THOUGH this publication contains an excellent sketch of the life of the highly gifted and accomplished Dr. Young, and a complete catalogue of his works, its chief claim to the attention of the learned at home and abroad is the preservation* of the doctor's inquiries into the mysteries of the ancient language of Egypt. An astronomical chronology deduced from Ptolemy and his commentators, the determination of enchorial dates and numbers, and the rudiments of a dictionary with reference to the Coptic, furnish, though as yet very meagre and imperfect, data on which we trust to see very valuable elucidations constructed within a very few years. The series of enchorial dates already enables us to trace the epistolary character of the language from the times preceding the Persian invasion till the conquest of Egypt by the Romans. In the astronomical series (produced from Ptolemy and his commentators, and Africanus' catalogue of the olympiads) the Christian era is, we observe, raised one year higher than the vulgar computation, which occasions the dates before Christ to appear a year too little, and those of the Christian era a year too much—a system likewise adopted by Pingre and other astronomers, but obviously tending to the confusion of chronology. We have only to add, that the few pages which did not undergo Dr. Young's own revision, have been superintended through the press, and the index completed, by the Rev. Mr. Tattam, than whom there is no scholar living more competent to the difficult task.

Lectures on Practical and Medical Surgery; comprising Observations and Reflections on Surgical Education; on the Investigation of Disease, and on the ordinary Duties of the Surgeon: forming part of an extended Course on the Principles and Practice of Surgery, delivered in 1829. Illustrated by engravings. By Thomas Alcock, M.R.C.S., &c. &c. London, 1831. Burgess and Hill.

AMONGST the numerous works on surgery published in this country, there is perhaps none which comprises all, or furnishes precise instruction for every duty which the surgeon is called to perform in the course of active practice. It is true that great or important operations, which are seldom performed, and which are required chiefly in consequence of inattention to, or ignorance of, scientific methods of cure in the early stages of disease, are described and descanted upon with great circumstantiality: but in these works, as well as in courses of

* We ought, perhaps, more strictly, to say republication, for the Enchorial Dictionary was appended to Mr. Tattam's excellent Coptic Grammar.

lectures, the more ordinary and the more useful duties of surgical practice are too generally overlooked, and the students and young practitioners are left to become acquainted with them during the course of their practice; and too frequently under circumstances injurious both to their reputation and to the constitutions of those submitted to their care. In order to remedy these defects in surgical education, as well as to direct the attention of surgical practitioners to various scientific subjects so much neglected; to point out certain important relations subsisting between diseases which appear local, and certain morbid conditions of the whole frame, or of remote and unsuspected parts; and to assist the inexperienced in their endeavours to investigate the origin, nature, and relations of surgical maladies, Mr. Alcock has furnished the profession with this work. These objects are of undoubted importance; and we are enabled to state, that perhaps none in the profession was better fitted, from the nature of his extensive and diversified experience—from the course of his studies and investigations, and the minute and precise character of all his researches—to fulfil them satisfactorily, or in a manner which the state of the medical sciences at the present day should lead us to expect. Mr. Alcock's previous writings had placed him in a conspicuous rank amongst medical authors; but for professional utility, and for general excellence of performance, the present work surpasses his former publications, and deserves to be placed amongst the best which has lately appeared on the nature and treatment of diseases.

Poems, Devotional and Didactic, from the Poetical Works of Bishop Ken. 36mo. pp. 96. Hamilton, Adams, and Co.

A PRITON selection from the ponderous posthumous volumes of Bishop Ken, and well worthy of being rescued from the mass by which they have so long been overlaid. A portrait of the worthy bishop adorns this small tome, which is so neat and tiny, that it seems to be the publishing antipodes of his works, as formerly produced. The sentiments throughout breathe a pure Christian spirit.

The Family Library: Dramatic Series. Nos. II. and III. Murray.

A SECOND and third volume of Massinger, with the omission of objectionable passages: of this series we have already expressed our opinion, and have merely to notice the progress of the design.

The Dramatic Works of Robert Greene; to which are added, his Poems: with some Account of the Author, and Notes. By the Rev. Alexander Dyce, B.A. 2 vols. 12mo. London, 1831. Pickering.

THESE two very beautiful volumes deserve the warmest praise. The editor's industry, and the taste of the publisher, have produced a handsome and complete edition of one of our old dramatic poets, whose works, rare and scattered, have long both wanted and merited to be thus collected.

Lucius Carey: a Novel. By the Author of the "Weird Woman." 4 vols. 12mo. London, 1831. Newmann and Co.

IT is not fair to judge the common run of novels, meant for the common run of readers, by a reference to first-rate standards. These volumes will pass an hour or so as pleasantly as the generality of their compeers.

ARTS AND SCIENCES.

ROYAL INSTITUTION.

MR. AINGER on Mordan's pencil and pen-making apparatus. This beautiful apparatus, from Mr. Mordan's manufactory, in perfect working order, was placed in the theatre; and the progression of the work—cutting the cedar, grooving it, cutting the lead and filling it in, gluing, turning the yet square pencils, and finishing them,—was shewn upon the manufacturing scale, and explained by Mr. Ainger. The apparatus invented by the late Mr. Brahmah for cutting pens, was also exhibited in full action, together with Mr. Mordan's apparatus for forming the delicate pieces of lead for his ever-pointed pencils. No description of ours can convey a just idea of the adaptation of these mechanical, and we may add perfect, contrivances, to the end for which they were invented.

In the library was the beautiful mountain-barometer, constructed by Mr. Robinson, of which we gave a description (*L. G.* p. 153) when it was exhibited at the Royal Society. A small portable transit instrument was also on the table, besides numerous specimens of Newberry's painted table-covers, and other works of art.

ROYAL ASTRONOMICAL SOCIETY.

FRANCIS BAILY, Esq. in the chair. Two communications were read;—one from Mr. Runker on occultations, the other by Dr. Robinson on irradiation. Several gentlemen were elected into the Society,—others were admitted; after which the meeting resolved itself into a general one, on the subject of the Society's charter. We have neither space nor inclination to give even an outline of the proceedings which followed, and it is satisfactory to know that the advancement of astronomical science does not require we should have either. Discontent was manifested, because (as we understood) Sir James South's name alone was in the charter. The whole proceedings afforded an example of an assembly set by the ears; and we are glad, at least for the present, to abstain from so unpleasant a subject.

ROYAL GEOGRAPHICAL SOCIETY.

LORD GODERICH, president, in the chair.—The reading of Mr. Lloyd's paper on the Isthmus of Panama was concluded: our analysis of which, however, we regret to find ourselves again compelled to postpone.

Two very important intimations were afterwards read from the chair. 1. It having been suggested to the council, by several members of the Society, that its objects would be materially advanced if committees were formed for the prosecution of particular branches of research, and the council highly approving of this suggestion, resolved, that members who may feel inclined to assist in carrying the plan into effect be invited to communicate with the secretary regarding it. And, 2. That if any of the members present at the ordinary meetings of the Society, wish, after the business of the evening is concluded, to make brief remarks, or put inquiries, respecting the subject of the paper which has been read, or are able to communicate further information regarding it, they are invited by the council to do so, and the meeting will be happy to attend to them.—Both these measures are, we believe, close copies of what has been long practised, and with excellent effect, in the Geological Society. The committees, by bringing the working members of the Society together, have given unity of

purpose to their individual labours; and their *visâ voce* communications with each other at the ordinary meetings, have both disseminated information among the other members, and greatly extended the interest taken by them in the general proceedings of the Society. Three committees were afterwards mentioned as at present more immediately contemplated; but the utmost readiness was at the same time expressed to form others, if members would come forward to suggest and join them. 1. A statistical committee, which should make the vast subject of statistics its especial object, and thus supply, in this country, the place of a statistical society, as established in Paris. 2. A colonial committee, which should direct its attention either to the British colonies alone, or to colonies generally, as might afterwards be agreed on. And, 3. A committee which should take up some one kingdom or province in the world, and compile a complete account of it in every respect, as an example on which others might be afterwards similarly proceeded with. By perseverance, a complete system of geography might be thus attained; and even if the labours of the committee stopped short of this, they would be most valuable as far as they might go; for, by exposing, as they advanced, the blanks which exist in our knowledge even of the countries most familiar to us, they would at once stimulate and direct inquiry in all. It was hinted, that as there are many *questions versatæ* regarding our colonies, in which it would be most inexpedient that the Society should interfere, it might be desirable to consider them first only physically; but we did not understand that this was announced as determined on, and, individually, we should rather hope not. There are few points on which our stock of exact information is generally so deficient as the actual and comparative state of our colonial possessions, and hence frequent misrepresentations respecting them, and *questions versatæ, in longum versantes*; for the common sense of mankind soon disposes of questions in which the facts are first well ascertained. Perhaps, therefore, nothing would be more useful in these colonial debates than the intervention of a coldly scientific and impartial set of inquirers into facts merely—men who, from the habits of their minds, would probably value the result of their inquiries chiefly as being facts, and who, at all events, would be so pledged by their position, and further controlled by their *colaborateurs*, that it would be scarcely possible that their reports should be other than serviceable to the cause to which all parties must equally wish success, however their imperfect information may, in the mean time, divide them regarding it—the cause of good administration. All this is, however, by the way. After further transacting its routine business, the meeting adjourned.

GEOLOGICAL SOCIETY.

RODERICK IMPEY MURCHISON, Esq. President, in the chair. Charles Barclay and Henry Bickersteth, Esqrs. were elected fellows, and M. Karl von Hoff a foreign member. The reading of Professor Sedgwick's paper, begun at the last meeting, was concluded. Among the donations laid upon the table, we noticed a collection of rocks from India, presented by the Asiatic Society of Calcutta.

LITERARY AND LEARNED.

ROYAL SOCIETY.

THE DUKE OF SUSSEX in the chair.—The President informed the meeting, he had suggested that, where it was necessary, all future

papers should be accompanied with explanatory sketches and drawings. A paper communicated by Mr. Pettigrew, and written by Mr. Wright, on a means of supplying the metropolis with filtered water from the Thames, was read. The author is known to the public as the writer of a little treatise, entitled "The Dolphin," which probably was the chief cause of the parliamentary commission for inquiring into the supply of London, with a view to get rid of the unutterable impurities held in suspension in the water of the Thames. In the present paper he recommends the construction of a filtering chamber below the bed of the river: sand, or sand and charcoal, he thinks the best filtering medium. He goes on to state, that the wells on the banks of the river Thames, many of which there are, receive their supply directly from the river, which comes its way through a stratum of sand, and thereby becomes perfectly pure. Another paper, by Robert W. Fox, Esq. communicated by Davies Gilbert, Esq., was also read: it was entitled, on the variable intensity of terrestrial magnetism, and the influence of the aurora borealis upon it. Several gentlemen were elected. There was presented, a method of ascertaining the strength of acetic acid by means of its density, founded upon experiments by A. Vander Toorn; yearly report of the progress of science, published by the Royal Academy of Sciences, at Stockholm; and various other scientific works.

SOCIETY OF ANTIQUARIES.

MR. AMYOTT in the chair. The members present proceeded to ballot for a proposition made by the council, to print certain Anglo-Saxon remains, when the question was carried. Mr. Ellis exhibited casts of the two sides of a seal attached to a grant to the abbey of St. Mary Bordesley, in Worcestershire. The figure represented on the seal wore the pointed helmet and nose-piece of the time of William the Conqueror. Mr. Knight exhibited a drawing (taken from a very advantageous point of view) shewing both the old and the new London bridges, as they are now standing; accompanied by a letter, stating that it was made as a record of the old structure, and to shew to posterity the striking difference in the construction of the two erections,—the old bridge having originally nineteen arches, the largest span of which was thirty-five feet; the new bridge having but five arches, the largest of which is a hundred and fifty-one feet nine inches in the span. The solids, occupied by the piers and starlings of the old structure previous to the commencement of the new works, was seven hundred feet,—four hundred and seven feet of which was occupied by the piers alone; while in the new structure, the space occupied by the piers is only ninety-two feet. The waterway of the old bridge at low water-mark was two hundred and thirty-one feet only, while that of the new bridge at all times of tide is six hundred and ninety feet. A communication was read from W. Waltham, Esq. of a document containing the account of a bailiff of the Duke of Lancaster, of the reign of Richard II., relative to the Savoy Palace and estate, shortly after Wat Tyler's insurrection, in which the palace and its costly furniture were destroyed by the mob; and shewing the price of timber, wages, &c. at that period.

ASSOCIATION FOR THE ENCOURAGEMENT OF LITERATURE.

ON Tuesday there was another meeting of the friends and subscribers to this project, at which W. A. Mackinnon, Esq. presided. The repor

of the provisional committee, and a series of resolutions, were read; from which it appeared, that of the proposed capital of 10,000*l.* in 50*l.* shares, to endow the Association, nearly a third had been subscribed; the deposits upon which would amount to five or six hundred pounds. The Rev. Dr. Savage Wade addressed the meeting, and warmly panegyricised the objects of the Institution, which were to patronise and assist sterling literary merit, destitute of resources, and unable to procure the publication of their works by "the trade." To a question put by Dr. Conolly, it was replied, that an individual was to be "hired" to decide on the merits of the manuscripts offered to the Society; and a permanent managing committee was appointed, with Sir Thomas Gates and Mr. Thomas Campbell as secretaries.

With every respect for the good intentions of the promoters of this plan, we must again observe, that its means are utterly inadequate to its objects, and its machinery quite ludicrous. To be able to effect any really beneficial results, a far different association would be necessary, with much greater funds, in larger shares, and under another sort of management. The sum total would barely cover the expense of two sterling publications; and if they failed to please, where would the Society and its hired *Midas* be? Not in the *Literary GAZETTE*, certainly. But there is little chance of any productions of intrinsic value being sent into this channel. It will be choked with the pretensions of the mediocre and the bad; of which classes we have already too many performances, even from the shops of the cautious booksellers.

The committee, and its organ too, will soon find, that by every refusal to gratify self-opinion, they have added to the hornet's nest, which at present only buzzes in their praise. If they resist intrigue and patronage, they must then expect the stings of the disappointed; and if they intrigue and favour, they will speedily dissipate the poor fund on which they set out. There is no safe course between this Scylla and Charybdis; even were the details of business, printing, engraving, &c. &c. not enough to sink the adventure. But, in truth, the whole design is hardly worth an argument,—it is a benevolent and silly absurdity, though graced by the names of the Duke of Somerset, the Marquess of Londonderry, Earl Dudley, Sir Gore Ouseley, Sir T. Phillips, Sir G. Duckett, and others, who have entertained the laudable view without reflecting much on the intervening way to its accomplishment.

FINE ARTS.

SUFFOLK STREET GALLERY.

THE preparations for opening this annual exhibition are, we rejoice to say, of a highly gratifying description. No fewer than thirteen hundred works have been received; and they include many of the ablest specimens of English and rising art which have ever adorned these walls.

As regards English art, we have recently seen some exquisite productions in natural history from the pencil of Mrs. Withers. They are executed in water colours; and it seems to us impossible to paint flowers or fruit in a manner more perfectly true and beautiful. In these pictures, the treasures of Flora bloom with perennial life, regardless of the blights of spring or the frosts of winter; and we have great pleasure in recommending so much merit to general notice. Mrs. Withers is also particularly successful in the delineation of animals. Whether engraving, for the scientific purposes of such

societies as the Linnean, Horticultural, &c., or for elegant tuition, we know of no artist of whose abilities we could speak more favourably than of this lady, whose performances we have noticed in exhibitions and publications, (in the *Pomological Magazine*, for instance); but never having examined them separately and together, not with that marked approbation which they so eminently deserve.

MR. LAURENCE MACDONALD'S EXHIBITION OF SCULPTURE.

WE have paid another visit to Mr. Macdonald's gallery, in Pall Mall, and the result is a confirmation of the opinion of his powers which we originally formed and expressed. He promises to be—or, rather, he already is—one of the most distinguished ornaments of the British school of sculpture. His groups of "Achilles and Thetis," and "Ajax bearing the dead body of Patroclus," exhibit an intimate acquaintance with the highest qualities of heroic art; although we own it struck us that, in the former, a little elongation of the lower extremities would have increased the grace and dignity of the figures. "The supplicating Virgin," and "The youthful Slinger," are exceedingly elegant and beautiful. Mr. Macdonald's busts are full of character; and are executed in a most bold and masterly manner. We are especially delighted with those of Sir John Sinclair, Professor Wilson, and Mr. Charles Kemble. The last-mentioned is as faithful a resemblance, and as fine and energetic a head, as ever was modelled. A bust of Mrs. Brougham (the mother of the Lord Chancellor) is very striking. Another, of Mrs. Nairne, is remarkable for the feminine delicacy and sweetness of its expression.

We must not omit to notice a simple and graceful figure of a boy, by a lady, a pupil of Mr. Macdonald's. It is equally creditable to the master and the scholar.

PAINTING IN WATER-COLOURS.

WE observe, from a prospectus just issued, that a new Society of Painters in Water-colours is projected. The grounds stated are, the great advances made in this very popular branch of art, and the limitation of numbers in the existing Society.

NEW PUBLICATIONS.

Landscape Illustrations of the Waverley Novels. Engraved by W. and E. Finden. Part XI. Tilt; Moon, Boys, and Graves; and Andrews.

ANOTHER beautiful part of this beautiful publication. Copley Fielding, Roberts, Nash, and Gastineau, are the four able artists from whose pencils these illustrations have proceeded. The view of *Fast Castle*, in particular, by the first mentioned, completely realises the description in the text: "a wilder or more desolate dwelling it was perhaps difficult to conceive." The view of *York Minster*, by Nash, is also very striking; it truly represents "the most august of temples."

Etchings. By W. Geikie. Nos. I. and II.; Six in each. Edinburgh, Constable; London, Moon, Boys, and Graves.

ALTHOUGH deficient in some of the technicalities of art, which may be easily acquired, these etchings exhibit a quality which cannot be easily acquired; for it is the result of powerful perception and acute observation, and is as rare as it is valuable,—we mean, character. In that respect, some of them, such, for instance, as "The Shoe Stand," "A Street

Auctioneer," "The Brute's Wud!" and "Morning of the Town Fast Day," are admirable. If Mr. Geikie is, as we suppose, a beginner, we predict that he will, by and by, distinguish himself.

Visits of William IV. when Duke of Clarence, as Lord High Admiral, to Portsmouth, in the Year 1827, with Views of the Russian Squadron. By Henry Moses. No. I.

WE have frequently had occasion to notice Mr. Moses' great talents in the delineation of naval subjects. The visit of their present Majesties to Portsmouth, in 1827, was furnished him with materials, of his happy treatment of which the present, being the first of four intended numbers, affords a very pleasing specimen.

Engraved Illustrations of Montgomery's Oxford. By Joseph Skelton, F.S.A., and other Artists. Whittaker and Co.

A DOZEN small but neatly-executed views of the various public edifices, &c. in the beautiful city of Oxford. Interesting to all, they must be peculiarly so to those in whom the contemplation of them is calculated to awaken recollections of youthful days, at once pleasing and melancholy.

Illustrations of the Works of Lord Byron. From Designs by Captain Locke. Colnaghi.

CAPTAIN LOCKE has transfused much of the spirit of the original into fourteen lithographic sketches, of which these illustrations consist. They are preceded by a fine head of Lord Byron, engraved by T. Wright, from a miniature painted by G. Sanders, when the noble poet was twenty-one years of age.

Six Coloured Views of the Liverpool and Manchester Railway, with a Plate of the Coaches, Machines, &c. From Drawings made on the spot by Mr. T. T. Bury. Ackermann.

THESE views, slight as they are, give a very good idea of the stupendous work to which they refer. "The Tunnel" and "The Excavation of Olive Mount" are really awful.

Twelve Designs, chiefly intended for transferring upon White Wood, by means of Ackermann's Caustic Varnish. Ackermann.

IF, as we firmly believe, "idleness is the root of all evil," it follows, that whoever invents a new occupation, however trifling in its character, is a public benefactor. To those fair ladies who have not had the opportunity—we will not be so ungallant as to say who have not the talent—to acquire the power of using their own pencils, the means which the ingenious plan for which the above-mentioned designs are chiefly intended will afford of availing themselves of the productions of the pencils of others, will furnish a pleasing amusement. These prints are also very fit subjects of imitation for young students in drawing.

MUSIC.

SOCIETA ARMONICA.

THE third concert was given on Monday to a full and fashionable audience. Much of the performance was instrumental, and beautifully executed; but in the vocal department, Miss Hughes sang with admirable effect, and fully justified the high anticipations we pronounced upon her earliest efforts. She has indeed been rapidly rising to the highest ranks in her profession. Signor David was also rewarded with much deserved applause. The whole went off with *éclat*.

MR. T. PHILLIPPS' LECTURES.

ON Wednesday we attended the first of Mr. Phillips' course of four lectures on music, at the concert-room of the Royal Academy, and were both instructed and gratified on the occasion. The lecturer laid down the elementary principles necessary to be observed by all who attempt to sing, and explained at length the best system of solfeggio. He applied this system to the distinct enunciation of words, the use of proper emphasis, and the beauty of expression in English singing; and taught how the breath should be managed to enable the vocalist to produce the best effect. All these valuable instructions were enforced by examples, accompanied by the pianoforte; which gave the charm of a concert to what might otherwise have appeared dry as a lesson. Many of Mr. Phillips' melodies were much applauded; and his audience departed highly gratified with his sensible observations and pleasing performance.

CHARITABLE CONCERT.

MR. MONTAGUE BURGOYNE, whose exertions on behalf of the distressed poor have more of the indefatigable energy of youth than of his advanced years, has set on foot a concert for the relief of the unemployed poor of the metropolis. It is, we are informed, to take place on Tuesday, under high female patronage, and several eminent performers have volunteered their services gratuitously in aid of this benevolent object. If we may judge from the number of mendicants who infest the streets, there never was a time when efforts of this description were more imperatively called for; and we are glad to see the example set by a gentleman who has done so much to improve the condition of the lower orders in the country by introducing the cottage and ground-allotment system.

DRAMA.

DRURY LANE.

MR. MACREADY, in *Macbeth* on Monday, and in the *Stranger* on Tuesday, well sustained the highest character of the living drama; and fully justified every encomium it has been our good fortune to bestow upon him since his career began. We always felt certain, that the entire public would, with opportunities of fairly estimating his great talents, be of our opinion. Both plays were, otherwise, cast in a satisfactory manner. Miss Huddart, in *Lady Macbeth*, displayed high merits, as well as some faults: Miss Phillips was an interesting *Mrs. Haller*.

Mr. Webster, the meritorious comedian of this theatre, has been trying his hand at a farce. His production, entitled *Highways and Byways*, is not founded, as our readers might imagine, upon Mr. Colley Grattan's work "of that ilk;" but on two vaudevilles, by Scribe, — *Mons. Rigaud*, and *Partie et Revanche*. The plot, which is of the slenderest description, bears but little affinity to the title. A young lady, hight Miss Gordon, is to marry a certain Mr. Stapleton, whom (of course) she has never seen, but who, she learns, is about to visit her *incog.*, in order to reconnoitre his intended. Now it happens, that a certain Mr. Narcissus Stubble, a traveller in the straw line, with a taste for mystery and adventure, arrives in the neighbourhood, and, thanks to a pair of mustaches and a ditto of shepherd's plaid pantaloons, is mistaken for the aforesaid Mr. Stapleton, and is consequently feasted and flattered till the arrival of the real Simon Pure (who is overturned at the door, in company with a

lady fellow-passenger, the betrothed bride of Narcissus) puts the man of straw in the awkward predicament expected from the beginning. To escape *horsewhipping*, he is content to look like an *ass*, pocket his mustaches as well as the affront, and beg pardon of every body, including the audience. We need scarcely say that Liston enacted Narcissus, or that he made us laugh as much as he could in the character. Miss S. Phillips played *Miss Gordon* very agreeably, and sang better than we had ever heard her. This lady is improving as an actress; and could she but be certain of her intonation, with her pleasing person and manners, we would not desire a better representative of light musical characters like the present. Mrs. Orger, Mrs. C. Jones, and Mr. Cooper, had but little to do; and there were some coarse lines put into the mouth of the former lady, which drew down the reprehension of the audience. Some opposition was manifested at the fall of the curtain; but the ayes had it by a large majority.

COVENT GARDEN.

AT this theatre, on Thursday, *St. Patrick's Day* was revived; but the *doubles* in that, being sanctioned by antiquity and the name of Sheridan, were vehemently applauded. So inconsistent is popular judgment!

ADELPHI.

WE ought ere now to have mentioned the Wednesday and Friday evening entertainments at this theatre during Lent. They are extremely clever; and worthy of the *lay* nights. Mr. Williams is not only one of the most amusing conjurors we ever saw, but one of the best imitators of comic singers. His entire *mélange* is excellent; the songs of "the last Lord Mayor's Day," and "the Loves of the Rose and Lilly," especially so. The theatre is so neatly arranged that it is like sitting in a drawing-room to witness the feats, and laugh at the whims.

PROJECTED NEW THEATRE.—We have just seen the plan of a new theatre, called the Royal Sussex Theatre; and to be erected at Knightsbridge, in the midst of that populous and rapidly improving neighbourhood. The projectors are, Messrs. Ward, Egerton, and Abbott; so that there is also a good foundation of dramatic ability. Nine thousand pounds is the estimated amount of the expenditure, of which sum it is proposed to raise six thousand by bonds of one hundred pounds each, at a stated interest, and with certain privileges. We hear that several noble and influential persons have adopted the scheme; and we certainly wish it every success.

PANORAMA OF HOBART TOWN.

WE were yesterday gratified with a private view of this small but very picturesque and interesting panorama, which Mr. Burford has just painted for exhibition. The scenery is various, beautiful, and very finely executed. But perhaps the principal attraction to the public will be in the spectacle of some of "the Swell Mob," of whom we heard so much last week on the way to the Queen's drawing-room, in the very different appearance they cut in Van Diemen's Land. Here the gentry have no hats to knock off, no watches to take, no purses to pillage, no wipers to filch. They are in a state of ragged and squalid coercion, with plenty of room for every thing except to commit depredations or run away. We think the panorama ought to be opened gratuitously,

or at the public cost, one day in the week; as a moral lesson to "the Swell Mob." There are also groups of natives and other groups, which animate the picture—the whole well deserving of popular favour.

VARIETIES.

Earthquakes.—An earthquake occurred at Canton on the 16th of September, a phenomenon very rare in that part of the world. The shocks lasted six or seven seconds, and the oscillations were north and south. On the 24th of June, however, a most destructive earthquake is described to have taken place in Tayming, a country north of Houan province, in lat. 36°, by which twelve cities and towns, and an immense multitude of people, were destroyed.

Necrology.—M. Robert Lefebvre, the French painter, died at Paris in September last. His *Psyche*, *Phocion*, and *Heloise*, and his various Scriptural pieces, had procured for him considerable reputation. No one surpassed M. Lefebvre, in France, in portrait, as his pictures of Carlo Vernet, de Grétry, de Guérin, de Bérin, de Vigée, Napoleon, Josephine, Pauline Borghese, the Duc de Berry, &c. sufficiently testify. Fine colour, graceful composition, perfect execution, and harmony of effect, were the characteristics of his pencil. Just before his death, he made his physician sit to him, and with a trembling hand endeavoured to discharge the debt of friendship. M. Lefebvre was a native of Bayeux.

History of the Morea.—M. Fallmerayer has published at Stuttgart a History of the Peninsula of the Morea, full of merit. On two epochs, especially, great light has been thrown by his researches. The first is that of the invasion by the Slavonians, the second that of the conquest by the French chevaliers. It is no longer possible to disbelieve, that in the year 589, the Avars, of the Slavonic race, spread themselves over the whole of the Peloponnese, and soon expelled the population. The fugitives passed over to the islands, by which M. Fallmerayer explains their maritime power. The other event occurred when the ruins of the Byzantine empire were still smouldering. Leon Sgueros wished to reign over Greece: he was the archon of Nauplion; he was perfidious and cruel: he had already seized Argos, plundered Corinth, and besieged Athens; when he was beaten near Thermopylæ by Boniface, the Count of Macedonia, and thrown back upon the Acropolis of Corinth. Then appeared near Patras the Count de Champlitte and his chevaliers. Scarcely had that town fallen into their hands, when they hurried to Corinth; and in company with Boniface and Ville-Hardouin, engaged in the expedition to Argos. Before Boniface left them, he invested Champlitte with the suzerainty of Athens and Eubœa.

Buonaparte.—The first authentic traces of Buonaparte's political doctrines are to be found in a pamphlet published by him in 1790, when he was twenty-one years of age. It is a letter to one of his countrymen, a deputy from the noblesse of Corsica to the constituent assembly, the conduct of which he blames. The following is a remarkable passage. "M. Paul fancied himself a Solon, but he badly copied his original. He placed every thing in the hands of the people and their representatives, so that there was no existing but by pleasing them. Strange error! which submits to a brute, to mercenary, the man who by his education, the lustre of his birth, his fortune, is alone made

govern! In the end, so palpable a perversion of reason cannot fail to cause the ruin and the dissolution of the body politic, after having tormented it with every kind of evils."—*Revue Encyclopédique*.

Pic et Ploc.—Under this strange title, M. Sue, a French writer, has just published a volume in emulation of the naval tales of Cooper. It contains two stories, both of pirates. The first, after a series of extraordinary adventures, is taken and executed at Cadiz; but his death is revenged by a comrade, who contrives to import the yellow fever into Cadiz from Tangiers! The second obtains possession of a slave-ship, by throwing his captain out of the cabin-window, turns bucanier, leads a life of pillage and violence, and then retires with a large fortune to his native town, where he conducts himself respectably, goes regularly to church, and on dying bequeaths a part of his wealth to the priest who is charged with the posthumous care of his soul! The French critics say that the work is too purely descriptive, and that it is deficient in character.

Religion Saint Simonienne.—Some of the French papers, especially *Le Globe*, are full of the rhapsodies of the professors of this new religion, which, it seems, is speedily to put down all other religions, and to establish a universal and harmonious union over the face of the whole earth! Among other desirable objects which it is to accomplish, are "classification according to capacity, and retribution according to works." At Brussels, the Catholic priests have succeeded, for a time at least, in preventing the missionaries of the Religion Saint Simonienne from having an opportunity of publicly proclaiming their doctrines.

Ancient Greece.—An able tract has been published at Berlin, from the pen of M. Schnitzler, on the colonisation of ancient Greece, a fragment of Schell's History of Greek Literature. M. Schnitzler examines three propositions—Did Cecrops come, about the year 1580 before Christ, from Sais into Attica? Did he there found Athens, and the worship of Minerva? Did Danaüs of Chemmis, in Upper Egypt, come and found Argos about the year 1560 before our era?—and he decides in the affirmative with respect to them all.

Medal of the Geographical Society of Paris to Mrs. Laing.—The medal which had been voted by the Geographical Society of Paris to the widow of the late Major Laing has been returned by Mr. Warrington, our consul at Tripoli, in consequence of the death of that lady. The Society has determined that it shall be transmitted to the heirs of the unfortunate traveller.

Parasitic Beetle.—At the meeting of German naturalists at Hamburg, Dr. Sundevall, of Lund, described a parasitic beetle, found in the body of the *Blatta Germanica*. Von Winthorn, of Hamburg, confirmed this observation, by exhibiting the occurrence of the larva of the *Tachina pecta* in the bodies of the *Cerhus gemmatum* and *violaceus*. At the same meeting, in the sixth sitting, Dr. Von Nordmann made known his observations on worms in the eyes of fish; to which Professor Gurit, of Berlin, added his observations on worms found in the eyes of horses.

Change of Colour in the Plumage of Birds.—The following facts are related by Mr. Young, in the *Edinburgh Geographical Journal*. A blackbird had been surprised in a cage by a cat. When it was relieved, it was found lying on its back, and quite wet with mud. Its feathers fell off and were renewed, and the new ones were perfectly white. A gray

linnet happened to raise its feathers at a man who was drunk: he instantly tore the creature from its cage, and plucked off all its feathers. The poor animal survived the accident (the outrage, we would rather say), and had its feathers replaced, but they were also white.

The Origin of the Asiatic Negroes.—The Geographical Society of Paris has offered a new prize for the best memoir on the origin of the Asiatic negroes,—a question which, they say, belongs peculiarly to the present masters of India to solve, as they are in a situation favourable for the investigation, and for the collection of documents which can throw light on a subject of that nature.

Conundrum.—Who are the most disinterestedly good? D'y'e give it up? The good for nothing!

LITERARY NOVELTIES.

[*Literary Gazette Weekly Advertisement*, No. XII. March 19.]

New Magazine.—We see, from an advertisement in our *Gazette* of to-day, that a new magazine, to be called the *Metropolitan*, is about to start, under the editorship of Mr. Campbell and Mr. Redding, so long the conductors of the *New Monthly*. They have experience and abilities; so we look forward with hope to our new contemporary.

French Poetry for Children, selected, with English Notes, by L. T. Ventouillac—Gebir, Count Julian, and other Poems, by Walter Savage Landor, Esq.—*Tales from the German of Tieck: Old Man of the Mountain*, the *Lovecharm*, and *Pietro of Abano*.—*Atherton*, a Novel, by the Author of "Rank and Talent."—*Rustum Khan*, or *Fourteen Nights' Entertainment at the Royal Gardens at Ahmedabad*, by a Gentleman who has resided several years in that part of India.—*A Compendium of Ancient and Modern Geography*, with Illustrations of the most interesting points in History, Poetry, and Fable, compiled by Mr. Arrowsmith, for the use of Eton School.—*A Second Series of Tales of a Physician*, by W. H. Harrison.—*The Canon of the Old and New Testaments ascertained*; or, the Bible complete without the Apocrypha and unwritten Traditions, by Archibald Alexander, D.D., New Jersey, with introductory Remarks, by John Morrison, D.D.—*Essays*, adapted to the understandings of Young Persons, on the Evidences of Natural and Revealed Religion, the Immortality of the Soul, &c., by Mr. R. Ainslie.—*Omnipotence*, a Poem, by R. Jarman.—*Richard Baynes's General Catalogue of Books in all Languages and Classes of Literature*, consisting of above 9,000 Articles.—*Philip Augustus*, an Historical Romance, by the Author of "Richelleu," "Darnley," &c.

LIST OF NEW BOOKS.

Greene's Dramatic Works, 2 vols. crown 8vo. 11. 1s. bds.—*Panizzi's Bojardo e Ariosto*, Vols. III. and IV. crown 8vo. bds. 12s. each.—*Bennett's Albanians*, and Miscellaneous Poems, crown 8vo. 7s. 6d. bds.—*Paxton's Introduction to the Study of Anatomy*, 8vo. 11. 1s. bds.—*The Premier*, 3 vols. post 8vo. 11. 11s. 6d. bds.—*Chitty's Burn's Justice*, 6 vols. 8vo. bds. 5s.; law calf, 5s. 18s.—*Society, or Spring in Town*, 3 vols. post 8vo. 11. 6d.—*Epps's Life of Dr. J. Walker*, 8vo. 12s. bds.—*Sailor's Bride*, 2 vols. 8vo. 6d. bds.—*Hamilton's English School of Painting*, Vol. I. 12mo. 18s. hf.-bd.—*Bird's Framlingham*, a Narrative of the Castle, 8vo. 7s. 6d. bds.—*Letters to a Mother*, fcp. 3s. 6d. bds.—*Wedded Life in the Upper Ranks*, 2 vols. post 8vo. 11. 1s. bds.—*Keppel's Narrative of a Journey across the Balkan*, with Maps, &c. 2 vols. 8vo. 11. 12s. bds.—*Pietas Privata*, chiefly from the Writings of Hannah More, 2s.; morocco, 3s.

*Britton and Pugin's Public Buildings of London, reduced
 to Half-price.*

ARCHITECTURAL ILLUSTRATIONS
 of the PUBLIC BUILDINGS OF LONDON, accompa-
 nied by Historical and Descriptive Accounts of each Edifice.
 By J. BRITTON, F.S.A. and A. PUGIN, Architect.
 The work consists of One Hundred and Forty-four Engravings
 in outline, beautifully executed by J. Le Keux, T. Rodg, C.
 Gladwin, &c. from Drawings and Measurements by A. Pugin,
 C. Gattermole, and other eminent Artists. The Historical and
 Descriptive Accounts are by J. Britton, F.S.A., Joseph Gwilt,
 F.S.A., J. P. Papworth, &c. and which embrace ample Illustra-
 tions of the Churches of St. Paul, Westminster Abbey, St. Mar-
 tin, St. Stephen, &c. Bridges, St. Luke, Chelsea; St. Pancras, Mary-
 lebone, the Temple, &c.; also copious Historical and Descriptive
 Accounts and Engravings of all the London Theatres, all
 the Bridges, including the New London; the Terrace in Regent's
 Park, the Bank, the Council Office, Law Courts, Diorama, Colosseum,
 Carlton House, Somerset House, College of Physicians,
 both Old and New; Westminster Hall, Mansion House; also of
 the Houses and Galleries of the Marquess of Uxbridge, Thomas
 Hope, Esq. John Soane, Esq. John Nash, Esq. &c. &c.
 Two vols. demy 8vo. cloth, 12s. 6d. Published at 5s. 6d.
 Two vols. imperial 8vo. large paper, cloth, 41s. Published at
 21s. 6d.

Church Architecture.

1. **Neale and Le Keux's Views of the Colle-
 giate and Parochial Churches of Great Britain**, with Historical
 and Architectural Descriptions, Ninety-six Plates, at the follow-
 ing reduced Prices.

3 vols. royal 8vo. in cloth, price 21s. 10s. Published at 5s.
 vols. royal 8vo. French on India paper, (arranging with Britton's
 Cathedral), in cloth, price 51s. Published at 10s.

2. **The Organic Remains of a Former World**,
 in 3 vols. 4to. with 14 coloured Plates, exhibiting above 700 Fossil
 Remains, price 61s. 6s. in cloth: an Examination of the Mineral-
 ized Remains of the Vegetables and Animals of the Antediluvian
 World, generally termed Extraneous Fossils. By James Parkin-
 son. Vol. II. may be had separately, price 21s. 12s. 6d. cloth.

3. **Outlines of Oryctology**, in crown 8vo.
 with Ten Plates, price 12s. cloth, a new edition, corrected by the
 Author: an Introduction to the study of Fossil Organic Remains,
 especially those found in the British Strata: intended to aid the
 Student in his Inquiries respecting the Nature of Fossils, and their
 Connection with the Formation of the Earth. By James
 Parkinson.

4. **Dr. Turton's Bivalve Shells of the British**
 Islands, systematically arranged, with Twenty Plates, coloured
 by Sowerby. 4to. cloth, price 81s. Published at 41s.
 A practical conchological observer, "that Dr. Turton's Account
 of British Shells is not only interesting to the collector, but also
 particularly desirable, as it includes the shells that have been dis-
 covered since the publication of Montagu. The author's resi-
 dence being on that part of the coast where the greatest number
 of shells are found, he had the most favourable opportunities of
 investigating the subject, the objects of his study being continu-
 ally before him."

5. **Watt's Bibliotheca Britannica**; or, gene-
 ral Index to British and Foreign Literature, in 4 vols. 4to. cloth,
 price 61s. 6s. Published at 111s. 11s.

6. **Dr. Dibdin's Library Companion**, in
 a large vol. 8vo. price 14s. Published at 11s. 6s.
 A Catalogue of Books, gratis.

M. A. Nettall, 24, Tavistock Street, Covent Garden.

Just published, by Henry Colburn and Richard Bentley,
 New Burlington Street.

Holy Breathings; a Series of Morning and
Evening Prayers. By a Lady.

Printed for Saunders and Otley, British and Foreign Public
 Library, Conduit Street, Hanover Square.

Price 7s. in cloth.
D E P E N D E N C E.
 By the Author of "Little Sophy," &c.
 This work is written under circumstances of peculiar inter-
 est to the author; and she hopes that she may confidently invite
 the attention of the young of her own sex, whose station in life
 places them above the evils of dependence, and who may perhaps
 only know how to judge of such trials from the pages of fiction.
 London: George Lewis and Co. St. Paul's Churchyard; and H. Morley and Son, Derby.
 Of whom may be had, by the same Author,
Little Sophy; a true Story. 3d edition,
 1s. 6d. cloth.
Recollections of a Beloved Sister. 2d edition,
 price 3s. 6d. boards.

DR. MILLIGAN'S valuable EDITION of
CELSUS.

2d edition, in 1 vol. 8vo. with an Engraving, price 16s. boards.
 A. Cornelli Celsi Medicinæ Libri VIII. et recensionem Leonardi
 Targui. Quibus accedunt Annotationes Criticæ, Medicæ, Physi-
 cæ; Tabulæ Characterum, Ponderum, Mensurarum, alieque;
 Indices Medicæ Medicæ Celsianæ Merumque; præfata de
 Celsi Vita Dissertationes. Continensque, Indices Jani Delphianæ
 aucti, EDUARDUS MILLIGAN, M.D. A.B.S.
 Coll. Reg. Med. Ed. Scd. &c.

Ediitio secunda, auctor et castigatior.
 Printed for MacLachlan and Stewart, Edinburgh; and
 Baldwin and Cradock, London.

Judging from the degree of approbation which the former
 edition of Dr. Milligan's Celsus was received by the Royal Colleges
 of Surgeons, and the Honourable the Company of Apothecaries;
 it is hoped the Delphin Index, and other matter added to this
 edition, will in no inconsiderable degree enhance its value among
 those who regulate the course of medical education.

LITERATURE.—MESSRS. COLBURN
 and BENTLEY have just issued a General Catalogue of
 their Standard Publications, which may be had gratis, on appli-
 cation, of all Booksellers. It contains upwards of 400 Works,

 the Art of Curing the Stone without Incision.

Printed for T. and G. Underwood, Fleet Street.

In 8vo. price 7s.
SUMMER and WINTER HOURS.

By HENRY GLASSFORD BELL.
 "Some brief and delightful sketches of poetry; feelings; the
 tender and the dreaming, which may grow more wise in after
 years, but not more beautiful; thoughts, or rather imaginations,
 for they are as yet winged and wild; fancies, some sad, some
 playful; little touches of nature, which show the writer has won-
 dered in most musical verse, are the contents of this slight volume,
 which is full of
 'The fragrance of summer
 Though summer is gone.'—*Literary Gazette.*
 London: Hurst, Chance, and Co. 65, St. Paul's Churchyard.

Wiffen's Tales.
 Elegantly printed in 2 vols. royal 18mo. with 30 fine Engravings
 on Wood, by Thompson and Williams, from Designs by Mayer
 and Coult, and a Portrait of the Author, price 16s. nearly
 bound in cloth.

THE JERUSALEM DELIVERED of
TORQUATO TASSO, translated into English Spa-
 nian Verse, from the original Italian; with a Life of the Author,
 and—formed after long and laborious research amongst the most
 historians—a List of English Crusaders.

 Gratton—Lord Sidmouth—Bishop Burgess, Copeland, Mant,
 and Heber—Lord Chief Justice Tenterden—Judge Taunton—
 Professor Robertson, Dr. Whately, Rev. H. H. Milman (Poet),
 Sandford (Greek)—Rev. J. Keble—Dr. Arnold—Rev. Daniel Wil-
 son—Mr. Coleridge, Denison, Sewall, &c.

With Plates, 4to. 11s. 11s. 6d.

MASTER'S HISTORY of the COLLEGE
 of CORPUS CHRISTI, in the University of Cam-
 bridge, with additional Matter, and a Continuation down to the
 present time.

By JOHN LAMB, D.D. Master of the College.
 John Murray, Albemarle Street.

Digitized by Google

Just published, price 7s. 6d. by J. Carverton, Cockspur Street.
RECOLLECTIONS OF SEVEN YEARS' RESIDENCE AT THE MAURITIUS, or ISLE OF FRANCE.
 By a LADY.

"It is a source of satisfaction to be able to recommend it as one of the most elegant pieces of composition that ever flowed from the female pen. The Life of France is what Mr. Moore would call a gem of the ocean,—it is all beauty and brilliancy; its sky is without a cloud, its mountains assume the most gorgeous forms, and stand right out from the azure heavens; its waters are perfect crystal, and leap from rock to rock; the ocean which surrounds it is transparent, and its depths are closed with forests of coral of the most beautiful and diversified forms. In birds are all of the loveliest dyes; its fruits of the most exquisite flavour, and in the greatest abundance." &c. &c.—*Advertiser*, Feb. 9th, 1851.

Published by Mr. Valpy, and may be had of all Booksellers.
 8 thick vols. 8vo. 11s. 6d.; royal paper, 11s. 11s. 6d.
DAMMI LEXICON GRÆCUM, Etymologum et Reale, cum proliis substratis tant Concordantia et Rationibus Homericis; cura J. M. DUNCAN.

Uniformly printed with the *Erasmian* Homer.
 That portion of *Dammi's Lexicon* which is devoted to the elucidation of *Findar* has already appeared in a separate form, as an Appendix to Mr. Huntingford's valuable edition of that poet; and it has been suggested to the publishers of the new edition of the complete *Lexicon* that it would be an acceptable service to literature, by a separate publication of the larger division of their author which is devoted to the *Iliad* and *Odyssey*. There are many scholars who devote themselves with peculiar attachment to the study of *Homer's* writings, and who, being possessed of *Erasmian's* or other scarce editions of that poet, would willingly render them complete by *Dammi's Lexicon* of a corresponding size. So furnished, their *Homeric* library may be said to want nothing.

2. **Novum Testamentum Græce**, recognovit atque insigniorum Lectionum Varietas et Argumentorum Notationem subavit G. C. Knappius. Crown 8vo. large type, 6s. 6d. or 6s. 6d. bound.

3. **Timel Lexicon Vocum Platoniarum**, Editio et Animadversionibus illustravit D. Ruhnkenius. 8vo. 6d. 6d. 6d.

4. **Scholia in Platonem**. Collata ad Codices optimos ab Immo Bekkero. 8vo. 8s. 6d. 6d.

5vo. 1s. 6d. a 2d edition of Sir Howard Douglas's Pamphlet.
CONSIDERATION ON THE VALUE AND IMPORTANCE OF THE BRITISH NORTH AMERICAN PROVINCES, shewing the Influence which the proposed Alteration on the Duties of Timber must produce on their Interest, and on the Navigation and Commerce of Great Britain.

John Murray, Albemarle Street.

Bowdler's Family Edition, &c. &c.
 In 5 vols. 8vo. price 11s. 6d. boards.
GIBBON'S HISTORY OF THE DECLINE AND FALL OF THE ROMAN EMPIRE, adapted to the Use of Families and Young Persons, in which the Civil, Political, and Military Transactions of the Empire are given in the powerful Language of the Author; but the Indecent Expressions, and all allusions to Improper Persons, are erased.

Henry Colburn and Richard Bentley, New Burlington Street.

2d edition, in 2 vols. with Fac-simile Autographs of the principal Characters.
GERALDINE OF DESMOND; or, Ireland in the Days of Elizabeth. An Historical Romance.
 By MISS CRUMPE.

"A work which promises to hold a very distinguished rank on the list of historical romances. In fact, it may stand alone for individual excellencies peculiar to it. Founded upon Irish annals, and depicting the most interesting and eventful period in the history of the sister country, it connects with the story of the Desmond family the political record of the times of Elizabeth's domination, when the yoke was firmly and finally fixed on the necks of the Irish people. The lover of romance will find in these pages what will be to him a most interesting and profitable labour much from the deep research displayed by the author on subjects connected with the customs of the native Irish of those times; and the politician and historian will be enabled to trace the causes of much that has occurred in that distracted country since its final conquest by the English queen."—*Oxford Herald*.

Henry Colburn and Richard Bentley, New Burlington Street.

In 1 thick vol. crown 8vo. a new edition of
ADS TO REFLECTION, in the Formation of a Manly Character, on the several Grounds of Faith, Morality, and Religion.

 the Antique, by W. H. Brooke, F.S.A.

THE MYTHOLOGY OF ANCIENT
GREECE AND ITALY; intended chiefly for the Use of
 Students at the Universities, and the Higher Classes of Schools.
 By THOMAS KEIGHTLEY
 Author of "Fairy Mythology," "Outlines of History," in the
 "Classical Dictionary," &c.
 Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

Valpy's Classical Library of English Translations, No. XVI.
 1st of April, price 4s. 6d.

THEOPHRASTUS. Illustrated by Fifty
 Physiognomical Portraits, by the most eminent Artists.
 To which are subjoined, Hints on the Individual Varieties of
 Human Nature, and general Remarks.
 The Characters of Theophrastus possess an interest and value
 beyond most of the remains of Grecian literature: they are in-
 ferior and exact portraits of those very peculiarities of tem-
 per that are every day passing under our own observation.

No. XVII. and XVIII. will comprise Horace,
 in which will be introduced Translations of different Parts of
 the Author, from the Poets of Dryden, Pope, Bentley, Swift, Por-
 son, G. Wakefield, Prior, Milton, Denham, Roscommon, Cowley,
 Byron, Horne Tooke, Materson, &c. &c. and of some of the
 most eminent Poets of the present day.

No. XIX. will contain Juvenal and Persius.
 The Fifteen first Numbers of the Series contain—Demosthenes,
 Gallus, Xenophon, Herodotus, Virgil, Pindar, Anacreon, and
 Tacitus. Any Author may be purchased separately, at 4s. 6s.
 per volume.

"If you desire your son, though no great scholar, to read and
 reflect, it is your duty to place into his hands the best translations
 of the best classical authors."—Dr. Parr.
 Printed and published by A. J. Valpy, M.A. Red Lion Court;
 and sold by all Booksellers.

LONDON'S AGRICULTURE, New Edition.

 the Writings of Jeremy Taylor, with a Memoir by the Editor,
 and several hitherto unpublished Sermons will be introduced.
 The first Five Numbers contain the only complete edition of
 Sherlock's Works.
 Printed and published by A. J. Valpy, M.A. Red Lion Court,
 Fleet Street; and sold by all Booksellers.
 Any Author may be had separately.

Early in March will be published,
FAMILY LIBRARY OF FRENCH
CLASSICS. Nouvelle Bibliothèque Classique; or, Col-
 lection of the Chief Authors of French Literature.
 Part First, the French Theatre, consisting of the Works of
 Molière and Racine, and a Selection from Corneille and Voltaire.
 Price of each Volume, containing about 400 pages, 2s. 6d.; or on
 fine paper, 4s. 6d.

Two volumes will appear monthly, commencing in March 1831.
 Published by Treuttel, Wurtz, Treuttel, Jun. and Richter,
 80, Soho Square, London.

The collection now announced is intended to form a New Fam-
 ily Library of the French Classics, embracing various depart-
 ments of literature, and appearing progressively.

At a time when the importance of moral and intellectual cul-
 ture is more generally felt than ever, an undertaking like the
 present is well adapted to assist in the progress of such important
 objects; and no expense has been spared to render the execution
 worthy of the design.

The classical writers whose productions will grace our pages,
 are those of the seventeenth and eighteenth centuries, a period
 the most illustrious for the production of masterly works, not
 only of pure literature and taste, but of standard rank in history,
 in morals, and in philosophy.

In order to give a higher degree of interest to this collection,
 we have confined it to works that have received the final sanc-
 tion of time, and are considered classical by all the nations of
 Europe.

It has too frequently happened that editors have published,
 without discrimination, all the productions of an author, and
 inserted pieces either not avowed by him, or unworthy of his
 high reputation.

Such an example it has been our care to avoid, by admitting
 only the chefs-d'œuvre of each writer, which have been selected
 by the unanimous approval of many distinguished men of letters.
 The reader will thus be spared the perusal of inferior or immoral
 productions, and a waste of time and money.

In addition to these advantages, the text of the present collec-
 tion will be printed from the best editions published during the
 lifetime of the authors, and compared with subsequent editions.
 Every pains has been bestowed to re-establish the text and punc-
 tuation in their primitive purity.

It seemed a necessary accompaniment to give some account of
 the lives and writings of the various authors, together with sys-
 tematic tables of contents, this last being a feature for the most
 part wanting in such works, that would otherwise derive great
 advantage from it.

The correctness of the typographical execution, the neatness of
 the type, and the beauty of the paper, will not be inferior to the
 care bestowed in the choice of the various works in the collection.
 Each work will have a portrait of the author engraved by the
 first artists. The octavo form has been adopted, as being the
 best suited for a collection intended for a permanent station in the
 library.

The dramatic portion will be published first, as having been
 the field in which the talent of the most eminent French authors
 was most particularly exercised, while the influence of this de-
 partment of literature on the character, the manners, the taste,
 and the language of a nation, cannot be too highly appreciated,
 or too strictly watched.

Molière, Corneille, Racine, and Voltaire, stand, confessedly,
 at the head of the French drama. The comedies of Molière, for
 the most part, are employed in depicting character, and, in conjunc-
 tion with historical tragedy, constitute the genuine literature of
 the stage, which thus becomes a school of morals and of actual
 life.

Dramatic poetry was first exhibited in all its perfection by P.
 Corneille, and is indebted to history for its true grandeur. In
 selecting, therefore, from the tragedies written in his declining
 years, as well as from those composed by Voltaire in his old age,
 we have embodied the greater part of those that have a historical
 character—a character that belongs still more strikingly to the
 literature of our own day, which is at the same time remarkable
 for its productions in morals and philosophy.

Such a selection from the French drama cannot fail to be con-
 sidered as unequalled in the whole range of modern literature,
 for the exhibition of grandeur and brilliancy of conception, truth
 of historical character, and exquisite purity of style.

The Family Classics of the French Theatre will form twenty-
 three volumes octavo, handsomely printed on fine paper, in the
 following order:

1. Molière, Œuvres, 7 vols. 8vo. with Portrait.
 2. Corneille, Œuvres Choies, 4 vols. 8vo. with Portrait.
 3. Racine, Œuvres, 6 vols. 8vo. with Portrait.
 4. Voltaire, Œuvres Choies, 7 vols. 8vo. with Portrait.
- The whole collection may be taken together, or each author
 separately. The success of the present Family Classics of French
 Classics will be announced in new prospectuses. The whole collec-
 tion, it is supposed, will not exceed eighty volumes.

Orders received by all respectable Booksellers in Town
 and Country.

DEBRETT'S PEERAGE.—A new and
 improved edition (being the Nineteenth), of this val-
 uable Work will be published in a few days, with a Portrait of His
 present Majesty, engraved by Dean; and, for the first time, the
 Blazons will be added.

Life of Bonaparte—National Biography, Nos. VII. VIII. and IX.
 In a few days, with Seventeen beautiful Illustrations by the most
 eminent Artists, price 18s.

BOURRIENNE'S LIFE OF BONA-
PARTE; to which are now first added, Notes and
 Illustrations from the dictations of Napoleon at St. Helena, from
 Notes by Joseph Bonaparte, the Memoirs of the Duke of Rovigo,
 General Lapp, Count Las Cases, Constant, &c.
 "A" This edition contains the only perfect translation of
 Bourrienne's Memoirs. Each volume may be had separately.
 Henry Colburn and Richard Bentley, New Burlington Street.

On the Twenty-eighth instant will be published, price 3s. 6d.
 a new Periodical, to be entitled

THE ENGLISHMAN'S MAGAZINE.

In offering another Monthly Periodical to the public,
 the Proprietors found their hopes of success on the spirit of the
 times, which is eminently favourable to the promulgation of just
 and independent opinions. The Englishman's Magazine has
 been undertaken with a view to generate and foster such opinions
 upon every subject within the comprehensive circle of literature
 and politics; and while its pages will offer novel and varied
 entertainment to the lovers of fine art and belles lettres, its more
 serious purpose will be to propagate truth, to expose the abuses
 of the social charities, to encourage genius, and to denounce
 arrogance and dishonesty.
 London: Hurst, Chance, and Co. 65, St. Paul's Churchyard.

First of April, 5s. 6d.
EPITOME OF ENGLISH LITERA-
TURE; or, a Concentration of the matter of Standard
 English Authors on a Plan entirely new; with Portraits, Bio-
 graphical Sketches, &c.

No. I. containing Paley's Moral Philosophy,
 with a Portrait.

The object of this undertaking is to publish, in monthly vol-
 ume, in a concentrated form, a Series of Standard English Authors,
 of whose works the present generation know little, and the rising
 Youth must know less.

From the limits of an advertisement it is impossible to state the
 precise nature of the plan intended to be adopted; suffice it to
 observe, that in history no facts, and in philosophy no reasoning,
 will be omitted or distorted, so as to render a reference to the
 original author requisite; and thus the youth especially of both
 sexes may become perfectly acquainted with authors repulsive
 from their bulk alone, at a comparatively little cost of time as
 well as price.

"We are all books reduced to their quintessence, many a bulky
 author would make his appearance in a pamphlet; there would
 be scarce such a thing as a folio, and the works of an age would
 be contained on a few shelves."—Addison.

The series will be confined to the popular productions of writers
 in prose, and the following Authors will be first selected:
 Historical.—Burnet, Clarendon, Hume, Robertson, &c.
 Philosophical.—Bacon, Locke, Paley, &c.
 Miscellaneous.—Addison, Goldsmith, Johnson, Milton, Swift.

No. II. will contain Paley's Evidences of
 Christianity, and Locke on the Human Understanding, with a
 Portrait.

The Historical and Miscellaneous Series will be ready for pub-
 lication in the spring, commencing with Gibbon, Clarendon, Bol-
 lington, Addison, &c.

Edited and printed under the superintendence of A. J. Valpy,
 M.A. Red Lion Court, Fleet Street; and sold by all Booksellers
 in Town and Country.

Prospectuses, with the Plan at length, may be had of
 all Booksellers.

On the 23d of May next will be published, No. I. of a New
 Monthly Literary Journal, to be entitled

THE METROPOLITAN.

Edited by THOMAS CAMPBELL, Esq.
 Author of the "Pleasures of Hope."

Assisted by the leading Literary Characters of the Day.

Prospectuses of the Work will be issued in the course
 of a few days.

New Burlington Street, March 1831.

STANDARD NOVELS.—A Companion to

the Waverley Novels.

Messrs. Colburn and Bentley beg to acquaint the public, that
 it is their intention to produce cheap editions of such novels and
 romances, written subsequently to the time of Fielding and Smol-
 lett, as have, like the productions of those great delineators of
 nature and manners, taken their rank among English classics.

The general boldness which such vivid exhibitions
 of life maintain on the curiosity of readers of every age and every
 class, is too well known to require comment; while he who reads
 them attentively may acquire, without the bitterness and the
 danger of experience, that knowledge of his fellow-creatures
 which, but for such aid, could, in the majority of cases, only be
 attained at a time of life when it would be too late to turn it
 to account.

It has been truly observed that well-wrought novels "take their
 rank by the side of reality, and are appealed to as evidence in all
 questions concerning man." It follows, therefore, that as man-
 ners change and character (which often depends on manners)
 varies, the "mirror held up to nature" must change also; and
 that, valuable as the older fictions are, it is necessary to study
 also those which have succeeded them, and which enable us to
 comprehend that which before us lies in daily life," and
 which have been designated by a great authority, as "the prime
 wisdom."

To enable the great mass of the public to enjoy these works,
 the possession of which has hitherto been chiefly confined to the
 wealthier classes, is the object of the present undertaking, for the
 establishment of which the Proprietors have within their power
 opportunities which they believe are not at the command of any
 other publishers.

The first Number, published on the 1st of March, contains the
 whole of the Pilot, by Mr. Cooper, for 6s. The second Number,
 to be published on the 1st of April, will contain the whole of God-
 win's celebrated story of Caleb Williams.

The volumes will range in the library with the Waverley
 Series, but they will contain a much greater quantity of matter—a
 quantity indeed equal to two, and sometimes to three ordinary
 volumes. A Number will be published on the 1st of every month,
 beautifully printed and illustrated with engravings, from designs
 by eminent artists, price 6s. nearly bound.

The Proprietors think it necessary to add, that a cheap
 uniform edition of the entire works of the celebrated Author of
 the "Pilot" can only be printed in the present series of Stand-
 ard Novels; inasmuch as the copyrights of the latter works of
 Mr. Cooper are the exclusive property of Messrs. Colburn and Bentley.

Orders received at every Bookseller's throughout the King-
 dom, where also Prospectuses and Specimens of the Plates may
 be seen.

In a few days will be published, in 1 thick vol. small 8vo.

THE PARLIAMENTARY POCKET

BOOK; or, a Key to both Houses of Parliament, (com-
 piled from original and official sources), containing Alphabetical
 Accounts of the Members of both Houses, including their Titles,
 Official Appointments, Relationship, Political Connections, &c.
 Also, the Regulations and Standing Orders of the Lords and Com-
 mons, respecting Privileges, Private Bills, Fees, Fines, and Com-
 mittees; with Lists of the Scottish and Irish Nobility who do not
 sit in the House of Peers; likewise, a Digest of the Plan of Re-
 form now in agitation, Lists of the Boroughs proposed to be dis-
 franchised, &c.; and every other Species of Information respect-
 ing the Constitution and Usages of Parliament.
 Printed for J. Andrews, 167, New Bond Street.

LONDON: Published every Saturday, by W. A. SCRIPPS, at
 the LITERARY GAZETTE OFFICE, 7, Wellington Street,
 Waterloo Bridge, Strand, and 13, South Moulton Street, Oxford
 Street, and also by J. Chappell, 8, Royal Exchange; R.
 Morrison, 4, Ave Maria Lane, Ludgate Hill; W. G. Smith,
 Edinburgh; Smith and Son, D. Robertson, and Atkinson
 and Co. Glasgow; and J. Cumming, Dublin.—Agent for
 America, C. Rich, 13, Red Lion Square, London.

J. MOYES, Took's Court, Chancery Lane.

THE LONDON LITERARY GAZETTE; AND Journal of Belles Lettres, Arts, Sciences, &c.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire its immediate transmission, by post, we recommend the LITERARY GAZETTE printed on stamped paper, price One Shilling.

No. 740.

SATURDAY, MARCH 26, 1831.

PRICE 8d.

REVIEW OF NEW BOOKS.

Illustrations of the Literary History of the Eighteenth Century; consisting of Authentic Memoirs and Original Letters of Eminent Persons; and intended as a Sequel to the "Literary Anecdotes." By John Nichols, F.S.A. Vol. VI. 8vo. pp. 896. London, 1831. Nichols and Son.

THE immense stores of literary correspondence, anecdote, biography, and antiquarian research, which Mr. Nichols during his long and useful life collected, have now furnished forth a sixth volume of very miscellaneous and curious matter, in addition to the valuable works for which the public are indebted to his ever-diligent pen. The title-page describes its contents, and we have only to turn over the leaves for such illustrations as will serve to intimate the agreeable character of the whole.

By the memoirs, correspondence, memoranda, anecdotes, &c. &c., we are made to meet, as it were, in familiarity, with W. Gifford, Lord Camelford, the Bishop of Dromore, the Earl of Buchan, Mr. Gough, Dr. Phineas Pett, the Rev. S. Denne, and many other persons of literary tastes and habits, whose inquiries were all directed to objects of antiquarian curiosity, or subjects of *virtù* and the *belles lettres*. From a volume so full of pleasing gossip, it is almost immaterial where we make our selections. We will, however, pitch *imprimis* on some letters of Lord Camelford, the then proprietor for the borough of Old Sarum, to his nominee Mr. Hardinge, as illustrating some of the mysteries of close boroughs, at present engrossing so much of popular opinion.

"Oxford Street, Jan. 26th, 1785.

"My dear Hardinge,—A few words upon the last sentence in your note as to your democratical principles of reform, of which you say you gave me early notice. The question now grows more serious, and therefore let us understand one another. I never wished you to vote against your opinion upon any subject, nor do I wish it now. Your principles, however, cannot be more decided upon the business of reform than mine; nor are they half so strongly pledged to the public. Old Sarum has two representatives; upon one of them I have not the smallest claim, because I never pretended any kindness to him in the seat I gave him. It is, to be sure, even in his instance, however, a whimsical thing, that from his connexion with Pitt he feels himself under a necessity of subverting, as far as his votes go, the seat he is intrusted with by his constituents, or, if you choose to call it so, by his excitement. But were he to vote against what Pitt, to whom he owes it, professes to have at heart, I am well-aware it might be interpreted by the enemies of his friend as inconsistency and double dealing. What is your case? The argument cuts exactly the other way. Who will believe, if they see you take a part in direct opposition to what I have so often declared to be my deliberate opinion, that there

is not a game played between us for the sake of flattering the minister's favourite object! My line has been distinct, and I have never departed from it. I dread every change; and at this moment in particular, think it not only unnecessary, but, considering the state of Scotland and Ireland, I think such a measure madness and absurdity. If, however, the circumstances were never so favourable, the utmost length I can go to is the one additional county member; but that I consider as an experiment, and as a compounding to prevent further mischief. This I shall certainly say in the House of Lords, if ever it gets thither, and shall think (what I shall not say) that he is an enemy to parliament who goes further. If, from your general wish to support the minister, or from your attachment to Lord Camden, or from a conscientious opinion upon the subject, you cannot think as I do, at least absent yourself upon this occasion, and do not distress me so far as to make me appear to hold two languages, at the same time that you oppose one of the most decided political tenets I can ever form, and oppose it with the weapon I have put into your hands. As to the democratical principle, how far that is likely to be gratified by enabling three or four great families in every county (generally peers) to add to their influence in the House of Commons, or by rendering such additional influence still more powerful in extinguishing the balance of the open boroughs, I leave to your reflection. I profess to wish that power and property may go together, and am therefore not very anxious for the plebeian system. All I shall add is, that, if I were to consider only my own emolument and that of my son (for I look no further), I should be happy that any scheme took place that would enable me to convert my privilege into an increase of income, which is a far more solid advantage than what is called importance and consideration. Weigh all this calmly in your own mind, and assure yourself that no difference of opinion will ever make an alteration in the affectionate regard with which I am faithfully yours, CAMELFORD."

In a letter two years later, he writes, facetiously—"As you say nothing of your reelection, I conclude you are tired of St. Stephen's Chapel, or disdain to represent the muttons, as Lord Mount Elliot calls the electors, with a bell-weather for the returning officer."

And again, two years later (1789)—"None of your Whig nonsense to me about the French revolution; madness and knavery, fanaticism and cruelty, are the principles of them all, from the leaders in their senate to their butchers in the streets. Let them not talk of liberty till they have learned the elements of justice, or of magnanimity till they are sensible to the dictates of humanity. They will go on from violence to violence, and from absurdity to absurdity, till common sense comes into fashion again at last, and things are brought back again into their old channel. If you will be a Whig, let it be in Brabant, where they have something to say for themselves. My heart bleeds for

them, when tyranny drives them to the wall; and no alternative is left them for safety but the *ultima ratio*, with all its consequences. I hope the accounts are exaggerated from thence; but I know enough of the temper of both sides to believe in the most horrid carnage."

"It seems (he observes, in 1790—and really, if we did not give the dates, these extracts might be very innocently read as penned in 1831)—it seems as if the world was always to go round in its circle, lest it should happen at any time to fix in a medium of common sense and common happiness. Ignorance and superstition produced the miseries of ages within our recollection; the opposite extremes to which all Europe is tending, point to evils full as great on the other hand, which I fear must afterwards throw us back again into barbarism and its concomitant, ignorant superstition. We may reason and refine for our amusement, if we please, in our closet, till we can distinguish no longer between right and wrong, and at last doubt of our own existence; but when once a people undertake to think for themselves, and to admit no principle they cannot prove logically and mathematically, sense becomes nonsense, and all practical ideas of social connexion are at an end altogether. Our religious and our political opinions (prejudices, if you please to call them so) must be taken up and maintained upon trust by at least 999 in 1000, or the Lord have mercy upon us. Well said the old French philosopher, that if he had all truths in his hand, he would die a thousand deaths before he would open it. The modern philosophers let out all, truth and falsehood together, to set mankind by the ears from one end of the globe to the other. I would tell them, that it requires but little genius to triumph over prejudices; but the proof of real understanding is shewn in respecting them, and directing them at the same time to the happiness of our fellow-creatures."

But we will not make it appear, from our illustrations, as if this were a political volume; on the contrary, it is anecdotal and literary, and we proceed to shew it in its truer light by quoting a few specimens.

Lord Camelford writes:—

"I sent ——— some wretched puns some months ago, but did not sign my name. I will tell you one that I thought perfect. The Bishop of Alais visiting a rector who was very rich and very avaricious, gave him some gentle hint of the character he had heard of him; 'Mais, monsieur,' says the man, 'il faut garder une poire pour la soif.' 'Vous avez bien raison,' replies the bishop; 'prenez garde seulement qu'elle soit du bon Chretien.' + + +

"When the Spanish dauphine passed through France to Paris, Bourdeaux received her and her suite with extraordinary magnificence. The Duchesse de Caumont had a cabinet fitted up for her at the house of a president, at God knows what expense; but she tossed up her nose at it, and was seen by Montesquieu in

† Our readers are aware that "bon Chretien" is the name of an excellent pear.

the ante-room of the dauphine as he was going to pay his court. 'Que faite-vous, la madame la duchesse?' 'Je m'échauffe, vous sentez bien que je n'ai rien où je suis logé; mais vous, président, comment pouvez-vous abandonner Paris pour une Société de Campagne? que fait on ici de grâce? dites moi un pen, et vos présidentes, elles font ici les duchesses et m'imaginent.' 'Oh, non, madame! pardonnez moi, elles ne sont pas assez impertinentes.'

"Our correspondence resembles, at this distance, the two gentlemen who made the observation upon the weather at Hyde Park Corner, and hatched the answer upon the same spot at their return. You will have forgotten the examination of the physicians; and will perhaps be congratulating upon the recovery by the time this comes to tell you, that this measure seems to me to verify an old adage of Fox the father, 'that nothing disconcerted an opposition so much as yielding to their proposition.'"

"I do not wonder you cast a longing wish towards these scenes of neutrality and sunshine. I have been longer a near witness to the revolutions of politics than you have, and have *vu le fond du sac*, as the cardinal said, when he rejected the sacrament upon his death-bed; it is a sad picture of the meanness and wickedness of the human heart; and I forgive princes whose feelings are hardened by it."

Some anecdotes of Dr. Johnson are hardly worth repeating: the following is not very favourably characteristic of another Don—the Rev. Mr. Leman.

"It has been remarked, with some justice, that his manners, on a first acquaintance, would often too plainly insinuate, that he knew himself to be a rich as well as a talented man, and that he was disposed to admit to a freedom of association such only as were equally fortunate with himself. Thus every person of title, or distinction for affluence, whom he named, was 'his friend.' The untitled, or moderate in circumstances, whom he was obliged to mention, however great their worth or talent, were merely persons of whom he had heard, or of whom he might chance to know something—at a distance. It was curious to observe how this fantastical humour spread itself amongst his servants—almost invariably the apes of their masters. I recollect calling once in the Crescent, and on inquiring if Mr. Leman were at home? was thus answered by his man: 'No, sir! Mr. Leman is out, and I do not exactly know where. But he is gone either to call on my Lord —, or my Lord —, or some other nobleman.'"

Anecdote of George IV., who, when Prince of Wales, rented, as a sporting-seat, the mansion of Critchill, about three miles from Chettle: it is told by the Rev. Dr. Chafin:—

"About this time, a very remarkable circumstance took place. One morning his royal highness called upon me alone, without any attendant, not even one servant, and desired me to take his information for a robbery, and to grant him a search-warrant. He insisted on my administering the oath to him, which I reluctantly did; and he informed me, that the head groom of his stables had his trunk broken open in the night, and a watch and many valuable articles stolen and carried away; and that it was suspected that they were concealed in such and such places, and that he chose to come himself, lest an alarm might be given, and the goods removed. His royal highness sat by my side while I filled up a search-warrant, which his royal highness hastened home with, and saw the execution of it himself; the goods were found in the suspected

places, a nest of thieves were detected, and all brought to condign punishment. Should his royal highness become sovereign, as by the grace of God he may soon be, what a strange story it will be to tell, that a King of Great Britain did apply to a poor country justice to grant him a search-warrant for stolen goods! But this would be a real fact."

Anecdote of George III., from the same authority:—

"His majesty's journey being made known, many persons went out of curiosity to see the cavalcade pass by; and, among others, my two nieces and I were standing near the place where the road turned, when his majesty's carriage suddenly stopped, and a horseman rode up to us, whom I immediately knew to be Lord Walsingham, and he knew me; for, some time before, I had a bill pending in the House of Lords, and his lordship was at that time chairman of the committee; and in the process of the business (in which I did not succeed) I had the honour of having several conferences with his lordship, which I gratefully acknowledge. His lordship, addressing me with a smile on his countenance, said, 'His majesty wants to speak to you; he wants to see whether your picture at Lord Dorchester's is a good likeness.' I was much confused at this notice; and was hastening towards his majesty's carriage, when I observed a favourite little dog of my niece's running under the wheels of another carriage, and in great danger, which with some difficulty I released, and took it up in my arms, and in that situation presented myself at the side of his majesty's chaise. His majesty very graciously began a conversation with me, by asking me if that house, pointing to it, was not mine. I answered his majesty that it was. He observed, that it was pleasantly situated, and appeared a good old mansion. I informed his majesty that it was built by my father. He said that he thought it must have been much older; and then very quickly added, 'Walsingham tells me that you are about to leave this fine healthy country for the foggy one of Cambridgeshire.' I answered, 'Yes; and please your majesty, I do it for reasons, with which if your majesty was acquainted, I think you would not much blame me.' He instantly said, 'I know, I know all.' And then, looking earnestly at me, he said to Lord Walsingham, 'Beach has done justice; it is a good likeness, a good picture.' Then looking at me again, with a smile on his countenance, said, 'In your picture you are drawn with a book in your hand, but now you have a dog, a pleasant companion, I suppose; for Walsingham has informed me that you are a sportsman; all in character, I find.' And immediately the glass was drawn up, and the cavalcade passed on."

This is one of the many characteristic hits made by the king, whose quick manner was misconstrued or misrepresented as folly, while he uttered such sound remarks as these in the most good-humoured way.

From these extracts we trust our readers will be taught to like this book; for we must now leave it to their good will.

The Poems of Henry Howard, Earl of Surrey.
Aldine Poets, Vol. X. London, 1831.
Pickering.

As beautiful and elegant a volume as its predecessors—and more cannot be said in its praise. A life of Surrey, written in the most minute spirit of antiquarian research, is prefixed. Biographers are generally accused of a leaning in

favour of their subject: this accusation at least cannot be brought against the present writer. In his anxiety to take an opposite course to that of Dr. Nott, whose life of Surrey leans to the romantic and most favourable view, the author now before us shews quite a dislike to his hero; and Surrey leaves his hands as much despoiled of all interest as is well possible.

We must say, that some of the conclusions are too invidiously drawn: there seems to us no sufficient grounds for calling him an unkind son—an inference founded on a complaint of "ungrateful children," in one of his mother's letters. The Duchess of Norfolk, in every chronicle of the times, is recorded as an intemperate and ill-disposed person, who seems to have scrupled little at any falsehood in the indulgence of an ungovernable temper. And when even his present severe biographer allows, that to his father he was a kind son, that he was also a good husband and father, it seems harsh and partial judgment to impeach his filial piety on no better authority than a violent woman's violent expression. There is not a grain of imagination throughout the memoir; but there is the most careful industry. Now, if the reader be so disposed, he can himself supply the want of fancy; but it would be a more difficult task to supply the facts and ingenious deductions of the most pains-taking investigation. The passage about Surrey's arms is so curious that we quote it—we allude to his quartering the arms of Edward the Confessor—one of the capital charges brought against him.

"The crime for which this young nobleman was arraigned has never been properly examined; and, satisfied with its manifest absurdity, historians as well as the biographers of Surrey have omitted to point out upon what grounds that inference is justified. The arms of King Edward the Confessor are presumed to have been a blue field charged with a gold cross flory at the ends, between five gold martlets, a kind of swallow without legs; but as heraldry was then unknown, it is extremely doubtful if this or any other bearing was used by that monarch. Arms appear to have been used by the kings of England in the reign of Richard the First, who bore a red shield, charged with three gold lions, which have ever since been deemed to be the arms of England. As early as the time of Edward the First, and probably about a century before, the arms of three saints were always borne on banners in the English army, and on all state occasions, namely, those of St. George, the tutelary saint of this country, of St. Edmund, and of St. Edward the Confessor; but neither of those ensigns was deemed to be connected with the sovereignty of England. Richard the Second, however, being actuated by extraordinary veneration for St. Edward the Confessor, chose him for his patron saint, and impaled his arms with those of England and France; and at the same time, he granted the Confessor's arms to be borne per pale with the paternal coats of two or three of the most eminent noblemen of the day, each of whom was descended from the blood royal. One of the persons so distinguished was Thomas Mowbray, Earl of Nottingham and Duke of Norfolk, the right to whose arms and quarterings was indisputably inherited by the Earl of Surrey; but the right to the coat of the Confessor depends upon whether it was granted to Mowbray for life only, or to him and his heirs, a point which has not been ascertained. Conceiving himself, however, entitled to it, Surrey, in marshalling his arms, included it with his other numerous

quarterings; and the injustice of construing the act into a treasonable design is still more apparent from other circumstances. Neither Henry the Eighth, nor any other monarch after Richard the Second, ever used the arms of the Confessor in conjunction with their own; and the statement that Prince Edward then did so with a label, is not supported by any other evidence. Surrey introduced the label as the proper distinction of his arms from those of his father, so that he appears to have done nothing that he was not authorised by law to do; and even at this moment heralds allow the Confessor's arms to several noble families. It is remarkable, that whilst this preposterous accusation was brought against Surrey, he himself bore the royal arms by virtue of his descent from Thomas of Brotherton, the son of Edward the First; whilst various other noblemen in the reign of Henry the Eighth quartered the royal arms of England and France; and two, if not more of them, the Duke of Buckingham and the Earl of Wiltshire, had borne them, not in the inferior position of the third or fourth, but in the first quarter, as their paternal arms, with impunity, and as a matter of acknowledged right."

The whole romance of the fair Geraldine is utterly demolished by the author of the present *Life of Lord Surrey*.

The Correspondence of the Right Hon. Sir John Sinclair, Bart.; with Reminiscences of the most distinguished Characters who have appeared in Great Britain, and in Foreign Countries, during the last Fifty Years. Illustrated by Facsimiles of Two Hundred Autographs. 2 vols. 8vo. London, 1831. Colburn and Bentley.

AFTER sifting these volumes with considerable patience, we are bound to say, that they contain a mass of curious information, and many entertaining anecdotes, as well as notices of persons of celebrity with whom the author has had intercourse, and of places he has seen under circumstances of more than common interest. We must likewise state, however, that there is also a considerable sacrifice of space to mere names, and to matters which do not repay the time spent in discussing them. Complimentary notes, thanks for books presented, &c. &c. acquire no claim to publication from being written by Prince This, or the famous That. In other cases, the subjects are rendered far more deserving of attention by the characters of the persons who write upon them; as when, in the second volume of this work, we find Washington, like another Cincinnatus, at the plough, entering into all the details of statistics, agriculture, buying and breeding, with the worthy Scots Baronet, who has devoted so long a life to these and other useful inquiries, well deserving the inscription which he tells us the Bishop of Blois wrote to him as "the most indefatigable man in Britain, and the man in Europe of the greatest acquaintance." A similar record is preserved in a more playful vein—a letter from Sir J. Macpherson in 1807, says:

"Go on with your united military and agricultural labours, and they will aid to give that integrity to Britannia which you have been usually explaining to her children. The lives of states and individuals are lengthened and shortened by corresponding causes. Your life as a traveller, a financial historian, an armed man, a parliament man, and a president of a board of agriculture, has been as useful as it has been various in its pursuits; not forgetting your own rising generation, and your statistical

labours. Continue; and may good, and every satisfaction, attend your liberal pursuits."

This is well borne out by the list of Sir J. Sinclair's works given in these volumes:—

"1. Personal Works."		Vols.
1. Observations on the Scottish Dialect	1	1
2. Various Tracts on the Navy, the Militia, &c.	1	1
3. History of the Revenue	3	1
4. Miscellaneous Essays	1	1
5. Husbandry of Scotland	2	1
6. Tracts on the Bullion Question	1	1
7. Tracts on the authenticity of Osian	1	1
8. Code of Health (first edition)	4	1
9. Code of Agriculture	1	1
10. Analysis of the Statistical Account of Scotland ..	1	1
	16	

"2. Works, in general drawn up by others, but printed under my directions."

1. The Statistical Account of Scotland	31
2. County Agricultural Reports, in 4to.	10
3. The County Reports of England and Scotland, in 8vo.	70
4. The General Report of Scotland	5
	—106

Total number of volumes

The conclusion is also so characteristic, that we must quote it.

"On the plans which are still in the author's contemplation.—After so many years of incessant labour, the publication of so many works, on such a variety of subjects, my having recently entered into the seventy-seventh year of my age, and having so numerous a family as thirteen children, and fourteen grand-children, many would recommend a life of retirement and repose; but various reasons have induced me to resolve on a different plan. 1. I find that a life of inactivity and idleness is the most irksome of any; and I am persuaded that an active mind degenerates, unless some great objects be kept in view: 2. From the attention I have paid to the subjects of health and longevity, I find that I am still capable of great exertion, either personal or mental: and, 3. I have for some time been employed in collecting the materials of some works, as the author of which I wish to have my name handed down to posterity, looking upon those I have hitherto published, with two exceptions (the Codes of Agriculture and Health), as of inferior value. On all these grounds, I have been induced to undertake completing what I call 'the Codean System of Literature,' comprehending four great works: 1. A Code or Digest of Agriculture; 2. A Code of Health and Longevity; 3. A Code of Political Economy, founded on statistical inquiries; and, 4. A Code or Digest of Religion. The two first of these works having been already printed, only require to be revised; and the materials of the two latter having been collected, and a plan for drawing them up having been arranged, the principal difficulties in regard to their publication have been surmounted."

We shall now select a few specimens of the multifarious contents of these volumes, which consist of correspondence with every quarter of the earth, with people of all kinds, from the throne to the workshop, and on almost every topic that could be suggested to an active and inquisitive mind.

"At Berlin (says Sir John, in 1786), I recollect an interesting discussion on the question, 'To what circumstance it was owing, that the French language prevailed so much in Germany, and in other parts of Europe?' On this subject, it was remarked by M. de Wilner, whom the new king much consulted, 'That the prevalence of the French was not owing to the superiority of the language itself to the English or German, or to any greater ability in the French authors, but in a great measure to the number of refugees driven from France

when the Edict of Nantz was repealed, who acted as teachers in every country where they went, and served to spread the French language, manners, and dress, all over the continent.' This remark was more applicable to Germany than to several other parts of Europe. I heard two anecdotes of Frederick, which I think it right here to record, as they do credit to the wit and manly spirit of two British subjects. A Dr. Baylis, having spent his fortune in vainly endeavouring to get a seat in parliament, was at last obliged to study medicine, and established himself in Saxony, where he acquired a high reputation. The King of Prussia offered him very handsome terms to settle at his capital, which he accepted. Upon his arrival in Berlin, and being introduced at court, the king said to him: '*Dites-moi un peu, monsieur, combien de monde avez-vous expédié, avant de parvenir à votre grande réputation?*' '*Pas la moitié autant que votre majesté,*' replied the doctor. It was so home a thrust that the king never forgave it. He liked to be witty himself, but not to be the cause of wit in others, or to give them any advantage over him in conversation. Hence he soon quarrelled with Voltaire and other distinguished literary characters. Sir Andrew Mitchell, a North Briton, was long ambassador at Berlin, particularly during the seven years' war, and attended the king during all his battles and campaigns. One day intelligence was received of great rejoicings in England, on account of some victory, with acknowledgments to the Divine Being for his powerful aid. On this the king asked Sir Andrew, '*Si le peuple d'Angleterre étoit assez fou pour supposer que le bon Dieu étoit un de leurs alliés?*' To which Sir Andrew answered: '*Que, s'il en étoit ainsi, il ne prendroit point de subsides.*' As it is well known that the King of Prussia was enabled to carry on the war, in a great measure, by the aid of English subsidies, the stroke was peculiarly cutting."

The following remarks are not inapplicable at the present time.

"Notwithstanding all the disadvantages attending it, there are never wanting, however, a sufficient number of persons anxious to obtain seats in parliament, and thus to enter on the career of politics. The objects which commonly influence their conduct may be briefly enumerated.

"1. *To obtain fame.*—But this is rarely practicable. The character and talents of a statesman may be warmly eulogised by one set of men, but will be as loudly reprobated by another, and the public do not well know which to believe.

"2. *The acquisition of wealth.*—Though some individuals and families have profited by enjoying official situations, yet many more have been ruined. Lord Chesterfield, in his Letters to his son (No. 89, vol. iv. p. 565), informs us, that the famous Duke of Newcastle, after holding great offices for fifty years, died £300,000 poorer than when he first came into power.

"3. *Rank.*—The acquisition of hereditary titles is certainly a desirable object, more especially when bestowed for public services. Indeed, when a British peerage is bestowed, it is not only accompanied with political power, but, if the private fortune of the individual be inadequate, his family is, in general, provided for at the public expense.

"4. *Personal decorations.*—These distinctions, when discriminately awarded; cannot be objected to, more especially as they die with the person on whom they are originally bestowed. It is a cheap way of recompensing public services.

"5. *Patronage*.—Fox often declared, 'that the pleasures of patronage seemed to him the circumstance which chiefly rendered the possession of political power desirable.' It is patronage, and not pecuniary emolument, which all high-minded men covet."

Upon mentioning to Mr. Bamber Gascoigne, "that the changing one member of an administration would be no great loss to it, more especially if he was not a very efficient minister," he replied, 'Be assured that you are quite mistaken; for it is a general rule, that an administration is like a set of nine pins—if you knock down one, the others are very apt to follow in succession.'"

Of the late Lord Melville we are told an interesting anecdote, which is also curiously illustrative of his illustrious friend, W. Pitt.

"In December 1796 I happened to meet with the noble lord at St. James's, when he said to me, 'It is a long time, Sir John, since you have been at Wimbledon. Name any time when you can spend a day with us, and we shall be most happy to see you.' By accident I fixed upon the last day of that year. Upon reaching Wimbledon to dinner, I found Mr. Pitt there. Lady Melville and the beautiful Miss Duncan (afterwards Lady Dalrymple Hamilton) were the only ladies present. We spent the evening principally in conversation, but also played a short time at cards; and about eleven we went to bed. As soon as I got up next morning, I proceeded to Mr. Dundas's library, where I found him reading a long paper on the importance of conquering the Cape of Good Hope, to add to the security of our Indian possessions. I said to him, on entering, 'I come, Mr. Dundas, to wish you a good new year, and many happy returns of it.' His answer I shall never forget.—'I hope that this year will be happier than the last, for I scarcely recollect having spent one happy day in the whole of it.' On this remark the following reflections naturally occurred: 'Here I am living in the same house with the two men the most looked up to, and the most envied of any in the country. I have just heard the declaration of the one, and I am convinced that the feelings of the other are not materially different. Can any thing more strongly prove the miseries attending political pursuits?' After breakfast Mr. Pitt asked me to return to London in his carriage, when he immediately commenced a political conversation. He said that the finances of the country were getting into a state of great disorder, from the enormous expenses of the war; and he was apprehensive that it would be extremely difficult to raise the necessary supplies for carrying it on much longer. He then added, 'As you have attended so much to those subjects, and have written the history of our finances, I should be glad to have your opinion as to the measures that ought to be pursued at such a crisis.' I suggested the idea of a loyalty loan, and that every individual should be called upon, in proportion to his income, to lend a sum of money to government, at a fair interest, according to the rate at the time. He entered at once into the idea: it was subsequently carried into effect, and ultimately produced those taxes on income and property which enabled us to carry on the war, and to bring it to so happy a conclusion."

"Lord Melville was a great friend to decision in business; and it was with him a favourite maxim, 'that delay leads to procrastination—procrastination to neglect—and neglect to oblivion.' He considered it extremely desirable in a free constitution, that there should be parties steadily opposed to each other, that the

measures of those in power might be vigilantly scrutinised, and when unable to stand investigation, successfully resisted. Hence he occasionally gave as a toast—'A strong administration, and a firm and able opposition.' The celebrated John Wilkes had the highest opinion of his oratorical powers. He thus discriminated to me the talents of the principal speakers in the House of Commons:—'Fox has most logic, Burke most fancy, Sheridan most real wit, Pitt excels in command of words and ingenuity of argument, but Dundas, with all the disadvantage of being a Scotsman, is our greatest orator. There is (he added) much sound sense, and no rubbish in his speeches.' At first he had great difficulty to obtain a patient hearing, owing to his Scotch pronunciation and dialect; but these defects were soon forgotten, from the force and ability with which his sentiments were delivered. As it was late in life before he got into parliament, he thought it better not to take any particular pains in correcting those national defects; and the house became so much accustomed to them that they proved no material detriment to his success as an orator."

Of Lord Erskine:—

"Lord Erskine was the youngest of three brothers, all of whom were remarkable for their wit and powers of conversation. The learned lord was particularly addicted to punning, of which I recollect the following instance:—I happened accidentally to inform him, that a female relation of his was unwell. He asked me what was the nature of her complaint. My answer was, '*water in her chest*.' 'If that is the case,' he replied, 'she is not much to be pitied. It is very lucky, in these hard times, to have any thing in *one's chest*.' Lord Erskine used frequently to compose short epigrams, which often contained much point and humour. As a specimen, may be mentioned four lines he wrote on hearing that the spurs of Napoleon had been found in the imperial carriage after the battle of Waterloo. Lord Erskine said they ought to be presented to the prince regent, with this inscription:

These Napoleon left behind,
Flying ^{rather} faster than the wind,
Needless to him when buckled on,
Wanting no spur but Wellington."

Of Mirza Abu Taleb Khan, the well-known Persian ambassador, Sir John relates:—"At one of the dinners I gave to the Mirza, the celebrated Dr. Watson, Bishop of Llandaff, was present. The bishop observed that the Persian took wine very freely; upon which he said to him—'Mirza, how comes this? Is not drinking wine prohibited by the Koran?' Upon which the Persian said, 'I take it *by inference*. In the Koran it is said, that we may take whatever is good for our health. I am informed that taking wine, in this country, is good for the health; and *therefore I infer*, that I may take it consistently with the precepts of the Koran.'"

"There was, at the same time, a great jealousy among the Irish statesmen, for the patronage of their own country. Lord Clare and Mr. Beresford wanted to get rid of Lord Castlereagh, who, they found, had more influence with Mr. Pitt than they had; and being accustomed to intrigues, they contrived, through the medium of the Archbishop of Canterbury (Lord Auckland's brother-in-law) and others, to blow up the flame. Their object was, partly to shake Lord Castlereagh's power, and partly to get rid of the Catholic emancipation, which they considered to be a dangerous measure. These intrigues, also, were much aided by Lord Liverpool, in hopes that it

would bring forward his favourite son, Lord Hawkesbury. Mr. Pitt, therefore, found a much greater resistance to his proposal of emancipation than he had at all anticipated; and being unaccustomed to have any favourite measure thwarted or controlled, he thought that the best mode of obtaining his object would be to threaten to give in his resignation, little dreaming that it would ever be accepted of. The king, however, had made it a matter of conscience to resist the measure, and had even canvassed several members of both houses to oppose it in parliament, that he might not be under the disagreeable necessity of giving it the royal negative, which he had resolved on, if the bill had passed both houses. In vain Mr. Secretary Dundas endeavoured to convince him, that it was not contrary to his coronation oath. His answer was, 'That he wanted none of his Scotch sophistry, and that it was better for him to change his ministers than his religion.' Other causes may have contributed to sour the king's mind, and to sow dissensions in the cabinet; but had it not been for the Catholic question, they would never have gone to any great extremity."

A fine collection of autographs of great and remarkable persons gives an additional value to these volumes.

Fragments of Voyages and Travels, including Anecdotes of a Naval Life: chiefly for the Use of Young Persons. By Capt. Basil Hall, R.N. F.R.S. 3 vols. 12mo. Edinburgh, 1831, Cadell; London, Whittaker and Co.

THE general national feeling and popular movement towards the navy has, of late years, been eminently sustained and kept alive by various literary works of no common standard. The splendid prose of Southey, so worthily employed on the triumphs of our great naval hero, will never cease, as long as our nation or language have existence, to "revive the old and inspire the young;" while the less ostentatious but more touching record of poor Collingwood's life and services, his unflinching perseverance under wearying difficulties, and patriotic self-devotion to the many deaths of lingering disease, stamp him as a finished model for professional imitation, and the unceasing object of his country's lament. Favourably disposed as the English public thus is to works having for their purpose the development of that cherished but somewhat anomalous character—the British sailor; Captain Hall has not speculated badly on the subject he has chosen for his present literary adventure. His volumes consist of an agreeable *mélange* of autobiography, naval anecdote, and sketches of a somewhat discursive nature, which we have felt much pleasure in perusing, although not perhaps unalloyed with feelings of an opposite nature; for the gallant author here, as elsewhere, contrives, out of charity, to throw a bone to the critics, to preserve the race of snarlers from starvation. But more of this anon. We have enough of agreeable matter, for the time present, to occupy both our own and readers' attention.

The title-page to these volumes indicates their being chiefly intended for young persons; but we are very much mistaken if the race of gray-beards will be the least numerous class among the readers of "midshipmen's pranks," and the humours of the gun-room. To us the following is irresistible.

"During the long winters of our slothful discontent at Bermuda, caused by the peace of Amiens, the grand resource, both of the idle

and the busy, amongst all classes of the Leander's officers, was shooting—that never-ending, still-beginning amusement, which Englishmen carry to the remotest corners of the habitable globe—popping away in all countries, thinking only of the game, and often but too reckless of the prejudices or fears of the natives. This propensity is indulged even in those uninhabited regions of the earth which are visited only once in an age; and if Captain Parry had reached the Pole, he would unquestionably have had a shot at the axis of the earth! In the mean time, the officers and the young gentlemen of the flag-ship at Bermuda, in the beginning of 1803, I suppose to keep their hands in for the war which they saw brewing, and hourly prayed for, were constantly blazing away amongst the cedar groves and orange plantations of those fairy islands, which appeared more and more beautiful after every such excursion. The midshipmen were generally obliged to content themselves with knocking down the blue and the red birds with the ship's pistols, charged with his majesty's gunpowder, and, for want of small shot, with slugs formed by cutting up his majesty's musket-bullets. The officers aimed at higher game, and were, of course, better provided with guns and ammunition. Several of these gentlemen had brought from England some fine dogs—high-bred pointers; while the middies, also, not to be outdone, must needs have a dog of their own: they recked very little of what breed; but some sort of animal they said they must have. I forget how we procured the strange-looking beast whose services we contrived to engage; but, having once obtained him, we were not slow in giving him our best affections. It is true, he was as ugly as any thing could possibly be. His colour was a dirty, reddish yellow; and while a part of his hair twisted itself up in curls, a part hung down, quite straight, almost to the ground. He was utterly useless for all the purposes of real sport, but quite good enough to furnish the mids with plenty of fun when they went on shore—in chasing pigs, barking at old, white-headed negroes, and other amusements, suited to the exalted taste and habits of the rising generation of officers. People will differ as to the merits of dogs; but we had no doubts as to the great superiority of ours over all the others on board, though the name we gave him certainly implied no such confidence on our part. After a full deliberation, it was decided to call him Shakings. Now, it must be explained that shakings is the name given to small fragments of rope yarns, odds and ends of cordage, bits of oakum, old lanyards,—in short, to any kind of refuse arising out of the wear and tear of the ropes. This odd name was perhaps bestowed on our beautiful favourite in consequence of his colour not being very dissimilar to that of well-tarred Russia hemp; while the resemblance was increased by many a dab of pitch, which his rough coat imbibed from the seams between the planks of the deck, in the hot weather. If old Shakings was no great beauty, he was, at least, the most companionable of dogs; and though he dearly loved the midshipmen, and was dearly beloved by them in return, he had enough of the animal in his composition to take a still higher pleasure in the society of his own kind. So that, when the high-bred, showy pointers belonging to the officers came on board, after a shooting excursion, Mr. Shakings lost no time in applying to them for the same. The pointers, who liked this sort of familiarity very well, gave poor Shakings all sorts of encouragement. Not so their masters;

—they could not bear to see such an abominable cur, as they called our favourite, at once so cursedly dirty and so utterly useless, mixing with their sleek and well-kept animals. At first their dislike was confined to such insulting expressions as these; then it came to an occasional kick, or a knock on the nose with the but-end of a fowling-piece; and lastly, to a sound cut with the hunting-whip. Shakings, who instinctively knew his place, took all this, like a sensible fellow, in good part; while the mids, when out of hearing of the higher powers, uttered curses both loud and deep against the tyranny and oppression exercised against an animal which, in their fond fancy, was declared to be worth all the dogs in the ward-room put together. They were little prepared, however, for the stroke which soon fell upon them, perhaps in consequence of these very murmurs. To their great horror and indignation, one of the lieutenants, provoked at some liberty which Master Shakings had taken with his newly-polished boot, called out, one morning—'Man the jolly-boat, and land that infernal, dirty, ugly beast of a dog belonging to the young gentlemen!' 'Where shall I take him to, sir?' asked the strokesman of the boat. 'Oh, any where; pull to the nearest part of the shore, and pitch him out on the rocks. He'll shift for himself, I have no doubt.' So off went poor dear Shakings! If a stranger had come into the midshipmen's birth at that moment, he might have thought his majesty's naval service was about to be broken up. All allegiance, discipline, or subordination, seemed utterly cancelled by this horrible act. Many were the execrations hurled upwards at the offending 'knobs,' who, we thought, were combining to make our lives miserable. Some of our party voted for writing a letter of remonstrance to the admiral against this unheard-of outrage; and one youth swore deeply that he would leave the service, unless justice were obtained. But as he had been known to swear the same thing half-a-dozen times every day since he joined the ship, no great notice was taken of this pledge. Another declared, upon his word of honour, that such an act was enough to make a man turn Turk, and fly his country! At last, by general agreement, it was decided that we should not do a bit of duty, or even stir from our seats, till we obtained redress for our grievances. However, while we were in the very act of vowing mutiny and disobedience, the hands were turned up to 'furl sails!' upon which the whole party, totally forgetting their magnanimous resolution, scudded up the ladders, and jumped into their stations with more than usual alacrity, wisely thinking, that the moment for actual revolt had not yet arrived. A better scheme than throwing up the service, or writing to the admiral, or turning Mussulmen, was afterwards concocted. The midshipman who went on shore in the next boat easily got hold of poor Shakings, who was howling on the steps of the watering place. In order to conceal him, he was stuffed, neck and crop, into the captain's cloak-bag, brought safely on board, and restored once more to the bosom of his friends. In spite of all we could do, however, to keep Master Shakings below, he presently found his way to the quarter-deck, to receive the congratulations of the other dogs. There he was soon detected by the higher powers, and very shortly afterwards trundled over the gangway, and again tossed on the beach. Upon this occasion he was honoured by the presence of one of his own masters, a middy, sent upon this express duty, who was specially desired to land the brute, and not to

bring him on board again. Of course, this particular youngster did not bring the dog off; but, before night, somehow or other, old Shakings was snoring away, in grand chorus with his more fashionable friends the pointers, and dreaming no evil, before the door of the very officer's cabin whose beautifully-polished boots he had brushed by so rudely in the morning,—an offence that had led to his banishment. This second return of our dog was too much. The whole posse of us were sent for on the quarter-deck, and in very distinct terms positively ordered not to bring Shakings on board again. These injunctions having been given, this wretched victim, as we termed him, of oppression, was once more landed amongst the cedar groves. This time he remained a full week on shore; but how or when he found his way off again, no one ever knew—at least no one chose to divulge. Never was there any thing like the mutual joy felt by Shakings and his two dozen masters. He careered about the ship, barked and yelled with delight, and, in his raptures, actually leaped, with his dirty feet, on the milk-white duck trousers of the disgusted officers, who heartily wished him at the bottom of the anchorage! Thus the poor beast unwittingly contributed to accelerate his hapless fate, by this ill-timed shew of confidence in those who were then plotting his ruin. If he had kept his paws to himself, and staid quietly in the dark recesses of the cock-pit, wings, cable-tiers, and other wild regions, the secrets of which were known only to the inhabitants of our sub-marine world, all might yet have been well. We had a grand jollification on the night of Shakings' restoration; and his health was in the very act of being drunk, with three times three, when the officer of the watch, hearing an uproar below, the sounds of which were conveyed distinctly up the windsail, sent down to put our lights out; and we were forced to march off, growling, to our hammocks. Next day, to our surprise and horror, old Shakings was not to be seen or heard of. We searched every where, interrogated the cockswains of all the boats, and cross-questioned the marines who had been sentries during the night on the fore-castle, gangways, and poop; but all in vain!—no trace of Shakings could be found. At length the idea began to gain ground amongst us, that the poor beast had been put an end to by some diabolical means; and our ire mounted accordingly. This suspicion seemed the more natural, as the officers said not a word about the matter, nor even asked us what we had done with our dog. While we were in this state of excitement and distraction for our loss, one of the midshipmen, who had some drollery in his composition, gave a new turn to the expression of our thoughts. This gentleman, who was more than twice as old as most of us, say about thirty, had won the affections of the whole of our class, by the gentleness of his manners, and the generous part he always took on our side. He bore amongst us the pet name of Daddy; and certainly he was like a father to those amongst us who, like myself, were quite adrift in the ship, without any one to look after them. He was a man of talents and classical education, but he had entered the navy far too late in life ever to take to it cordially. His habits, indeed, had become so rigid, that they could never be made to bend to the mortifying kind of discipline which it appears essential every officer should run through, but which only the young and light-hearted can brook. Our worthy friend, accordingly, with all his abilities, taste, and acquirements, never seemed at home on board ship; and unless a man can

reach this point of liking for the sea, he is better on shore. At all events, old Daddy cared more about his books than about the blacks, and delighted much more in giving us assistance in our literary pursuits, and trying to teach us to be useful, than in rendering himself a proficient in those professional mysteries, which he never hoped to practise in earnest himself. What this very interesting person's early history was, we never could find out; nor why he entered the navy; nor how it came, that a man of his powers and accomplishments should have been kept back so long. Indeed, the youngsters never inquired too closely into these matters, being quite contented to have the advantage of his protection against the oppression of some of the other oldsters, who occasionally bullied them. Upon all occasions of difficulty, we were in the habit of clustering round him, to tell our grievances, great and small, with the certainty of always finding in him that great desideratum in calamity—a patient and friendly listener. It will easily be supposed, that our kind Daddy took more than usual interest in this affair of Shakings, and that he was applied to by us at every stage of the transaction. He was sadly perplexed, of course, when the dog was finally missing; and, for some days, he could give us no comfort, nor suggest any mode of revenge which was not too dangerous for his young friends to put in practice. He prudently observed, that as we had no certainty to go upon, it would be foolish to get ourselves into a serious scrape for nothing at all. 'There can be no harm, however,' he continued, in his dry and slightly-sarcastic way, which all who knew him will recollect as well as if they saw him now, drawing his hand slowly across his mouth and chin, 'There can be no harm, my boys, in putting the other dogs in mourning for their dear departed friend Shakings; for, whatever is come of him, he is lost to them as well as to us, and his memory ought to be duly respected.' This hint was no sooner given than a cry was raised for crape, and every chest and bag ransacked, to procure badges of mourning. The pointers were speedily rigged up with a large bunch of crape, tied in a handsome bow, upon the left leg of each, just above the knee. The joke took immediately. The officers could not help laughing; for, though we considered them little better than fiends at that moment of excitement, they were, in fact, except in this instance, the best-natured and most indulgent men I remember to have sailed with. They, of course, ordered the crape to be instantly cut off from the dogs' legs; and one of the officers remarked to us, seriously, that as we had now had our piece of fun out, there were to be no more such tricks. Off we scampered, to consult old Daddy what was to be done next, as we had been positively ordered not to meddle any more with the dogs. 'Put the pigs in mourning,' he said. All our crape was expended by this time; but this want was soon supplied by men whose trade it is to discover resources in difficulty. With a generous devotion to the cause of public spirit, one of these juvenile mutineers pulled off his black handkerchief, and, tearing it in pieces, gave a portion to each of the circle, and away we all started to put into practice this new suggestion of our director-general of mischief. The row which ensued in the pig-sty was prodigious—for in those days, hogs were allowed a place on board a man-of-war,—a custom most wisely abolished of late years, since nothing can be more out of character with any ship than such nuisances. As these matters of taste and

cleanliness were nothing to us, we did not intermit our noisy labour till every one of the grumblers had his armlet of such crape as we had been able to muster. We then watched our opportunity, and opened the door so as to let out the whole herd of swine on the main-deck, just at a moment when a group of the officers were standing on the fore part of the quarter-deck. Of course, the liberated pigs, delighted with their freedom, passed in review under the very nose of our superiors, each with his mourning knot displayed, grunting or squealing along, as if it was their express object to attract attention to their domestic sorrow for the loss of Shakings. The officers were excessively provoked, as they could not help seeing that all this was affording entertainment, at their expense, to the whole crew; for, although the men took no part in this touch of insubordination, they were ready enough, in those idle times of the weary, weary peace, to catch at any species of distraction or devilry, no matter what, to compensate for the loss of their wonted occupation of pommeling their enemies. The matter, therefore, necessarily became rather serious; and the whole gang of us being sent for on the quarter-deck, we were ranged in a line, each with his toes at the edge of a plank, according to the orthodox fashion of these gregarious scoldings, technically called 'toe-the-line matches.' We were then given to understand that our proceedings were impertinent, and, after the orders we had received, highly offensive. It was with much difficulty that either party could keep their countenances during this official lecture, for, while it was going on, the sailors were endeavouring, by the direction of the officers, to remove the bits of silk from the legs of the pigs. If, however, it be difficult—as most difficult we found it—to put a hog into mourning, it is a job ten times more troublesome to take him out again. Such at least is the fair inference from these two experiments; the only ones perhaps on record,—for it cost half the morning to undo what we had effected in less than an hour—to say nothing of the uncessing and outrageous uproar which took place along the decks, especially under the guns, and even under the coppers, forward in the galley, where two or three of the youngest pigs had wedged themselves, apparently resolved to die rather than submit to the degradation of being deprived of their mourning. All this was very creditable to the memory of poor Shakings; but, in the course of the day, the real secret of this extraordinary difficulty of taking a pig out of mourning was discovered. Two of the mids were detected in the very fact of tying on a bit of black bunting to the leg of a sow, from which the seamen declared they had already cut off crape and silk enough to have made her a complete suit of black. As soon as these fresh offences were reported, the whole party of us were ordered to the mast-head as a punishment. Some were sent to sit on the topmast cross-trees, some on the top-gallant yard-arms, and one small gentleman being perched at the jib-boom end, was very properly balanced abaft by another little culprit at the extremity of the gaff. In this predicament we were hung out to dry for six or eight hours, as old Daddy remarked to us with a grin, when we were called down as the night fell. Our persevering friend, being rather provoked at the punishment of his young flock, now set to work to discover the real fate of Shakings. It soon occurred to him, that if the dog had really been made away with, as he shrewdly suspected, the butcher, in all probability, must have had a hand in his murder;

accordingly, he sent for the man in the evening, when the following dialogue took place:—'Well, butcher, will you have a glass of grog to-night?' 'Thank you, sir, thank you. Here's your honour's health!' said the other, after smoothing down his hair, and pulling an immense quid of tobacco out of his mouth. Old Daddy observed the peculiar relish with which the butcher took his glass; and mixing another, a good deal more potent, placed it before the fellow, and continued the conversation in these words: 'I tell you what it is, Mr. Butcher—you are as humane a man as any in the ship, I dare say; but, if required, you know well, that you must do your duty, whether it is upon sheep or hogs?' 'Surely, sir.' 'Or upon dogs, either?' suddenly asked the inquisitor. 'I don't know about that,' stammered the butcher, quite taken by surprise, and thrown all aback. 'Well—well,' said Daddy, 'here's another glass for you—a stiff north-wester. Come! tell us all about it now. How did you get rid of the dog?—of Shakings, I mean?' 'Why, sir,' said the peaching rogue, 'I put him in a bag—a bread bag, sir.' 'Well!—what then?' 'I tied up the mouth, and put him overboard—out of the midship lower-deck port, sir.' 'Yes—but he would not sink?' said Daddy. 'Oh, sir,' cried the butcher, now entering fully into the mercenary spirit of his trade, 'I put a four-and-twenty-pound shot into the bag along with Shakings.' 'Did you?—Then, Master Butcher, all I can say is, you are as precious a rascal as ever went about unchanged. There—drink your grog, and be off with you!' Next morning, when the officers were assembled at breakfast in the ward-room, the door of the captain of marines' cabin was suddenly opened, and that officer, half shaved, and laughing through a collar of soap-suds, stalked out, with a paper in his hand. 'Here,' he exclaimed, 'is a copy of verses, which I found just now in my basin. I can't tell how they got there, nor what they are about;—but you shall judge.' So he read the two following stanzas of doggerel:—

'When the Northern Confederacy threatened our shores,
And roused Albion's lion, reclining to sleep,
Preservation was taken of all the king's stores,
Nor so much a rope yarn was launched in the deep.
But now it is peace, other hopes are in view,
And all active service as light as a feather,
The stores may be d-d, and humanity too,
For SHAKINGS and shot are thrown o'erboard together!'

I need hardly say in what quarter of the ship this biting moral of cock-pit satire was concocted, nor indeed who wrote it, for there was no one but our good Daddy who was equal to such a flight. About midnight, an urchin—who shall be nameless—was thrust out of one of the after-ports of the lower deck, from which he clambered up to the marine officer's port, and the saah happening to have been lowered down on the gun, the epigram, copied by another of the youngsters, was pitched into the soldier's basin. The wisest thing would have been for the officers to have said nothing about the matter, and let it blow by. But angry people are seldom judicious—so they made a formal complaint to the captain, who, to do him justice, was not a little puzzled how to settle the affair. The reputed author, however, was called up, and the captain said to him—'Pray, sir, are you the writer of these lines?' 'I am, sir,' he replied, after a little consideration. 'Then—all I can say is,' remarked the captain, 'they are clever enough, in their way—but take my advice, and write no more such verses.' So the affair ended. The satirist took the captain's hint in good part, and con-

fined his pen to topics below the surface of the water."

[To be continued.]

Major Keppel's Journey across the Balcans, &c.
[Second Notice.]

AT Adrianople Lord Dunlo and Major Keppel (whom we left there at the close of our preceding notice) were hospitably entertained by Mr. Duveluz, the British consul, of whose domestic establishment, &c. we have the subjoined touching story:

"The consul's house is nearly the best in the town. The fate of its preceding occupants is an example of the uncertainty of life in this country. It was successively the property of two brothers. One fell a victim to the plague, when that heavy scourge last visited Adrianople; the other, who succeeded him in his property, was decapitated shortly after, before his own door. Among the servants of the consul is a beautiful Greek of the name of Marigo, who comes nearer to my idea of a Hebe than almost any other woman I ever saw. Moreover, she is not only very pretty, but very good. Her adventures are a picture of the country and times in which she lives. I relate them as I heard them, partly from Mr. Duveluz and partly from her own mouth. She was born at Scio; her father, a man in comfortable circumstances, was remarked for his facetious character, even in that island, the former abode of wit and mirth. At the insurrection of Scio, he was one of the first who fell in that terrible massacre. His unhappy widow, with four children, of whom Marigo was the youngest, fled into the mountains, with a little dry bread and a pitcher of water, and hid themselves in the cavity of one of the highest rocks in the island. They remained unmolested for two days, though they were kept in dreadful alarm by the constant report of fire-arms, the savage yells of the Turks, and the despairing screams of their victims. Their supply of water exhausted, the mother resolved in the dead of night to refill the pitcher; but the courageous little Marigo seized it from her mother's hands, said she would fetch the water, that she was the lightest and smallest of them all, and had the best chance of escaping unseen by the Turks. At midnight she set out on her good and bold enterprise, crept down the rock, and arrived at a spring, without any further inconvenience than cutting her feet with the sharp stones. As she was returning, she heard voices in the Turkish language near: she threw herself into a field of standing corn. She had been heard and was pursued. The Turks hunted for her with their yatagans. At last one of their party slightly wounded her. It was an old white-bearded negro, who hurried her away towards the town. They stopped at a house, and were admitted by another negro, who proved to be the son of her captor. The younger black immediately conceived a violent affection for the pretty captive: a quarrel between the men was the consequence; and it ended in the father's seizing a pistol and discharging the contents into his son's body. The wretched old man became frantic at what he had done, and mingled his yells of grief with his son's dying groans. The wounded man soon expired: the old father then opened the window, took up the corpse, and flung it into the street. He now became more furious than ever. At length he seized Marigo by her hair, dragged her into the street, and offered her for sale. Haji Baba, a nefarious slave-dealer of Adrianople, bought her for a handful of paras (a few pence), and took her to his dépôt, where she found a

number of companions in misfortune, who, together with herself, were put into a large boat, and landed at Gallipoli, whence she was brought to Adrianople. Here she had the happiness to fall into the hands of my excellent friend Mr. Duveluz, who redeemed her. Ever since, he has treated her like a daughter, and she repays his goodness with a daughter's love. Several of Marigo's companions in misfortune were sold in the Dardanelles to Turks, though Haji Baba had assured them that he intended to take them to Adrianople, and to dispose of them only to Christians. The greater portion, however, were brought to Adrianople. On his arrival, Haji Baba waited upon the consul, as the Christian subjects of the Porte did not dare to deal with him; and he himself was under the same apprehensions of treating openly with him for his slaves. The consul requested to see them. He was conducted to the place where they were confined. He describes it as the most heart-rending scene he ever beheld. They were the true picture of misery. Pale, emaciated, sickly, dirty, and in rags, they all flocked round him, and, with the most ardent prayers, begged he would redeem them. The voice of misery never pleaded in vain to my kind-hearted friend. He purchased the redemption of the six youngest, four of them (amongst whom was the pretty Marigo) he sent to Mrs. Duveluz, and consigned the care of the two others to his shoemaker, a married man, and an Ionian. In a very few days, through the assistance of the Greek archbishop of Adrianople, together with what he himself could spare, he obtained the liberty of all the poor creatures. Some were comfortably placed in Christian families; and several of the young girls Mr. Duveluz had the satisfaction of marrying well in the town, and of restoring others to their relations, who had escaped to different parts of Greece. Mr. and Mrs. Duveluz brought Marigo's mother from Smyrna in 1828. Her two sons, although the consul offered nine thousand piasters for their ransom, to a Turk at Cassaba, near Smyrna, he could never prevail upon him to sell them; and the Mahometan has since induced them to conform to his religion. Marigo's sister has never been heard of. It is not fair to throw the whole odium of the massacre at Scio on the Turks, inasmuch as it was brought on the Greeks entirely by themselves. The following remarks are from Sir Pulteney Malcolm's dragoman, one of the sufferers who was sent into slavery to Smyrna, and purchased by Captain Hamilton, of the Cambrian, for one or two dollars. At the time of the insurrection in Samos, the Greeks and Turks in Scio were living on the most friendly terms, and it was the general wish of the inhabitants to continue so; the Turks consequently refused to take any part in the struggle, and communicated their resolution to the constituted authorities. Greek deputies from Samos arrived, and constantly succeeded in raising disturbances, in which some Turks were killed, and hostilities then began, which ended in a general massacre. The Greeks were the aggressors, and took advantage of the state of security in which the few Turks in the island were living. The interference of the Turks with the Sciotes, previous to their insurrection, was confined to a small garrison in the castle, and a tribute paid in mastic to the seraglio. The prosperous state of the island is a proof how little they were molested. The Sciotes had few, if any, sailors amongst them; their ships, which were numerous, were manned by Ipsariotes. On the breaking out of the troubles, the ships were

withdrawn to Ipsara. At the massacre, numbers who escaped from the town fled to the other side of the island, opposite Ipsara, from which it is separated by a very narrow channel. The deplorable situation of Scio was perfectly well known; and these unhappy fugitives, by their cries and motions, endeavoured to persuade the Ipsariotes to come over and carry them away; not a boat shoved off, and, in sight of their own vessels, the unfortunate Sciotes were either massacred by the Turks, or obliged to throw themselves off the rocks into the sea; numbers, especially the women, preferred the latter alternative. By this treachery the Ipsariotes kept possession of the ships, whose owners were no longer in existence, and to obtain which, they stained their name with a crime of which history hardly affords a parallel. The day of retribution soon arrived, and Ipsara is now almost a desert island,—a few straggling houses are the only remains of a once flourishing town; and an occasional pirate-boat, the only vessel seen coming out of a port once the most frequented and busy of the Levant.

"We heard," continues the author, a few pages on, "this morning of a whimsical mistake of identity which occurred a few days before, and is the common talk of the town. An officer in Uhlan's corps of cavalry, well known to the consul, was walking along the streets, when a Bulgarian woman rushed out of her house, and ran towards him, exclaiming, 'My dear boy! what! now that you are in a fine dress, are you ashamed of your poor mother?' Soon after, an older woman claimed him for her grandson, and the younger branches of the family hailed him as a brother. He managed to make his escape for the time; but in passing shortly after through the streets, he was upbraided for his unnatural conduct in disowning his relations. Thus assailed, he applied to Count Diebitzsch for protection. An inquiry was established through the medium of the Bulgarian archbishop. The parties were confronted; the supposed mother called out, 'If it be my son, he has a scar on the left side of his forehead.' The officer's cap was removed, and, strange to say, the scar on the identical spot appeared. The woman triumphantly exclaimed, 'He had that scar when he was eight years old.' Here several Russian officers interposed, and said that the officer had left St. Petersburg without the scar, and had received it in an affair with the enemy before Shumla. Thus ended this comedy of errors."

"A bright-eyed young Greek lady was so obliging as to indulge our curiosity by appearing before us this morning in the dress of the last new fashion from the grand signior's seraglio. This habit is called *antari*: the upper part, or what ladies call the body, fits close to the shape, and shows the form very distinctly, the neck and chest being only covered with a thin gauze; the lower part of the dress is divided into three long lappets, which trail on the ground, one behind and two in front; the hinder one is two feet, and the two before each one foot broad. When the wearer walks, she places the two lappets between her legs, which, together with her capacious trousers, oblige her to make a stride at each step as if she were crossing a gutter. This fashion, which is of the sultan's especial choice, is of one colour; his sublime highness being a great lover of uniformity in the dress as well as in the complexion of his ladies: thus, he is said to be proof against the most fascinating dark eyes, if the hair and skin of the possessor be not found to correspond. The tightness of the

body of the dress is made in imitation of European fashions: as a further mark of his admiration of them, the sultan has lately put the whole seraglio into stays: a Turkish lady recently arrived from Constantinople wears a very tight pair, and is said to be of a most waspish shape, very different from that rotundity of form of which Ottoman ladies used formerly to be so proud. In the evening, the dragoman of the consulate and his wife came to pay their respects to Mrs. Duveluz. The lady is one of the belles of Adrianople, and looked exceedingly well in the head-dress of the country—an embroidered handkerchief, round which the hair is fantastically but not ungracefully wove. The fate of her father was that of which a parallel instance might be brought forward in most of the leading Greek families of Adrianople. He was beheaded in the first year of the Greek revolution; his alleged crime was wearing the *jes* or red cap, the distinguishing mark of the Turk. We heard that one day, the weather being warm, he had taken off the *calpac*, and had kept on the small red skull-cap which is generally worn under it: but in all probability the accusation was only a pretext for his execution: his situation as one of the principal Greek merchants would naturally have subjected him to the suspicion of being an accessory to the revolt; and, in such cases, a less offence would have ensured his doom."

The following very remarkable anecdote is told of the signature of the treaty between Russia and the Porte:

"The ratification not arriving, an aide-de-camp was despatched to Constantinople, to hurry the signature of the sultan, which had been protracted for a considerable time. I must digress for a moment, to mention the reason of the delay, since it is characteristic of the monarch, who is alleged to have risen above the prejudices of his nation. The paper on which these documents are generally written is gilded and painted in a particular manner. Unfortunately, none of the precious material was ready; and some days were required to manufacture it. It was in vain that they represented to the sultan the necessity of the signature, and not of the gilded paper. Nothing would move him. Like the King of Spain, who died of heat because the proper attendant was not by to remove his chair from the fire, this enlightened 'king of kings' ran the risk of having his capital taken, rather than infringe the slightest iota of etiquette. At last, the document, duly bedizened and gilded, made its appearance; and lucky was it for the sultan that he did so, for the Russian general fully intended to have advanced on the capital at all hazards, if the ratification had not opportunely made its appearance."

Of Turkish fortune-telling we have an amusing specimen.

"A sly-looking old dervish, of reputed sanctity, came to-day to tell our fortunes. His nonsense is only worth recording as shewing the universal prevalence of similar superstitions. After making a numerical calculation of the letters of our names, he read our destinies out of a book. Lord Dunlop's star was in the sixth heavens. The writer in the second heaven had decided that Wednesday is his fortunate day. He will be a rich and great man. His commands will be obeyed, as those of a king. He will have many enemies. He will have strife with those with whom he eats bread and salt. If he have a charm on his right arm, the good *peri* (fairy) will protect him. He had an illness at two years old; he

has since been in health, and will die at a good old age. My fortunate day is Friday. The evil eye has power over me. My heart is as light as the wind. I am impatient, if my orders are not instantly obeyed. My existence will be happy. I have royal blood in my veins. I am anxious about some lady. I also have enemies amongst the eaters of my bread and salt. A person whom I have benefited tries to injure me, but will neither succeed in this world nor the next. I make the best of every thing. Late in life I am to go to the holy land. My guardian angel's seal will protect me from the evil eye and evil tongue. I am to marry three, six, or nine wives. It is to be hoped, that, if I must fulfil this last part of my destiny, my guardian angel's seal will protect me from the penalty which the laws of my country will inflict for such an indulgence."

For the present, we must conclude with a description of the famous Russian general, now so conspicuous on the Polish theatre.

"Field-Marshal Count Diebitsch is a little, fat, plethoric-looking man, something less than five feet high; he has a very large head, with long black hair, small piercing eyes, and a complexion of the deepest scarlet, alike expressive of his devotion to cold punch, and of a certain irascibility of temper, which has elicited from the troops, to his proud title of *Zabal-cansky* (or the Trans-Balkanian), the additional one of the *Semavar* (or the tea-kettle). I have said that Count Diebitsch owes his fortune to his face; the sequel will shew how. He is the second son of a Prussian officer, who was on the staff of Frederic. At an early age he entered the Russian army, and obtained a company in the imperial guard. It was at this time that the King of Prussia came on a visit to the Russian autocrat, and it so happened that it was Captain Diebitsch's tour of duty to mount guard on the royal visitor. The emperor foresaw the ridiculous figure the little captain would cut at the head of the tall grenadiers, and desired a friend delicately to hint to him that it would be agreeable to his imperial master if he would resign the guard to a brother officer. Away goes the friend, meets the little captain, and bluntly tells him, that the emperor wishes him not to mount guard with his company; for, *adieu*, he, l'empereur dit, *et il faut convenir, que vous avez l'extérieur terrible*. This 'delicate hint' that his exterior was too terrible to be seen at the head of troops not remarkable for good looks, so irritated the future hero of the Balcan, that, with his natural warmth of temper, he begged to resign, not his tour of duty only, but the commission he held in the Russian army; and being a Prussian, and not a Russian subject, desired to be allowed to return to his native country. The Emperor Alexander, who appears to have formed a just estimate of his talents, easily found means to pacify him, by giving him promotion in the line. He has subsequently made himself so useful in that part of the service, where beauty was not indispensable, that the late emperor placed him at the head of the general staff, which situation he held when the reigning emperor appointed him to succeed Count Wittgenstein in the chief command." He is a Protestant.

Having with this portrait finished all we intend to do for the illustration of Vol. I., we shall reserve a short notice of the second for another *Gazette*. Meanwhile, we most heartily recommend the work as a treat to our readers.

Beechey's Voyage to the Pacific.

(Third notice: Conclusion.)

At Bow Island.

"Previous to the arrival of the missionary, every one had his peculiar deity, of which the most common was a piece of wood with a tuft of human hair inserted into it; but that which was deemed most efficacious, when it could be procured, was the thigh-bone of an enemy, or of a relation recently dead. Into the hollow of this they inserted a lock of the same person's hair, and then suspended the idol to a tree. To these symbols they address their prayers as long as they remained in favour; but, like the girl in China, who, when disappointed by her lover, pulled down the brazen image and whipped it, these people when dissatisfied with their deity, no longer acknowledged his power, and substituted some other idol. There were times, however, when they feared its anger, and endeavoured to appease it with cocoa-nuts; but I did not hear of any human sacrifices being offered. They appeared to entertain the Pythagorean doctrine of the transmigration of the soul, and supposed the first vessel which they saw, to be the spirit of one of their relations lately deceased."

We pass by Otaheite, as being pretty well known to the majority of readers, and have only to notice with regret that Capt. B. represents the natives as being less improved than could have been hoped from their intercourse with Europeans. Nor shall we pause at the Sandwich Islands, but adventure on for Kamschatka. On the 10th of July, 1826, Beering's Island was seen from the Blossom: on the 22d, the ship entered Kotzebue Sound; and here the description of the natives presents another variety.

"We were (says the author) visited by several baidars, containing from ten to thirteen men each, whose object was to obtain articles in exchange. They were in every respect similar to the natives of Schismareff Inlet, though rather better looking, and were all, without exception, provided with labrets, either made of ivory and blue beads, as before described, or ivory alone, or of different kinds of stone, as steatite, porphyry, or greenstone: they readily disengaged these from their lips, and sold them, without minding the inconvenience of the saliva that flowed through the badly cicatrized orifice over the chin; but rather laughed when some of us betrayed disgust at the spectacle, thrusting their tongues through the hole, and winking their eyes. One or two had small strings of beads suspended to their ears. The articles they brought off were, as before, skins, fish, fishing implements, and nic-nacs. Their peltry consisted of the skins of the seal, of the common and arctic fox, the common and muskrat, the marten, beaver, three varieties of ermine, one white, one with a light brown back and yellow belly, and the third with a gray back spotted white and yellow; the American otter, the white hare, the polar bear, the wolf, the deer, and the badger. Their fish were salmon and herrings: their implements, lances, either of stone or of a walrus tooth fixed to the end of a wooden staff; harpoons precisely similar to the Esquimaux; arrows; drills; and an instrument, the use of which was at first not very evident. It was part of a walrus tooth, shaped something like a shoe-horn, with four holes at the small end communicating with a trough, that extended along the middle of the instrument and widened as it neared the broad part. From the explanation given of it by the natives, it was evidently

used to procure blood from dying animals, by inserting the end with the holes into the wound, and placing the mouth at the opposite end of the trough to receive the liquid as it flowed. From the satisfaction that was evinced by the describer during the explanation, it is evident that the blood of animals is as much esteemed by these people as by the eastern Esquimaux. On the outside of this and other instruments there were etched a variety of figures of men, beasts, and birds, &c. with a truth and character which shewed the art to be common among them. The reindeer were generally in herds: in one picture they were pursued by a man in a stooping posture in snowshoes; in another he had approached nearer to his game, and was in the act of drawing his bow. A third represented the manner of taking seals with an inflated skin of the same animal, as a decoy: it was placed upon the ice, and not far from it was a man lying upon his belly, with a harpoon ready to strike the animal when it should make its appearance. Another was dragging a seal home upon a small sledge; and several baidars were employed harpooning whales which had been previously shot with arrows: and thus by comparing one with another, a little history was obtained which gave us a better insight into their habits than could be elicited from any signs or intimations."

On the 25th the expedition reached Chamisso Island, where the instructions were to await the arrival of Captain Franklin; it was five days later than the time agreed upon, but as no signs of Franklin were to be seen, Captain B., after taking precautions for his guidance, should he arrive during his absence, proceeded to coast along the farther shores. Of the people he says,—

"The persons of our new acquaintance were extremely diminutive, dffty, and forbidding. Some were blind, others decrepit; and, dressed in greasy worn-out clothes, they looked perfectly wretched. Their hospitality, however, was even greater than we could desire; and we were dragged away by the wrists to their hovels; on approaching which we passed between heaps of filth and ruined habitations, filled with stinking water, to a part of the village which was in better repair. We were then seated upon some skins, placed for the purpose; and bowls of blubber, walrus, and unicorn flesh (*monodon monoceros*), with various other delicacies of the same kind, were successively offered as temptations to our appetite, which, nevertheless, we felt no inclination to indulge. After some few exchanges, the advantage of which was on the side of our acquaintances, who had nothing curious to part with, an old man produced a tambourine, and seating himself upon the roof of one of the miserable hovels, threw his legs across, and commenced a song, accompanying it with the tambourine, with as much apparent happiness as if fortune had imparted to him every luxury of life. The vivacity and humour of the musician inspired two of the old hags, who joined chorus, and threw themselves into a variety of attitudes, twisting their bodies, snapping their fingers, and smirking from behind their seal-skin hoods, with as much shrewd meaning as if they had been half a century younger. Several little chubby girls, roused by the music from the subterranean abodes, came blinking at the daylight through the greasy aperture of the roof, and joined the performance; and we had the satisfaction of seeing a set of people happy who did not seem to possess a single comfort upon earth."

The following is curious among these sa-

vages, and might send us back to ancient times for omens of a similar kind:—

"A singular method of deciding a bargain was resorted to by one of their party, almost equivalent to that of tossing up a coin. We had offered an adze for a bundle of skins; but the owner, who at first seemed satisfied with the bargain, upon reflection became doubtful whether he would not be the loser by it; and to decide the doubtful point, he caught a small beetle, and set it at liberty upon the palm of his hand, anxiously watching which direction the insect should take. Finding it run towards him, he concluded the bargain to be disadvantageous to him, and took back his goods."

The accounts of the Esquimaux met on the adjacent coasts are extremely interesting; and so are the details of the boat expedition up Kotzebue Sound, adding seventy miles to our knowledge of the coast,* and the near approach of a meeting with Capt. Franklin. But in the correspondence, to which we referred at the commencement of the review, we have gone so much into these particulars, that we may content ourselves with a general reference to them, and to repetition of our highest praise of Capt. Beechey's volume.

On his return homeward, our intelligent and gallant countryman continued to enlarge our geographical and useful knowledge, by visiting and examining many parts very imperfectly described by antecedent travellers; and has thrown the charms of interest and literature over the whole. His work is thus a lasting monument of his own abilities, and an honour to his country. Our limits, indeed, enable us to do it but scant justice; yet we trust we have said enough to shew that it combines in an eminent degree those qualities which are well calculated to delight the general reader, while they gratify the lover of literature and inform the man of science. Neither are the fine arts neglected; for the designs and drawings, excellent in their original forms, are here admirably multiplied by the burins of E. Finden and other distinguished artists. To conclude, we have not seen a production which could reflect greater lustre upon the talents and character of an individual than this does upon the talents and character of Capt. Beechey.

Scientific School Copies. Selected and written by J. Netherclift. Souter.

It is justly remarked by Mr. Netherclift, in the modest advertisement prefixed to his valuable publication, that "the subjects of the school copies now generally in use impart but little information to the mind, and the great portion of time necessarily occupied in the writing-lesson is thus spent merely in the acquirement of a mechanical art. But the experience of the author (as a private teacher) has fully proved, that by directing the pupil's attention in his writing exercise to copies in which short definitions, theorems, explanations of the terms, &c. relating to science, are repeatedly before his eye; his memory will be gradually stored with the first principles of knowledge, which are calculated so materially to facilitate the higher branches of his education." We entirely agree with Mr. Netherclift; and we cannot too strongly recommend his ingenious and well-executed *Scientific School Copies* to the attention of those engaged in the education of youth. The first and second series of these copies are now before us, which are respectively devoted to astronomical and geometrical definitions. As specimens of calligra-

* The whole distance left unexplored is only 146 miles.

phy, they are beautifully executed; and the cheapness at which they are published is extraordinary—the price charged for a piece of large and small-hand writing being only "one half-penny." As Mr. Netherclift's is a clever original work, of which no doubt there will be many imitations, we feel bound in honesty to commend his labours especially to the notice and patronage of the heads of schools, at whose hands he certainly merits reward.

The Omnipresence of the Deity. By Robert Montgomery. Tenth edition. London, S. Maunders.

A new edition of this very popular poem printed as a school-book; in which form it has been introduced into several highly respectable seminaries. We much approve of the plan, and strongly recommend it to teachers.

Fables of the Day; written and arranged for the Artless of all Ages, by Francis Fitz-Esop. 18mo. Pp. 117. London, S. Maunders.

THERE is both pith and whim in this modern version of fables, which are satirically directed to concerns and topics of the day. The first fifty pages are a fling at Mr. St. John Long; the Two Cocks, in the next, are the Duke of Wellington and Lord Grey. The Deformed Ape is a progeny between superstition and bigotry, and shews up O'Connell. The Feud of the Furniture is a droll illustration of reform; and the whole will afford half an hour's amusement to the lovers of caricature, and a laugh at the times.

The Didoniad, a semi-Virgilian Nautic Epic, in nine Cantos. By Paul Hudiger, Esq., late Lieut. R.N., 12mo. Pp. 278. Edinburgh, H. Constable; London, Hurst and Co.

WE confess this poem is far too poluphloisio-biotico-thalassical for us: we cannot understand it, though it is evidently meant for humour, and does shew scintillations, where the expressions are intelligible, which is not the case with the general scope. There ought to be a key, if there really is any thing to decipher.

The Infant Teacher's Assistant, for the use of Schools and Private Families; or, Scriptural and Moral Lessons for Infants; with Observations on the Manner of using them. By T. Bilby and R. B. Ridgeway, Masters of the Chelsea and Hart Street Infant Schools. 18mo. pp. 112. London, 1831.

WE most cordially recommend this little volume, which displays much industry and judgment in its arrangement. Brief and appropriate texts from Scripture—hymns—short poems, containing some simple lesson of morality, or something of general information—questions on different points of sacred history—the first elements of arithmetic—various branches of common and useful knowledge—are here collected in the most plain and distinct form, such as the most childish capacity would be capable of comprehending. The writers well remark on the difficulty of fixing, without wearying, infant attention; and we must say the methods here set forth appear to us to be excellent. Few persons but must be aware of the existence of those admirable institutions, the Infant Schools. The anxiety spared the parents, the benefits conferred on the children, are too obvious to need prolonged mention. This little work is the production of two masters, who thus submit to the public the results of a plan they have themselves found

to work well; and we must say it is simple, attractive, and various. We would particularly call to the attention of our country readers. To many a village school, a volume whose lessons are so easily understood and adopted, as are those of the one before us,—to many a village school, it would be invaluable.

A Key to the Genders of French Nouns. By F. de Brandecourt B.—London. J. Johnstone.

THIS slight pamphlet is founded on Professor Lemarc's system, and appears very well calculated to assist the learner in one of the great difficulties of the French language, its genders. We must say, however, that the price, eighteenpence, for scarcely two dozen pages, is quite ridiculous.

The Siege of Constantinople; in Three Cantos, with other Poems. By Nicholas Michell. Pp. 81. London, 1831. Smith, Elder, and Co.

A MODEL is to a poet what a false beacon is to a mariner. Lord Byron has evidently been Mr. Michell's idol; and in imitation he has merged all originality. *The Siege of Constantinople* is a large and faint shadow of *The Siege of Corinth*; and the renegade hero is of the *Lara* and *Ginour* school. Still, there is a spirit about his dedication that we like; and our best justice will be to quote its conclusion.

"Having entered the lists of poetry, should I be foiled at the first onset, I may probably, like a true knight, who, as Cid Hamete's hero says, 'though he be vanquished to-day, may conquer to-morrow,' reset my lance in rest, and venture another encounter."

Neatly bound in cloth, and as neatly printed, this volume is got up in a style very creditable to its publishers.

ORIGINAL CORRESPONDENCE.

To the Editor of the Literary Gazette.

SIR,—Observing in the *Literary Gazette* of last week a notice of Mr. Young's account of the change of colour in the plumage of birds from fear, I have been induced to mention some circumstances which, among others, fell under my own observation, and from which I am led to conclude that such changes among the volatile tribes are not so rare as may be imagined, and are often produced by disease, as well as by other mental passions besides terror.

Without referring to the celebrated *Jacobite* goldfinch of Miss Cicely Scott, which the good old maiden of Carubber's Close affirmed became of a deep sable hue on the day of Charles's martyrdom,—though doubtless the natural philosopher would have discovered in this some more efficient cause than respect for the royal sufferer!—I myself recollect a partial change in the colour of a fine green parrot, belonging to Mr. Rutherford, of Ladfield. Like Miss Scott, the laird of Ladfield was a staunch adherent of the house of Stuart, and to his dying day cherished the hope of beholding their restoration to the throne of Britain.

In the mean time, Mr. Rutherford amused his declining years by teaching Charley to whistle "The king shall hae his ain again," and to gibber "Send the old rogue to Hanover," for which he was always rewarded by a sugar-plum or a dole of wassail (Scotch short-bread). Those Epicurean indulgences at length induced a state of obesity; and so depraved became the appetite of the bird, that, rejecting his natural food, he used to pluck out the feathers from

those parts of the back within his reach, and bruise them with his bill, to obtain the oily substance contained in the quills.

The feathers which grew on the denuded parts were whitish, and never resumed their natural hue. I often saw Charley long after the death of his master, and he looked as if Nature, in one of her sportive moods, had created him half parrot, half gosling,—so strangely did his whitish back and tail contrast with his scarlet poll and brilliant green neck.

A still more remarkable change of colour in a lark, belonging to Dr. Thomas Scott of Fanash, occurred under my own eye, and which, I have no doubt, was produced by grief at being separated from a mavis. Their cages had long hung side by side in the parlour, and often had they striven to out-rival each other in the loudness of their song; till their minstrelsy became so stunning, that it was found necessary to remove the laverock to a drawing-room above stairs.

The poor bird gradually pined, moped, and ceased its song. Its eyes grew dim, and its plumage assumed a dullish tint, which, in less than a fortnight, changed to a deep black.

The worthy physician watched with the eye of a naturalist this phenomenon; but, after a while, fearing for the life of his favourite, he ordered it to be replaced alongside its companion.

In a short time it resumed its spirits and its song—recommended its rivalry with the mavis—but, after every moulting, the new feathers were always of the same coal-black colour.

The mavis evinced no corresponding feeling of attachment—neither, so far as I recollect, missing its companion nor rejoicing at its restoration.

A. C. HALL.

ARTS AND SCIENCES.

ROYAL INSTITUTION.

MR. RITCHIE, lecturer on natural philosophy in the Institution, on elasticity,—particularly the elasticity of torsion. From the nature of the subject, and the manner in which it was handled by Mr. Ritchie, this was an exceedingly interesting lecture. He first gave a general view of the elasticity of matter in its two states, solid and fluid. After describing the method by which Mariette investigated the law for the compression of air, he remarked, that this method could not be employed beyond a very few atmospheres, but that M. Cernsted had, by a powerful condensing apparatus, proved the same law to hold when the air was compressed into the one-sixth part of its original bulk. Mr. Ritchie then stated, that there was a striking deviation from the law, "that the volume into which any quantity of air is compressed is inversely as the compressing force," in the case of those gases which Mr. Faraday has liquefied by simple condensation. When sulphurous acid gas is compressed with a force of about three atmospheres and a half, it is converted into a liquid; and when the pressure exceeds two atmospheres, it begins to give signs of this change of state by deviating from the general law of condensation; or, in other words, it begins to lose a portion of its elastic force. The lecturer then made a few observations on the three kinds of elasticity of solid bodies, namely, the elasticity of compression, the elasticity of tension, and the elasticity of torsion; the last of which formed the principal subject of the lecture. After stating the laws of the elasticity of torsion, discovered by Coulomb, in five wires of iron, brass, silver, &c. he investigated experimentally these laws, as belonging in a perfect degree to threads of

glass. If a fine thread of glass, two or three feet long, be attached to a small handle, and the other end prevented from turning round, it may be twisted two or three hundred times without breaking; and when allowed to untwist itself, it will return exactly to its former position. By attaching a fine thread of glass to the edge of a delicate balance, and fixing the other end securely in a torsion key, and then putting successively equal weights into one of the pans, Mr. Ritchie shewed that the degrees of torsion necessary to raise the weights were directly proportional to the weights employed. By this means the weights of minute portions of matter could be ascertained; which would scarcely be sensible with the finest balances. Mr. Ritchie then shewed the application of this beautiful property to the construction of an electrometer, and proved, from the perfect elasticity of the thread, as well as from its insulating power, the advantage of glass over the finest metallic wires. But the most elegant application of the elasticity of glass was in the construction of an exceedingly delicate galvanometer. A fine magnetic needle is suspended above a coil of wires by a glass thread several feet long, the upper end of which is attached to a torsion-key. A current of voltaic electricity is then made to circulate along the wires, the needle is instantly deflected, the torsion-key is turned round till the deflecting force of the current is vanquished by the elasticity of the glass. The experiment is repeated with different currents, and the degrees of torsion afford an accurate measure of the deflecting forces of the currents. Towards the conclusion of the lecture Mr. Ritchie shewed two beautiful applications of this property in threads of glass, to the experimental demonstration of two properties belonging to a horizontal or vertical pendulum, when deflected or made to vibrate by the magnetic influence of the earth, or simply by the earth's attraction. These properties involve mathematical considerations which could not with propriety be brought before the general reader, but will likely find a place in the more detailed accounts of the evening lectures, contained in the *Journal of the Royal Institution*. Mr. Ritchie remarked, that the galvanometer was so delicate as to detect the slightest difference between alloys of the same metal, and might thus be employed as a test for detecting a base gold coin, or even one having too much silver or copper combined with it.

In the library were many curious pieces of apparatus, laid on the table by M. Bourden, of Paris: one of these was a glass lamp, with argand burner, the supply of oil to which was forced upwards by a pump, consisting of a particular arrangement of glass tubes, containing columns of mercury; and the motive power acting upon this liquid was merely the expansion of air in a glass bulb, alternately carried over and away from the flame. Another apparatus, founded upon the hydrostatic pressure of two columns of liquid, the one continuous and the other broken by air, exhibited a circulating motion for a long while together.—Various works of art, paintings, busts, &c., including presents to the Institution, were also placed on the table, together with samples of Col. Pasley's artificial cements; a specimen of a beautiful little ground parrot, from Australia, sent by the Zoological Society, the introduction of which to this country was noticed in the *Lit. Gaz.* some weeks ago.

NEW PUBLICATIONS.

The Botany of Capt. Beechey's Voyage, &c. &c.
By Dr. Hooker and G. A. W. Arnott, Esq.
Part I. 4to. pp. 48. London, Treuttel and Würtz.

THE first of the scientific adjuncts to the voyage which has recently occupied so many of our pages; and, if we may judge from its commencement, a very valuable addition to botany. The collections were principally made by Mr. Lay, the naturalist to the expedition; but also by the officers generally, and in particular by Mr. Collie. Of the literary portion of such a work we can give no example; and of the plates, ten in number, we need only say, that they are accurately and very prettily engraved.

Flora Boreali-Americana, or the Botany of the Northern Parts of British America. By Dr. Hooker. Part II. 4to. Treuttel and Co.

WE do not remember to have seen the First Part of this work, which is chiefly composed of plants found during Capt. Franklin's expeditions, but with additions from Mr. Douglas's collection. It is every way similar to the preceding, but on a somewhat larger paper, and the plates more numerous.

LITERARY AND LEARNED.

ROYAL SOCIETY.

J. W. LUBBOCK, V.P. and treasurer, in the chair. Two papers were read: the first was a description of Mr. Robinson's mountain-barometer, the column of which is divisible into two portions; communicated by Captain Kater: the second, on water cements, by Col. Pasley. The chairman read a letter from H.R.H. the Duke of Sussex, stating his great regret that, from indisposition, he was unable to take the chair that evening, as he had intended. The chairman also notified the adjournment of the meetings till after Easter. Among the presents were several volumes of memoirs, from the Imperial Academy of Sciences at St. Petersburg; Mr. Ranking's two volumes of Historical Researches; and various numbers of Professor Schumaker's *Astronomische Nachrichten*.

SOCIETY OF ANTIQUARIES.

MR. HAMILTON, V.P. in the chair.—Mr. F. Madden exhibited the matrix and an impression of the seal of the Priory of St. Mary, Southwic, in Hampshire, a remarkably fine specimen of the monastic seals, with splendid Gothic work, in some parts standing out in full relief, distinct from the back ground. Mr. M. observed on the very scanty information hitherto derived as to the manner of making and affixing the impressions of the ancient seal. The seal in question, however, had thrown considerable light upon the subject; and, it appears, that the impressions were formed of two distinct pieces, each half being impressed on both sides,—the interior impression of each piece being made to correspond with openings in the other, through which it might be seen, the two pieces were then united with bits of spiral wire, and the edges of the wax melted together. This accounts for the extraordinary and beautiful hollow work seen in many of the ancient seals. An impression of this seal has been found attached to a document dated in the thirteenth century.—The Secretary commenced the reading of what appeared to be a very long communication, by the Rev. H. M. Grover, on the history, customs, and games, of ancient Greece and Italy. On ac-

count of Passion week and Easter, the meetings of the Society were adjourned to the 14th of April.

ROYAL SOCIETY OF LITERATURE.

THE President in the chair.—The paper read was the conclusion of Mr. Prince Hoare's essay on the moral fame of authors. The justness of the opinion, that there exists an inseparable connexion between the moral and religious sentiments of men of genius and the stability of their literary fame, which the writer maintained upon general grounds in the former portion of his memoir, he further evinced in this second portion from an examination of the moral character of Shakespeare's dramas. After various observations upon the productions of that wonderful bard, in relation to the views advanced, he selected the tragedy of Macbeth as a signal illustration of his principle. Throughout this sublime composition, he shewed that the transcendent powers of the poet are no less apparent in the way in which he attains his object of instilling moral warning and instruction, than in his astonishing delineations of character and passion. The eloquent writer, in conclusion, asserted his belief, as an inference to which he had been led by his subject, that literature is one among the principal means employed by a beneficent Providence for effecting the great moral purposes of his government, in relation to mankind. Viscount Goderich and the Rev. Miles Bland, D.D. were elected members. Various presents to the Society's library were announced.

ROYAL ASIATIC SOCIETY.

SIR ALEXANDER JOHNSTON in the chair. There were read, 1. Remarks on some ancient inscriptions found in Lycia and Phrygia, by Professor Grotefend, of Hanover. Facsimiles of these inscriptions are given by Mr. Walpole, in his *Travels in the East*, with explanations; they were discovered by Messrs. Cockerell, Carlyle, and Col. Leake: they are in the old Etruscan character, and treated of at length by MM. Letronne and Saint Martin; but in the philological part much remains to be done, and to this Professor Grotefend applies himself in his essay. 2. A copy of a Latin inscription found in the great temple at Kalabsher, in Nubia, in 1828, by Captain Rainer, C.B., R.N. It appears to be to the honour of Gallus, a favourite general of the Emperor Hadrian. A transcript has been made by the Rev. H. Drury, of Harrow; and a translation was furnished by Col. Broughton. The latter gentleman having resigned the office of secretary, had a unanimous vote of thanks awarded to him for the valuable services he had rendered to the Society. Mr. Prescott presented his Remarks on the Architecture, Sculpture, and Zodiac, of Palmyra; the chairman some MSS. connected with inquiries made by him while chief justice on the island of Ceylon, at the suggestion of Jacob Bryant, Maurice Heeren, and other eminent antiquaries, respecting places in that island mentioned by Ptolemy, Pliny, and others.

FINE ARTS.

SUFFOLK STREET EXHIBITION.

WE have been much gratified with our private view of this, the eighth, Exhibition of British Artists in Suffolk Street; for it justifies all those anticipations of improvement and success with which we hailed the establishment of this new colony of the arts. We have no hesitation in stating that it far surpasses any former

year. Indeed, there is no department in which it does not display works of extraordinary merit; whether we refer to subjects of general interest, portraits, landscape, familiar life—or to the qualities of fancy, colour, drawing, taste, and other essentials of painting. There are no fewer than 915 Nos. in the catalogue, including two whole-lengths begun by Sir T. Lawrence, and finished by Mr. Simpson. In landscape we have Linton, Hofland, Roberts, Nasmyth, Wilson, Westall, J. W. Allen, Witherington, Childs, J. Ewebank, Earl, C. J. Scott, Maddox, and many others, from the well-known excellence of most of these we have named, to the rapidly rising talent of others. In portraiture, Mr. Lonsdale is eminently conspicuous; and Hurlstone, J. P. Davis, Clint, R. F. Bone, Mrs. Carpenter, Mrs. Pearson, &c. are seen around, his not unworthy associates. Mr. R. B. Davis has a superb chase; Parria, Inskipp, J. Holmes, Prentis, Hart, and Harvey, some sweetly fanciful performances, and others of a yet more ambitious character. Lance is great in the larder; and the domestic circle, whether for whim or feeling, is admirably kept up by Knight, Webster, Fraser, Liverseege, Clater, Kidd, Gill, and Lonsdale, jun. The room with water-colours and miniatures would in itself form a very attractive exhibition; but we have not time to dilate even on the whole, and can only heartily recommend an early visit to all who love to witness the progress and prosperity of the British school.

NATIONAL GALLERY.

THE late Mr. Holwell Carr has bequeathed a splendid collection of Italian pictures of the old masters to the National Gallery. Surely this addition to the treasure already possessed by the country, and likely to be so munificently augmented, will lead to the immediate erection of a building worthy of its reception.

MUSIC.

PHILHARMONIC CONCERTS.

AN oratorio, called the *Last Judgment*, in the original *Die Letzten Dinge*, composed by Spohr, to words selected from the Holy Scriptures by Rochlitz of Leipsic, was the grand and very novel feature of the third Philharmonic Concert, on Monday last. So great an innovation as the introduction of nearly a whole oratorio, to the exclusion of instrumental music,—especially the orchestral symphony, for which the Philharmonic audience has hitherto shewn such a decided predilection,—could not have been hazarded by the directors but under the impression that the work they substituted possessed some very superior qualities. Their bold experiment, we are happy to state, succeeded beyond all expectation. Since the first performance of that oratorio, at Cassel, in 1827, under the composer's own direction, and at the Norwich Music Festival in September last, the most competent judges have come to the conclusion, that it is a work so ingenious in its original conception, so profound and elaborate in its construction, and yet throughout so beautifully adapted to, and descriptive of, the sublimity of the subject, that it must be ranked among the best productions in the sacred style, whether ancient or modern. Here Spohr seems to have been in his very element; and we have always maintained, that the gravely serious, the plaintive and pathetic, are much more suited to his genius than the opposite qualities; more a "mater dolorosa" than a "Fin ch' han dal vino." The overture, the

first part of which is in D minor, the second in D major, is very characteristic, and partakes of the two styles of composition—the sacred and dramatic. The first chorus, "Praise his awful name," and the solo, "Mighty he cometh to judgment," more simple in construction than the following, form a beautiful contrast with the recitative and solo, "Behold the Lamb that was slain!" and "Weep no more." The solo and chorus, "Blessing and honour," have justly been remarked as bearing resemblance, both in the melody and the accompaniments, to Handel's chorus, "The many rend the skies." It is rather light, but very pleasing. A greater claim to particular distinction, for beauty of melody and deep feeling, has the duet, most deservedly encored, "Forsake me not in this dread hour, O God, most merciful." The chorus, "Destroyed is Babylon," is grand and magnificent beyond all description—its effect almost terrific. The quartet, "Blessed are the departed," is as beautiful as it is difficult, and was the second piece encored. The singers, Mrs. W. Knyvett, Messrs. W. Knyvett, Vaughan, and E. Taylor, and also the choir, deserve the highest praise for accuracy and precision in the execution of these extremely difficult pieces, several being written in four sharps and flats, one even in six flats; to say nothing of abrupt transitions and intricate harmonies. Of the other parts of the concert it may suffice to mention Mendelssohn Bartholdy's overture to the "Midsummer Night's Dream," and Mr. Neukomm's *sinfonia* in E flat. The latter is written very much in the easy, pleasing style of Haydn, his master, and was very favourably received. The whole concert produced general satisfaction.

ANCIENT CONCERT.—On Wednesday her Majesty was present at the Ancient Concert. The performances were of a very high order.

On Wednesday, Mr. Philipps's second lecture, at the Royal Academy of Music, was still more numerously attended than the first; and his farther development of the principles of musical instruction, with pleasing vocal examples, was often and much applauded.

THE famous Hummel of Weimar, we are told, is about to pay us another visit, at the latter end of next month, about the time when Paganini is expected.

DRAMA.

THE *Adelphi* and the *Olympic* close this evening for the season. The lessees, male and female, of these true places of entertainment will no doubt hail the termination of their labours, and keep their golden harvest-homes merrily enough. But their small green curtains will fall heavily on our hearts, and their closed box-doors make a dismal blank in our existence. The knowledge of their well-merited success must, however, in some measure console us. The *Wreck Ashore* has proved laden with specie, to the great joy of the dwellers on the Strand; and the roar of *Olympic Revels* (as we predicted) ceases but with the season; *Pandora*

* We are little inclined to find fault, but cannot refrain from hinting to the directors, that in the choruses the tenor voices were too prominent, and the basses not enough so; the effect would have been much improved had this been otherwise. The *Messiah* at Drury Lane theatre was nearly torn to pieces a few evenings since by the screaming of three or four tenors, who seemed disposed to have the affair entirely to themselves; and there was a little of the same fault here on Monday night. These very noisy persons should not be allowed to sing solos.

closing her strong-box upon upwards of three thousand pounds, which the kind gods have netted for her within three months! Mathews and his double, the veritable *Adelphi*, the anything but Sigh-amese twins, we may chance to get a peep at during the spring, in some less dramatic but equally amusing shape: but *Vestris* is lost to us till the first of next October: *Momus* may be "at home" for a few nights, but *Euphrosyne* leaves town for the season. *Venus* will not be an evening star again till the autumn; but she will rise, say the theatrical astronomers, with redoubled splendour. "The lower limb" of this beautiful planet (we speak the language of the observatory) will become visible 7^h 5^m 30^s on the 1st of October, 1831.—Hold! gentle reader, we have been just bitten by an astrologer—what if we continue our observations and predictions, concerning the drama generally, in the true Mooreish style. Listen to the *Vox Stellarum Scenicarum*.

Of the Vernal or Spring Quarter.

According to the meridian of Greenwich, this quarter will commence on Easter Monday, the 4th of April, when Astley's Amphitheatre will be found in 8 (or opposition) to the Surrey, and Drury Lane equally so to Covent Garden. Kean will be lord of the ascendant in the succedent house near Finsbury □; and *Inverarity*, the newly discovered star in the constellation *Lyra*, will be a conspicuous object in the operatic hemisphere. We may expect to hear important news from the east. A deep tragedy is likely to be acted on the other side of Temple Bar—Heaven preserve the lord mayor and aldermen! Some important cavalry movements will take place near Westminster bridge—ay, and in the Haymarket too, if we may trust the appearance of Cooke's troop in the old Tennis-court. A showman, near Greenwich, shall augment his fortune about this time; and let those who run down hill look to their footing. Nearer home we may expect splendid mutations of scenery: a great painter is at work at Drury Lane; and the 6 of Peake with Farley, at Covent Garden, bodes much entertainment to the holiday makers. Let us hope all will go well.

Of the Estival or Summer Quarter.

At this ingress of the Sun into Cancer we have several occultations of the superior planets, in the cadent houses of Drury Lane and Covent Garden. Farren will be in transit to the Haymarket, where he will be an evening star for four months; and that lately observed luminary, Taylor, will be seen rapidly approaching the same star about the end of June. From this favourable aspect we predict that a manager is likely to make money, and a young actress to rise greatly in public estimation. A long-pending cause in Chancery is settled about this time, and the gentlemen of the long robe, who have fattened upon the spoils of their foolish clients, are the only gainers by the decision.

The Autumnal Quarter

Will commence, as we before stated, on the 1st of October, when all the superior planets will be in opposition. We may expect great changes in every part of the theatrical world.

New faces now in every house appear, And minor signs do make the majors fear Something is acting for the public good, Where players can be seen and understood, Malignant aspects stream from Charles's main, And Mars doth glare in angry Leo's mane; Futurity ma's feeble vision mocks, But Hope remains in sweet Pandora's box.

The Winter Quarter, or Brumal Ingress, Begins on Monday, the 26th of December,

when those eccentric bodies, the comet pantomimes, become annually visible in all the signs of the theatrical zodiac;—which is to set the Thames on fire next Christmas, we cannot pretend to say. The most remarkable sign in this quarter is a Δ (or trine) of Abbott, Egerton, and Warde, which is likely to affect the inhabitants of Knightbridge and its vicinity—we hope pleasantly, but time alone can shew. Persons high in office seem disposed to clear up all former misunderstandings. A reform in theatricals is as much wanted as a reform in parliament. Let us hope, then, courteous reader, that a reform play-bill may pass both houses, and calm down the present agitation of the dramatic world.

KING'S THEATRE.

On Thursday night Pacini's far-famed folly, *L'Ultimo Giorno di Pompei*, was produced at this theatre, for the benefit of Signor David; and on Saturday repeated, as we might say, for the benefit of the mechanist, and not of the treasury. The cast was well suited to the composition, and the composition to the cast; for never was vile production so vilely performed. Imagine Castelli, Fihelmi, and Deville, strutting away as "top sawyers" in the scene, and the late Miss Paton, too late in the day, enacting the part of the *prima donna* of the night. *La blache*, to be sure, did his best to conceal the composer's defects; and David exerted his utmost to render more unpalatable, if possible, the author's puerile production, by the constant employment of an effeminate *falsetto* with a false intonation. Nor does Signor David improve upon acquaintance, at least in this piece. His emphatic "pumpings" in passages when the sense of the music would proscribe all expression of passion, are sometimes laughably ludicrous. To employ a "coinage" of our own, he sings too much in *italics*; he reminds us of a pitiable punster who has no other mode of pointing his joke than by strongly accenting his witless word.

As for the title of the opera, judging of the character of the music, and of the unsuited situations of the scene, it might as well have been called the *Last Days of the Tory Administration*, as here, or any where else indeed, entitled, the *Last Day of Pompeii*. But it were a waste of words to enter into a critical analysis of poor Pacini's patchwork. With the exception of a quartet in the first act, and a duet in the second—the former pilfered from the *Semiramide* of Rossini, and the latter from the *Otello* of the same author—there is not discoverable in the whole opera an original motive or a connected melody, which could, by possibility, ever run the chance of even dying a natural death upon a Parisian hurdy-gurdy.

In conclusion, we have only to advise the manager, who doubtless has incurred considerable expense in his second mounting of Mount Vesuvius: "Do, by way of variety, substitute the Vesuvius of Pompeii for the Vesuvius of Masaniello, when that inimitable ballet is next represented; or, if not, why, follow the example of the provincial worthy, and advertise, according to custom, in large letters—'POSITIVELY THE LAST NIGHT of the last DAY of Pompeii—the whole of the music to be left out by particular desire.' This may do something for the theatre, keep the audiences in good humour, and perhaps sufficiently awake to enjoy either the pretty ballet of *La Somnambule*, or the splendid spectacle of *Kenilworth*."

* Vide Lady Morgan's *Book of the Boudoir*.

COVENT GARDEN.

Miss F. KEMBLE has played *Lady Constance* in *King John* twice this week; and without disparagement to her fair fame. Much of the performance was very fine.

VARIETIES.

Action of Metals on Water and Carbonic Acid.—M. Despretz has stated to the French Academy, that nickel, cobalt, zinc, and tin, possess, like iron, the property of decomposing water at a red heat, and that their oxides are reduced by hydrogen at the same temperature: he has also observed that carbonic acid is converted by zinc and tin into oxide of carbon, and that this gas completely reduces the oxides of these metals. Thus a fact, which was considered as anomalous, extends to several metals and binary compounds.

Sir Walter Scott.—A rumour obtained very general circulation last week, that Sir W. Scott had been attacked by a serious illness; but we are happy to say it was only the revival of a former exaggerated report. The excellent baronet is in good health, and giving his leisure to the finish of *Count Robert*, which we trust we shall see as soon as the ferment of politics has subsided.

The March of Politics.—Not only has Mr. Ridgway published the majority and minority on the Reform Question in red and black ink, to distinguish the sheep from the goats; but Howlett and Brimmer have followed the example, and given us the lists in gold, opposed to black letters. We observe that Hunt, notwithstanding his blacking, is on the golden side, and Goulburn is among the blacks.

Britton's Lectures on Architecture.—On Monday Mr. Britton commenced his course of eight lectures at the London Institution. The attendance was numerous, and the lecture listened to with great approbation.

Peterborough.—A society has been recently established in this city, on a very respectable footing, both in point of numbers and in the character of the members, embracing in its objects the discussion of historical and literary questions, and the formation of an extensive library. It is also the intention of some of the members to offer occasional contributions of papers, in order to make a collection of manuscripts illustrative of the history and antiquities of Peterborough and its neighbourhood, and other compositions of a miscellaneous nature. The ends the society have in view are, "the general improvement of the intellectual powers, the promoting a love of literature, and the diffusion of useful knowledge."—*Cambridge Paper.*

One Sense!!!—Our philosophical readers, who have hitherto valued themselves on the possession of *five senses*, and our less instructed friends who have talked in common parlance of being frightened out of their *seven senses*, will, to use the phraseology of parliamentary petitionising, be filled with consternation and dismay at learning that it has just been settled *there is but one sense!!!* Man, the head of created beings, enjoys only one sense, and that sense is TOUCH. His eye touches spectral objects, his ear touches sounds, his nose touches smells, his palate touches flavours—in short, his whole life is but Touch and Go.

Scientific Societies.—It is estimated that there are above fifteen hundred learned and scientific societies in the world; above half of which are occupied in the encouragement of agriculture, manufactures, and commerce.

Observations on the Mollusca.—M. Rang,

who has recently returned from a voyage to Senegal, has addressed a letter to Baron Ferrussac, in which he communicates some of the results of his voyage. He has found that the *ropan* of Adanson is nothing else than the *modiola caudigera* of Lamarck, which envelops itself in a calcareous tube, with which it lines the cavity it has previously hollowed in stone. Lamarck had already seemed to believe in the presence of a tube in the lithodomus; and the discovery of the fact in the living animal is the more important, that M. Ch. Desmoulins has determined its presence in fossil individuals from the neighbourhood of Bordeaux. M. Rang found in the river Senegal beautiful *etheria* at a distance of 600 miles from its mouth. He has also discovered in some rivers the *galathea radiata*, which Lamarck quotes as coming from Ceylon. This beautiful shell is found on sand-banks which are covered by some feet of fresh water: with it live eight or ten species of *melania* of exceeding beauty, and which in form, variety, and size, approach the genus *potamides* of M. Brogniart, as well as the fossil *cerithia* of the Parisian limestone.

Cholera Morbus.—Accounts from Russia state, that notwithstanding the season, which invariably checks this fatal malady, the artificial heat produced at Moscow and other Russian towns by the use of furs, and by the large stoves in the houses, have prolonged its existence, and that great apprehensions are entertained that, on the approach of spring, its violence and rapidity of communication will be entirely restored.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XLIII. March 26.]

At Home and Abroad, a Novel, by the Author of "Rome in the Nineteenth Century," and "Continental Adventures," is announced.—An Essay on the Influence of Temperament in modifying Dyspepsia, or Indigestion, by Dr. Thomas Mayo.—A new edition of Mr. Babbage's Table of Logarithms.—A work, consisting of illustrations of the Rarer Plants contained in the Herbarium collected by Dr. Horsfield in the Island of Java; selected and described by Robert Brown, Esq. and entitled *Plantae Javanicæ Rariores*, descriptive Iconibusque Illustrata, is announced.

Of Destiny, by the Author of "Marriage," we have only time to say, that a hurried glance gives us a very favourable opinion of its entertaining powers.

LIST OF NEW BOOKS.

Loudon's Encyclopedia of Agriculture, new edition, 8vo. 2l. 10s. bds.—Mitchell's Siege of Constantinople, a Poem, 8vo. 6s. bds.—Lovett's Revelation of St. John Explained, 8vo. 9s. bds.—Young's Egyptian Dictionary, 8vo. 12s. bds.—The King's Secret, 3 vols. post 8vo. 1l. 11s. 6d. bds.—Burckhardt's Travels among the Bedouins and Wahabys, 2 vols. 8vo. 1l. 8s. bds.—Paris's Life of Sir H. Davy, 2 vols. 8vo. 1l. 8s. bds.—Family Library of French Classics, Vols. I. and II. 8vo. bds. 3s. 6d. each; fine paper, 4s. 6d.—Brown's Bible, imperial 8vo. 1l. 8s. bds.—Lord Henley's Memoir of Lord Northampton, post 8vo. 8s. 6d. bds.—Hall on the Faith and Influence of the Gospel, with Essay by Chalmers, 12mo. 5s. bds.—Clarke's Scripture Promises, with Essay by Wardlaw, 12mo. 3s. 6d.—Dr. Pye Smith's Discourses on Prophecy, 8vo. 12s. bds.—Hinton's Lectures on Revelations, 12mo. 4s. 6d. bds.—Leigh's Guide through Wales and Monmouthshire, with Map and View, 8s. cloth.—Robert's Welsh Interpreter, 3s. 6d. cloth.—Leigh's New Pocket Road-Book of England and Wales, 3d edition, with plans of Tours and Map, 8s. bound; with 55 County Maps, 12s. bound.

TO CORRESPONDENTS.

We have to suggest to several correspondents the expediency of furnishing us with their addresses when they expect answers. E. W. C. and Lieutenant L. (we give only the initials) may be in the next street; but we cannot tell.—M. A. B. must address Annette elsewhere; we advise *vide roce*.

The Latin lines inquired for by W. B. a fortnight ago, and several answers to which we last week acknowledged and promised to insert, are quoted by F. C. P. thus—

"Lumine Acon dextro; capta est Leonilla sinistro,
Et potis est formâ vincere uterque deos.
Blande puer, lumen quod habes concede parenti;
Sic tu cæcus Amor, sic erit illa Venus."

He is of opinion that, though they might have been applied to the Princess Eboli, they were written centuries before.

P. G. J. quotes Martial—erroneously, we fancy:
"Lumine Acon cap't est dextro; Leonilla sinistro,
At formâ potest vincere uterque Deos.
Parve puer! lumen quod habes concede sorori—
Sic tu cæcus Amor; sic erit illa Venus!"

Ignotus has the lines from the papers of a deceased friend, with a rather paraphrastic translation—

"Lumine Acon dextro, capta est Leonilla sinistro,
Et poterat forma vincere uterque Deos:
Parve puer! lumen quod habes concede puellæ,
Sic Tu cæcus Amor, sic erit illa Venus."

"Since of thy right eye, Acon, thou'rt bereft,
Whilst Leonilla sadly mourns her left,
Yet both possess'd of forms so beautifully true,
That gods themselves might send the knee to you—
O boy! concede the light thou hast
To youth, so matchless then!
And thus to woman Cupid be—
She, Venus to the men."

Ignotus tells us he also found the annexed epigram and translation, in looking for the above lines—

"Hic liber est in quo querit sua dogmata quisque,
Et in quo reperit dogmata quisque sua."

"His doctrine here, each doctor strives to find,
And finds out ev'ry doctrine to his mind."

Another valued correspondent quotes the lines exactly like Ignotus, only substituting "sorori" for "puellæ." He refers us to the *Pandects of Amalfi*, of which it is stated in the *Encyclopædia*,—"Amaltheus (Jerome, John Baptiste, and Cornelle), three celebrated Latin poets of Italy, who flourished in the 16th century. Their compositions were printed at Amsterdam in 1685. One of the prettiest pieces in that collection is an epigram on two children, whose beauty was very extraordinary, though each of them was deprived of an eye."

J. W. L. quotes the epigram from the Latin poems of the three brothers Amaltheus; and says, "it is stated in Dr. Warton's Essay on Pope's Genius and Writings, to have been made on Louis de Mairouin, the handsomest man of the time, and his sister the Princess d'Eboli, both having lost an eye."

Another correspondent, E. M. of Bath, writes:—"I know of no composition of two lines on the subject referred to; but, with the hope of communicating some information to W. B., I transcribe a letter in my possession, addressed to me by the late accomplished Mrs. Piozzi.

29th May, 1817.

Sir,—This is how the epigram stands in my scrap-book:

Lumine Acon dextro, capta est Leonilla sinistro,
Ex poterat forma vincere uterque Deos.
Blande Puer! lumen quod habes concede Sorori;
Sic tu cæcus Amor, sic erit illa Venus.

Would not the epigram have gained in value, had the mother and son been represented as each of them one-eyed? It would certainly have been more classical to have substituted the word *parentis* for *sorori*; but I am never surer of my prophy. One could then have translated it thus:

Leonilla said, 'Lend me that eye,' to her son,
Perceiving the boy, like herself, had but one;
'For then we may manage the matter between us;
And you'll be blind Cupid, whilst I shall be Venus.'

The writer of this epigram was Cornelius Amaltheus, who printed a collection of poems at Amsterdam, in 1685: a Protestant, I believe, though born in Italy, and who parodied in Latin verse the Catechism of the Council of Trent."

T. S., however, does give us two lines only; but they are imperfect;—they do not tell the fact, and are merely the last two of the four. E. T. does the same, and says they were made use of in the reign of Philip II., though previously written. Mr. C. Walmesley says the lines were in our first example, except *sorori* for *parentis* from the *Selecta Poëmata Italorum*, 2 vols. 4to. Lond. 1740.

We need notice no farther explanations; and we insert the foregoing as an amusing proof of the interest taken in matters connected with polite literature. By the by, "a Truant from Dean's Yard," Westminster, palms the following upon us as an attempt at a free translation, pretending he had not seen the original; but the last line is a sad tell-tale!

Pulchra parens pueri; puer ipse, parentis imago,
Uno, sorte pari, lumnis orbe caret:
Redde tuum, formosæ puer, modo redde parenti;
Sic tu cæcus Amor, sic erit illa Venus.

ADVERTISEMENTS,

Connected with Literature and the Arts.

BRITISH INSTITUTION, Pall Mall.

The Gallery for the Exhibition and Sale of the Works of British Artists is Open Daily, from Ten in the Morning till Five in the Evening.

3. Captain Franklin's Two Journeys to the Polar Sea. Four pocket vols. 2s.

John Murray, Albemarle Street.

THE FOREIGN QUARTERLY REVIEW.

Price Six Shillings, No. XIII. of
Contents: I. Spirit of the Twelfth and Thirteenth Centuries—II. Mythology and Religion of Ancient Greece—III. Andral on Consumption—IV. The Vase of the Vase—V. The Vase of the Middle Ages—VI. History of the Hanseatic League—VII. History of the Ancient Germans—VIII. Correspondence between Schiller and Goethe—IX. The Brunswick Revolution—X. United States of America—XI. German Pocket-Books for 1881—XII. Critical Sketches of Greek, Hebrew, French, and German Writers—XIII. Miscellaneous Literary Notes from France, Germany, Holland, Italy, Russia, and Spain—List of the principal New Works published on the Continent, from October to December 1880, inclusive—Notice to Correspondents.

"This Review has far to go to the most interesting of all the Quarters. In a literary point of view, it is equal to the very best of them already. Its articles are generally chosen with sound judgment, and almost uniformly executed with great ability. Its political principles are liberal and enlightened, and it seems to be entirely free from the spirit of partisanship. On the whole, we cannot hold out to our literary friends a higher treat, either in point of variety or utility, than a perusal of this Number of the Foreign Quarterly Review."—*Porthsmouth Advertiser*.

"What wonderful students these Germans are! See what a flood of light they throw on every obscure part of antiquity, by dint of that singular union of industry and enthusiasm, labour and imagination, united with a beautiful simplicity and homely feeling (elsewhere shown in this Number, in the Life of Weber, to pervade all classes in that country), which our would-be-wise sneer at, and call, in derision, Germanism!"—*Glasgow Free Press*.

"The present is, in our opinion, the most powerful Number that the Foreign Quarterly has yet published."—*Edinburgh Literary Journal*.

"A valuable work, and one undoubtedly at the head of our periodical literature; admirable for the spirit of liberality which pervades its pages, and for its historic lore and profound philosophical criticism."—*The Irishman*.

"In point of erudition and elegance of diction, this Number will be found equal to any of its predecessors. History, in her classic and most animating form, is treated in these pages, and imparts to them, in this age of literary levity and frivolity, a peculiar and important character."—*East India Magazine*.

"The Number before us is a superior one to most of its predecessors, first, from the miscellaneous character of its information; secondly, from the able way in which that information has been condensed and made acceptable to the most fastidious and impatient readers."—*Sun*.

"The Foreign Quarterly keeps up its interest and ability; and this is saying much on its behalf, after the honest and disinterested praise to its former Number. One case of the gratification which we open a new Number of this periodical we must say a word or two upon, in the hope that it may recommend it to others, who, like ourselves, feel an increasing aversion to being pestered with the vituperative wranglings of party politicians. The Foreign Quarterly is delightfully free from such nuisances; it is unmarked by the odious plague-spot of faction. For these reasons we cordially recommend the Foreign Quarterly to the notice and support of such of our readers as may be so desirous of being kept abreast of the topics which absorb all the attention of the quinquennial of today, as to have no thought to spare for the general interests of literature and science."—*Edinburgh Chronicle*.

Just published, by Henry Colburn and Richard Bentley, New Burlington Street.

By J. A. PARIS, M.D. F.R.S.

Fellow of the Royal College of Physicians.
"The information which it contains is important, and in very many instances altogether new. The arrangement is judicious, and it should be; the style popular and familiar."—*Times Journal*.

London: Printed for G. Underwood, 25, Fleet Street.

London's Agriculture, New Edition. In 2 large vol. 8vo. closely printed, with upwards of 1100 Engravings on Wood, price 21. 10s. bound in a new edition, with considerable Alterations and Improvements, of

AN ENCYCLOPEDIA OF AGRICULTURE,

comprising the Theory and Practice of the Valuation, Transfer, Laying-out, Improvement, and Management of Landed Property; and the Cultivation and Economy of the Animal and Vegetable Productions of Agriculture, including the latest Improvements; a general History of Agriculture in all Countries, &c.

By J. C. LOUDON, F.L.S. H.S. &c.

No pains have been spared on the part of either the Author or the Publishers to render this second edition of the Encyclopedia of Agriculture as perfect as possible. The Author undertook a Journey into France and Germany in 1870, on purpose to procure information respecting the present state of agriculture on the continent; and the Publishers have gone to the expense of nearly 600 new engravings, nearly half of which are new subjects. The co-operation of upwards of forty individuals, (a list of which is appended,) has also been procured, and the result given; and their suggestions or additions have embraced almost every department of the work. On the whole, the author thinks himself warranted in asserting that the work is now as perfect as its nature and the present state of agricultural science and practice will admit.

Printed for Longman, Rees, Orme, Brown, and Green.

FRASER'S MAGAZINE for TOWN and COUNTRY.

Full-length Portraits of the following Literary Characters have already appeared:—

Select Library.—Vol. I.

is small 8vo. price 6s. cloth boards. Vol. I. (on April 1, Vol. II.) of an enlarged and improved edition of

POLYNESIAN RESEARCHES, during a Residence of nearly Eight Years in the Society and Sandwich Islands. In 4 vols.

By WILLIAM ELLIS.
Being the First Volume of the "Select Library," which is designed to present to the public, in a neat and convenient size, principally re-publications of a series of interesting and valuable works of a religious tendency, hitherto issued only in an expensive form, and consequently beyond the means of many persons who would otherwise have read them.

Advertisement in the present Edition.
In issuing the first volume of the "Researches" in their present improved state, the author and publishers feel happy in being able to comply with the suggestions of a number of highly respected individuals, who have expressed their wishes that the work might be published in a cheaper and more portable form. The suggested price of the present volume and their periodical appearance, will, it is hoped, secure the object desired—their more extended circulation and consequent likelihood of more general usefulness.

The important parts have been slightly abridged: the whole arranged in a regular methodical order; and the History of the Establishment and Extension of Christianity in the South Seas continued to the date of the latest intelligence.

As the Sandwich Islands form the northern boundary of Polynesia, in order to render the work more complete, the account of these islands, originally contained in the Narrative of a Tour through Hawaii, or Owhyhee, will be published in a corresponding manner, under the same title, and will constitute a fourth volume of Polynesian Researches.

Notice of the First Edition of Polynesian Researches.

"This is the most interesting work, in all its parts, we have ever read."—*Quarterly Review*.

"We have no space even to enter into a brief analysis of these highly interesting volumes; and it must suffice for the present to observe, that they are replete with valuable and curious matter, descriptive of the South Sea Islands and their inhabitants. A series of anecdotes, unimagined, they run through the work, without interfering in the slightest degree, with the information it affords."—*Literary Gazette*.

London: Fisher, Son, and Co. Newgate Street.

3d edition, dedicated to Sir Walter Scott, in 3 vols. post 8vo. 11s. 6d.

RICHIEU, a Tale of the Court of France.

By the Author of "De L'Orme," "Dumley," &c.

"This novel and history of the French court commences with the last year of the reign, as it may be termed, of the Cardinal de Richelieu, who governed not only Louis XIII. but all France, with a despotic and restless sway. Among the numerous characters introduced are the king, his consort, Anne of Austria; his majesty's dame d'honneur, Clara de Hautefort, a former mistress of the king; the Duc d'Orléans; the cardinal's great friend and confidant; their corrupt tool, Lefevre, de Marquise de Fontenilles; Cinq-Mars, de Thou, &c. The remarkable hero is the Count de Stange, chamberlain to the queen; the heroine, Mademoiselle de Beaumont."—*See Monthly Magazine*.

Henry Colburn and Richard Bentley, New Burlington Street.

With Woodcuts, 3 vols. post 8vo. 16s.

A YEAR IN SPAIN.

By a YOUNG AMERICAN.

"Nothing is so common and so common than to fill a book of travel with crude information, the after gleaming and gathering of the coast; while nothing is more difficult and rare than to dash with truth and vivacity those familiar scenes of life, and those people and characters by the way-side, which place a country and its people in the mind of the reader, and make up the compass of the traveller. We trust that the extracts we have furnished will show the author to possess this talent in no ordinary degree."—*Quarterly Review*, No. LXXXVIII.

phic Manual, by Mr. Lowndes.

William Pickering, Publisher, Chancery Lane.

Ireland in the Days of Elizabeth.

3d edition, in 2 vols. post 8vo. illustrated with Fac-simile

Autographs of the principal Characters,

GERALDINE OF DESMOND; or, Ireland

in the Days of Elizabeth. An Historical Romance.

By MISS CRUMPE.

"A work which promises to hold a very distinguished rank on the list of historical romances. In fact, it may stand alone for individual excellences peculiar to itself. Founded upon Irish annals, and descriptive of the most interesting and eventful period in the history of the sister country, it connects with the story of the Desmond family the political record of the times of Elizabeth's domination, when the yoke was firmly and finally fixed on the necks of the Irish people. The lover of romance will find in these pages wherewith to entertain his idle hour. The antiquary may learn much from the deep research displayed by the author on subjects connected with the customs of the native Irish of those times; and the politician and historian will be enabled to trace the causes of much that has occurred in that distracted country since its final conquest by the English queen."—*Oxford Herald*.

Henry Colburn and Richard Bentley, New Burlington Street.

Beautifully printed in 1 vol. foolscap, price 6s. 6d.; or in 18mo.

price 5s. 6d. a new edition of

No. 741.

SATURDAY, APRIL 2, 1831.

PRICE 8d.

REVIEW OF NEW BOOKS.

Italy. By Josiah Conder, author of the "Modern Traveller." 3 vols. 12mo. London, 1831. Duncan.

AFTER a long list of tours, and descriptive sketches, and guides,—all of which comparatively disappoint the reader in search of comprehensive knowledge,—we are here presented with a work whose purpose is to supply the defects of its predecessors; and, though concise in form, to make us amply acquainted with Italy and its inhabitants. The name of the writer, already so well known as the author of those highly interesting and valuable volumes the *Modern Traveller*,—a work which every year advances in popularity, as its merits come to be more fully examined,—is a sufficient attestation to the interest, impartiality, and intelligence, of his present design. Taking all the performances on Italy, which have been so copiously furnished during the last twenty years, combining their information, correcting their errors, reinforcing their anecdote and information by his own, and influenced by no authority but that of an excellent and practised judgment, he may congratulate himself on having compiled a work of the most serviceable, and not less of the most attractive nature, to every man who desires to have, in a portable size, a *vade-mecum* through Italy. For truly says the preface, "Stimulated by the public approbation awarded to his former work, as well as by the intrinsic interest of the subject of these volumes, the author has spared no pains to render them as complete and accurate as possible; and the delay which has occurred in their appearance has been occasioned by no remission of his labours, but by the very arduous nature of his complicated task. He does not shrink from any competent criticism, feeling assured that the work will be justly and favourably estimated by those who will be able to detect its deficiencies. If it is not all that he could wish to have made it, he claims the merit of having, under all the circumstances, done his best. So wide are the discrepancies in the varying reports of our writers, even upon points which it might seem easy to verify, or impossible to mistake, that it has often been a matter of no small perplexity to ascertain which statement might be most safely depended upon. Not to speak of the varying estimates of the area of Italy, given by Humboldt at 10,000, by Malte Brun at 5,000 square leagues; the reader will find, for instance, the height of the Falls of Terni estimated, by different travellers, at 1060, 800, 64, and 200 feet; that of the Torre d'Asinara at Bologna, at 256, 327, 348, 376, and 13 feet; the Val di Chiana, at 60 miles in length and 3 in breadth, and again at 40 miles in length by from 7 to 12 in breadth; the height of the aqueduct at Spoleto, at 250 feet and 230 yards, &c. But in numberless instances, these variations have been too unimportant to notice, though they have materially

added to the difficulty of the writer's task. Who would have expected to find the accurate Gibbon guilty of the gross blunder of making the Mincio flow into the Lago di Garda?"

The plan of these volumes is that of a complete account of Italy as it is; a view of it in its political relations, natural qualities of character, produce, and soil; antiquities, architecture, general arts, &c.—all that can form matters of inquiry to an intelligent mind. Without the dryness of a road-book, it points out the routes to the principal points of course and curiosity; without the teasing minuteness of a "Guide," it leaves no remarkable church, picture, or object of ingenious invention, unnoticed; and without the intolerable prolixity and trifling of antiquarian detail, it traces vividly, and yet closely, those footsteps of ancient times which make Italy classic ground,—an illustrious cemetery, filled with the monuments of men and ages whose memory it is almost a religion to preserve. The arrangement which the author has adopted for his volumes, also appears to us to be admirably calculated to bring all those features into full relief. Noticing the actual territorial divisions as matters of geography, he follows in his description the routes which would be naturally presented to a traveller desirous of thoroughly investigating Italy. He makes the chief cities leading points of his narrative; and from each as a centre, he radiates out to the circumference of the circle which may be presumed to have been influenced by their character;—as, for example, Turin, Genoa, Milan, Venice, Florence, Pisa, Lucca, Bologna, Rome, and Naples. As it would swell this notice to a singularly inconvenient length to give all the passages which strike us as conceived with beauty, or described with force, we shall take only a few topics, as specimens of its information; inclining to the description of places which at this period, from political causes, possess an additional degree of public interest. We shall therefore dismiss the malaria, and leave Rome and Florence, with their statues, pictures, and churches, often vividly described by this writer, and turn to the districts in which the new Italian revolution is making progress: and, first of Parma, whence the ex-empress of France has been lately ejected with so little ceremony.

Parma, together with its little river of the same name, retains unchanged its ancient appellation. Like the greater number of Italian cities, it may justly boast a certain degree of beauty in its architecture. It covers a considerable area, its walls being between three and four miles in circumference, and contains a population amounting to between 30,000 and 35,000 souls. Lady Morgan describes its streets as, nevertheless, dull and dreary, "lined with those mouldering edifices which the French call *massures*, the habitations of the lowly, and with some fine and almost ruinous palaces, the dwellings of the great. Almost every other building is a church; but of these churches, though all are rich within, few are finished without—a

fact of common occurrence in Italy. The miserable little shops, the silent streets of Parma, shew no traces of its ancient commerce, when its market supplied wool to Europe. Now it exhibits only a hopeless indolence and a torpid inactivity. A little raw silk, and the cheese which is found so much better every where than in the district whence it takes its name, form the whole exports of the Parmesan States; and the only visible symptoms of internal trade are festoons of macaroni, and the swinging pewter basin which vibrates over the barber's shop. The barber of Italian towns is still a character, and differs little from the important personage who, in remoter times, gave heroes to comedy, and *intriguants* to novels. His shop alone is secure of custom, where all must shave *sometimes*, and where no one shaves himself. While the barber's shop is the emporium of news and the mart of trade in the morning, the *caffè*, after the church, seemed to be, in Parma, the principal place of resort to persons of all ranks. These *caffès*, modelled upon the French, and about as splendid as such festive rendezvous are in a third-rate provincial town in France, are still the gayest things in Parma. The churches are evidently the fashionable evening lounge; for, though we saw but very few carriages on the *corso*, and found the theatre empty, the churches were brilliantly illuminated; and the votarists were so numerous within, that many, unable to proceed further, knelt in the street round the doors of entrance, while the benediction was pronouncing. Parma is extremely Spanish, from having been long the residence of a Spanish court, and governed by Spanish influence. In an attic apartment of the Farnese palace, the traveller is shewn the splendid Parisian wardrobe of the ex-empress of France. Massive toilet-tables of *or-molu*; a beautifully sculptured mirror; the cot of the young 'King of Rome,' of mother-of-pearl inlaid with gold; vases and basins of solid silver, washed with gold: these and other articles of imperial luxury, the memorials of fallen greatness, together with Napoleon's travelling bedstead, and various other things belonging to him, are here fondly or ostentatiously preserved by the present sovereign of Parma—once the imperial mistress of France, now sunk into 'the sole directress of the monotonous concerns of a petty state,' with no one to soothe her sorrows or to enliven the dulness of her present life—an empress without an empire, a widow while her husband was yet living, and now a childless mother with a living son. Her majesty (for she still retains that high style) resides principally at her country villa at Colomaro, ten miles north of Parma, visiting her capital only during the carnival. She is said to be much beloved by her subjects."

Modena, another of the lately revolutionised states, follows.

"This city, which has been much embellished within the last fifty years, has a very handsome and cleanly appearance, together with an air of gaiety and liveliness, which bespeaks it to be the residence of a court. The

recent improvements (chiefly in the *Strada Maestra*) have divided it into the new and the old city. Its general architecture is striking to a stranger, the greater part of the streets being built with open arcades, which add greatly to the beauty of the place, and afford a welcome shade or shelter from the heat or the storm. The ducal palace, which stands isolated in the great square, is a handsome structure; 'not, like that of Parma, on too great a scale for the state, but completely finished, superbly furnished, and kept up in a suitable style. Among its decorations is a rare and very beautiful marble, called *scogliato*, of a bright azure, slightly mixed with deeper shades of blue.' The ducal library, well known under the name of the *Biblioteca Estense*, contains 60,000 volumes, and is esteemed highly valuable. It was formed of the Ferrara library, to which great additions have been made; and two of the most eminent literati which Italy has produced in modern times, have successively filled the office of librarian here—Muratori (born at Vignola in this duchy) at the beginning of the last century, and Tiraboschi (a native of Bergamo) about 1780. The picture gallery, though despoiled of some of its most celebrated pictures, is still one of the finest collections in Italy. A copy only of the famous *Noite* of Correggio, is now to be seen here, which is said, however, to give no bad idea of the admirable effect of the original. The subject is, the Adoration of the Infant Saviour by the Shepherds. The principal light emanates from the body of the Infant, illuminating the surrounding objects; but a secondary light is borrowed from a group of angels above, which, while it aids the general effect, is itself irradiated by the glory breaking from the Child. The face of the new-born Saviour is skilfully hidden by its oblique position; but that of the Virgin is warmly irradiated, the forehead only being thrown into shade. The glow which illuminates the piece is heightened to the imagination by the attitude of a shepherdess, who shades her eyes with her hand. The glimmering of day-break, which shews the figures on the back-ground, contributes to the splendour of this noble composition."

Bologna, the most successful of the present candidates for independence, has been always of a strangely republican cast, and worn its papal chains with a good deal of scorn: it has prospered accordingly.

"On approaching the city, the country gradually improves, and becomes better wooded. The extreme fertility of the rich plain in which it stands is indicated by the heaviness of the grain, the height and vigour of the full-eared maize, and the incomparably fine growth of the hemp. In the neatness of the cottages, the careful husbandry, and the general appearance of the population, there are also signs of a greater degree of prosperity than in almost any other part of Italy. The Bolognese has always been the most flourishing of the four papal legations; owing, Bishop Burnet tells us, to its peculiar constitution. 'For Bologna,' he says, 'delivered itself to the popedom upon a capitulation, by which there are many privileges reserved to it. Crimes, there, are only punished in the persons of those who commit them; but there are no confiscations of estates; and though the authority in criminal matters belongs to the pope, and is managed by a legate and his officers, yet, the civil government, the magistracy, and the powers of judicature in civil matters, are entirely in the hands of the state. By this regulation it is, that, as the riches of Bologna amaze a stranger, it being neither on a navi-

gable river, nor the centre of a sovereignty where a court is kept; so, the pope draws much more (in taxes) from this place of liberty than from those where his authority is unlimited and absolute, but that are almost quite abandoned.' Another favourable circumstance is, that the sale of the monastic property during the occupation of the French has greatly multiplied the number of the smaller landed proprietors, and raised up a thriving agricultural population. In one respect, however, that revolution has led to disastrous results. It has afforded opportunity and pretext to the restored government for depriving the Bolognese of most of their ancient privileges. By a papal rescript dated July 6, 1816, the popular magistracy and tribunals, the ancient faculties, the government of the militia, the right of coining money, and the right of popular election, were cancelled and annulled; and Bologna is now subject to the same laws and regulations as the rest of the states of the church. Bologna is picturesquely situated at the base of the Appennines; the Reno passes through the city, and the Savena washes its walls. It is surrounded with a high brick wall, about six (Italian) miles in circuit, and contains a population of between 60,000 and 70,000 souls. On approaching the city, its curious leaning towers and high antique spires, with the singular arcade leading up to the church of the Madonna di San Luca, perched on a steep hill overhanging the Reno, have a singular and striking effect. Though one of the oldest cities in Italy, it is one of the best preserved, and has a venerable appearance, without being ruinous. Its streets are lined with arcades, affording a covered footway on each side, as at Padua and Modena. If less elegant in appearance than the latter city, it has nothing of the monotonous, sombre character of the former. Its fine lofty arcades are supported on well-proportioned columns, and the architecture is in better taste, more finished, and on a larger scale. The city abounds with large churches and handsome palaces; and if these are not distinguished by any very striking architectural excellence, the general style is good, and the effect pleasing.

"We have yet to speak of what was once the glory of Bologna, its University,—one of the oldest in Europe, being founded in 1119, and the first in which academical degrees were conferred. 'It was within her walls, during the tumult and desolation of the eleventh century, that learning first attempted to raise her head; and scholars and soldiers were often mingled in the same street, which resounded alternately with the shouts of warriors and the vociferation of disputants. In the twelfth century, the almost incredible number of ten thousand students was assembled there; and each country of Europe had its regents and professors, to prevent a second confusion of tongues in this modern Babel. The civil and canon laws were the favourite, almost the exclusive studies. Paris addressed herself more particularly to theology. Salerno was equally unrivalled in medical pursuits; but it flourished only under the humble name of school; and the diploma which, in process of time, constituted it a university, seems to have been the signal for the expiration of its learning, and the extinction of its authority. Padua and Oxford now began to acquire celebrity. The former university, a sort of offset from that of Bologna, soon eclipsed the medical school of Salerno. The latter, in the host of its students, if in no other respect, far outstripped every other. In the year 1340, the university of Oxford is said to have contained no fewer

than 30,000 students. The schools of Bologna have been distinguished by one remarkable peculiarity: in the number of its learned female members and professors, its university stands alone. In the fourteenth century, Giovanni d'Andrea, professor of jurisprudence, had two daughters, one of whom, named Novella, when her father was prevented from delivering his lectures, was accustomed to supply his place from behind a curtain,—which, we are told, was

'drawn before her,
Lest, if her charms were seen, the students
Should let their young eyes wander o'er her,
And quite forget their jurisprudence.'

In later times, the chairs of the university have occasionally been filled by female professors of eminent attainments. Not many years before Mrs. Piozzi visited Bologna, *la dotteressa*, Laura Bassi, gave lectures upon the mathematics and natural philosophy, till she grew very old and infirm; and her pupils always handed her very respectfully to and from the doctor's chair. A marble tablet has been erected to her memory. Many learned ladies of France and Germany were at that time members of the university. Madonna Manzolina was about the same time professor of anatomy. Still more recently, the professorship of Greek was held by Signora Clotilda Tambroni, whose severity, we are told, is still remembered by her pupils. The university of Bologna, although it has long been on the decline, is on a much better footing now than prior to 1798, when monkish professors taught nothing but a sophistical and rancorous theology, together with the narrow principles of canon law. * * * It now possesses the best and most costly instruments, as well as a large botanic garden. The number of professors (stated by Eustace to be seventy) is at present about twenty-six. That of students, a few years ago, was 550. The library contains 200,000 volumes."

We have thus run lightly over the volumes, which deserve an ample and attentive study, and which we should prefer either on an Italian tour, or as an intelligent conductor through the delights and wonders of the finest region of the world for the traveller at his own fireside, to any work that has been hitherto furnished by English literature. An interesting preface, containing a catalogue *raisonné* of the chief authorities on the subject, displays the singular extent of inquiry and diligence resorted to by Mr. Conder for the completion of his volumes on Italy. We have only to add, that the embellishments are numerous and beautifully executed: indeed, they are equal to some of the much-prized Annuals.

Destiny; or, the Chief's Daughter. By the Author of "Marriage," and the "Inheritance." 3 vols. 12mo. Edinburgh, 1831, R. Cadell; London, Whittaker and Co.

To do full justice to an excellent novel, it should scarcely be judged as "one by itself, one;" but rather with reference to its thousand competitors. Comparisons are odious, we grant; but is it not their truth which makes them odious? no falsehood was ever half so afflicting as a disagreeable verity. To appreciate, therefore, the merit of the three clever volumes before us, compare them with the trash, "without mark or likelihood," which daily issues from the press—historical novels, which have laid Hollinshed, &c., not their author's, invention under contribution; political novels, made up from last year's newspapers; or fashionable novels, each resembling the other, as do the parties whose chronicles they

profess to be. Instead of such "dull reiteration," we have here a work that really does owe something to its author's talents, that calls upon the inventive faculty, and that is indebted nothing to either the peerage or the papers. Miss Ferrier is evidently a woman of strong practical sense, great knowledge of character, a keen perception of the ridiculous, and a wonderful power of re-creating the images impress on her mind again on paper. She is almost unrivalled in her portraiture of an oddity; the absurdities stand forth so actual and so tangible—or, to use a national phrase, so life-like. *Destiny* is of a species that may well be called the novel of character—it is in the development of character and its results that our author excels. Glenroy may almost be termed an historical picture; the selfishness of small and daily greatness, the exaggerating dignity of the Highland chief, the profusion misnamed generosity, the indulgence wrongfully termed affection—are all drawn in colours as forcible as they are true. Benbowie, the chief's silent companion, whose great distinction is his ugly waistcoat, whose only agreeable quality is acquiescence, and whose constant reply to Glenroy is an affirmative, or, as our author neatly terms it, a confirmative, is another genuine personage. The Rev. Duncan M'Dow is also perfect: coarse, obtuse, selfish, with that "dullness which ever loves a joke," a loud laugh rather, indifferent to the feelings of others, because quite unconscious of them. Happy are those who have no Mr. M'Dows among their acquaintances! Inch Orran is a finely dried and preserved specimen of "a particular man,"—so use the author's own words, "Many and various were the rumours afloat concerning him. The only point they all agreed in was, that he was a very particular man—which is the next thing to being called a Hydra." • • • He recollected that he was a particular man; and even a great man must give way to a particular man, inasmuch as the one is sometimes a poor man, and the other is always a rich man." But though we have not room to go through the whole catalogue of characters, we must not omit Mrs. Macauley, the most simple, kind-hearted creature that ever nursed a fit of the gout. After all, affection is the best moral beautifier. We must give a conversation between her and the chief, premising that the boy Ronald therein mentioned is the object of Glenroy's anger, from a distant kinsman having made him his heir; and the chief is one who whenever he is angry thinks himself ill-used.

"You'll really make these children as great fools as you are yourself," cried Glenroy, impatiently. "How can you put such nonsense into their heads!" "Me, Glenroy! 'deed, I never put any thing into their heads. I would be very sorry; so far from that, when the boys said that you hated Ronald—for he was a bad boy—I said to them: Well, childer, your papa may say what he pleases, and you ought to mind every thing he says, when it is good and fit to be remembered; and when he happens to say what is maybe not just so right, then you must be sure to forget it." "I really don't believe there is such another fool as yourself in existence," cried Glenroy; "and I only wish you had this gout of mine in your tongue, to silence it." "Well, I'm sure I wish I had, if it would take it out of your toe, Glenroy; but wait till you hear." "Oh, says Norman, 'I shall take care never to forget that he chased me out of an estate.' Nor I," says Ronald, "that he had the impudence to want to marry Edith; a pretty husband, indeed, for

Edith, a poor tacksman's son!" Childer, says I, I fear you read your Bible to little purpose, or you would not speak evil of your neighbour, or be so scornful of any body for being more humbly born than yourselves; for we are such curious creatures, we cannot tell what may happen to us. You ought to remember how Joseph, that was sold for a slave, came to be a ruler over his proud brethren; and was not there King David, the greatest of all the kings of the earth,—what was he but a poor shepherd boy? But it pleased God to make him a great king; and if it please Providence to appoint that Ronald should live to become a great man, who knows but he may be married to Miss Edith—"Providence!—appoint!—what is it you mean, Mrs. Macauley? do you know what it is you are saying?" cried Glenroy, furiously. "'Deed do I, Glenroy, and I'm sure so do you, that it is Providence that appoints our lot—" "Providence!—appoint!—lot!—do you mean to make my children predestinarians?" cried Glenroy, passionately. "I thought you had been merely a simpleton—but I see you're a most mischievous creature, and I cannot suffer you in my family, if you sport such doctrines as these." "Well, Glenroy, if you think so, I cannot help it;" and poor Mrs. Macauley's heart rose at the thoughts of having to choose between her chief and her conscience. "But I don't believe you know yourself what it is you mean," cried he, somewhat mollified at sight of her distress. "'Deed, then, but I know very well, Glenroy." "Then I say you are a very dangerous and mischievous woman," cried Glenroy, enraged that she would not take advantage of the loophole he had opened for her escape. "Well, maybe I am, Glenroy," was the humble reply; "but I'm very sure I do not mean it." "You are really not fit to associate with either men or children," cried the chief, striking his crutch on the floor as he spoke. "Well; may be not," was said in a very dejected tone; "but you may say what you please of me, Glenroy—for there's no harm in that; but I do not like to hear you casting out with Providence." "Who's casting out, as you call it, with Providence, you old goose?" "Well, I really thought you was affronted at my saying that we did not get every thing our own way in this world, but that Providence appoints our lot for us." "Then I tell you again, Mrs. Macauley, that I will not suffer such doctrines in my family; I'm for none of your predestinarian notions here. I suppose you'll have my servants cutting my throat, and saying it was appointed. I—I—it's really a most infamous doctrine." "Oh! Glenroy, that is not the Christian notion of the thing at all; it's only poor ignorant heathen craters, or them who do not take pains to read their Bible, who can misuse it that way; for how can we think we are appointed to do mischief to one another, when does not He tell us that we are to love our neighbours as ourselves?" "Deed, if an angel were to tell me the contrary, I would not believe it." "You really—you know nothing about the matter, and I desire I may hear no more such doctrines; there's no knowing where it would end." "'Deed' then, I think it would just end in our being of contented minds, and learning to walk humbly with God, casting all our care upon Him who careth for us." "Oh, you are setting up for a saint too! but I'm for no saints in this house, remember." "Well, you know if you wish me to go my way, I cannot help it; it is my duty to go." Here tears streamed down Mrs. Macauley's cheeks. "Yes, yes, you're ready to go, and leave me at the very

time when you might be of some use; you might at least have the discretion to stay till I have got somebody to take your place; but do as you please." "Oh, Glenroy, how can you think it would please me to leave you and your children!" cried poor Mrs. Macauley, quite overcome. "Well, stay where you are," cried Glenroy, somewhat softened; "only don't go and fill the children's heads with these pernicious doctrines of yours." Mrs. Macauley's face fell at the conclusion of this sentence. "I must speak the truth to them, Glenroy," said she, with a sigh, "whatever may come of it; and I think we are such curious craters, and know so little, that we cannot tell what may happen to us. It may be God's will to raise us up, or to cast us down." "Are you at it again," interrupted Glenroy, furiously; "when I tell you, Mrs. Macauley, I will not suffer these doctrines in my family?" "Well, Glenroy, I am sorry it should be my lot to displease you—for I owe you a great deal of kindness, and I would lay down the hair of my head for you and your childer; but I cannot give up my principles." "Who's meddling with your principles?" demanded Glenroy, again softened at sight of her distress. "Well, I thought it was not like you to do it; you who have such good principles of your own." "It's my opinion," said Glenroy, "you know nothing about principles—I don't believe you know what they are; are they flesh and blood, or are they skin and bone?" "Oh! Glenroy, I wonder to hear you, who have so much good sense, speak that way, when you know what respectable things principles are, and what poor craters we would be without them. No, Glenroy, when I die, I will leave those things behind me; but I expect to carry my principles along with me—for no doubt they will be of use to me in the next world." "That's very true," said Benbowie, waking out of a doze; "on my conscience, we should keep all we can." "I don't believe there's a man on earth but myself that could put up with two such idiots," muttered Glenroy. "Oh! 'deed, we have all our appointed trials, Glenroy," said Mrs. Macauley, looking in his face with the most perfect good-nature and sympathy; "but we have all a great deal to be thankful for, too, and myself most of all; for 'man proposes, but God disposes,' and so He has disposed you to be a good and kind friend to me, Glenroy." "You speak a great deal of nonsense," said the chief, whose wrath, having had its full swing, now evaporated; "but I don't believe you know what you say, and I dare say you mean well; and there's the children calling you." And he graciously extended his hand, which received a kindly pressure from the placable Mrs. Macauley."

Our limits only permit us to point attention to a most touching and beautiful scene at the end of the first volume—we allude to that where Ronald gazes on his unconscious family; and we regret we can do scant justice to the sweet and gentle Edith, the very personification of "how divine a thing" a woman may be made. We should, moreover, have liked to introduce Mr. M'Dow in his married state: but we have only space to commend these parts most heartily to our readers. One great charm of the volumes is the vein of fine taste and feeling that runs through them; the quotations that are made are gems of their kind; and to our taste, these treasured memories are most graceful evidence of "the fine fellowship of kindred minds." We now leave the *Chief's Daughter* to that fair favour she so well deserves to find with the public.

Dramatic Annual, 1831. A Playwright's Adventures. By Frederick Reynolds. 18mo. pp. 356. London, 1831. Longman and Co.

THE title-page is a misnomer; for the adventures are those of one Vivid, the author of an excellent and successful comedy, and consequently no "Playwright," but a sterling dramatic writer. And these adventures, we are sorry to say, are exceedingly commonplace: the mere usual routine of two young lovers, separated by cruel fate, and brought together by such accidents as falls from vicious horses, being nearly drowned but not quite, meeting at every strange turn of life, saving from the clutches of what the Irish call an abductor, and other cases of rescue too tedious to mention, till in the end they are rivetted together fast as the law can make them.

Not expecting this sort of thing from Mr. Reynolds, we are disappointed; and our disappointment is the greater as we looked for an abundance of whim, anecdote, and smart observation, not only on the stage, but on society at large. Having, however, but a sprinkling of these qualities, we shall do our endeavour to illustrate the volume in the most favourable light by their selection. And first, of the obstacles to play-writing, the experienced author tells us, when Vivid resolved to pursue that course—

"In vain also did other well-wishers point out the various difficulties attendant on dramatic composition. In vain did they remind him that his first difficulty consisted in pleasing himself—his second difficulty in pleasing the manager—his third in pleasing the actors—his fourth in pleasing the licenser—his fifth in pleasing the audience—his sixth in pleasing the newspapers—and, in addition to all these, the actors must please not to be taken ill, the weather must please not to be unfavourable, the opposing theatre must please not to put up strong bills; and then!—what then?—why then, 'Please to pay the bearer the small sum of * * *'; and, N.B. which sum is sometimes, *par accident*, not paid at all."

There is so much truth in this, that it is surprising any one should attempt dramatic composition: but hundreds do so every season; and what between their own trash and the difficulties in the way of getting aught good performed, our theatres are what we see.* The subject is farther exposed in a dialogue between the pseudo author and Charles Candide, a manager of one of the great theatres.

"Come," said Mr. Candide, "sit down, sir, and I will soon convince you that I am not exactly so great and powerful a personage as you suppose me to be. First, give me your hand; next, a bumper to our better acquaintance. There; and now allow me to ask—Would you treat an actor with similar respect?" "Certainly not, sir. I look upon him as one who, in most respects, is a dependent on the manager." "You mistake. The manager is, now-a-days, dependent on him, at least on every first-rate performer; but, by way of preamble, please to understand that the remarks I am about to make are only applicable to those actors and actresses who demand and receive large nightly salaries; for as to the second, third, and fourth-rate performers, &c."

* Near the end Mr. R. makes one advise Vivid "the writing by steam—otherwise 'cribbing' from *vaudeville*," and adds—"Modern dramatists are completely justified in adopting this system; for when the company is *shy*, and the cash is *shy*, none but a rich or independent author can afford to devote a whole year's labour to the composition of that precarious commodity, a comedy in five acts; and certainly several living dramatists are fully capable of producing such commodity."

the stock company—why, looking upon each of them as my fellow-labourer in an unproductive vineyard, I am consequently their advocate and champion." "I comprehend: you only mean to complain of what Churchill calls the 'monarch players.' 'Certainly not. [i. e. certainly *ay*?] But the truth is, since the star system commenced, and the salaries have been nearly more than trebled, these 'monarch players' have become so much above their employer, that when on a Saturday (pay day) I drive to the theatre in a hackney-coach, I am often prevented getting up to the stage-door in consequence of the number of their gay chariots, cabriolets, and other handsome equipages." "Indeed! and authors?" earnestly inquired Vivid, but in his usual unsophisticated style. "How many authors' carriages drive up?" "Oh! as to authors," replied the smiling manager, "two or three of them, perhaps, mount old umbrellas; but when some people are overpaid, other people must be necessarily underpaid, you know, and—" "How? why, I thought, at least I have heard of a thousand pounds having been made by a comedy." "True; but in that day there were no stars, or if there were, they had gazers, and at any rate did not rise in demand as they fell in attraction. Colman received for *John Bull* eleven hundred pounds, and he well deserved such remuneration; for the comedy averaged four hundred and seventy pounds for forty-eight nights; and the salary of no actor who performed in it (and amongst such actors were George Cooke, Lewis, Fawcett, Emery, John Johnstone, &c.) exceeded twenty pounds a week; whereas, 'there be players' who latterly have actually received double that sum per night! and this at the time when a first-rate actor (not singer) at Paris is content with getting about four hundred pounds per annum." "Well, but excuse me, my good sir, if the system does not answer, why go on giving such high and ruinous salaries?" "Why, 'there's the rub;' and I can only thus explain the case: you have heard, I presume, of two rival stage-coach proprietors, who, in the frenzy of competition, blind with rage and jealousy, became so determined to outvie each other in the number of customers, that at last each ran his coach from Exeter to London, not only gratis, but actually paid for every passenger's provisions during the journey. Such is nearly mine and my rival manager's stage contest; and till we can get an understanding (not so easy a theatrical acquirement, I assure you), and imitate the example of our predecessors, those firm allies, Messrs. Sheridan and Harris, why, season after season we shall only open the doors of our magnitudinous concerns to find provisions for others, certainly not for ourselves." "So it appears; and yet, I believe, sir, you will frankly acknowledge, that you sometimes reap a productive harvest." "We do, once in three or four years; and, *entre nous*, I'll tell you how such harvest is produced; but mind, your finger on your lips." Vivid bowed assent, and Mr. Candide continued. "Why, aware, sir, that of late years more has been achieved off than on the stage, we invent, or rather manufacture, an histrionic lion or lioness." "What? I don't understand." "Observe! In the event of two or three disastrous seasons, that formidable champion, the press, always most liberally and good-naturedly comes forward, and offers to rally round the falling house. After various preparatory apertures, we then bring out our manufactured novelty—our aforesaid lion or lioness—of course taking care that the curtain shall draw up to a crowded audience; for if it

be a bad house, the town regularly deem it to be a bad performance. Then, as to applause, in addition to our own rank and file, the dread of closing our doors induces so many hundreds to open their hands and mouths, that three rounds and continued bravos are secured to every attitude and clap-trap. Next, if a tragedy be selected for this important first appearance, we rely on the never-failing pathetic author's producing tears; but having three or four fainters at command, we ourselves bring them into action." "Capital! Why, you leave nothing to chance?" "Nothing; for, the curtain down, the hackneyed call, amidst waving of hats and handkerchiefs, is huzzaingly made and acceded to. Laurel is likewise thrown on the stage; and next morning the *locus* of panegyric being sounded in every liberal paper, in a day or two after the manager not only raises the salary, but publicly, in the green-room, makes a brilliant and appropriate present; next, most of the print-shops display a likeness of the new wonder, whose defects actually become beauties; then, in case of the slightest indisposition, bulletins are issued; and the box-keeper is also ordered to state that 'not a box is to be had for a month.' Such a sufficient quantity of dust is thrown into John Bull's eyes, that he cannot see any mode of escape, and therefore, though at least he finds it out, he comes till he does find it out; and which act of kindness is all that is required in a city whose population consists of above a million and a half of capable customers. There—don't you call this management?"

Upon this picture the only remark we shall offer is in defence of at least one organ of public opinion. The *Literary Gazette*, though kindly disposed to encourage every species of rising talent, in literature, in the arts, or on the stage, never lent a line to the manufacture of either lion or lioness; but, on the contrary, has been ever bold in pulling the lion's skin off any ass that attempted to bray a roar from under such covering. It is, no doubt, very difficult for the press to keep itself quite free from influence, whether favourable or unfavourable, (but especially from the former, generated, perhaps, by friendly intercourse, by a knowledge of matters justly bearing upon a case though unfit for public reasoning, or by many adventitious circumstances); yet we will venture to say, that its particular and general independence is far more worthy of approbation than deserving of covert censure. It requires an inflexible sense of duty to induce an editor to be the means of wounding the feelings or injuring the interests of persons whom he esteems; but we claim, not only for our own publication, but for many of our contemporaries, the meed earned by this most painful of all our sacrifices—the sacrifice of private sentiments to honest and independent respectability. As for the opposite inuendo—that of indulging in resentments or enmities—it is beneath an honourable mind to notice it. We have nothing, therefore, to detain us from another extract; and we fall on Westminster and Winchester schools, with instances of the scandalous and demoralising fagging system. Vivid is on the coach for London:—

"Among other passengers, there were two little boys about eight or nine years of age, accompanied by a livery servant; and it appeared, from their conversation, that one was a Winchester, and the other a Westminster scholar. The Bartholomewtide holidays having lately concluded, they were both returning to *purgatory*, and were disputing aloud which had undergone, or would still undergo most school

hardships. The little Winchester asked his fellow-sufferer if ever he had been locked up by the big boys (as he termed them) in Westminster Abbey? 'Because,' added he, 'last winter I passed one whole frosty night in our cathedral.' 'Very well,' replied the Westminster, 'and what did I and five little second-form boys undergo, one dark December evening, in the cloisters?' 'What?' rejoined the little Winchester. 'Why, the gravediggers having dug a deep grave (preparatory to a corpse being buried in it next morning), as usual, placed a few loose boards over it, and left their work for the night. Soon after, as I and my little chums were passing, in our way from school to our boarding-house, we were suddenly pounced upon and seized by half a dozen head boys, who, having removed the boards, instantly, *sans cérémonie*, forced us all into the grave; and then, having replaced the said boards, they all commenced dancing upon them, and thus sung aloud:

'Earth shall cover ye,
We'll dance over ye,
Fol loi de riddle loll.'

Then, would you believe it? though we were shuddering—nay, almost senseless with cold and terror, yet, on their stamping, and, in a loud threatening tone, calling out 'Chorus! join in chorus!' we were actually obliged to sing out, or rather sigh out,

'Earth doth cover us,
They dance over us,
Fol-lol-de-riddle-loll—Oh! oh! oh!'

'However,' continued the Westminster, 'the Abbey clock tolling nine, our tyrannical seniors all fled to the dormitory, and we, the poor entombed juniors, more dead than alive, crawled out, one by one, and at last tottered to the boarding-house, where the increased dread of our despotic lords compelled us, in answer to the mistress's inquiries, to assign any cause but the real one for our alarm and absence.' The little Winchester resumed; and, as if his senses had not yet recovered from the fright, thus flourished away: 'Ay; but on that night, when I was shut up in the cathedral, on the bell tolling 'one,' did not a supernatural light make its appearance—and did not the organ, of its own accord, strike up? and, then, did not the effigies of Cardinal Beaufort, Bishop Gardiner, William Rufus, and Inigo Jones, led on by the grim king of antics, commence the 'dance of death?' and then——' Here the argument was stopped by the stopping of the coach."

After the severe exposure of this sort of nefarious tyranny at Winchester School—(see the *Literary Gazette* for 1829)—we had hoped the practice would have been reformed altogether. But it is not so; and the painfully ludicrous exemplification of its continuance related by Mr. Reynolds, is no caricature or exaggeration of the sufferings of the unhappy younger members of these places of tuition. Is it not astonishing that the masters of these schools should not, for their own sakes, set their faces against the cruelties and degradations to which the children confided to their charge are subjected? Within the last month we have been made acquainted with the abuse of power by head boys at Westminster, of which we could have formed no conception without actual proof. Literally, the torments inflicted by ruffian despot on their juniors are incredible: and what are the results? the decay of the school! for what parent will send his son, under the pretence of public education, to be treated worse than a dog, his spirit broken, and his character rendered slavish and deceitful by the caprice and barbarity of uncontrolled viciousness, alike

destructive of the moral future—of the oppressor and the victim. Earnestly do we trust that these remarks may recall attention to this most important question.

We shall now shortly dismiss the volume before us. The intrigue story of Lady Arden (founded on a notorious affair at a *déjeûné* the season before last) borders too closely on the license of *Tom Jones*, to be consistent with the better taste of our day. At p. 260 will be found a pretty considerable detail of what active travellers can accomplish in forty-eight hours.

"On their arrival within a mile of Geneva, they took up their abode at the Hotel d'Angleterre, which is built on the very shore of the lake; and they were all so delighted with the house and its situation, that they determined upon remaining there a couple of days; during which period Vivid and Lady Henrietta, accompanied by her father and Mrs. Almack, took various pleasurable excursions; sometimes visiting Geneva, sometimes various ancient chateaux—amongst others, Voltaire's residence at Ferney—and frequently sailing on the lake."

We conclude with a trio of the best *jeux d'esprit* we can find.

"A third anecdote was that of an actor, whose lower limbs (*i.e.* those by which he walked) were so tremendously thick and unwieldy, that, on his being thrown out of a cab, the wags said, that he had broken his right leg with the greatest difficulty."

"On Vivid being asked whether love-making or quarrelling predominated behind the scenes—'Oh! by far the latter,' he replied; 'however, I must say, your true wrangling brethren of the sock and buskin soon make it up again, and in the height of their dispute mix kind, familiar expressions with angry ones;—such as, "Tis a lie, my dear Tom, &c." As a proof—not a week ago, a deputy manager, after having written to a monarch-player and threatened, if he did not return to his duty and complete his engagement, an action would forthwith be brought, he (the hostile manager) thus curiously concluded his letter—"And, *wishing you success*, I remain truly your's, &c."

"It appeared that on returning from the duel, the captain indulged in his usual mode of getting relief whenever he had at all suffered by over excitement, *i.e.* by ringing either his sitting-room or bed-chamber bell regularly every four or five minutes; and on this occasion he continued ringing them with such increased fury, that the quiet old landlady told him, that he must either leave off thus for ever disturbing the other lodgers, or instantly quit the house. Having often threatened him before, she now insisted on being obeyed; when, after some remonstrances on his part, finding her inexorable, he consented to leave off ringing the bells, provided he might keep quiet possession. This being agreed to by the good old lady, all went on peaceably till the evening, when, about nine o'clock, the report of a pistol was heard in his chamber. Every body rushed in, expecting to find he had destroyed himself; when, to their astonishment, he stood erect before them, and said, coolly, 'By the powers! if I mayn't ring a bell, what better noise than this can I make, honeys, just to get a little attendance?'"

We are afraid our literary examples cannot recommend the Playwright to the highest share of popular favour; yet, for the common and readily-pleased reader, it has attractions enough to while away a few idle hours, even in this point of view. But it possesses a superior value, and one which is worth its whole price

twice told. We allude to the numerous designs which accompany it, from the pencil of W. H. Brooke. Beside those illustrative of the author's narration, are others purely inventive, displaying a fertility of genius and imagination, both in the serious and comic of art, which must increase even this artist's reputation.

Among this class we were struck with two in perfect contrast. Success is designated by a pair of dashing sparks kicking the world before them in the way of a football; while the want of success is represented by a poor fellow out at elbows, hissed at by a goose and a serpent. The jubilee in honour of Shakespeare is humorously hit off; where the characters who formed the procession, from the drenching nature of the day, were obliged to march under umbrellas. Mr. Brooke has introduced the ghost in Hamlet, followed by Caliban thus furnished. These, with many others, display very superior qualities; for in them are admirably united humour without caricature, and the imaginative with sound principles of art.

A Narrative of a Visit to the Court of Sinde; a Sketch of the History of Cutch, &c. &c. By James Burnes, Surgeon to the Resident at Bhooh. 8vo. pp. 253. Bombay, Summar-charr Press. Reprinted: Edinburgh, 1831. J. Stark.

A VOLUME equally interesting and unpretending; and illustrative of a country of which we know comparatively little, though it was traversed by Scylax, the admiral of Darius Hystaspes, and by Alexander the Great, and is the Delta of one of the noblest rivers in the world. Besides a considerable addition to modern geography, Mr. Burnes furnishes an entertaining narrative of the court of the Ameers of Sinde, and of the manners of their subjects: but as even their territory is not accurately known to Europeans, we shall begin our review by stating what it is. "The dominions of the Ameers of Sinde extend from the district of Shikarpoor on the frontier of Cabul, and the island of Bukkor in the Indus, along the level plain, watered by that river, to the sea; a space of about two hundred and fifty miles. Their general boundaries are the British principality of Cutch, and the Indian Ocean to the south; the kingdom of Jessulmere and the Registah, or Sandy Desert, to the east; the mountains of Belochistan on the west; and the provinces of Seewistan and Bahawalpoor on the north. The Indus traverses the country in a direction nearly diagonal; fertilising the soil in its course, but, like the Nile, often proving pernicious to those who dwell on its banks, by the swamps which its annual inundations create. The temperature in the summer months is high, and proportionally low in the winter season. . . . Hyderabad, the capital, is situated about 130 miles from the sea, on the eastern side of the river. Its population may be estimated at 20,000 souls; and that of Tatta, the only other city of note in the province, at 40,000."

Without going into its previous history, we may say: "On the distribution of the Mogul realms into Soobahs or divisions, in the time of Akber, Sinde was attached to Mooltan, but was occasionally ruled by separate viceroys, nominated by the court of Hindoetan, till the invasion of Nadir Shah, when it was ceded to Persia by virtue of the treaty concluded between that monarch and the Emperor Mahomed the Second; who, to use the polished terms of the instrument itself, 'in consideration of an affection stronger than father ever shewed to son, or brother to brother,' dismem-

bered to his conqueror, as a peace-offering, all the territories bordering on the Indus which were then deemed worthy of his acceptance. This arrangement concluded, Nadir Shah visited Tatta; but his assassination, which occurred soon after at Meshed, in Khorassan, having left a field open for the ambitious schemes of his general, Ahmed Khan Seedozy, that aspiring chief declared himself King of Cabul, and laid the foundation of the Douranee empire, to which Sindé, after a time, submitted, and has ever since been considered subordinate. The house of Calora claimed a lineage from the princely blood of Abbas, the uncle of the prophet; but its greatness in Sindé is traced to Adam Shah, a native of Belochistan, who gained a high influence from the reputed sanctity of his character, and as the chosen disciple and delegate of a famous Mahomedan preacher in the middle of the fifteenth century of our era, and whose descendants, inheriting the holiness of their ancestor, succeeded to his spiritual power, and were revered as saints, till about 1705, when they were honoured with a title and a jaghire, by the great Aurungzebe. With temporal rank thus added to religious veneration, the grandeur of the family rapidly increased; and in a few years their glory reached its zenith by the issue of a firmann, under the emperor's signet, installing their representative in the viceregal government of Tatta. The patent for this investiture was granted about 1736, in the person of Meean Noor Mahomed, who may be styled the flower of the race."

Of Belochistan, Pottinger's travels gave us some account; and respecting Sindé itself, the author refers for information to various Indian Reports, of which we could have wished he had incorporated the marrow in his own relation, as they are sealed books to the English reader. But we must be content with what he has done; and therefore proceed to his personal observations on a visit to Hyderabad in 1827-8, which he performed as a medical man, at the request of the principal chiefs, one of whom, Meer Mourad Ali, was supposed to be dangerously ill at the time.

About the end of last century, after the common mutations of oriental courts, intrigues, assassinations, &c. &c., a person named Futteh Ali, descended from the chief of a Beloché tribe, called Talpoor, and several of whose ancestors (who had for generations held the highest offices of state) were murdered by the rulers of the Calora dynasty, mounted the musnud, "and was shortly afterwards confirmed as ruler of the country by the patent of the king, Timour Shah. On his own elevation, this prince liberally resolved to admit to a participation in his high destiny his three younger brothers, Ghoolam Ali, Kurm Ali, and Mourad Ali; and the four agreed to reign together, under the denomination of the Ameers, or lords of Sindé. While they all lived, the strong and unvarying attachment they evinced for each other gained them the honourable appellation of the *Char Yar*, or 'the four friends;' and although Meer Futteh Ali died in 1801, and Ghoolam Ali in 1811, this government, a phenomenon in history, has continued, with little alteration, from its first commencement to the present moment. There are still some remnants of the exiled house living under the protection of Runjeet Sing, the celebrated Sikh chieftain, and the king of Joudpoor. The intercourse of the British with Sindé has been rare, and for the most part unsatisfactory. The great advantages of Tatta as an emporium for the trade of central Asia,

early invited English speculators to the Indus; but the constant opposition of the Portuguese prevented their effecting a permanent settlement; and, if we may judge from the indignities offered to the ambassadors of James the First to the King of Persia, as they passed through in 1614, our countrymen must at that time have been in bad repute. About 1758, Ghulam Shah encouraged the Bombay government to establish a factory at Tatta, which was withdrawn, however, some years after; though so late even as the beginning of this century, Mr. Crow appears to have been our commercial resident at that city. The ambitious schemes of the French made it necessary in 1808-9 to send missions to the chief powers in the north of India, in order to counteract their intrigues; and while Mr. Elphinstone and Sir John Malcolm were deputed to the courts of Cabul and Persia, an envoy also proceeded to Hyderabad, who, although indifferently received, gained the object of the governor-general. Before this embassy, the Ameers had seen no British subjects, except as petitioners for mercantile benefits; which gave rise to a reproach they have often been known to apply to us, unwittingly in the same terms as a much greater personage—that we are a nation of shopkeepers. Of this erroneous impression we may presume that they are by this time pretty nearly cured."

Having crossed the Korá, or easternmost branch of the Indus, here about four miles wide, from Luckput, the northern town of Cutch, to Kotree, the southern town of Sindé, our countryman journeyed to Hyderabad, amid the usual delays of eastern caution and ceremony. On this side of the river the habitations of the natives are inferior to those of Cutch; and the houses, or rather huts, are still movable, as they are described to be by Arrian in the days of Alexander. At Ruree, a considerable place, Mr. Burnes was met by khans sent by the Ameers to welcome him. "They received me (he says) with great courtesy, each embracing me in a ceremonious manner; and, after a profusion of civilities on their part, entered into a long complimentary message from the Ameers, who, they assured me, were highly gratified by my visit. They brought orders from Hyderabad that neither I nor my retinue should be permitted to pay for any supplies on the route; and although I was of course unwilling to accept, and remonstrated strongly against, such an expensive mark of kindness to above a hundred persons, I was forced to comply, in order to avoid giving offence. Fifty camels were in attendance, by command of the Ameers, who had given positive directions that none of my followers should be allowed to walk. The khans even considered seriously how my palanquin-bearers could be mounted; and although this was impracticable, I was obliged to consent that the sipahis [sepoys] of the guard, and all others, should proceed on camels. The supplies were of an expensive description; nothing, in fact, seemed to be spared that could add to my comfort, or that of my attendants; and sugar, sweetmeats, and opium, were daily issued in great profusion.

"Nothing (he continues) could exceed the attention I experienced on the route from my Mihmandars, who themselves frequently sat up to watch me during the night. A large cotton mattress, covered with crimson silk, was always carried near me, in case I should feel disposed to alight; flaggons of cooled sherbet, and other luxuries, were also liberally supplied. The Ameers had sent several hawks,

which afforded an attractive sport on the road, and supplied my table with every species of winged game, which, indeed, is more abundant in Sindé than in any country I have ever visited. My great object being to reach Hyderabad without delay, our rate of travelling was as rapid as possible. There must have been at least a thousand persons in our party, most of whom were mounted on camels."

"On the morning of the 10th of November, I entered Hyderabad; and no language of mine can do justice to the busy and varied scene which was then before me. Upwards of ten or twelve thousand persons must have been assembled, all of whom manifested an intense curiosity to see me: the women even, very unlike the gentle Hindoo ladies, pressed themselves close to the chair, and such was the concourse, that it was almost impossible to proceed, although the Sindian soldiery spared neither sword nor matchlock in endeavouring to clear the way. Within a mile of the city, I was mounted on a large black horse, handsomely caparisoned, which had been brought out by Wullee Mahomed Khan, and led slowly forwards; but the crowd being found quite impervious, my conductors recommended me to enter my own close palanquin, or box, as they termed it, to be out of sight, and escape the pressing of the multitude. In this manner, after much labour, in one of the hottest days I had ever experienced, we at length reached the gate of the fortress of Hyderabad, which is appropriated solely to the residence of the Ameers and their families, and where I learned, for the first time, that I was immediately to be introduced to the lords of Sindé. The silence which reigned within the fort formed a strong contrast to the noise and tumult without. After passing through some narrow streets, which were inhabited only by the immediate retainers of the court, I found myself, unexpectedly, among a crowd of well-dressed Sindians, in a large open area, the walls of which, on either side, were fancifully decorated with paintings, and the ground covered with variegated carpets. At one end appeared three large arched doors with curtains of green baize, towards one of which I was led by the vizier and another officer; and before I could collect myself from the suddenness of the transition, my boots were taken off, and I stood in presence of the Ameers. The *coup-d'oeil* was splendid. I had an opportunity of seeing the whole reigning family at a glance, and I have certainly never witnessed any spectacle which was more gratifying, or approaching nearer to the fancies we indulge in childhood, of eastern grandeur. The group formed a semicircle of elegantly attired figures, at the end of a lofty hall spread with Persian carpeting. In the centre were seated the two principal Ameers on their musnud, a slightly elevated cushion of French white satin, beautifully worked with flowers of silk and gold, the corners of which were secured by four massive and highly-chased golden ornaments, resembling pine-apples, and, together with a large velvet pillow behind, covered with rich embroidery, presenting a very grand appearance. On each side, their highnesses were supported by the members of their family, consisting of their nephews, Meer Sobdar and Mahomed, and the sons of Mourad Ali, Meers Noor Mahomed, and Nusseer Khan. Farther off sat their more distant relations, among whom were Meer Mahmood, their uncle, and his sons Ahmed Khan and Juhann Khan. Behind stood a crowd of well-dressed attendants, sword and shield bearers to the different princes. To a European, and one

accustomed to form his notions of native ceremony by a much humbler standard, it was particularly gratifying to observe the taste displayed in dress, and the attention to cleanliness, in the scene before me. There was no gaudy show of tinsel or scarlet; none of that mixture of gorgeousness and dirt to be seen at the courts of most Hindoo princes; but, on the contrary, a degree of simple and becoming elegance, far surpassing anything of the kind it had ever been my fortune to behold. The Ameers and their attendants were habited nearly alike, in agricas or tunics of fine white muslin, neatly prepared and plaited so as to resemble dimity, with cummerbunds or sashes of silk and gold, wide Turkish trousers of silk, tied at the ankle, chiefly dark blue, and the Sindian caps I have already described, made of gold brocade, or embroidered velvet. A pair of cashmere shawls of great beauty, generally white, thrown negligently over the arm, and a Persian dagger at the girdle, richly ornamented with diamonds, or precious stones, completed the dress and decoration of each of the princes. Viewing the family generally, I could not but admire their manners and deportment, and acknowledge, that, in appearance at least, they seemed worthy of the elevation they had gained. The younger princes, indeed, had an air of dignity and good breeding seldom to be met with, either in the European or native character. The principal Ameers were the least respectable of the party in point of looks; probably from having had less advantages, and more exposure to hardships in early life. They are in reality older, but did not appear above the age of fifty, from the very careful manner in which their beards and hair are stained. With one exception, there is little family likeness between them and the younger chiefs, who have inherited from their mothers fair complexions, jet black hair, with long eyelashes and eyebrows."

We must reserve a few further particulars for our next No.

The King's Secret. By the Author of "The Lost Heir." 3 vols. 12mo. London, 1831. E. Bull.

A most animated and picturesque narrative, whose interest is as well sustained as its mystery. Truly, it is no small praise, in these novel-reading days, to say that we think even the most experienced reader will not guess the secret of these pages before the author's own time. The scenes are laid in the stirring reign of Edward III.; and the author has caught the spirit of the time, and given a most accurate and dramatic picture of the by-gone days he invests with all the life of fiction. But, while careful to preserve that propriety of costume and manners, which gives such an air of reality to an historic fiction, he has not fallen into the too common fault of merging the author in the antiquary, and relying on the details of others instead of his own resources. On the contrary, the story is as original as it is interesting. We shall select one scene, partly for its merits, partly because it displays those of the hero. We should mention, that Leonard is the nephew of an Italian gold-worker, who has often distinguished himself in the sports of the age.

"It chanced, then, on the occasion alluded to, that some of the nobles of the court, then held at the Tower, had ridden within the walls to view the city sports, and partake of the good cheer of the wealthy citizens, as was by no means infrequent in these days, when the

deep indent which lay between trade and aristocracy was actually impassable to the former, and there was therefore less danger, and more condescension, in these and the like politic courtesies, which served, for a time, to reconcile to their state a class whose wealth gave power, and forced respect, in outward forms at least, from the proud and privileged lords of land, although they did not yet, as their wise descendants have done, receive the rich traders into their order; thus, in reality, securing its permanence, and adding to its power, by the accumulated wealth of these recruits, who pass a life of labour in one class, on purpose to amass the gold wherewith another may uphold the sinews of its greatness. At the time of which we treat, the line of demarcation was complete, and too well defined to be lost sight of, because occasionally crossed; like oil and water, the parties might flow together for a time, but there was then little apparent chance of their ever permanently co-mixing. The courtly visitors were, therefore, on the occasion alluded to, received in all humility, and thankfully welcomed, by the attending authorities. The most honourable places were cleared for their ladies, in the gallery, which overlooked the lists; and such of their attendant esquires as might choose to seek honour against the city youth, were courteously entreated to enter the arena. As many had come prepared to share in this favourite and eagerly sought sport of the age, a party, termed of 'the Court,' was quickly formed against that styled of 'the City.'"

At length Leonard is opposed singly to Lord James Audeley.

"Taking the full sweep of the enclosure, they returned each to his own end of the lists, whilst the friends and well-wishers of the champions received their favourites with various quaint greetings of encouragement. 'Well stricken, Audeley!' 'Fairly played!' called out many of his approving comrades. 'Bravely held, bold squire! I warrant thy spurs will be kept bright, win them when thou wilt, young bird of a bold breed!' shouted a sturdy-looking yeoman, who supported himself on a slight projection of the gallery, under which the youthful noble once more took his stand to receive from the courtly dames above, as numerous, though less heartily expressed, praises. 'Right gently borne, James Audeley,' murmured one fair maid, as he gracefully bent over his saddle, in passing along. 'Choose tougher lance, cousin James; let Colthurst pick for thee!' called out an elder dame, experienced in such matters. 'Thou must not leave this prize in the city, or thou art no longer squire of mine; so, bestir thee, young gentleman,' impressively whispered the Lady Agnes Beauchamp, as she stooped over the gallery, in which she occupied the place of state."

An act of courtesy on Leonard's part occasions a slight delay.

"It was during the interval consumed by this preparation that Leonard received his first disgust of the situation in which fate had placed him, from the gallery we have before noticed, and under which his reverse position now placed him. Of a truth, the remarks of those of the court who sat there were not conveyed in a tone that courted concealment, and were certainly less flattering to the young citizen than those of his friends, at the other end of the space. More than one tongue expressed a desire to look upon his face, adding, in a tone of mock pity, that they regretted his cervelliere had but little chance of being raised that day—unless it was to give him fresh air, and free

breathing, after the overthrow which must terminate his next course with the Lord James."

Our hero, however, unhorses his opponent.

"The city's success was now achieved, and the area of old Smithfield never rung with louder cheers of triumph than rose from that multitude, when the marshal loudly awarded the prize, and the honour of having borne him best, to their young defender. After first slowly parading round the ample space, amidst these loud demonstrations of favour, preceded by the marshals and their train, Leonard, with a throbbing heart, was conducted to the gallery, there to receive, from the hand of the Lady Agnes Beauchamp, a rich belt and sword, the allotted prize of this day."

"Give me the sword, sir marshal," replied the ladye, "and let us look upon the face of the young citizen, who has had such a lucky chance against James Audeley; marry it will teach our young gallants not to play so loose a game within your lists for the future, but to come better mounted, and not hold city running so over cheap." It was thus this proud ladye haughtily intimated that Leonard was rather to ascribe his success to the contempt of city prowess, which had led young Audeley and his fellows to come indifferently mounted to this meeting, than to his superior skill. As she spoke, she indolently rose to receive the weapon from the hands of the marshal, whilst Leonard, bending on both his knees before her, lifted from his head the close cervelliere, or outer helmet, worn during the course over the simple basinet, which usually left the whole face exposed. 'Why, who is this?' exclaimed the countess, turning obviously pale as she bent a look of rivetted and painful interest upon the youth—'who is this, I say, that kneels here?' 'Leonard Borgia,' replied the marshal, proceeding literally to enumerate in due form all the particulars noted on his formula; 'the nephew to Messer Andrew Borgia, merchant, and—' but here the impatient ladye broke in with—'Leonard Borgia! impossible—he has deceived you, this is none such as—speak, young sir, who are you?' 'Even that which you have heard me called, ladye,' replied Leonard, rising indignantly to his feet, and led, by what he had before heard, to construe this questioning into a fresh desire to insult. 'Why, this is marvellous!' again exclaimed the ladye, her brow darkening with the very severity of her continued examination of the features of the youth; then turning to the marshal, she hurriedly continued—'There, sir, do you take the sword, and gird it about this young man, for I find it something over heavy for my handling; and, in truth, the weapon shook in her grasp, as she presented it to the wonder-struck functionary; then sinking back into the seat, she continued, curiously, though with a more composed look, to watch the progress of the investiture, or rather the person invested. 'God and St. George speed this good gift!' cried the old marshal, laying his hand on the sword pommel, after having drawn the buckle of the belt. 'May this good weapon never be drawn but with right, and never be it sheathed but with honour!' 'Amen!' Leonard ejaculated, as bowing low, he gladly and hastily withdrew, amidst the smiling approval of the fair circle through which he moved. But these commendations came too late, and were now unheard or unheeded; that haughty ladye's scorn had pierced too deeply within his sensitive and proud spirit, and those first-heard contemptuous whisperings lived in his hearing, long after the shouts of

triumph which preceded and followed them, were forgotten."

We must refer our readers to the work itself for farther explanation. Among the characters introduced are a very graphic and bold sketch of the celebrated Von Artevelde, and a very lovely one of his daughter. Altogether, we can cordially commend these pages, and hold the *King's Secret* to be among the very best of our historic fictions. It may not be amiss to remind our readers that the author is Mr. Power, the celebrated Irish comedian, who is assuredly making himself as high and popular a name in literature as upon the stage.

The Christian's Magazine. Part I. 8vo. pp. 80. London. C. Richards.

WE have great satisfaction in welcoming this new and excellent contemporary into the field. Founded on the principle of establishing the Christian faith above the attacks of the infidel and deist, it is indeed a very superior production, and contains not only a miscellany of high character, selected from a multitude of sources, but also many specimens of learning, and a knowledge of ancient and oriental literature, which must be very effectual in promoting its beneficial design. We have rarely read eighty pages of greater variety and instruction; and we may add, notwithstanding the title and object, of greater interest and entertainment.

Standard Novels, No. II. Caleb Williams. Pp. 452. London, 1831. Colburn and Bentley; Bell and Bradfute, Edinburgh; Cumming, Dublin.

THIS publication must ensure a prodigious success; for it is wonderfully convenient and wonderfully cheap. As we had the *Pilot* in Vol. I. we have here in Vol. II. the whole of Mr. Godwin's deeply-wrought story of *Caleb Williams*, finally touched by the author, with a frontispiece and a vignette, which, though not of the first order, are sufficient embellishments for such a work. A short but interesting memoir of the able and distinguished writer is prefixed; and also other prefatory matter; so that altogether we may say that we have seen no periodical design more attractive in every way than the "Standard Novels."

National Library, Vols. VII. VIII. IX. Bourrienne's Memoirs of Buonaparte. Colburn and Bentley.

WE have of late had occasion to deliver our opinion so frequently upon M. Bourrienne, that we shall now content ourselves with describing this edition of his works. It is very handsomely got up, with beautifully engraved portraits (one to each vol. of Buonaparte and his two empresses), and many well-executed designs of leading events in the extraordinary life of its hero. A manifest and striking improvement is also made by contrasting or corroborating the text with notes from the mouth of Napoleon himself, and from the publications of the Duke of Rovigo, Rapp, B. Constant, and other writers who have treated of the same period and matters. A very carefully digested and clear index* adds a value to the whole; and when we consider that the substance of eight octavo volumes is corrected and compressed in these three; that new contemporaneous lights are thrown upon

the original; and that the work is really admirably adorned by the engraver, we need only leave it to its own course.

Epitome of English Literature; or, a Concentration of the Matter of Standard English Authors. Philosophical Series. No. I. Paley's Moral Philosophy. Edited under the Superintendence of A. J. Valpy, M.A., late Fellow of Pembroke College, Oxford. London, Valpy.

WELL, here is another cheap periodical condensation—another Tincture of Literature. We know not when the cup will be full; nor can we very clearly foresee what will be the consequences of this widely increasing species of publication, either in respect to general information or to the particular interests of publishers and authors. It is true with regard to this, as to almost every other similar design, we must say of it separately that it is excellent. To have the essence of Paley's Moral Philosophy in a neat pocket volume, for five shillings and sixpence, (followed by sterling works in like fashion) is very desirable; and must tend to spread the knowledge of our classic literature where it has never found its way before. But where will encouragement be found for living or future Paleys, if the whole circle of publishing is to be thus occupied by epitomes and condensations? Who will plod over voluminous authors, and dwell on the details, however invaluable, of illustrious minds, when they can have them concentrated into spirit through the alembic of abridgement? Will the saving of time and labour always compensate for the loss of those minute characteristics by which so much of ingenious speculation may be kindled, and on the understanding of which so much of wisdom may hinge? It is a theme of vital importance: we cannot resolve these and many other questions which it suggests.

We may return to the consideration hereafter; but all we have to do now is to bestow our hearty approbation upon the skilful manner in which the present undertaking has been completed.

1. *Greek and English Lexicon, &c. &c.; also, an English and Greek Lexicon.* By George Dunbar, A.M. F.R.S.E., Professor of Greek in the University of Edinburgh, and E. H. Barker, Esq. 8vo. pp. 1167. Edinburgh, MacLachlan and Stewart; London, Simpkin and Marshall; Dublin, Cumming.
2. *Elements of Greek Prosody.* Translated from the German of Dr. Frank Spitzner, by a Member of the University of Oxford. 8vo. pp. 179. London, Whittaker and Co.
3. *Elements of Greek Accentuation.* From the German of Dr. Karl Goettling. pp. 122. Same Publishers.
4. *Maittaire's Greek Dialects.* Abridged and translated into English, by the Rev. J. Seager, B.A. &c. 8vo. pp. 304. London, Longman and Co.; Baldwin; Whittaker and Co.
5. *Scriptores Græci Minores, &c.* 2 vols. 12mo. Oxford, Talboys.

IN the present day, when classical learning is somewhat at discount, as compared with the times of Bentley, it is curious to observe how extraordinarily the facilities for its attainment are multiplied, and its advancement furthered, by productions "aiding and abetting" every branch into which it is divided. To commence the above list of works, we have, first, an English and Greek Lexicon—a thing unknown till the days of Dr. Donnegan. The especial advantages of Greek being at once translated

into our own language, we conceive to be, the obvious clearness and comprehensiveness with which we arrive at the meaning, neither of which would be equally attained by a Latin version—comprehensiveness being incompatible with the cramped medium of the Latin tongue; so that we are often laid under the necessity of acknowledging that "the interpreter is the most difficult to be understood of the two." Another peculiar recommendation claimed by Dunbar and Barker's Lexicon is, that it carries with it the nature of a gradus, as the quantities of all doubtful words are marked. It is a most excellent production, and well deserving the attention of every scholar and teacher.

2. The Greek Dialects, although a very learned work, and well calculated to be very useful, if not a very great favourite at our schools and universities, may be presumed to be of not sufficient interest to the general reader to warrant our going any length into extracts.

3. 4. Greek Accentuation by Goettling, and Greek Prosody by Spitzner, are valuable tools in the hands of a "reading man," and will doubtless conduce to elevate him in the tripos, or further him towards the attainment of a first class; but we dare say our readers generally will pardon our omitting to enter upon a discussion concerning "masculine paroxytones" or "polysyllabic feminines."

5. The Minor Greek Poets we cordially recommend. The present is a very beautiful, and, if we are not mistaken, the only collected edition. These little volumes hold out great inducement, even to an idle man, to brush up his Greek, will repay the time spent over their pages with gratification, and may be read with the greatest ease, especially if the Greek and English Lexicon be not out of reach.

At Home and Abroad. By the Author of "Rome in the XIXth Century," &c. 3 vols. 12mo. London, 1831. J. Murray.

THE fair and popular author of "Rome in the XIXth Century" comes upon us with strong claims to attention; even though the influx of new novels since our last, warns us from giving too much of our *Gazette* to that single species of publication. And we are almost glad of it in this instance, because *At Home and Abroad* is of a different order from the preceding publication to which we have alluded, and one of the more usual class of fictions, in which loves, and jealousies, and fears, and hopes, and accidents, are woven into the history of the characters. Upon this ground we should suspect the present to be a more juvenile performance of the accomplished writer; and consequently rather addressed to youthful reading than to gray-bearded criticism. There is often a degree of liveliness, however, in these pages, and also touches of playful satire, which promise more than they perform, owing to the light, and we might say careless, way in which the scenes are wrought out. We shall make no extracts; but call on the author to favour us, which she is quite capable of doing, with something yet better than she has produced.

Travels and Discoveries in Northern and Central Africa in 1822, 3, and 4. By Major Denham, Captain Clapperton, and Dr. Oudney, &c. &c. 4 vols. 18mo. London, 1831. J. Murray.

As we have previously done by Parry and Franklin, the publisher has here done by the interesting Travels designated in the title-page;—made them accessible to the poorest

* We are glad to see the practice becoming more general of appending indices to works of this description, since they not only enable the reader to find, in an instant, any information he may require treated of in the text, but must prove a valuable saving of time to the historian who may hereafter have occasion to consult them.

classes of the reading world, by printing them in a very neat manner, and selling them at a price which nothing but the widest circulation could render possible, and which hardly any probable circulation can render profitable. Thus, while handsome libraries and public rooms may boast of their quarto and octavo editions, not only the home of the 10^l. householder, but even of the cottager, may enjoy the pleasures of these pages, and while their inmates glow over the enterprise and spirit of our adventurous countrymen, they may acquire a knowledge of foreign climes and manners, and imbibe similar feelings for their own government at home. Though on a smaller scale, the portraits and embellishments of these vols. are equal to the large.

The Secretary's Assistant. 12mo. pp. 156. Whittaker and Co.

ONE of those useful little books which, having used and found how serviceable it is for almost daily reference, you wonder that you could ever do without. This Assistant gives you superscriptions, lists of ambassadors and consuls, the forms of petitions and memorials, abbreviations of knightly orders, and other pieces of instruction for intercourse with society. It is a fifth edition.

ARTS AND SCIENCES.

POLAR CIRCLE: CAPTAIN ROSS.

WE have received intelligence that the Esquimaux have not this season visited any of the Hudson Bay settlements; and the fact cannot but be considered interesting with reference to Capt. Ross's Expedition. It is to be presumed that had these people fallen in, either with our enterprising countryman, or the wreck of his vessel, they would waive their usual journey, having through these means procured their supplies: but at all events the probability is that Capt. R. had gained the main land, though up to last winter he had not been able to pass it.

ROYAL INSTITUTION.

MR. FARADAY on the properties of light generally, and more particularly on the experiments connected with this subject lately made in the laboratory of the Institution by Mr. Pearsall, the chemical assistant. Mr. Pearsall, though a youthful experimentalist, has, by a course of unrelaxing application in the laboratory, made some important discoveries in the nature and properties of light. His recent papers, also, which have found a place in the *Journal of the Institution*, of itself a sufficient test of their worth, do his research much credit. Mr. Faraday first took a brief view of the white and coloured properties of light, which was required in order to make the point of the experiments clear; he then proceeded to the experiments themselves. There are certain mineral substances in which light would seem to be stored up, and which may be evolved by particular operations: thus, some fluor spars, phosphate of lime, and other minerals, when moderately heated, evolve light for a short time and then become obscure, like ordinary bodies. When re-heated, there is no repetition of the appearance; the light, or source of light, appears to be exhausted. Mr. Pearsall, however, has found that by passing the electric discharge of a moderately-sized jar ten or twelve times over these exhausted phosphori, the power is restored, and they acquire their first state: this may be repeated a great number of times. Further, such bodies as scallop and

oyster shells, the bones of cuttle-fish, mother-of-pearl, ivory, &c. when calcined, may in this way be converted into phosphori, never having before been in that state. The particular effects and nature of phosphori were fully illustrated by experiment.

In the course of the evening it was intimated that there would be no Friday evening meeting until the 15th of April, when Mr. Daniell would treat of the forms and attractions of the particles of crystals.

COLLEGE OF PHYSICIANS.

SIR HENRY HALFORD, Bart. in the chair. The registrar, Dr. F. Hawkins, read a paper on epilepsy, by Dr. Roberts, in which some instances were related of this disorder arising from external injury. In one case a tumour of the brain, surrounded by a softening of the cerebral substance, was caused by blows on the head. It was the opinion of the author, that if bleeding had been practised in these cases to a sufficient extent, after the infliction of the injuries, the subsequent occurrence of epilepsy might have been prevented. A paper by Dr. Anthony Todd Thomson was afterwards read, on the effects of *strychnia* on the animal economy. This valuable alkali is a powerful stimulant of the nerves of voluntary motion, and has lately been recommended as a remedy in paralytic cases, especially in those arising from the poisonous influence of lead. Dr. Thomson had instituted some experiments with this substance on dogs, which were minutely detailed in his paper, and from which it appears that *strychnia* has no tendency to cause determination of blood to the head; and he concludes, therefore, that it may safely be administered even in those paralytic cases which have appeared to arise from pressure on the brain. He conceives it to be a remedy of considerable value in all cases of palsy, in which the sensibility of the affected limbs has not been impaired.

GEOLOGICAL SOCIETY.

W. J. BRODERIP, Esq. in the chair.—A paper on the geology of Swan River and Garden Island (Isle Buache), was read by the venerable Archdeacon Scott. The memoir was accompanied by a series of specimens, illustrative of the general structure of the country, and particularly of the modern calcareous formation which constitutes so great a portion of the western coast of Australia. There was likewise exhibited a new species of *Delphinula* (*D. camellosea*), which occurs in a recent state on the beach of Garden Island, and was also found fossil in digging a well on the mainland, a mile from the shore, at the depth of eighty-four feet, imbedded in the calcareous sand. The whole collection was presented to the Society by Mr. Scott. Among the donations laid on the table was a very fine slab of the Dudley limestone, crowded with organic remains, and presented by Lord Dudley. Several fellows were elected.

ROYAL GEOGRAPHICAL SOCIETY.

W. R. HAMILTON, Esq. in the chair. Read a memoir, by the Rev. Dr. Goodenough, on the voyage of H. M. S. *Blonde* up the Black Sea, in 1829.

The *Blonde* weighed from Constantinople on the 9th November, 1829; and proceeded on her voyage for the first twelve hours with a fair wind. On the 10th, she was taken aback by a strong gale from the northward, with thick weather and snow; and this description of climate seems to have accompanied her

during nearly the whole trip. On the 13th, she arrived at Sevastopol, in the Crimea, having sounded repeatedly in the passage, with 100, 120, and 140 fathoms line, without striking the bottom, even with this last, when within sixteen miles of the Crimean shore. At Sevastopol she anchored in nine fathoms, in the outer road, which is of easy access, but open to the west and north-west, unless, as in part, protected by some reefs and shoals outside, which are indicated by beacons. The inner harbour is one of the finest in the world; but owing partly to the quarantine regulations, and partly to the state of the weather, few or no observations were made on it. It is reserved exclusively for the use of the Russian navy; and several of their ships were lying in it; but their state of repair seemed indifferent, and their bottoms especially were said to be much injured by the worm (*teredo navalis*), which seems to have taken up here its favourite abode. From Sevastopol she proceeded along the land to the northward, till, on reaching Cape Tarkh, the north-west point, (which runs out low, but has an excellent light on it, that may be seen eleven or twelve miles), she bore up for the opposite coast, which she made about Akerman, finding the distance eleven or twelve miles less than is laid down on the charts. Thence she proceeded to Odessa, and anchored in seven fathoms; again in the outer road, which is perfectly open, having every where a uniform depth at equal distances from the shore. The quarantine regulations here also prevented intercourse; but the town looked from the sea to be handsomely built; and the lazaretto and quarantine establishments were far superior to those of Sevastopol. There appeared, however, to be no fortifications or guns mounted; and the salute was returned by a brig, the only vessel of war then in the port. From Sevastopol she coasted to the southward, touching at Varna, Bourgas, Sizeboli, &c. &c. on her way to Constantinople; and her whole voyage is comparatively barren of incident. But it is interesting, both as having been the first ever made in this sea by a British man-of-war, and also as furnishing a few points on which existing facts may be compared with the representation of the ancient geographers concerning a portion of the ocean of great importance in their estimation, and which they have minutely described.

1. The severe weather experienced may be considered illustrative of that proverbial inclemency which, with the cruelty of some of the earlier inhabitants of a portion of its shores, is said to have given this sea at first the name of *ægeus*, or inhospitable, until probably the multiplication of Greek colonies along its whole coast changed this to *ægeus*, or hospitable; and which is also considered as having suggested its modern name "Black." 2. Its extreme depth is the more remarkable, as Polybius, and even long before him, Strabo of Lampascus, assert it, in their time, to have been rapidly filling up; and the prodigious number of great rivers which flow into it, make it, indeed, impossible that this should not be the case, though the effect seems not yet perceptible; nor until the bottom rises to within a reasonable distance from the surface can it become so; for, from another observation made by the *Blonde*, (viz. that even in the mouth of the estuary into which the Dnieper, Bog, Dniester, &c. flow, at twenty miles distance, there is no deposit of mud, but only stones and broken shells), it is evident that the current of these rivers carries their charge of earthy matter beyond this distance, to the as yet unfathomed depths out-

side. 3. Sevastopol, Dr. Goodenough remarked, is not the ancient Sebastopolis (Augusta), once the seat of the great Indian traffic of the Romans, where, as Pliny tells us, 150 interpreters were kept to facilitate a traffic maintained with 300 nations; but that place (at an earlier period called Dioscurias, and now Iskourial), is situated on the opposite shore, about thirty miles north of the Phasis, or river of the Argonauts. 4. Odessa is, in like manner, an instance of the misapplication, by the Russians, of the classical names of ancient cities on this sea, not being either of the towns called Odessus: and Kherson is not even on the peninsula, which either gave or borrowed its name (Chersonesus) from the town so called. 5. In passing the Danube, the master of the Blonde, from whose log the above particulars of his voyage are extracted, minutely describes the appearance of the Isle of Serpents, generally considered by geographers the same with the island Leuce, or of Achilles, mentioned by the ancient writers as being off the mouth of that river, but which Dr. G. thinks must be sought for nearer the land, if not, perhaps, now completely incorporated with the coast. The delta of the Danube, like all others similar, probably gains annually on the sea. And it is at least certain that a bank, described by Polybius as being a day's sail (thirty or forty miles) from it out to sea, and on which, he says, the fishing vessels there frequently grounded, no longer exists at that distance, the Blonde having stood to within three miles and a half of the light-house, with regular shallow soundings—not, however, less than ten fathoms—the whole way.

The thanks of the Society were unanimously voted to Dr. Goodenough for his most interesting communication, and the meeting adjourned.

CELESTIAL PHENOMENA FOR APRIL.

20^d 8^h 47^m—the Sun enters Taurus: its true place in the heavens will be south of those stars in Aries which 2000 years since passed through the equinoctial colure.

Lunar Phases and Conjunctions.

	D.	M.	M.
☾ Last Quarter in Sagittarius	5	0	3
☾ New Moon in Pisces	12	4	0
☾ First Quarter in Cancer	18	18	27
☾ Full Moon in Libra	26	12	19

The Moon will be in conjunction with

	D.	M.	M.
Jupiter in Capricornus	7	18	0
Mercury in Aries	12	17	0
Venus in Libra	14	2	15
Mars in Taurus	16	0	6
Saturn in Leo	20	18	30

Occultation of Aldebaran.—15^d 4^h 50^m 29^s—immersion; 5^h 54^m—emersion. The following diagram will illustrate the phase and position of the Moon, and the points of immersion and emersion.

Notwithstanding this will occur at the time the Sun is above the horizon, it may be readily seen with a telescope. This occultation (should the unlightened limb be visible) will be more favourable for observing the singular phenomenon of the projection of Aldebaran on the disc

of the Moon than those which have already occurred of this series: the immersion will take place at the dark edge of the disc, and the eye will be less likely to be perplexed with the different illuminations of the star and the moon, the one sharp and twinkling, the other soft and quiescent: the observer may follow the star to the edge of the disc with less excitation than when the immersion takes place at the bright edge, and be better prepared to note any phenomena which may occur. This series of occultations of Aldebaran commenced in 1829, and will terminate in 1832.

5^d 19^h 15^m—Mercury in his superior conjunction. 11^d—ascending node. 15^d—perihelion. 22^d—in conjunction with δ Arietis: difference of latitude 4'.

Venus is now of a gibbous form, with about $\frac{1}{4}$ of her full disc defective. This beautiful planet pours forth a flood of radiance on the evening landscape, though still too remote from the earth for satisfactory telescopic observation. 4^d—ascending node. 22^d—in conjunction with 1 Δ Tauri: difference of latitude 6'. 26^d—with 1 and 2 ν Tauri: differences of latitude 2' and 10' respectively.

Mars continues to be conspicuous among those stars which have shed their brightest lustre over the wintry sky of the northern regions of the world, and are now gradually blending their enfeebled rays with the glorious beams of the advancing summer's sun. 6^d—in conjunction with 179 Mayer: difference of latitude 4'. 25^d 6^h—with 132 Tauri: difference of latitude 12'.

The Asteroids.

Jupiter is a morning star. The following is the only eclipse of the satellites which will be visible:

	D.	M.	M.
First Satellite, Immersion	24	15	44

28^d—Saturn stationary.

Uranus is advancing to a favourable position for observation.

Lunar Eclipse of 26th February last.*—The following were the observations. 5^h 45^m (clock time)—the Moon's upper limb was indistinctly perceived above a low bank of clouds, over which was diffused a slight blue haze. 5^h 55^m—the shadow of the Earth quite clear of Mare Crisium and Mare Humorum: the eclipsed part of the disc not visible. 6^h 5^m—the shadow passed the centre of Tycho and the northern part of Mare Fecunditatis. 6^h 10^m—the eclipsed limb dully visible, and of a neutral colour; the edge of the shadow more defined than when first observed, and the penumbra about the breadth of Mare Crisium. 6^h 15^m—the shadow passed through the southern part of Mare Fecunditatis. 6^h 25^m—the defined edge of the shadow left the Moon; the penumbra lingered for several minutes afterwards, and exhibited a dull appearance on the western limb. A halo of unusual brilliancy surrounded the Moon at 9^h.

Conjunction of Mars with 1 Δ Tauri, 17th

* See Celestial Phenomena for February.

March last.*—This conjunction, if not an occultation, was a very close appulse; the planet was traced to within a minute distance of the star, and at 11^h 15^m the star disappeared, and continued invisible for about three minutes: the proximity of Mars to the vapours of the horizon rendered the edge of the disc rather confused, notwithstanding which, the impression on the observer is, that the star was occulted.

Depford.

J. T. B.

FINE ARTS.

SUFFOLK STREET EXHIBITION.

ROCKED, as it were, in the storm of political agitation, our artists continue to produce their bright creations with as much perseverance as if all around partook of the tranquillity which belongs to their own pursuits and character. Whatever may be their success as respects individual advantage, we may justly repeat, that a fairer, or, indeed, so fair a claim to public favour has never before been preferred by the Society of British Artists; and we trust that, amidst the contests and clamours of the day, the lovers and encouragers of the Fine Arts may yet find a breathing time, in which to inspect the performances and reward the merits of those who have laboured so indefatigably to win their regard. We proceed to notice a few of the novelties which most forcibly attracted our attention.

No. 3. *A Portrait of James Heath, Esq., A.R.A.* J. Lonsdale.—A more faithful and characteristic resemblance, and a more living head, we never saw.

No. 6. *Portrait of His Grace the Duke of Gordon, &c. &c.* The head and hand painted by the late Sir T. Lawrence, P.R.A.; the arrangement and the completion of the picture by J. Simpson.—Mr. Simpson has acquitted himself very creditably in this arduous undertaking. We prefer this picture to the *Portrait of the Right Hon. the Earl of Jersey*, finished under similar circumstances.

No. 7. *Civita Castellana.* W. Jantion.—In our opinion, decidedly the best of Mr. Jantion's productions of this class. Although a local view, he has imparted to it the grandeur of a fine composition.

No. 18. *Il Penseroso.* T. Webster.—And *l'Allegro* too; for if the subject weeps, the spectator laughs. Painted with Mr. Webster's accustomed ability.

No. 25. *Reading the Manuscript.* A. G. Vickers.—Good composition, harmonious colouring, and free execution, are the only qualities to be recognised in this production. Is it not rather imprudent in an artist, who can evidently do so much more, to content himself with presenting such mere splashes of his pencil to the public?

No. 61. *The upper end of Derwentwater, taken near Lowdore Waterfall.* T. C. Hoffman.—A concentration of all of beautiful that lake-scenery can yield.

No. 66. *The Poacher's Daughter.* J. Inkipp.—Rich, deep, and transparent.

No. 73. *Study from Nature.* Mrs. W. Carpenter.—Truth and simplicity, with a masterly breadth of effect and execution.

No. 74. *Children blowing Bubbles.* W. Gill.—A beautiful little gem.

No. 78. *The Gravedigger.* H. Liverseege.—We have seen pictures by Mr. Liverseege that we prefer to this; but there is great talent in it, nevertheless.

No. 79. *Still Life.* J. Holmes.—A very fair

* See Celestial Phenomena for March.

pun. The accessories are finely painted. It is one of Mr. Holmes's best pictures.

No. 80. *The Grandfather*. J. P. Knight.—What scenes are so interesting as those in which the domestic affections are called forth?

No. 87. *A Study of my Father*. J. Hayter.—Mr. Hayter has communicated a powerful Rembrandt-like effect to his little sketch.

No. 93. *Ferretting*. C. Hancock.—Full of life and spirit.

No. 100. *An Interior of a Room, 15, Berners Street, with a Portrait of H. Bone, Esq. R.A.* R. T. Bone, Jun.—Perfectly the effect of a camera-obscure—"the truth, the whole truth, and nothing but the truth." An admirable little work.

No. 101. *Auld Robin Gray*. J. P. Knight.—Much technical excellence; but, in other respects, we confess that we have seen this oft-repeated subject better treated.

No. 102. *Vine near Hertford*. B. J. E. Jones;

No. 108. *Market Morning*. J. W. Allen.—Two exceedingly clever landscapes.

No. 114. *The Eleventh Hour*. E. Prentis.—Mr. Prentis has here proved himself a master. Parts of his picture are frightfully fine, especially the expression of the dying usurer and of his dissipated and obdurate son. Several Hogarthian touches will reward an attentive examination of this work, which, if in some little respects open to criticism, nevertheless discloses talents of a very high order.

No. 132. *The Cooenalters*. G. Harvey.—A scene of deep interest. The various and well-contrasted characters who are listening to the energetic exhortations of "the minister," shew that Mr. Harvey has studied human nature attentively.

No. 138. *The Presumptive Pinch*. W. Kidd.—Farcical and amusing.

No. 157. *The Festival of the Law*. S. A. Hart.—A gorgeous assemblage of colour; but toned down into rich depth and harmony. It is difficult to conceive any thing more splendid.

No. 158. *Portrait of a Lady*. G. Clint, A.R.A.—The costume in this sweet portrait is chosen with peculiar taste.

No. 160. *Portrait of Lord Chancellor Brougham*. J. Lonsdale.—As strong a likeness of this highly-gifted and extraordinary man as any portrait, the features of which are immovable, can possibly be. The composition is grand, the parts are well put together, and the whole is firmly and finely painted.

(To be continued.)

NEW PUBLICATIONS.

The Gallery of Greenwich Hospital; comprising Portraits of celebrated Naval Commanders, and Views of their most memorable Actions: illustrated with Biographical and Historical Memoirs. By Edward Hawke Locker, Esq., F.R.S., F.S.A., one of the Commissioners of the Institution. Part I. Harding and Lepard.

This is the first Part of a work, which, if we may judge of the intended volume by its commencement, will be a worthy companion to *Lodge's Portraits and Memoirs*, brought out by the same spirited publishers, and to which we have so frequently felt it our duty to call the attention of our readers. The present publication, while it records the achievements of the gallant profession of which our beloved Monarch is so illustrious an ornament, will make the humble middy pant for opportunities to emulate Nelson and Trafalgar. At any time such a work must have been popular; but in the present favourable circumstances, appearing, as it does, under the immediate pa-

tronage and sanction of his Majesty, it will no doubt be peculiarly so. The memoirs in the first Part are those of Lord Hawke, Lord Bridport, Vice-Admiral Benbow, and Capt. Cook. As a specimen of the simplicity and clearness of the composition, and as exhibiting a curious picture of a state of things, to which, happily for the country, our navy has long been a stranger, we will extract a passage from the account of Vice-Admiral Benbow, of whom Mr. Locker justly observes:—"Perhaps no name is better remembered among our seamen than that of their ancient favourite, Benbow, whose death, recorded in one of their most popular ballads, still cheers the middle watch of many a stormy night at sea."—He had recently been employed in enforcing the restitution of some English vessels which had been seized by the Spaniards at Cartagena.

"Scarcely had he returned from this valuable service, when the prospect of war with France determined the English ministers to despatch a stronger force to the West Indies. They advised the king to send Benbow once more; but to this his majesty objected, considering it ungenerous to so zealous an officer, to give him no respite, while others lay idle on shore. This service, however, being relished by none of those to whom the command was successively offered and declined, the king, half offended with his ministers, turned merrily round upon them, and, alluding to the foppery of dress and manners exhibited by some of the naval officers of that day, said, 'Well, then, I see we must spare our beaux, and send honest Benbow.' Being summoned to the royal presence, the king asked if he were willing to return to the West Indies; graciously observing, that he should forfeit none of his favour if he declined to go. Benbow, though not insensible of his sovereign's considerate regard for him, replied, 'No, sire, I do not understand such compliments. When your majesty wants my services, I have no right to choose. I am ready to sail immediately to any quarter of the world to which your majesty may be pleased to send me.' Having thus accepted the command, and relieved the embarrassment of the king's ministers, the vice-admiral hoisted his flag, in August 1701, and received under his orders the ships after-named, viz.

Breda,	70 guns	{ Vice Admiral John Benbow.
Defiance,	64	{ Captain Christopher Fogg.
Windsor,	60	{ Richard Kirkby.
Greenwich,	64	{ John Constable.
Ruby,	48	{ Cooper Wade.
Pendennis,	48	{ George Walton.
Falmouth,	48	{ Thomas Hudson.
		{ Samuel Vincent."

Mr. Locker proceeds to describe, in a clear manner, Benbow's able conduct in the West Indies, his actions with Du Casse, and the cowardly and mutinous behaviour of his captains, except Captain Walton of the Ruby. After which he continues:—"On the 24th (we quote from the narrative of a person on board the Breda), 'a light breeze carried us once more within hail of the sternmost ship of the enemy, upon which he fired a broadside of double and round below, and of partidge aloft, which was returned. At three in the morning the admiral's right leg was knocked to pieces by a chain shot, and he was carried below. While the surgeon was at work with him, one of his lieutenants endeavoured to console him; upon which Benbow replied, I am sorry for it too; but I would rather have lost both my legs than have seen this dishonour brought on the English nation. And hear me, should another shot deprive me of life, behave like men, and fight it out while the ship can swim.' He im-

mediately ordered his cradle on the quarter-deck, and thus continued the fight till day-break, when their antagonist ship exhibited terrible proofs of the effect of their fire. The enemy, seeing Benbow still deserted, bore down again in a body between her and the Breda, firing all their broadsides into her, and towing off their disabled ship, which he was in no condition to prevent, though he followed them still with all the sail he could carry, enforcing the battle signal, which was always out, by firing shot at his own treacherous deserters. The admiral, during a calm, sent Captain Fogg to each of their ships to remonstrate with them on their base conduct. Kirkby came on board the Breda, expressed no sympathy for his wound, and impudently pressed him to desist from any further engagement. This unprincipled man, who is designated as *Colonel Kirkby* in the proceedings of the court-martial, seems to have had great influence over his wretched colleagues, who being thereupon summoned on board by the admiral, avowed their concurrent opinions, having already signed a paper which Kirkby had drawn up for that purpose. On this, Benbow, 'perceiving they had no mind to fight, thought it not fit to venture further. He was then abreast of the enemy, and had a fair opportunity of beating them, all the ships being in good condition except his own.' Thus basely abandoned, the indignant admiral was obliged to bear up for Jamaica, nor was the enemy either in a condition or a disposition to follow him. At no time had the French a more brave and able naval commander than Du Casse, who, while he felt for the honour of his own nation, rendered ample justice to his antagonist, from whose resolute attack he had a narrow escape. Three times during their long-continued contest was he boarded by Benbow, who received a shot in the arm, and a severe wound in the face in these encounters, and would undoubtedly have carried his antagonist, had his own captains made any fight against the rest of their ships. When the French admiral reached Cartagena, with a liberality highly honourable to him, and which we gladly record, he addressed the following pithy letter to his much-injured rival.

"Sir,—I had little hope on Monday last, but to have supped in your cabin. It pleased God to order otherwise; I am thankful for it. As for those cowardly captains who deserted you, hang them up, for they richly deserve it.—Yours, Du Casse."

"When arrived at Jamaica, Benbow issued his commission to Rear-Admiral Whetstone to try these officers by a court-martial. Benbow, though suffering great anguish from his wound, gave evidence against them in person, and on the 12th of October, 1702, they received sentence as follows:—

Colonel Richard Kirkby	to be shot.
Captain Cooper Wade	do
Captain John Constable	cashed.
Captain Christopher Fogg	suspended.
Captain Samuel Vincent	do

Captain Hudson of the Pendennis died before the trial, or would undoubtedly have shared the fate of Kirkby and Wade. The sentence being forwarded to England, and the prisoners sent home shortly after, in H. M. S. Bristol, the government, in order to mark its indignation against them, and perhaps to defeat all attempts to procure their pardon (for it is said they were highly connected), caused death-warrants to be sent to all the ports, that summary justice might be done upon Kirkby and Wade, immediately on their arrival, who were not permitted to land, but were shot on board the Bristol, on the

16th of April, 1703, two days after she anchored at Plymouth. The health of the gallant admiral declined rapidly after the amputation of his leg, chiefly owing to the grief and indignation he had endured, and he breathed his last at Port Royal, on the 4th of November, 1702."

The portraits prefixed to the memoirs are admirably engraved, from original pictures by Cotes, Kneller, Reynolds, and Dance; and they are followed by a free and spirited etching (by J. C. Allen), from the magnificent and well-known painting by De Louthembourg, of "The Defeat of the Spanish Armada." "For this splendid picture," says Mr. Locker, "our Gallery is indebted to the liberality of Lord Farnborough, who, being one of the Directors of Greenwich Hospital at the period when the collection was first projected, was not contented with proving, by this donation, his cordial desire to promote the honour of the Royal Navy, and the interest of that art of which his lordship has constantly shewn himself a judicious patron, but a still more important service was rendered to the Institution by his effectual mediation with our late accomplished sovereign, who was graciously pleased to present to it thirty-seven of the most valuable pictures now in the Gallery."

Landscap Illustrations of the Waverley Novels.

Part XII. London. C. Tilt.

ANOTHER exquisite series of four landscapes, which illustrate scenes in *Red Gauntlet*, *Waverley*, *Ivanhoe*, and the *Black Dwarf*.—Solway Sands, and Manor Glen, after Copley Fielding; Stirling Castle, after Robson; and Wharfedale, after De Wint, all engraved by E. Finden, not only portray interesting subjects in his most beautiful manner, but preserve the characteristics of the original paintings so delightfully, that we seem to have the artists in their own styles and colours before us. The word "gems" could never be more truly applied to productions of art.

Compositions of the Acts of Mercy. Drawn by the late John Flaxman, Esq. R.A.P.S. Engraved by F. C. Lewis, Engraver of Drawings to the King. Published by Miss Flaxman and Miss Maria Denman.

EIGHT noble designs, distinguished for their grandeur, simplicity, beauty, and pathos. That must indeed have been a pure and refined mind from which they were the emanations. It is impossible to look at them and not be fully sensible of the force and dignity of the arts, when directed to objects worthy of their highest powers. "Feed the hungry," and "Deliver the captive," are our favourites; but they are all admirable; and they have been engraved in aquatinta by Mr. Lewis with a congenial feeling.

Thomas Young, M.D. F.R.S. Foreign Associate of the Royal Institute of Paris. Engraved by C. Turner, A.R.A. from a Picture by Sir T. Lawrence. Colnaghi, Son, and Co. WE have seldom seen a portrait by the late President which more happily exemplifies the grace and beauty of his style, as far as respects the preservation of gentlemanlike character, and the exquisite drawing of the features.

Views of the Neilgherries, or Blue Mountains of Combatoor, Southern India. Drawn from nature and on stone, by Captain E. M. M'Curdy, 27th reg. M.N.I. Smith, Elder, and Co.

THERE are few acquirements more valuable to a military man, whether with reference to his profession, or merely to the rational and amus-

ing occupation of his frequent leisure, than the power of using his pencil in the delineation of the various and distant scenes among which, in the course of an eventful life, he may chance to be thrown. Of this truth the present publication adds another and a very pleasing proof. "These beautiful 'Blue Mountains' (as their name implies, from *neil*, *blue*, and *gherry*, *mountain*)," observes Capt. M'Curdy, in the general description fixed to his plates, "had long excited the admiring gaze of each European who had passed within view of their majestic height (towering as they do far above all other of that grand range of mountains called the 'Western Ghauts'), and their smooth and verdant tops had long tempted the adventurer's tread. But it was not till January, 1819, that they were explored, and found more than to realise all the expectations of the enterprising Englishmen who reached their summit, and breathed an air so pure, cool, and elastic, that it did not require the contrast with the burning plain from which they had just ascended, to convince them of its exhilarating, beneficial, and strengthening influence." It appears that, since the above-mentioned period, a settlement has been established on these mountains for the reception of sick officers and men; and that its salubrity has in many instances been strikingly exemplified.

The views are four in number (besides a small vignette), and are of a very picturesque character. If they do not exhibit all the technicalities of the more practised professional artist, they evince much firmness and freedom of execution, and bear the stamp of that important quality the absence of which in representations of local scenery cannot be compensated by any other,—fidelity.

ORIGINAL POETRY.

LINES

*Supposed to be the Prayer of the Supplicating Nymph in Mr. Laurence Macdonald's Exhibition of Sculpture.**

She kneels as if in prayer, one graceful arm
Extended to implore: her face is fair,
But calm and somewhat sad; methinks the past
Has taught her life's all general lesson—grief;
But grief which has subsided on that brow
To a sweet gravity, that yet seems strange
In one so young: her lip is cold, and wears
No smile to suit its beauty or its youth.
What is its prayer?

THE myrtle wreath that I have laid
Upon thy shrine is withered all;
The bloom which once its beauty made,
I would not, if I could, recall;
No! emblem of my heart and me,
I lay it, Goddess, on thy shrine;
And the sole prayer I offer thee,
Is—let it still be emblem mine.

There was a time when I have knelt
With beating heart and burning brow;
All I once felt is now unfelt—
The depths once stirred are silent now:
I only kneel that I may pray
A future like my present time—
A calm, if not a varied way—
A still, if not a summer clime.

There comes no colour to my cheek,
Whatever step be passing by;
No glance makes mine the green earth seek,
That answer of a conscious eye;
My pulse is still as waves that sleep
When the unbroken heaven is seen;
Ah! never comes a calm so deep
As where the tempest late hath been.

* We could wish our readers to visit the beautiful statue which has inspired these exquisitely descriptive, touching, and poetical lines.—*Ed. L. G.*

Thou, Wind, that, like a gentle song,
Scarce stirs the sleeping summer air,
How often hast thou borne along
The vain reproach of my despair!
Fair foot, by whose moss-circled side
My eyes have shed their bitter rain,
Flow on with an unsullied tide,
Thou'lt never see my tears again.

Time was, I loved so many things,
The earth I trod, the sky above,—
The leaf that falls, the bird that sings;
Now there is nothing that I love—
And how much sorrow I am spared,
By loveless heart and listless eye!
Why should the life of love be shared
With things that change, or things that die?

Let the rose fall, another rose
Will bloom upon the self-same tree;
Let the bird die, ere evening close
Some other bird will sing for me.
It is for the beloved to love,
'Tis for the happy to be kind;
Sorrow will more than death remove
The associate links affections bind.

My heart hath like a lamp consumed,
In one brief blaze, what should have fed
For years the sweet life it illumed,
And now it lies cold, dark, and dead.
'Tis well such false light is o'ercast,
A light that burnt where'er it shone;
My eagerness of youth is past,
And I am glad that it is gone.

My hopes and feelings, like those flowers,
Are withered, on thy altar laid—
A dark night falls from my past hours:
Still let me dwell beneath its shade,
Cold as the winter midnight's air,
Calm as the groves around thy shrine—
Such, Goddess, is my future's prayer,
And my heart answers, "It is mine!"

L. E. L.

SIGHTS OF LONDON.

MISS LINWOOD'S EXHIBITION.

THIS lady, an extraordinary instance of talent and perseverance, has, in (we believe) her 74th or 75th year, added another large work to her gallery, upon which she has been employed for the term of an apprenticeship. It is called "The Judgment upon Cain," and represents the first murderer when his "punishment is greater than he can bear," with his wife and two children partaking of his agony and despair. The picture is originally of the French school, and a good deal exaggerated; but still, as a performance of needlework, with all its vivid hues, it is a remarkable production. The rest of the Gallery, consisting of above sixty pieces, many of them natural as well as beautiful, is a singular spectacle of human ingenuity. For our young holiday-making friends, we counsel a visit to Miss Linwood; from whose works they will derive pleasure, and from whose example they may gather a useful moral lesson.

OXFORD STREET BAZAAR.

THIS mart, where so many holiday gratifications are concentrated, will, no doubt, attract a shoal of visitors, both old and young, at the approaching Easter. The spirited landlord has put forth a fresh bush from his Diorama and Physiorama, to entice the pleasure-seeking multitude. At the Diorama the novelties comprise views of the interior of King's Chapel, Cambridge, Llanberis Lake, and the Basilica of Saint Francis. The first of these, presenting

our glorious canon of Gothic architecture, the King's Chapel, is incomparably the best, yet still leaving sufficient to admire in the two others. In the view of the Basilica of Saint Francis, where a congregation is beheld engaged in devotion, we must say, the artist has partially failed; for, in the mass of figures he has there introduced, we discover a want of harmony and connexion with the other parts of the picture; but this demerit is not peculiar to the present occasion; for, in all similar compositions, we have noticed that a much higher degree of excellence is yet to be attained, before the illusion can be perfect when animate objects are represented. The Physiorama contains fourteen pleasing views, with which both children and parents will be equally delighted; the former at seeing so much, and the latter at only paying a shilling for it.

VARIETIES.

Barometric Variations.—M. Bouvard, of the observatory at Paris, has lately published some minute and very numerous observations on the movements of the barometer, from which it would appear that, towards the equinoxes, this instrument attains its maximum at eighty minutes past eight A.M., and at about eleven P.M.; the minimum at the same period is at four A.M. and at four P.M. In summer, the maximum is at ten minutes past eight A.M., and in winter at thirty minutes past nine A.M.

Lieut. James Holman, the Blind Traveller.—We have news of our friend at Canton, where he was safe and well at the beginning of last December.

Earthquakes.—The shock of an earthquake, it is stated in a Caernarvon journal, was felt at Bardsey Island on Thursday the 17th ult. It lasted about a minute and a half. A similar phenomenon occurred about seventy years ago. This is the second earthquake on the British coasts within the last month: Dover, Deal, Sandwich, and the adjacent parts of Kent, having been affected by a movement on the 2d.

Odd Title.—A work has been published in France with the title of "Universal Peace; or, the Philosophical Marriage of Commerce with Agriculture and his whole Family."

Klinger, &c.—The German poet Klinger, the author of *Faust*, died lately at St. Petersburg, at the age of seventy-seven. Another German bard, Frederick Matthisson, expired at Dessau on the 12th ult. aged seventy-one.

French Industry.—The Académie de l'Industrie at Paris has offered a gold and silver medal (the former of the value of five hundred francs) for the best and second best "Inquiry into the scientific and practical principles most favourable to the progress of agricultural, manufacturing, and commercial industry in France."

Chinese and Portuguese Grammar.—A new grammar of the Chinese language, the *Arte Chinesa Constante do Alfabêto e Grammatica*, by Father Gonçalves, has been produced at Macao, and is highly spoken of in the *Canton Register*. It is stated to contain a good deal of Chinese antiquities, specimens of forty-five different dialogues, a collection of proverbs, and useful extracts relating to history and mythology.

Theory of Sound.—We understand that the experiments instituted in London on Mr. Trevelyan's theory of sound do not bear out the conclusions to which he has been led. (See *Ed. Gaz.* No. 738.)

Arabian Tradition.—The Ashabir-Ras (the named ancestors of the Russians) had a well

which furnished them with water sufficient to water their ground, and a just king whom they deeply regretted after his death. After some time, the devil appeared to them in the shape of the defunct king, and said to them, "I am not dead, but I absented myself from you to witness your grief." At this they were exceedingly delighted. He then ordered them to interpose a veil between the people and himself; and pretended that he should never die. The greater part of them believed and worshipped him. God sent a prophet to announce to them, that it was the devil who was talking to them from behind the veil, and to turn them from his worship. He ordered them to adore the only God, who had no associate. They approached the prophet, killed him, and threw him into the well. Immediately, the water disappeared, drought prevailed, the trees dried up, the fruits fell to the ground, the country became a desert, and the inhabitants were changed into wild beasts.—*Hammer's Russian Origins.*

Population of Rome.—The Diario di Roma has published the following statement of the population of Rome during the twelve months which elapsed between Easter 1829 and Easter 1830:—

Parish churches.....	54
Families.....	34,805
Bishops.....	30
Priests.....	1,455
Monks and Friars.....	1,986
Nuns.....	1,385
Seminarists and Collegians.....	560
Heretics, Turks, and Infidels, exclusively of Jews.....	206
Prepared for the Sacrament.....	107,433
Not prepared for the Sacrament.....	36,852
Marriages.....	1,068
Male baptisms.....	2,339
Female baptisms.....	2,351
Male deaths.....	2,862
Female deaths.....	2,113
Males of all ages.....	77,475
Females of all ages.....	69,810
Total population.....	147,385

From this table, compared with those of preceding years, it appears that in Rome, in the year 1830, the population had increased by 2,744 souls; the births, in proportion to the whole population were 1 to about 31½; the deaths, 1 to about 29½; the births of males and the births of females nearly equal; the births in proportion to the deaths, 1 to 6½; the marriages in proportion to the births 1 to 4½; the average number of births amounted to 391 a-month, or 13 a-day; the average number of deaths amounted to 416 a-month, or 14 a-day.

New Method of multiplying Dahlias.—Some dahlias, belonging to M. Jacquemin, having been injured by the wind in the first days of June, and some branches broken off, he placed them in the ground, in hopes of developing the flower. This did not take place; the vegetation languished, but the plants appeared good, and being carefully taken up, were found furnished with tubercles. Hence a new means of multiplying these flowers, and the illustration of a curious physiological fact.

Why is a man who deals in stale jokes like a stock-jobber?—Because he depends on fund-dead property.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XIV. April 5.]

The third and concluding Volume of Dr. Nares's Life and Times of Lord Burleigh is just ready for publication. We have reason to believe that the public have been long under an erroneous impression respecting the author of this work. It is not a posthumous publication of the late Archdeacon Nares, as many have supposed; but the work of a living divine, the Rev. Dr. Nares, Regius Professor of Modern History in the University of Oxford, as set forth in the title-page. Of the Archdeacon, who died in the year 1829, and of his many learned works, an account

has lately appeared in Messrs. Fisher's National Portrait Gallery. The author of the present work, it may be sufficient to state, by way of distinction, is also the author of a work on the "Plurality of Worlds," much noticed on its first appearance (1809); the Bampton Lecture for (1803), highly commended in Archbishop Magee's great work on the Atonement; the Critical Remarks on the Version on the New Testament edited by the Unitarians, 1811; the Sermons on the Creed, 1816; the Historical Prefaces to the several Books of Scripture in the second edition of Tytler's "Elements of General History," a tenth edition of which is just published; the "Heraldic Anomalies," and, long ago (anonymously), the popular little work "Thinks I to Myself;" besides abundance of single Sermons, Reviews, &c.

By the Rev. Charles B. Taylor, M.A., author of "May You Like It," the Records of a Good Man's Life—A new edition, by H. C. Deakin, of the Deliverance of Switzerland; and of his Portraits of the Dead—Second edition: the Rev. Mr. Evans's Rectory of Valehead; Mr. Dawson's Present State of Australia; Mr. Montgomery's new Poem, Oxford.

LIST OF NEW BOOKS.

Lardner's Cyclopædia, Vol. XVII. (Hydrostatics and Pneumatics, 1 vol.) fcp. 8vo. 6s. bds.—Reynold's Dramatic Annual, 12mo. 13s. hf.-bd. mor.—Holland on the Fœtus, Liver, &c. 8vo. 8s. bds.—Family Classical Library, No. XVI. (Theophrastus), 18mo. 4s. 6d. bds.—Eulonia of English Literature, No. I. (Paley's Moral Philosophy), 12mo. 5s. 6d. bds.—Hughes's Divines, No. XI. Latitude..... 51° 37' 32" N.
Longitude.... 0 3 51 W. of Greenwich.

TO CORRESPONDENTS.

We are obliged to S. M.; but it is hardly worth while to occupy more room with the subject.

Our thanks to H. E. B.; but the insertion of her pretty poem would commit us to more correspondence of the same kind than we could accommodate.

To show that we meant no ill will to S., we will indulge him with his version of the epigram.

"We have each but one eye;
Yet so lovely men deem us,
With the gods we may vie,"
Quoth Miss Polyphemus.
"Dear boy, then, how stupid,
To share two between us!
Give me yours—You'll be Cupid,
And I shall be Venus."

We received No. I. of our new contemporary, the Englishman's Magazine, too late for any notice, except that it appears to be very neat in its typography and arrangement.

The Working Man's Companion, Cottage Evenings, and the Architecture of Birds, a volume of the Library of Entertaining Knowledge, both published under the superintendence of the Society for the Diffusion of Useful Knowledge; Dr. Lardner's Hydrostatics and Pneumatics (Vol. XVII. of Cabinet Cyclopædia); Poem of Sir Thomas Wyatt (new volume of the Aldine); and several other novelties, are also too late.

The Navy at Home is postponed, in consequence of the number of Novels which previously demanded attention.

The entertaining and clever No. of the Harmonicon (XLVIII.) can only have a passing note of praise. It is quite a musical treasure.

No. I. of the National Omnibus, a journal apparently to appear once a fortnight, is an odd jumble, but displays considerable whim and talent.

ADVERTISEMENTS,

Connected with Literature and the Arts.

BRITISH INSTITUTION, Pall Mall.—

The Gallery for the Exhibition and Sale of the Works of British Artists is Open Daily, from Ten in the Morning till Five in the Evening.

Admission, 1s.—Catalogue, 1s.

WILLIAM BARNARD, Keeper.

SOCIETY OF BRITISH ARTISTS,

The Eighth Exhibition for the Sale of Works of Art by British Artists, is now Open, from Ten till Dusk.

Admission, 1s.—Catalogue, 1s.
JOHN WILSON, Secretary.

HAYDON'S NAPOLEON.—This Picture

will open on Easter Monday, at Ten o'clock, 23, New Bond Street.

Admission, 1s.—Catalogue, 6d.
With Studies from his real Hat, his Bed at Fontainebleau, his Column at the end of his favourite Walk, with an Eagle grasping the World; his English Garden, &c. &c. sketched by Mr. Haydon in 1814, at Fontainebleau.

This Portrait has been purchased by one who was constantly with him, as the only Picture in which justice has been done to Napoleon's form and air of profound meditation.

TO BOOKSELLERS, STATIONERS,

and PRINTERS.—To be disposed of, a well-established Business, in a respectable Market-Town, in the East Riding of Yorkshire. The situation the best in the Town, and the Stock small.

Apply (if by letter post-paid), to Messrs. Simpkin and Marshall, Stationers' Hall Court, London; or to Mr. John Hinton, Bookseller, &c. Leeds.

TO THE NOBILITY AND GENTRY OF THE

UNITED KINGDOM.—The most useful and wonderful Invention has been acquired by Mr. Tanner, the celebrated Professor of Philosophy and Mathematics, by the combination of certain Metals, refined with more subtle Bodies, producing an impenetrable, malleable, durable Amalgam, infinitely superior to the Rhodium, which he manufactures into Mathematical Pens, possessing the quality of three Temperaments; resisting the corrosive particles of the Ink, uniting all the usefully important Principles of Patents, and every Description of Metal Pens yet invented, with the adaptation for every Handwriting; bearing at least an Economy of 500l. per cent.

To be had wholesale only of the Inventor, 19, Brunswick Street, Hackney Road; and retail of every Stationer and Cutler in the Kingdom. Price, each; the Three Temperaments, 2s. 6d.; 4s. 6d. per Box of Half Dozen.

The genuine Pens have "Tanner" engraved thereon.

MUSIC.

PIANO-FORTES.—MART.—The Equitable Plan of this highly reputed Establishment, small Profits, Prices affixed, no Abatement whatever; and to ensure entire satisfaction, exchange allowed until such is afforded. The Assortment is extensive, splendid, choice, and fashionable, as Cabinet, Cottage, Square, &c.; also by every eminent Maker, and all warranted genuine, perfect, and complete.
Mart, 71, Dean Street, Soho, opposite Queen Street.

BOOKS PUBLISHED THIS DAY.

By the Rev. RICHARD CATERMOLE, B.D.
Printed for J. Hatchard and Son, 107, Piccadilly.

Montgomery's New Poem.—In 8vo. 7s. 6d.

OXFORD: a Poem.
By ROBERT MONTGOMERY,
Author of the "Omnipresence of the Deity," &c.

Also,
Engraved Illustrations of the Poem, by J. Skelton, F.R.A. and other Artists. Price 8s.; Proofs, on India paper, 10s. 6d.

Whittaker, Treacher, and Co. Ave Maria Lane, London; and W. Blackwood, Edinburgh.

THE PET POET.—The extraordinary

claims of Mr. Montgomery as a Poet are fairly discussed in Number IV. of the Royal Lady's Magazine, just published, with Four splendid Line Engravings, price 2s. 6d.

"The editor sets up for a snappish critic, too! O damn! I'm—Literary Gazette."

"Another labourer in the field of honest criticism."—*Albion*.

Rev. Robert Wall.

THE IMPERIAL MAGAZINE for April,

No. 4, Second Series, contains a Portrait and Memoir of the above celebrated Divine.

Proofs of the Portrait, for framing, on plain paper, 1s.; India paper, 2s.

New editions of the *Jas. No.* containing the Portrait of the King; and the *Feb. No.* the Portrait of Dr. Fletcher, are now ready, to secure which, early application will be necessary, as no ret is intended to re-iss.

London: Fisher, Son, and Co. Newgate Street; Simpkin and Marshall; and Sherwood and Co.

PRICE 8d.

REVIEW OF NEW BOOKS.

The Life of Archbishop Cranmer. By the Rev. Henry John Todd, M. A. 2 vols. 8vo. London, 1831. Rivingtons.

WHILE all parties either admit or applaud the transcendent scholastic abilities of Cranmer; not only has the public life and political reputation, but even the private worth and character of this theological reformer, furnished fuel for unceasing controversy. In the times immediately subsequent to those in which he suffered, and, indeed, at every successive period, when party-zeal, on the one hand, deemed it a furtherance of its own cause to belabour the memory of the dead, or taking up the cudgels in behalf of his fame, was by the other party considered as equivalent to self-defence, this literary warfare has been ever and anon waged, and that without losing much of its disputatious and acrimonious character. Hence we find the historical reputation of such contradictory statements, that we can hope to arrive at the truth with any degree of probability or satisfaction. The author of the present *Life* has done wisely in quoting his authorities for such positions as contrast former opinions; and, in laying down his own neither dogmatically nor unsupported, he has entitled himself to the claim of a fair and judicious biographer. We give the first interview of Cranmer with the king.

"But to return to the conference, as related by Foxe, Archbishop Parker, and others. The almoner had no sooner communicated the advice of Cranmer, than the delighted sovereign exclaimed, 'Where is this Dr. Cranmer? Is he still at Waltham?' Gardiner and Foxe replied, that they left him there. 'Marry,' said the king, 'I will surely speak with him, and therefore let him be sent for out of hand. I perceive that this man hath the right sow by the ear. And if I had known this device but two years ago, it had been in my way a great piece of money, and had also rid me out of much unquietness.' Cranmer had departed from Waltham. But a messenger was sent after him, and he was brought, unwillingly, into the royal presence. The interview is interesting. 'I well perceive,' said the king, 'that you have the right scope of this matter. You must understand, that I have been long troubled in conscience; and now I perceive that by this means I might have been long ago relieved one way or other from the same, if we had thus proceeded. And therefore, master doctor, I pray you, and nevertheless, because you are a subject, I charge and command you, all other business and affairs set apart, to take some pains to see this my cause to be furthered according to your device, so that I may shortly understand whereto I may trust.' Cranmer appears to have thought the plea of conscience sincere.

Himself was certainly sincere in the opinion, that this affair might lead to the separation of his country from the despotism of the see of Rome. His was the sagacity of the many who throughout Europe were in favour of the divorce, in order that by checking the dispensing power of the pontiff, they might free the mind from that 'absolute monarchy which superstition had erected in it.' He therefore admitted, but with the diffidence that always distinguished him, the conversation into which he had been accidentally drawn. 'I am content therewith,' said his sovereign; 'but yet, nevertheless, I will have you specially to write your mind therein.' And so calling the Earl of Wiltshire to him, he said, 'I pray you, my lord, let Doctor Cranmer have entertainment in your house at Durham-place for a time, to the intent that he may be there quiet to accomplish my request; and let him lack neither books nor any thing requisite for his study.'"

Cranmer has been charged, and not without some shew of reason, with sycophancy to the monarch; but the details of his history warrant the supposition that neither his own interest, nor personal advancement, were the motives of his courting the favour of the king, by seconding his views. Without the royal support, the cause of the reformers was for the time hopeless, and Cranmer knew that it was not to be gained by vainly attempting to thwart the desires of such a despot as Henry the Eighth. And it was thus, "by giving him his head," that he was enabled so to guide and manage the power of the king as to direct it to the furtherance of the reformation. It is indeed more than probable, that the reformed church owed its existence and progress to Cranmer having made a friend of this regal mammon of unrighteousness. But through the very means that advanced and invigorated the cause to which he devoted his life, the character of the high-principled reformer became tarnished, by being merged in the subserviency of the courtier. We quote the annexed letter, from him to Henry, respecting Anne Boleyn, as highly characteristic of the times and the writer.

"Pleaseth it your most noble grace to be advertised, that at your grace's commandment by Mr. Secretary's letters, written in your grace's name, I came to Lambeth yesterday, and do there remain to know your grace's further pleasure. And forso much as without your grace's commandment I dare not, contrary to the contents of the said letters, presume to come unto your grace's presence; nevertheless of my most bounden duty I can do no less than most humbly to desire your grace by your great wisdom, and by the assistance of God's help, somewhat to suppress the deep sorrows of your grace's heart, and to take all the adversities of God's hands both patiently and thankfully. I cannot deny but your grace hath great causes many ways of lamentable heaviness; and also that, in the wrongful estimation of the world, your grace's honour of every part is so highly touched, whether the

things that be spoken of be true or not, that I remember not that ever Almighty God sent unto your grace any like occasion to try your grace's constancy throughout, whether you can be content to take of God's hand as well things displeasing, as pleasant. And if he find in your most noble heart such an obedience unto His will, that your grace, without murmuration and overmuch heaviness, do accept all adversities, not less thanking Him than when all things succeeded after your grace's will and pleasure, nor less procuring His glory and honour; then I suppose your grace did never thing more acceptable unto Him, since your first governance of this your realm. And moreover your grace shall give unto Him occasion to multiply and increase His graces and benefits unto your highness, as He did unto His most faithful servant Job; unto whom, after his great calamities and heaviness, for his obedient heart, and willing acceptance of God's scourge and rod, *addidit ei Dominus cuncta duplicia.* And if it be true that is openly reported of the queen's grace, if men had a right estimation of things, they should not esteem any part of your grace's honour to be touched thereby, but her honour only to be clearly disparaged. And I am in such a perplexity, that my mind is clean amazed. For I never had better opinion in woman than I had in her, *which maketh me think that she should not be culpable.* And again I think that your highness would not have gone so far, except she had been surely culpable. Now I think that your grace best knoweth, that next unto your grace I was most bound unto her of all creatures living. Wherefore I most humbly beseech your grace to suffer me in that, which both God's law, nature, and also her kindness bindeth me unto; that is, that I may, with your grace's favour, wish and pray for her, *that she may declare herself inculpable and innocent.* And if she be found culpable, considering your grace's goodness towards her, and from what condition your grace of your only mere goodness took her and set the crown upon her head; I repute him not your grace's faithful servant and subject, nor true unto the realm, that would not desire the offence without mercy to be punished, to the example of all others. And as I loved her not a little for the love which I judged her to bear towards God and his Gospel; so, if she be proved culpable, there is not one that loveth God and his Gospel that ever will favour her, but must hate her above all other; and the more they favour the Gospel, the more they will hate her; for then there was never creature in our time that so much slandered the Gospel. And God hath sent her this punishment, for that she feignedly hath professed his Gospel in her mouth, and not in heart and deed. And though she have offended so that she hath deserved never to be reconciled unto your grace's favour, yet Almighty God hath manifestly declared His goodness towards your grace, and never offended you. But your grace, I am sure, [acknowledgeth] that you

have offended Him. Wherefore I trust that your grace will bear no less entire favour unto the truth of the Gospel than you did before; forasmuch as your grace's favour to the Gospel was not led by affection unto her, but by zeal unto the truth. And thus I beseech Almighty God, whose Gospel he hath ordained your grace to be defender of, ever to preserve your grace from all evil, and give you at the end the promise of his Gospel. From Lambeth the 3d day of May, [1536].

"After I had written this letter unto your grace, my lord chancellor, my lord of Oxford, my lord of Sussex, and my lord chamberlain of your grace's house, sent for me to come unto the Star-Chamber; and there declared unto me such things as your grace's pleasure was they should make me privy to: for the which I am most bounden unto your grace. And what communication we had together, I doubt not but they will make the true report thereof unto your grace. I am exceedingly sorry that such faults can be proved by the queen, as I heard of their relation. But I am, and ever shall be, your faithful subject."

By judiciously collecting and arranging all the requisite information that bears upon the subject of his volumes, Mr. Todd has rendered his work amusing, while it is calculated to convey a fair view of Cranmer's character, and the manners of the times in which he lived; and from the pleasing and unprejudiced style of his writing, he has succeeded in throwing the semblance of novelty over a subject somewhat deficient in that particular, from the frequency with which it has already been handled, either in praise or vituperation. We therefore readily lend his work our recommendation, as being the most impartial and complete historical narration of the life of this celebrated churchman.

The Navy "at Home." 3 vols. 12mo.

London, 1831. Marsh.

WE have had several sailors' books of late, descriptive of the sea and those who live upon its bosom, to which number we do not think the present performance can be deemed a very popular addition. Scenes of low and uninteresting association do not acquire attractions from being painted with minute accuracy; and it is a gross mistake to fancy that the vulgarities of the cock-pit can bear the test of repetition even in society, and far less of printing and perusal as a picture of manners. There is a laboured attempt at smartness, too, in this narrative, which, like all forced humour, instead of making us laugh, makes us yawn; and looking at it in the graver light, as likely to do honour to or depreciate the naval character, we must say that the author has only succeeded in raising the most unfavourable impressions of the class to which we presume he belongs. For example, the introduction of the hero to his ship.

"At this instant, following the same supply, came thundering down the ladder, and dragging something in human shape, dressed in a red coat after him, the midshipman (Mr. Theophilus Tugjank) who had been in the boat for the said provender, and who now called out with a voice of thunder, or rather the growl of a bear, to which quiet and well-bred quadruped he bore no bad resemblance, either in make or disposition, 'I say, hoy! avast there! halves! d—my eyes, not so fast—don't gammon a fellow—here's a lad wants something as well as yourselves—you've no occasion to be in such a hurry: come, above in there, youngster! sheer off!' After which pithy exordium he thrust the unfortunate being round the table,

half on the backs of those in the way, to a spot among the youngest at the lower end; where, having jammed him into a place between two, who seemed in no hurry to make room, he regained his own seat (left vacant, near the caterer) in a twinkling, seized on the remains of one of the ponderous quarters, which he generously divided with his protégé, throwing it along the table, and calling out to 'pass it up' and 'give the youngster a cup and saucer, and knife, d—my eyes!' So busy by this time, indeed, were the whole fraternity, that their new and fancifully dressed guest was hardly noticed, nor was it without sundry d—my eyes' (which we take to be synonymous with the sweet gentle 'my gracious and goodness' of young ladies), that the unfortunate subject of this our history (for it was no less a personage) obtained a cup and saucer."

Such is a specimen of the language; and elsewhere throughout these volumes we find terms yet more coarse and offensive, such, indeed, as ought never to have passed the ordeal of a decent pen, and still less have appeared in any publication of the present day, when external decorum, at least, is demanded by the good sense and good taste of the country. Filth, oaths, and obscenity, are not, we surmise, entertaining to any description of readers; and it is only in these qualities that the writer of the *Navy at Home* differs from, and is infinitely inferior to, the *Naval Sketch-Book*, or Captain Maryatt's volumes,* much as we had to condemn their lapses. We have also noticed, that the author, by drawing derogatory portraits of all ranks on board of ship, has lowered the profession of which he was a member; but yet we do not think, and we are glad of it, that he has had the honour of being a real seaman,—for we discover so many errors in naval phraseology, that we may safely conclude they never fell from a sailor. Thus, for instance, vol. i. p. 78, we are told, "Jack was dancing round the capstan bars;" whereas Jack could only be *turning* round with the capstan bars; and, again, in the next page, we have "pull together," for the nautical term of "heave together." At page 90, we have "beans" served out among the provisions,—a thing, we believe, never seen in the navy; and at page 99, it is asserted (in contradiction to the fact that the captain alone can inflict corporeal punishment), "there was a too unlimited power left with the officers throughout the ship, down to the smallest brat, of inflicting instant and corporeal punishment for the most trivial mistake, occasionally; the severity of which was only moderated by the quantum of anger occasioned at the moment: this species of punishment was generally inflicted by the boatswain's mate on the spot, either with his *rattan*, or with a more cruel instrument a '*rope's end*,' quite as severe as the Russian knout."

We have noted a few of these matters to shew that the writer had no pretensions to undervalue his predecessors in the same style of composition, or set himself up as a model. The following practical remarks, however, merit consideration.

"Looking with the eye of experience at a more noble race of fellows, most officers know that they prefer a prompt and calculated severe suffering, to a tedious task, or a stoppage of grog; not one in fifty but would cry out, 'O, d—my eyes, give us a dozen at the gangway at once; but no black list, no stopping a feller's grog!' Besides, as to tasks, they are almost as

* Apropos: among other stale or stolen parts, with which the *Navy at Home* is stuffed, we find the King's Own plundered verbiage.

vexatious to the officers as the men; business and lists multiply as in the chancellor's court; and having a sort of convicts about the decks busy at a needless labour, when there is quite enough to do in the regular routine of duty—and thought hardly used by all the rest of the men (for offences of all sorts are forgotten the next minute), is, after all, but an indifferent succedaneum. Supposing the positive stripes could be avoided—but they cannot, these very men are sure, in the end, to furnish the ordinary periodical quota for the *ultima ratio*. That this number may be small or excessive, depends more on the captain than themselves. Men throughout the service are pretty much alike, and are, like household servants, what their masters make them—we say the captain, and it would seem to fling a responsibility on his shoulders unjustly disproportionate. But who does not know, among naval men, that the officers of the ship 'trim' themselves, as well as their sails, to the wind that blows?—"trim" themselves they must—if for the better, so much the better; and how many thousand various shades are there harmonised and finely blended, simply from the master's hand! in fact, in whatever way duty is carried on—whether the men are peaceable, happy, and do their duty well, or whether the exact contrary is perceptible—one can never be very far out, in giving the commander the entire credit, good or bad: like the wheels of a clock, they will not go well while the main-spring is defective; though indeed, to carry on the simile, they may and do go, after a fashion."

We need proceed no farther with a work of this sort, the chief characteristics of which are all the vulgar coarseness of a low cockney captain's clerk, without any of the wit or eccentricity of the tar; of silly twaddle; of revolting descriptions, where the forcible and pathetic are aimed at; and of the repetition of poor stories, which could not amuse even a galley-stoker. We conclude with the author's notice of his own powers:—

"The next in order was a young fellow of very good family, who had been long at sea, and was up to quite as much as this salt-water quill-driver, and had, indeed, out-alarmed and out-blackguarded him in a regular set-to, in which the whole mess sat umpires."

He is the very person to earn such a victory.

Constable's Miscellany, Vol. LXVI.—Switzerland, the South of France, and the Pyrenees, in 1830, Vol. I. By Derwent Conway, author of "Solitary Walks through many Lands." Edinburgh, 1831, Constable and Co.: London, Hurst, Chance, and Co.

SWITZERLAND is beaten ground to go over, and we doubt whether the pages before us contain any striking novelty. Still, the book is a very pleasant and a very readable one: those who have not visited the country will find much information communicated in a lively manner; and those who have previous and personal knowledge will find it agreeably refreshed. A collection per chance is the best exemplification of the varieties of a traveller.

"The coiffure of the women of Basil pleased me. In place of tying a handkerchief close round the head, as is the almost invariable custom in the French provinces, or of covering the hair with tinsel ornaments, as is usual on the German frontier, the Swiss, at least the *Basileois*, adopt the simple mode of fixing a bow of broad black riband a little forward from the crown of the head, allowing the two vandyked ends to fall halfway down the forehead. This does not disfigure a pretty face, and gets off &

plain one. I did not find the taste of the Basilois so conspicuous in every thing else. Although the rain had ceased, they still carried their umbrellas unfurled, to dry them; and these exhibited more than any the colours of the rainbow. The favourite colours were bright red, yellow, and pink; nor did the ladies of Basil shew more taste in colours, than the women in humbler ranks. Their parasols exhibited quite as gaudy an array, and, being silk, the colours were even brighter.

I have never travelled in any country where the people talk so much about liberty, as in the country of the Grisons—above all, in the Engadine. 'This,' said a peasant to me at a little village in the *Ober Engadine*, where I shall by and by conduct the reader, 'this is the only republic in the world, and we are the only free people!' and I have no doubt he spoke as he believed. 'Touch the very smallest of our rights,' said another in the village of *Pont*, 'and revolt would instantly follow.' If the rights vaunted by these people did really exist, their determination to preserve them might be easily accounted for. The Engadine is shut out from the rest of the world by high and almost impassable mountains. The defile of the *Finstermuntz*, on the side of the Tyrol, might be defended by a handful of resolute men; and if a single rock were blown up in the pass from *Chur* by *Mount Albula*, the only vestige of a road would be swept away; and the only entrance to the country would then be by the tremendous chasm below, and up a cataract of two or three hundred feet. But the liberty so much spoken of by the Grisons, and of which they are so proud, has no existence. When we say that the country of the Grisons is a republic, that no distinction of rank is ostensibly recognised, and that every individual has a voice in the election of representatives, we enumerate all its pretensions to the enjoyment of perfect political liberty; but much more than this is wanted, before a country can be said even to approach such a state of political liberty as is compatible with the existence of any organised government; and in all beyond what I have enumerated, the Grison republic is deficient. That *free* and greatest safeguard of the rights of a free people, the liberty of the press, is unknown. Nothing is published that is not previously read by the public authorities, and approved; and so far off are the Grisons from trial by jury, that the courts of law hear and determine with closed doors. So far, indeed, is this principle carried, that the council, or representative body of the canton, holds its deliberations in secret. There are some things, indeed, of a public nature, with which the Grisons have much reason to be pleased, though these by no means result from their form of government, but from the smallness of the state. I allude particularly to the absence of taxation. There is no imposition or tax of any kind. The expense of the government, &c. is defrayed by the dues charged upon the transit of merchandise through the canton; so that the Grisons themselves pay nothing for the maintenance of their state.

The scene in this inn afforded a fair specimen of Grison enjoyment. Fourteen villagers were seated at a long table, each with his cap on, which each no doubt fancied the cap of liberty. A small wooden plate, with some bread and cheese, and a small bottle of wine, stood before each. The conversation was energetic and gay; its theme was politics—the politics, not of the world—not of Europe—not even of Switzerland—but of their own canton. One, seemingly the most respectable of the group,

perceiving that I listened to the conversation, and suspecting that I was unacquainted with the language in which it was carried on, commanded silence, and addressing me in French, told me, that I had here a specimen of the manner in which the Grisons spent their evenings. 'When the labour of the day is ended,' said he, 'we assemble here—we order our chopin of wine, and discourse upon the privileges we enjoy. You have no liberty in England to compare with ours;' and yet, the man who was the eulogist of liberty, was himself the village tyrant—so the person who spoke English informed me.

'The reason why so many of the young men left their country to seek fortune in other quarters, was not owing to any dissatisfaction with home, nor even to a vague desire of seeing the world; but that this arose from a certain habit of thinking, which teaches every peasant of the Engadine, from his earliest youth, to look with horror upon a state of dependence; and as every father cannot leave to a numerous family a patrimony sufficient to secure them all against dependence, one or two sacrifice themselves to the general good: and so sober and industrious is the general character of the Grisons of these valleys, that the greater number of those who have left their home when youths, return to it before their best years be over, and before the death of friends and relatives has robbed home of its greatest charm. For the most part, these young men carry away with them from 300 to 500 francs. They direct their steps to any of the great cities—to Paris, Marseilles, Lyons, or Bordeaux, and perhaps spend a hundred francs upon their journey. Three or four hundred francs are therefore left, one half of which, perhaps, they offer to the master of any well-frequented *café* or *restaurant*, as a fee, to be taken as a *garçon*. Activity and industry recommend them to the master, civility to the customers, and saving habits soon produce a little store. A knowledge of pastry, acquired at home, renders them useful; and perhaps, after some time, this department is confided to their care. At all events, in the course of a few years, they generally open a confectioner's shop, and in it acquire a sufficient sum to carry back to their native valley, though not yet sufficient to purchase repose. They then become travelling merchants between their own country and those parts where they purchase foreign articles for home consumption; and it frequently happens, too, that, even after their permanent settlement at home, they retain a shop in some distant city, to which they pay an annual visit. In the absence of the proprietor, the business of the shop is not intrusted to a stranger, but is always conducted by some young man of the same valley, or perhaps of the same village, who is fortunate enough to get at once into so excellent a road to fortune, and who willingly pays some hundred francs for the privilege. In time, he purchases the proprietary, and becomes rich in his turn.'

'In the Grisons, as in many other parts of Switzerland, the sexes rarely mingle in society. A man seldom visits in company with his wife; and it scarcely ever happens that young men and women are found in the same party, unless when visits are made to the houses of near relatives. But to this strict limitation of intercourse there is one very extraordinary exception. In *Chur*, there is what they call a *réunion* of young men; that is, unmarried men, from about twenty to twenty-eight years old. During the winter, this society has two or three balls, generally given at some place out of town; and each member of this *réunion*,

which comprises all the respectable young men of the town and neighbourhood, invites a young lady. The invitation is always accepted, with consent of her parents; and on the appointed evening, the young lady is put under the protection of her cavalier, who conducts her in a sledge or carriage to the place appointed for the ball. None of the parents are present; the party is composed entirely of young unmarried persons. The ball continues till three or four next morning; and when it breaks up, each gentleman conducts his partner home. This, I say, is a very extraordinary exception to the strictness otherwise observed in the intercourse between young persons of opposite sexes, and cannot fail to produce its results. The Grisons are doubtless as susceptible as the people of other countries; and it is evident that a custom like this must greatly encourage the formation of attachments. Now, what would any one naturally infer from the existence of this usage, knowing to what it must lead? They would presume, that the young men composing this *réunion* were all of them young men of so much respectability, and of such worldly prospects, that it was almost a matter of indifference to the parents of the young ladies to which of them their daughters were united. Nay, one might almost go the length of inferring, that this *réunion* was formed by the young men, and sanctioned by the old people, purposely to facilitate the marriage of sons and daughters. But all this is far from being the case: there are no such things as marriages of inclination. If, as must often be the case, a proposal is made by a member of this *réunion* to the young lady whom he has been accustomed to escort, it immediately becomes a matter of diplomacy. If the suitor be agreeable to the young lady's parents, he is accepted, and the *fiancée* goes to no more balls, even in company with her intended husband: her visiting days are over until the marriage takes place. But if the marriage proposed be not acceptable to the parents of the young lady, there is an end of the affair: she must get the better of her attachment, and may continue to go to the balls; though etiquette and prudence, of course, forbid that she should continue to have the same escort."

Mr. Conway does not give a very favourable picture of the Grisons' honesty; and their liberty, at all events, they seem resolved to keep for themselves:—

"I scarcely ever changed a piece of money in the Grisons, that an attempt was not made to give less than its value; and, at the same time, presuming upon my ignorance of Swiss coinage, money either altogether false, or depreciated value, or useless in the country of the Grisons, made a part of the change. Moderate overcharges I do not complain of, because I lay my account with them. But these, when very gross, become mere robbery; and of this description was the demand made at *Ilanz*, where I now am. I had bread, milk, and two eggs, for supper—this was all the house afforded; and for breakfast, I had bread, butter, sugar, and hot water to make tea, which I carried with me. The whole of these could not have been worth one franc; and in the morning, when I demanded my bill, I was told it amounted to *nine francs*. I requested to know the particulars. Supper three francs, breakfast three francs, bed three francs. I told him [whom?] the charge was quite absurd. He shrugged his shoulders. I told him it was at least three times what would be charged for the same accommodation in England. 'C'est possible!' said he, with the greatest coolness; 'mais nous

sommes à présent en Suisse. I told him I would not pay it. 'How can you help it?' said he, with the utmost effrontery; and, in short, I purchased leave to go upon my journey by submitting to be robbed. I could mention several other instances of robbery to match this. And with respect to begging in the Grisons, how do the peasants manage to reconcile their cupidity with their independence? They manage in this way. They employ their children to beg in the neighbourhood of Chur; and, on the road to the Bains de Pfeffers, where the inhabitants are accustomed to see strangers, you cannot pass a hamlet without being assailed by children; while the parents, richer, perhaps, than you are, stand at the door with an air of Grison independence. But this is not all:—when I have refused to give anything, (and, I need scarcely say, I always did refuse,) I have been frequently hooted at, and pelted with stones; and, upon one occasion, when I turned back, to bestow a little wholesome chastisement upon some boys past the age of children, two or three men, and as many women, all of whom had seen the misconduct of the boys, rushed from the cottage-door, and shewed, by their menaces, that I should act wisely in submitting to be pelted with stones in so free a country as the Grisons. So much for Grison honesty and Grison civilisation."

"There is a law peculiar to this valley, which forbids the transference of small parcels of property. A man must sell all, or none; he cannot sell his meadow-land without his mountain-grazings also, nor these without his wood; so that the multiplication of very small proprietors, and the division of land, is checked. There are several other curious laws and usages peculiar to Grindelwald—one, among others, that a man cannot bequeath his property to his children by testament, or according to his own wishes. He must divide it into parts, and his children draw lots for their separate inheritances. There is yet another usage still more extraordinary—so extraordinary, indeed, that I took great pains to inform myself upon the subject, as I could with difficulty bring myself to give credit to it; yet, however incredible it may seem, I feel that I am entitled, from the inquiries I made, to assert the existence of the usage. When persons are married, in whatever rank they may be, the bride passes the twenty-four hours previous to the celebration of the ceremony, with her intended husband as *his wife*; and I could not learn that a refusal to celebrate the marriage had ever followed this uncommon license. Unlike many other parts of Switzerland, marriages in this valley are generally marriages of inclination."

There is an interesting account of M. de Fellenberg's establishment; a philosophical experiment, of which we have frequently spoken in the *Literary Gazette*.

We should think the next-coming volume would be interesting, as the south of France and the Pyrenees are less known than the parts treated of in the present.

The Mythology of Ancient Greece and Italy. By Thomas Keightley, Esq. 8vo. London, 1831. Whittaker and Co.

A PRODUCTION like the present, of diligent research, philosophical comparison, and general intelligibility, embracing within moderate limits a view of the mythology of Greece and Rome, was a desideratum in our literature which we are glad to see filled up. Differing essentially from the imperfect treatise of Töke, and from the mystic reveries of Creutzer, Mr. Keightley has presented us with a classical

and scientific work, at the same time forming a popular compendium of his interesting subject, and wileing the young mind to its study by the pleasing manner in which he has treated it.

Of a book embracing so many topics of attraction, and extending to such a variety of discussions important to the philosophical inquirer, it will not be possible to present the reader with an analysis within the limits afforded to us. We prefer letting Mr. Keightley speak for himself in one or two short extracts; and warmly recommend the work, as by far the best that has appeared on the subject in the English language.

"In process of time, when communication with Egypt and Asia had enlarged the sphere of the ideas of the Greeks, the nether-world underwent a total change. It was now divided into two separate regions: Tartarus, which in the time of Homer was thought to lie far beneath it, and to be the prison of the Titans, becoming one of its regions, and the place of punishment for wicked men; and Elysium, which lay on the shore of the stream of Ocean, the retreat of the children and relatives of the gods, being moved down thither to form the place of reward for good men. A stream encompassed the domains of Hades, over which the dead, on paying their passage-money (*ψαλλας*), were ferried by Charon: the three-headed dog Cerberus guarded the entrance; and the three judges, Minos, Æacus, and Rhadamanthus, allotted his place of bliss or of pain to each of the dead who was brought before their tribunal. A river called *Oblivion* (*λήθη*) was added to those of Homer's trans-Oceanic region, of whose waters the dead were led to drink previous to their returning to animate other bodies on earth. All these circumstances were, if we are to credit the historian Diodorus, framed in imitation of the customs of Egypt; where judges of the dead sat, in an island to which each body was conveyed ere it was consigned to the tomb, to have sentence passed on the life and character of the deceased, and sepulture was assigned according to his merits. In this country, also, the doctrine of the metempsychosis, or animation of successive bodies by the same soul, was taught; and thence it was probably first imported into Greece. In the sixth book of Virgil's *Æneis* will be found the richest and fullest description of the new-modified underworld, and it will not be an uninteresting employment to compare it with that in the eleventh book of Homer's *Odyssey*. The poet Claudian, too, has with his usual elegance drawn a luxuriant description of the blissful scenes which the under-world would present, to console and reconcile its future mistress. Before we quit *Aidoneus* and his realms, we must call attention to the circumstance of mankind agreeing to place the abode of departed souls either beneath the earth, or in the remote regions of the west. The former notion, it is probable, owes its origin to the simple circumstance of the mortal remains of man being deposited by most nations in the bosom of the earth; and the habits of thinking and speaking which thence arose, led to the notion of the soul also being placed in a region within the earth. The calmness and stillness of evening succeeding the toils of the day, the majesty of the sun sinking as it were to rest amid the glories of the western sky, exert a powerful influence over the human mind, and lead us almost insensibly to picture the west as a region of bliss and tranquillity. The idea of its being the abode of the departed good, where, in calm islands, they

dwelt 'from every ill remote,' was then an obvious one. Finally, the analogy of the conclusion of the day and the setting of the sun with the close of life, may have led the Greeks to place the dwelling of the dead in general in the dark land on the western shore of Ocean."

The next extract relates to the celebrated Eleusinian mysteries, of which Mr. Keightley offers the following solution:

"In the very early ages of Greece and Italy, and probably of most countries, the inhabitants of the various independent districts into which they were divided had very little communication with each other, and a stranger was regarded as little better than an enemy. Each state had its own favourite deities, under whose especial protection it was held to be, and these deities were propitiated by sacrifices and ceremonies, which were different in different places. It is further to be recollected, that the Greeks believed their gods to be very little superior in moral qualities to themselves, and they feared that if promises of more splendid and abundant sacrifices and offerings were made to them, their virtue might not be adequate to resisting the temptation. As the best mode of escaping the calamity of being deserted by their patrons, they adopted the expedient of concealing their names, and of excluding strangers from their worship. Private families, in like manner, excluded their fellow-citizens from their family sacrifices; and in those states where ancient statues, *ærolites*, and such-like, were preserved as national palladia, the sight of them was restricted to the magistrates and principal persons in the state. We are to recollect, that Eleusis and Athens were independent of each other till towards the time of Solon. The worship of Demeter and the Kora was the national and secret religion of the Eleusinians, from which the Athenians were of course excluded, as well as all other Greeks. But when Eleusis was conquered, and the two states coalesced, the Athenians became participants in the worship of these deities; which, however, remained so long confined to them as to have given origin to a proverb (*Ἀττικὴν τὰ Ἐλευσινία*), applied to those who met together in secret for the performance of any matter. Gradually, with the advance of knowledge and the decline of superstition and national illiberality, admission to witness the solemn rites celebrated each year at Eleusis was extended to all Greeks, of either sex and of every rank, provided they came at the proper time, had committed no inexpiable offence, had performed the requisite previous ceremonies, and were introduced by an Athenian citizen. These mysteries, as they were termed, were performed with a considerable degree of splendour, at the charge of the state, and under the superintendence of the magistrates; whence it follows, as a necessary consequence, that the rites could have contained nothing that was grossly immoral or indecent. There does not appear to be any valid reason for supposing, as many do, that any public discourse on the origin of things and that of the gods, and other high and important matters, was delivered by the Hierophant, or person who bore the highest office in the mysteries; whose name would rather seem to be derived from his exhibiting the sacred things—ancient statues, probably of the goddesses—which were kept carefully covered up, and only shewn on these solemn occasions. The delivering of a public discourse would, in fact, have been quite repugnant to the usages of the Greeks in their worship of

the gods, and the evidence offered in support of this supposition is extremely feeble. But the singing of sacred hymns in honour of the goddesses always formed a part of the service. The ancient writers are full of the praises of the Eleusinian mysteries, of the advantages of being initiated, i. e. admitted to participate in them, and of the favour of the gods in life, and the cheerful hopes in death, which were the consequence of it. Hence occasion has been taken to assert, that a system of religion little inferior to pure Christianity was taught in them. But these hopes, and this tranquillity of mind and favour of Heaven, are easy to be accounted for, without having recourse to so absurd a supposition. Every act performed in obedience to the will of Heaven is believed to draw down its favour on the performer. The Mussulman makes his pilgrimage to the Kaaba at Mecca, the Catholic to Loretto, Compostella, or elsewhere; and each is persuaded, that, by having done so, he has secured the Divine favour. So the Greek, who was initiated at Eleusis,—whose mysteries, owing to the fame in which Athens stood, the able writers who so loudly extolled her and every thing belonging to her, the splendour and magnificence with which they were performed, eclipsed all others,—retained ever after a lively sense of the happiness which he had enjoyed when admitted to view the interior of the illuminated temple, and the sacred things which it contained, when, to his excited imagination, the very gods themselves had seemed visibly to descend from their Olympian abodes, amidst the solemn hymns of the officiating priests. Hence there naturally arose a persuasion, that the benign regards of the gods were bent upon him through after-life; and, as man can never divest himself of the belief of his continued existence after death, a vivid hope of enjoying bliss in the next life. It was evidently the principle already stated, of seeking to discover the causes of remarkable appearances, which gave origin to most of the ideas respecting the recondite sense of the actions and ceremonies which took place in the Eleusinian mysteries. The stranger, dazzled and awed by his own conception of the sacredness and importance of all that he beheld, conceived that nothing there could be without some mysterious meaning. What this might be, he inquired of the officiating ministers, who, as various passages in Herodotus and Pausanias shew, were seldom without a tale, a *ἱερὸς λόγος* (*sacred account*), as it was called, to explain the dress or ceremony, which owed perhaps its true origin to the caprice or sportive humour of a ruder period. Or, if the initiated person was himself endowed with inventive power, he explained the appearances according, in general, to the system of philosophy which he had embraced. It was thus that Porphyry conceived the Hierophant to represent the Platonic Demiurgus, or creator of the world; the Torch-bearer (*Daduchus*), the sun: the Altar-man (*Epibomus*), the moon; the Herald (*Hierokeryx*), Hermes; and the other ministers, the lesser stars. These fancies of priests and philosophers have been by modern writers formed into a complete system; and St. Croix in particular describes the Eleusinian mysteries with as much minuteness as if he had been actually himself initiated."

We must not omit to mention, that the work contains some very beautiful etchings from the antique, selected from Millin's superb *Galerie Mythologique*, and most accurately and usefully copied by Mr. W. H. Brooke.

In fine, we may say with the author to the student—*Accipe*.

Captain Hall's Fragments of Voyages and Travels.

[Second notice.]

WE return with unabated interest to this agreeable skimmer of ocean life and adventure. The lively extract with which we illustrated our preceding notice put us in so good-humoured a vein, that we should be quite content not to intrude upon less agreeable matter; but such is the influence of bad example—which all condemn, yet still pursue—that even in the present instance we can only express our regret at Captain Hall's having been induced to deviate from his fair-weather course,—and then follow him ourselves. The portion of his work to which we are about to advert, is among the latter pages of the second volume, where, leaving his delightful subject, and happy way of treating it, he betakes himself to outtrail the raileries of the reviewers on the subject of a former publication,—his *Travels in North America*. We must, nevertheless, premise, that we are by no means certain that he is sincere in his sharp attack upon "fire-side and library-keeping" critics: we remind ourselves of his being a man of war, well versed in strategy; and it may be only a weak invention, to revive the drowsy attention of the public to this much-injured scion of his pen. If, however, in earnest, we confess our surprise; for it is not an age since he himself assumed the critical sword and balance, and on a subject where it was perhaps not altogether unreasonable for those who think deeply, and consequently change rarely, to look for a Minos of a little more political experience, and less doubtful consistency, than was to be found under the hood of the Tory novice. We cannot, indeed, discover in what way Captain Hall has been ill-treated: he went to the United States for the expressed, and in no way concealed, purpose of limning our brother Jonathan. Now, no one is easy while sitting for a portrait; and surely, after having sat, or as, probably, our Transatlantic friends would say, having squatted, an opinion may be offered as to the likeness. We believe the painter was dissatisfied with the materials there afforded him to work out his canvass; he had no idea of finding society upon so low and equal a scale; it was a shock to his cultivated mind to have vice protruded on him without a courtly veil—to look upon honesty linked with vulgar bluntness, and real courage with blustering vanity; to behold the honoured staff and truncheon of command intrusted to ignoble names, and wielded by vile hands,—and, in direct opposition to his lurking aristocratical principles, to find all this accompanied with a more even distribution of happiness than in any other part of the globe. The United States, as a late author well observes, "is only just setting out on the path of history;" the face of the country is too majestically featured with wood and water, and has been as yet too little disturbed, to suffer the pettiness of ornate or minute description; and the population is of too coarse and homely a cast, to allow any high exaltation of praise, or attack of rude asperity. That Captain Hall made a most able use of a few materials, is beyond dispute; but he should not be dissatisfied if the world refuses to receive his opinions on the same terms as his information. We have observed that those who suddenly change either their religious or political tenets are invariably the most violent and least reasonable declaimers against former opi-

nions and associates; and the gallant author, in his mild mention of the Liberal party, will not be the exception to our remark.

We have now but little to stop us in regaining our course of hearty commendation; but this little is on a subject with which we are completely at variance with the writer's opinions. He holds that, for the well-being of our navy, it is absolutely necessary to tempt the aristocracy with the bounty of speedy promotion, as an inducement for them to embark in this profession, that they may, by their habits, infuse a gentlemanlike spirit through the service. With regard to the infusion of a gentlemanlike spirit by such means, it is quite the *argumentum ad absurdum*: indeed, if our recollection be not sadly astray, most of the naval sprigs of nobility we have seen, rather appear to have taken their tone from the cockpit than to have given one to it; and it is pretty certain that the navy makes manners, as well as men. This is well exemplified in our present patriot monarch, who, untouched by the refinements of the highest society, still retains the characteristic straightforwardness and blunt expression of the British sailor, combined with a fine sense of honour and gentlemanlike feeling. The unfair distinction of speedy promotion, putting aside the public odium that attaches to it, is of itself destructive to the noble *caste* it is meant to serve; for it tends to confirm indolence, to foster pride and unnatural pretensions; it is a clog upon genius, a death-blow to honourable exertion, and a principal reason why so few of lordly title and lineage are to be found upon the roll of Britannia's naval heroes. Having now expressed our opinions upon these trifles—for trifles they are in comparison with the general merit of the work,—it will be our duty to select some passage whereby we may lead the reader's mind to the same conclusion that our own has arrived at from a closer perusal; which is, that these volumes do infinite honour to their author, may be of infinite service to the naval profession, and are sure of being productive of infinite pleasure to the very many who will certainly read them. Through the whole range of English literature it would be perhaps difficult to light upon a specimen of autobiography more simply elegant and more purely natural than the following:—

"Various circumstances conspired to give me, very early in life, what is called a taste for the sea. In the first place, I came into the world in the midst of a heavy gale of wind; when such was the violence of the storm, and the beating of the rain, that there were some thoughts of removing the whole party to a less rickety corner of the old mansion, which shook from top to bottom. So strong, indeed, was the impression made on the imagination of those present, by the roaring of the surf, close at hand, the whistling of the wind in the drenched forest, and the obvious rocking of the house, under the heavy gusts of that memorable gale, that, as soon as I was old enough to understand any thing at all, the association between the events of my future life, and those of my birth-night, began to be sown in my mind. Thus, long before I shipped a pair of trousers, I felt that a salt-water destiny was to be mine; and as every body encouraged me to cherish these early predilections for the sea, I grew up with something of the same kind of certainty of becoming a sailor, as an elder brother does of becoming a country gentleman, from his knowing—'for quickly comes such knowledge'—that the estate is entailed upon him. The holidays, also, which released me from the irksome confinement of the High

School of Edinburgh, were passed in the country, on a part of the rugged sea-coast of Scotland, peculiarly calculated to foster nautical propensities. During the weary months which preceded and followed these six delicious weeks of liberty, my thoughts, instead of being devoted to the comprehension of abstract rules of grammar, which it was our worthy preceptor's sole object in life to drive into us, invariably strayed back to the picturesque and iron-bound shore, as it is happily termed in naval language, along which I was wont to ramble in full enjoyment during these holidays. So incessantly, indeed, was the contrast presented to my imagination, between the cramped routine of school discipline, and the glorious freedom of the sea-beach, that I took little or no interest even in the games which filled up the play-hours of the other boys; and, from dwelling upon these thoughts day and night, I became so gloomy and wretched, that the bare recollection of my feelings at that period often makes me shudder, though more than thirty busy years have since passed over my head. The master of our class was as excellent a man, I believe, as could be; but he would have deemed it a shocking crime against his calling—which he very naturally considered the first on earth—to have allowed that any one boy possessed a particle more of feeling, or was conscious of more independence of thought, than his companions. Still less could he understand that any boy should pretend to have aspirations and wild fancies—dreams he called them—the object of which lay far beyond the boundary walls of the playground. Accordingly, I dragged on a tolerably profitless and painful existence for several years; though, perhaps, with a little management, this period might have been rendered not only useful, but happy. Once only, during my continuance in this limbo, as the Spaniards call the purgatory of children, I was addressed in a very kind manner by the head master, though a severe personage in his way, as far as regarded the use of the formidable strap, or taws, which in Scotland supply the place of the wholesome birch of English seminaries. He took me on one side, and said, in a tone so unusual in the despotic government of schools in those days, that it made me start,—‘How comes it, little fellow, that you are always so gloomy; and that you never play as the rest do, but look for ever as if some misfortune had befallen you?’ I answered, ‘that the confinement of the school was much too great, and that I could not bear being always treated as if I had no feelings or peculiar wishes worthy of separate consideration.’ That it was not the number of hours’ confinement I complained of, but the awkward selection of the periods. Let me, sir,’ I said, ‘but choose the time for study, and I will cheerfully work even much longer. At present, the day is totally cut up and destroyed.’ He smiled, patted me on the head, and said the hours and discipline could not be changed, merely to suit the fantastic taste of one boy. I knew this well enough already; in fact, I was not so absurd as to suppose that a public school could be maintained on my visionary principles, or that any rules could be established for their government but such as took account of average abilities, and made allowance for an ordinary share of feeling and patience. Whether or not my quantum of sensibility were needlessly great, is of little consequence: it certainly was so different from that of my companions, that it completely prevented my profiting, in the mean time, by the opportunities of this school, and drove me to rest my only prospect of happiness in getting

away from its thralldom. Certain very troublesome misgivings, also, as to the future, came across my juvenile thoughts about this epoch; especially as to the probabilities of happiness in that wide world of freedom for which my soul panted, and of which I knew nothing, except by description. I happened, one day, to get hold of Gray's Ode on a distant Prospect of Eton College—a poem fraught, it is true, with images of the highest possible beauty, both of thought and of expression, but most of which are certainly far better calculated to beget despondency than hope, by teaching that school days are unavoidably happier than those of after-life. What the ‘march of intellect’ may have done lately to remedy this matter, I cannot say; but in my time, and at the particular school alluded to, the season of boyhood was, to me at least, any thing but a happy one; and I well remember, after reading the poem in question, exclaiming, in a state of great despair, ‘If it is certain that my future life is to be more wretched than this, which is now so full of misery, what, alas! is existence worth?’ In this terrified frame of mind, I dived into various other works, but, to my sorrow, very seldom met with any thing of a more consolatory nature. Nor was it till many years’ trial of the wear and tear of actual life, that I came to learn the fallacy of most of these assertions respecting the comparative happiness of school; and to feel assured that the whole, or nearly the whole matter, lies essentially with ourselves, since, in any situation in life, the amount of our happiness will be found to bear, in the long run, a pretty exact ratio to the heartiness with which we perform our duty. Whereas Gray's Ode, Young's Night Thoughts, and other sombre productions, too often thrust into the hands of young people, would almost seem to inculcate the notion that the most virtuous persons are the least happy, and that life is necessarily filled with care and remorse, instead of being, as it really is, to those who choose to make it so, a scene of high enjoyment—not, indeed, one of unmixed enjoyment, but one in which the pleasures generally far outweigh the sorrows. It has, accordingly, always seemed to me a libel on our nature, and a perverse misapplication of the gifts of Providence, to consider that the earliest days of life must of course be the happiest. It may do very well, in poetical fiction, to talk of childhood being the ‘sunshine of the breast;’ but surely the true, broad daylight of life, not poetically, but practically speaking, is to be found at a later period, when the faculties are far more matured, and the will is left free. Be all this, however, as it may, I never lost a minute in hurrying away from school, the instant our examinations were ended. At these periodical trials, it may be well supposed, I never cut any great figure; for, I contented myself with trying to keep a little above the middle, partly because some boys at thereabouts to whom I was attached, and partly because the particular bench alluded to was near the fire. As soon as the term of imprisonment was over, I flew to the coach-office, and never felt perfectly satisfied that all was right and safe, till fairly seated on the top, by the side of my friend the guard, and bowling along the high road. On reaching the country, the first object always was to hunt out some of the fishermen on the shore, who readily engaged to give me a row next morning. After a sleepless night of anticipated delights, I commonly found myself, at sunrise, in a fishing-boat, half a league from the coast, surrounded by congenial spirits—fellows who had no idea of grammar—and who were willing, either from bribery, or

from motives of professional sympathy, to consider me as somebody, and not to reckon me as a mere zero, serving no other purpose but to augment the numbers of a school without having any value in myself. At all events, these hardy boatmen were so much amused with my enthusiasm about their art, that they took great pleasure in feeding my young fancy with tales of nautical dangers and hardships, the joyous excitement of which placed the dull drudgery of syntax in sad contrast. On these expeditions, however, I was always wofully sea-sick; for the boats, or cobbles, as they are called, were not altogether so tidy as a man-of-war's gig; besides which, they generally enclosed a due allowance of bilge water, and decayed remnants of forgotten fish. So that my taste for the sea had often tough work to hold its ground, against the deranged action of the stomach; and it must be owned that I often leaped on shore again, to the enjoyment of steady footing and an atmosphere less fishified, with a half-uttered vow at my lips that I would never tempt the ocean more. This slight infidelity to my beloved element, however, was always very transient, as it seldom lasted longer than the time it cost to climb the high, steep bank, which guarded the coast. From this elevation, the view extended far up the Firth of Forth on one hand, with many a mountain lying between it; right out into the German Ocean in front; while the scene was bounded on the right, or eastern side, by the noble promontory called Fast Castle, better known as the Wolf's Crag of the Waverley Novels. To my young fancy this seemed the grandest of all landscapes—and still, after I have rambled for more than a quarter of a century over the earth's surface, and made personal acquaintance with some of the sublimest works of nature, my opinion of the beautiful scenery in question is not changed, otherwise than by increased admiration. Indeed, it will often require much time, and more extended means of comparison, as well as the assistance of just conceptions of what is really meant by the great and beautiful in nature, which spring from experience alone, before we can fairly estimate the advantages which frequently lie at our very doors. This will apply, perhaps, to other things besides scenery—but it is with that alone I have to do just now—and certainly few things can be imagined more brilliant than the view from the part of the coast in question. For the sea at that point being a great commercial thoroughfare, is generally studded over with vessels of various sizes and descriptions, and, I may add, of colours. For what the lights and shades of heaven do not perform in this respect, the seamen do for themselves, by tanning their sails, and painting the ships of many different hues. As these vessels drifted past, and dropped, one by one, out of sight, beyond the horizon, I felt the most eager desire to follow their wanderings into those wide seas, about which I had so often read—where the land is lost sight of for months together, and where every evening brings fresh stars into view, and every bird and fish, as well as every breath of air, indicates another climate, and almost another world. In the meantime, however, my operations in nautical affairs were necessarily limited to the horse-pond, upon which, by the assistance of an obliging carpenter-lad, I managed to make the first fair trial of that element with which, in after-life, it was my happy lot to become so familiar. Our vessel consisted of two or three rough logs, fished from the farm-yard, and sundry planks nailed or lashed across them. A mast was readily obtained by the abstraction of a bar from the

nearest palling. But considerable difficulty arose as to the sail; for canvass was a material much beyond our finances or influence. At length my ingenious companion—who, by the way, distinguished himself in after-life as a ship-builder—suggested the idea of employing one of the mats used by the gardener to protect his plants from the frost. Thus, step by step, our gallant vessel was at last rigged out; and on the second day of our labours, every thing being ready, and the wind fair, we started from one end of this inland sea, and, after a prosperous voyage of about ten minutes, by 'God's grace'—to use the quaint language still printed in bills of lading—more than by any skill of our own—we reached the other extremity, without any serious disaster. The pleasure which this primitive voyage inspired, has never since been much exceeded. It was the first unalloyed happiness I had ever experienced, and at once opened up a new prospect of hope and resolution, which rendered the weary load of school existence somewhat less intolerable than it had been before. It also gave me a foretaste of the joys of enterprise, and independent command, which, in their turn, called up innumerable visions of successful resource, surmounted difficulties, and all the demi-savage delights of such a life as that of Robinson Crusoe, with the additional advantage of that great adventurer's experience. Little did I then think, and, in fact, it was nearly impossible I should reasonably think, that the realities of life could ever reach these imaginary conceptions. And yet I have lived to experience that, sanguine as I then was, these anticipations fell much short of the glorious reality, which is almost every where to be met with. Indeed, I may say, with perfect truth, that in all these voyages and travels, I have generally found things more curious, and more interesting, in all respects, than I had looked for—or, if the career of curiosity has at any time been checked, it has only been followed by a more ardent pursuit, and ultimately by still higher rewards. This process of feeding the curiosity was well enough exemplified by a series of very exciting, though often painful and seemingly discouraging, incidents that occurred every year on the coast already mentioned, as forming the scene where I passed the holidays. Ten leagues, or thirty geographical miles, due north of the house in which I was born, lies the Bell Rock, just off the mouth of the Tay, and close to the northern side of the great estuary called the Firth of Forth. At the time I am speaking of, this rock was justly considered one of the most formidable dangers that the navigators of those seas had to encounter; for its head was merged under the surface during greater part of the tide, and at no time did it make any shew above the water. There was nothing to be done, therefore, but to keep well clear of the mischief, or, as seamen express themselves, to give the rock a wide birth. Ships, accordingly, bound for the Forth, in their constant terror of this ugly reef, were not content with giving it ten or even twenty miles of elbow-room, but must needs edge off a little more to the south, so as to hug the shore, in such a way, that, when the wind chopped round to the northward, as it often did, these over-cautious navigators were apt to get embayed in a deep bight to the westward of Fast Castle. If the breeze freshened before they could work out, they paid dearly for their apprehensions of the Bell Rock, by driving upon ledges fully as sharp, and far more extensive and inevitable. Thus, at that time, from three to four, and sometimes half a dozen vessels used to be wrecked every winter, within

a mile or two of our very door. Perhaps there are few more exciting spectacles than a vessel stranded on a lee-shore—and especially such a shore—which is fringed with reefs extending far out, and offering no spot for shelter. The hapless ship lies dismantled, bilged, and beat about by the waves, with her despairing crew clinging to the wreck, or to the shrouds, and uttering cries totally inaudible in the roar of the sea—while at each successive dash of the breakers, the number of the survivors is thinned, till, at length, they all disappear—the gallant bark goes to pieces—and the coast, for a league on either side, is strewn with broken planks, masts, boxes, and ruined portions of the goodly cargo, with which, a few hours before, she was securely freighted, and dancing merrily over the waters. But it is the greatest of all mistakes to suppose that the actual contemplation of such disasters, still less the description of hardships, has any tendency to divert a young mind from following its original bent, towards a profession of such varied and high excitement as that of the sea. At all events, the effect of each succeeding shipwreck I witnessed, was only to stimulate me more and more to pursue the object of all my thoughts, waking or dreaming. I can recollect, however, being conscious of a feeling of awe, approaching at times to dread, as I saw the waves curling themselves over these devoted vessels, and gradually tearing them to pieces as the tide advanced. But still there was always more of confidence and pleasure in the prospect which my mind's eye conjured up to itself beyond these stirring adventures. To this day there is told a traditional story amongst our fishermen, of my having once contributed to save a ship's crew, by engaging some country people to transport a boat from a distance, across the hills, in a cart. The account farther sets forth, that I had only a few halfpence in my pocket; and that when these proved insufficient to induce the carter to go out of his way, I stoutly asserted I had authority from my father to offer five pounds for any such assistance. Upon this pledge the cart was freighted with its unwonted cargo, and the boat was brought in time to the spot. I have no recollection whatsoever of this incident; but something of the kind may possibly have occurred, or, more probably, may have been merely talked of amongst the fishermen, my great patrons and admirers. These things, by making me feel not so utterly useless in the world, as I was made to appear at school, must have united me by still stronger ties to the animating profession to which I grew up, apparently as a matter of course."

We have now only to thank Captain Hall for the pleasure we have felt on perusing his work, and to wish him a fair and prosperous voyage to his destined port of public favour.

Burnes' Visit to the Court of Sind.

[Second Notice: conclusion.]

THE Ameers of Sind greatly doubted the medical skill of one so young as Mr. Burnes; but he soon inspired them with confidence, by curing Mourad Ali of his disease, which was not immediately dangerous, though "his brothers, Futteh and Ghoolam Ali, had died of, or rather perhaps with, complaints of a similar nature, which seem to be hereditary in the family; and he himself had gone so far as to make his will, settle his property, and prepare long written advices for his children." Yet there was something whimsical in the treatment, from the doctor's being obliged to go shares with his patient in all his prescriptions, "according to

the Beluche rule, which requires the physician to swallow one pill before he administers another. Mourad Ali (he tells us) positively refused to take any remedy without this previous ceremony; and as my complaisance could not bring me to inflict on myself the nauseous dose more than twice, an unfortunate attendant was selected as the subject of experiment, and underwent, without mercy or necessity, such a course of continued sweating and purgation, as must have left on his mind and body any thing but a favourable impression of the English mode of practising physic. Latterly, when I became more intimate with the Ameers, the custom was dispensed with; though they took care to intimate to me that their doing so was the highest compliment they could have paid me, and even made so much of the matter, as to direct their envoy to bring it to the notice of the governor of Bombay, as an extraordinary proof of their confidence and friendship for the British."

The sulphate of quinine was proved to be of invaluable efficacy on this occasion; and Mr. B. states, that "their highnesses, the moment they discovered the effect of the quinine, seized the phial which contained it without ceremony, and ordered it to be sealed and locked up for their own proper use at a future period. Even afterwards, when I myself fell sick, no solicitations could induce them to part with a single grain, though I was dangerously ill; and when, at my departure, I made a request for the bottle in exchange for another, as it was one which belonged to a valuable medicine chest, the proposal was at once rejected, evidently from an idea, that it might share with its contents some supposed talismanic virtue."

Speaking of the wealth and splendour of the Ameers, Mr. B. says, "Of all the things calculated to engage the attention of a stranger on visiting the court of Sind, none will excite his surprise more, or is really more worthy of observation, than the brilliant collection of jewels and armour in possession of the Ameers. A great part of their immense treasure consists in rubies, diamonds, pearls, and emeralds, with which their daggers, swords, and matchlocks, are adorned, and many of which they wear as rings and clasps on different parts of their dresses. The fall of the Cabül monarchy has reduced to indigence and ruin most of the princes and nobility of that kingdom, and has forced them to part with ornaments of great value, many of which have been bought up, at low prices, by persons sent by the Ameers to take advantage of their necessities. Merchants, with precious stones, are encouraged to visit Sind from all parts of Asia, in consequence of the ready market they meet with at the capital for their valuables; and one or two Persian goldsmiths are engaged at court, where they work in enamel, and contrive expedients to display the jewellery of their masters to advantage. The art of enlaying letters of gold on steel has also been brought to the greatest perfection by these artisans. The Ameers have agents in Persia, Turkey, and Palestine, for the purchase of swords and gun-barrels, and they possess a more valuable collection of these articles than is probably to be met with in any other part of the world. I have had in my hand a plain unornamented blade which had cost them half a lac of rupees. They estimate swords by their age and the fineness of the steel, as shewn by the *johar* and *aub*, or temper and watering. One, which Kurm Ali presented to me, bears the Mahommedan date 1122 (A.D. 1708,) and was valued in Sind at two thousand rupees. The armory of their

highnesses is graced with swords which have been worn by almost every prince renowned in Asiatic story; and I have had the honour of trying the balance of weapons which had been wielded by Shah Abbas the Great, Nadir Shah, Ahmed Shah Doranee, the present king of Persia, and many other equally illustrious personages. The blades are embellished with inscriptions in gold, which, in the case of those belonging to members of the family who are Sheahs, usually consist of short prayers to Huzrut Ali for aid and protection; and in that of the others, of verses from the Koran, or appropriate quotations from Persian authors. On all belonging to Kurm Ali I observed the words *Bunduh Ali Mohammed*, 'the slave of the descendants of Mahommed Kurm Ali,' and on that he gave me, besides a couplet from the Shah Nameh, there was one of his own composition, together with a stanza from the pen of Wullec Mahommed. Meer Nusseer Khan presented me with one on which were inscribed six lines written by himself for the occasion, and where my own name is introduced. The swords do not appear heavier than our common English sabres, but they are differently balanced; and I have seen one of the young princes with a single stroke cut a large sheep in two pieces; a feat which somewhat reminded me of that told of the famous Saladdin in Sir Walter Scott's 'Tales of the Crusaders.' There is a certain mode of striking with them, which requires great practice and dexterity, as one of Meer Ismail Shah's sons broke a very valuable blade in a similar experiment a short time before I went to Hyderabad. Our English cutlery, which is so generally esteemed throughout Europe, has little value in the estimation of the Amers. They had never heard of a sword from Great Britain of any price; and I raised their curiosity to the utmost by informing them that his Majesty had lately presented one of his great lords (the Duke of Northumberland) with one worth a lac of rupees. They seemed to be fully sensible, however, of the superiority of our gun-locks, a number of which they entreated me to beg the government to procure for them. I saw several expensive and highly-finished fire-arms which had been presented to them, from time to time, by our authorities in India, thrown aside as useless, without their locks, which had been removed to put on their own fowling-pieces. For the shape and appearance of the latter I must again refer to the frontispiece to Pottinger's Travels. Those belonging to the Amers resemble the two there delineated, with the addition of being highly ornamented. The barrels, which are all rifled, are chiefly brought from Constantinople; they are about double the length of ours, and of a very small calibre. The Sindians never use small shot, and they place no value on pistols or detonating locks. When they observed that their jewels and armour excited my admiration, some of them made a point of appearing differently decorated every day, and always handed me their swords for examination."

The Indus, called Sindh by the natives, has undergone, and is continually undergoing, great changes; but Mr. B. anticipates the time when the British influence shall extend to Sindh, and this classic river once more become the medium of a mighty intercourse between the interior of Asia and the uttermost points of India.

Having allowed so much of our space to this volume, we must refer the history of Cutch and other parts to those interested in Indian

subjects, to whom, as well as to the public generally, we can most cordially recommend Mr. Burnes' production.

Aldine Poets. Vol. XI. The Poetical Works of Sir Thomas Wyatt. London, 1831. Pickering.

THIS volume is got up in the same style of excellence as its predecessors. A life of Sir Thomas Wyatt is prefixed, painstaking, but dry; and utterly deficient in those critical remarks which should form part of biographies like these: it is far fitter for an antiquarian than a poetical series.

Irishmen and Irishwomen. By the Author of "Hyacinth O'Gara," &c. 12mo. pp. 219. Second edition. Dublin, Tims; London, Hamilton and Adams; Edinburgh, Waugh and Innes.

A VOLUME full of pictures of conspiracy, murders, burnings, executions, such as the newspapers weekly contain of the gem of the ocean and finest pisantry on earth. The catastrophe is to enforce the advantage of religious instruction.

Select Female Biography; comprising Memoirs of eminent British Ladies, derived from original and other sources. By the Author of "the Wonders of the Vegetable Kingdom Displayed." Pp. 395. Second edition. London, 1829. Harvey and Darton.

A SELECTION of memoirs, made with much good taste and feeling. All the biographies tend to illustrate the beneficial effects of religion on the female character. Perhaps the term "eminent" is a misapplication; for many of the sketches are of individuals, some little known, and, in two instances, anonymous: but examples so amiable and so excellent cannot be too widely diffused. We much approve this little volume.

Agape; or, the Sacred Love-Pledge. By Mrs. Lachlan, author of "Leonora," &c. 12mo. pp. 569. London, 1831. Simpkin and Marshall.

WE do not see the utility of the present volume: it is a large collection of sacred texts; selected, we must say, with more zeal than judgment. If designed as a present, it were far better to give the source of these pages. We shall not improve upon the Bible.

Mischief. pp. 46. London, E. Moxon. WE were, of course, attracted by the captivating title of this poem; and soon ran it through. Having done so, it appears to us only necessary to say that it displays considerable talent, and is, take it all in all, a sort of inferior Beppo. We should not like to say that it is immoral and indecent; but it sails as near the wind as possible in both these respects, and will hardly do good to readers of any class, sex, or age.

A Treatise on Hydrostatics and Pneumatics. By the Rev. D. Lardner, LL.D., &c. 12mo. Longman and Co. 1831.

THE 17th No. of Dr. Lardner's "Cabinet Cyclopaedia" has just made its appearance, and fully sustains the favourable opinion we have already expressed as to the merits of this valuable compendium of modern science.

The principles both of hydrostatics and pneumatics are too well explored to admit of any thing like novelty. The editor has, therefore, with great judgment, devoted his labours to

their most recent application to the common purposes of human economy. It is this view of scientific literature which forms the distinguishing feature of Dr. Lardner's excellent and popular series.

The Pleasures of Benevolence, a Poem. Pp. 108. London, Holdsworth; Edinburgh, Waugh and Innes.

"OH, fallen mid evil days!" may any young writer now exclaim, who adventures forth on the sea of public favour with a slight volume of poems. Yet there is much in these pages that merits praise; harmonious verse, and a vein of good and kindly feeling, which in former times would have won notice.

Alibeg, or the Tempter. By William Child Green, Author of the "Abbot of Montserrat." 4 vols. 12mo. A. K. Newman and Co. London, 1831.

THERE is a great deal of invention and variety in these pages; and to the lovers of a wonderful, mystical, and mysterious narrative, we commend them.

ARTS AND SCIENCES.

ZOOLOGICAL SOCIETY.

W. J. BRODERIP, Esq., in the chair. The usual Report was read. Balance in favour of the Society, on last month's account, was stated at 769*l*. There was an increase of 385*l*. during the last quarter, as compared with the corresponding quarter of last year. In the month of March nearly 7000 persons visited the gardens, and upwards of 1000 the museum. Amongst the donations to the Society were 500 East Indian bird-skins, embracing about eighty different species, presented by Mr. Heath, of Madras, to Mr. Vigors, and by the latter gentleman to the Society. The Report further stated, that all the female kangaroos presented by his Majesty had produced young: so had the *Axis* doe, and several others. One of the *Cereopsis* geese, which had laid eggs early in the season, hatched one; the remainder having been unfortunately frozen. These are birds of the southern hemisphere, whose natural time of breeding corresponds with the English winter; and it is an interesting speculation in science, adds the Report, to ascertain whether the effect of climate may so far counteract the natural impulses of this species, and of others of the same hemisphere, as gradually to assimilate their period of breeding to those of the species of our own latitudes. Difference of temperature had a manifest effect on the male Wapiti deer; the one kept warm at the garden having shed its horns six weeks before those of its species at the farm; whilst the rapid and almost daily increasing growth of the new horns is obvious to every visitor. The Report gave much satisfaction. It was resolved that the anniversary meeting should be held in the rooms of the Horticultural Society, or others of proper dimensions. Lord Stanley and Mr. Vigors were put in nomination: the former as President, vice the Marquess of Lansdowne, and the latter Secretary, as heretofore; an arrangement which met with much approbation. A number of ladies and gentlemen were elected into the Society.

HORTICULTURAL SOCIETY.

DR. HENDERSON in the chair. Two communications were read; the first was on the cultivation of the carnation, by Mr. May; and the other on the double-flowering yellow sweetbriar, by John Williams, Esq. The author is

of opinion: that in the course of a few years there will be no end to the varieties of the rose. Last year gave to him three new seedlings from a bed raised from seeds of the single *ciliosa* and pollen of the double Scotch rose: the leaves resembled the *spinossissima*, but much more vigorous. It was announced that the annual *fête* would be celebrated on Wednesday the 22d of June, instead of Saturday the 18th of the same month. There was a very fine show of plants in flower at this meeting, and several varieties of the apple and pear in excellent preservation.

EXETER HALL.

THE object of this building, the most striking of the architectural improvements in the Strand, which has recently been opened, is to afford increased and suitable accommodation for the anniversary and other meetings of the religious, charitable, and scientific institutions of the metropolis. It consists of a spacious hall, 130 feet in length by 76 in breadth, and capable of holding upwards of 2,500 persons, which is designed for the meetings of the larger societies: a second-sized room, 58 feet long and 31 feet 6 inches wide, for smaller meetings, and calculated to contain an audience of about 600; together with twenty-three other rooms, of different sizes, intended for committee rooms and offices,—several of which are already occupied.

The building is said to have cost about 28,000*l.*; nearly the whole of which sum has been raised by subscription, in shares of 50*l.* each; and it is conceived, that the income arising from the use of the large rooms, and the rent of the offices, will be sufficient to give a reasonable return (which is in no case to exceed five per cent) on the capital subscribed.

The want of a building of this description has been long and severely felt; and its completion, we have no doubt, will tend materially to promote the interests of the various benevolent and scientific institutions in London, as well as prove a great public convenience.

FINE ARTS.

SUFFOLK STREET EXHIBITION.

[Second Notice.]

No. 161. *The Grand Entrance to Rouen Cathedral*. D. Roberts.—Painted to the very letter of the description quoted in the catalogue from "Cotman's Antiquities of Normandy:"—"The western front forms a *tout-ensemble* of the most imposing character. The very discrepancy in the different parts, by increasing the variety, adds to the effect of the whole." Every body knows Mr. Roberts's talents; and they were never more finely exemplified.

No. 164. *Minna and Brenda*. J. Inskipp.—A natural and tasteful display of Mr. Inskipp's powers in colouring and effect.

No. 179. *Badinage*. J. Inskipp.—The Puckish character of playful humour is well calculated to inspire the spectator with a sympathetic feeling of mirth.

No. 180. *Waiting for a Customer*. H. C. Sme.—We hope that the excellent qualities of this performance will render the appeal comprised in its title irresistible, and that a customer for it will soon be found.

No. 181. *Still Life*. Lonsdale, jun.—In the present, as in other performances of the same kind, this young artist has turned his pots and pens to good account. Nothing that we have seen in the best works of the Flemish school

appears to us to have gone beyond this little picture, either in truth, tone, or execution.

No. 186. *Carnarvon Castle*. E. Childe.—We have so frequently seen this distinguished feature of Welsh scenery exhibited under the effect of gloomy grandeur, that it is an agreeable surprise to us to find it thus cheerfully lit up, as well as invested with some of the best qualities of art.

No. 187. *Portrait of J. Carew, Esq.* J. Simpson.—Truth and simplicity are the qualities of this, as well as of other admirable portraits which we have seen from Mr. Simpson's pencil. That he was an assistant of the late accomplished President's, is a sufficient warrant of his talents; but the style of his works is quite distinct from that which might occasionally be called the glitter of Sir Thomas's pictures.

No. 202. *Van Dyck courting the pretty Peasant of Savellthem*. F. De Brackeleer.—A painted libel. The great artist, whose beautiful and noble countenance we have been accustomed to see beaming from the canvass with an air of sweetness and dignity conformable to the recorded character of the original, is here represented, lolling at an ale-house door, with a vulgar visage flushed by liquor, toying with a coarse country hoyden, on whom the epithet "pretty" has been most gratuitously bestowed. We do not find fault with Mr. De Brackeleer's technical skill; we only wish him a better taste.

No. 208. *Coast of East Lothian, Bass Rock and Tantallon Castle in the distance*. J. Ewebank.—Great as is the rivalry in this department of art, and numerous and striking as are the qualities displayed in it, there are a novelty of style and an excellence in the present performance which entitle it to high distinction.

No. 213. *Sir Roger de Coverley and the Spectator, in Spring Gardens*. T. Clater.—In spite of the vigorous efforts of modern genius and talent to displace them, the characters and scenes of Addison still are, and will long remain to the English public, "familiar as household words." In the representation of the passage which he has chosen for illustration, Mr. Clater has happily availed himself of the splendid and characteristic costume of the time, and has exhibited his usual skill and fidelity in the gloss and texture of its various parts. The light and the effect are admirably managed, and the garden scenery has all the gaiety and variety of Watteau.

No. 220. *The Larder*. G. Lance; No. 233. *The Christmas Present*. W. Derby.—The superlatives of language would fail in attempting to describe the felicitous execution displayed in the representation of these tempting assemblages of "the good things of this life."

No. 222. *The Chase, Portraits*. R. B. Davis.—The lines quoted in the catalogue furnish so excellent a comment on this truly able performance, that we cannot forbear transcribing them:—

"See my brave pack, how to the head they press,
Justling in close array
— the hunter's cheering shouts
Float through the glades, and the wide forests ring—
How merrily they chant!
See, the swift courser strains! his shining hoofs
Securely beat the solid ground."

In contemplating the animated scene, snatches of old songs, all tending to prove how skillfully the painter had done his part, came across our memory. We even caught ourselves humming aloud,—

"And a hunting we will go!"

A resolution, alas! more easily made than carried into effect. The general composition, so

contrived as to preserve all the technicalities of the amusement without any injury to its pictorial character, the beauty, high condition, and spirited action of the horses, the eagerness and impetuosity of the dogs, the rich and diversified foreground, the extensive (although somewhat slightly painted) champaign in the distance,—all combine to produce a most pleasing and exhilarating effect; and to shew how justly Mr. Davis is entitled to the honour which we understand has been conferred upon him, of being appointed Animal-Painter to our beloved Sovereign.

No. 234. *Cattle and Figures on the Bank of a River; Evening*. J. Dearman.—This is one of the best specimens that we have seen of the talents displayed by Mr. Dearman in cattle and in river scenery. It may vie with the works of Cuyp, in some of those qualities for which that great artist was distinguished.

No. 235. *The Captive*. R. Farrier.—Most willingly would we rescue so fair a damsel from her confinement, but our days of chivalry are long since past. We must enter our protest, however, against the situation in which one of Mr. Farrier's best-finished pictures is placed.

No. 246. *Landscape Composition*. Rev. J. Thomson.—The character of this landscape composition—with which the tones are in perfect accordance—is that of sublimity; and the style in which it is executed is that of an adept.

No. 255. *The Carrier Pigeon*. R. Edmonstone.—The bird is here introduced as playing no unimportant part in the sentimental drama of the picture. It is evidently the messenger of love.

(To be continued.)

NEW PUBLICATIONS.

The Victim of Seduction. A series of Paintings by Messrs. J. and G. Fogg, illustrating the Hon. Mrs. Norton's pathetic Poem of "the Sorrows of Rosalie."

THESE paintings are seven in number, and follow in the course of the poem, describing the most prominent incidents from "the eve of elopement" to the despair and climax of the victim's sufferings in the death of her infant. The pictures are of a cabinet size, and executed with suitable finish; while the character and expression of those who figure in this pictorial drama are justly, and in many instances powerfully depicted; and if it be true that

"Pictured morals strike the mind,
And through the eye correct the heart,"

the painters are entitled to that share of commendation which is due to such results.

Interior of Westminster Abbey. From a Drawing, of the same size, by G. Cattermole, Esq.; engraved by W. Woolnoth. London, H. Teesdale and Co.

THIS magnificent interior, engraved in the highest style of line engraving, and enriched with the ceremonial of the funeral of Henry V., is a production of peculiar interest. In the architectural parts it is beautiful, and the introduction of the figures has superadded that splendour of effect which distinguishes the pencil of Mr. Cattermole. The print is at once classical and gorgeous; a very fine specimen of drawing and engraving.

The Bridemaid. Painted by E. T. Parris; engraved by John Bromley. London, Moon, Boys, and Graves.

No admirer of the natural and affecting in the conception of art, and of the excellent in ex-

cution, can forget Mr. Parria's exquisite production of the *Bridemaid*, which we rejoice to see here multiplied in the most pleasing style, by the skill of J. Bromley. None of the beauties of the composition are lost; but, on the contrary, the tender sentiment of the affectionate bride-maid is preserved with all the effect, except what colour in painting gave, of the original.

The Bride. Painted by Leslie, R.A.; engraved by James Thomson. Same publishers.

ANOTHER exquisite performance, and most delicately engraved. The soft and lovely expression of the head, the light and gauzy costume, the action of drawing on the glove, and, in short, every part of the picture, are sweetly and harmoniously touched.

The Enthusiast. Painted by the late Theodore Lane, who lost his life by an unfortunate accident, May 21st, 1828; engraved by Robert Graves. Same publishers, and for the benefit of Mr. Lane's widow.

A MEMORIAL of the graphic humour of an artist, sorrow for whose melancholy fate is revived by the contemplation of a production of so much whim and drollery. The old gentleman with the gout angling in a tub, and having all the appurtenances pertaining to his ruling passion around him—fishing basket, landing net, baits, Isaac Walton, &c., is admirably delineated. The intense watchfulness of the angler for the bobbing of his float; and the contrast of the good fireside, the medicines on the table, &c. &c. form indeed a Tale of a Tub, worthy of universal acception. The engraving, too, does honour to the burin of Mr. Graves; and, in every point of view, we earnestly recommend the plate, as equally deserving of patronage from its own great merits, and the laudable ground of its publication.

Portrait of Cooper, the American Novelist.—

A very spirited engraving of Mr. Cooper is the embellishment of the *New Monthly Magazine* for the present month. This mode of attracting popular attention seems to be gaining ground. From the female nobility of *La Belle Assemblée* we have now got to a series of literary characters; and these we cannot but consider very appropriate ornaments to a literary magazine. Mr. Cooper's is a marked countenance; such as might have been expected from his writings. A memoir accompanies the portrait.

The Afternoon Nap. Drawn on Stone by W.

Sharp; from a Painting by F. P. Stephanoff. WHEN the cat is away, the mice will play, says the adage; and when old papas take their afternoon's nap in the sultry summer, their pretty daughters may chance to shew some signs of affection for their young sweethearts:—at least so it is very playfully depicted here; and the lithography is extremely clever.

Fancy Ball Dresses. The Loire Intérieure,

No. 2. *North Holland,* No. 3. Spooner. No. 2 for us, though No. 3 is not amiss. These costumes are very pretty, and we should think would be great favourites with the fair.

NATIONAL GALLERY.

To the Editor, &c.

SIR,—Allow me a small space in your paper to call the attention of the country, and more particularly those who take a lead in the encouragement of the Fine Arts, to the present state of our National Gallery. Surely no person

can contemplate the magnificent and beautiful works which it contains without feeling sorry and ashamed that a building has not yet been found or built suitable for their reception, and worthy of one of the first nations in the world. The lower room in particular,—in which are Hogarth's admirable series of *Mariage à la Mode*; a fine specimen of Cuyp, a grand picture by Vandyck, West's celebrated Christ healing the Sick, which cost three thousand guineas, besides several others;—is so extremely dark, that it is impossible to see them, much more to examine their various beauties. I understand also there are many pictures which cannot be exhibited for want of room.

The country has lately had an increase of a most splendid collection of the Italian school, bequeathed by the late Rev. Holwell Carr, and also got six pictures left by the late Mr. Cholmondeley, of Great Cumberland Place. I am glad, however, to find that late exquisite connoisseur, Mr. Carr, has stipulated in his will for a gallery where his munificent bequest could be properly seen and justly appreciated; and I do trust that those noblemen and gentlemen who are looked up to as the leading patrons of the Fine Arts will now exert themselves to procure for this country so desirable an object as a National Picture Gallery; it being a matter of surprise, from the present arrangement, that any individual should be induced to contribute to the collection, except on the same terms as Mr. Carr; whereas, were it placed on that scale which every true lover of the art in this country would wish, and which ought to have been the case, if the immense sums of money which are annually voted by parliament for public works are taken into consideration, and none of which, in a national point of view, are of more importance than this,—I have no doubt that very valuable additions would be frequently made by the nobility and the wealthy, so as to render it eventually equal, if not superior, to any other collection in Europe.* I am, &c.

J. M.

HAYDON'S NAPOLEON.

WHEN the print of this subject made its appearance last year, we expressed our admiration of it. That admiration is confirmed by the present picture;—a figure of the size of life, finely and carefully painted. It was remarked of Wright of Derby's celebrated "Dead Soldier," that although there was but one face visible in the composition, and that a countenance of joy, the feeling which the whole excited was of the deepest pathos. In Mr. Haydon's work there is no face visible; and yet, insensible must be the spectator who can contemplate it without emotion. The impressions under which it was conceived and executed have been very forcibly and poetically described by Mr. Haydon himself in the following passages, which we extract from his illustration of the picture:—

"It was impossible to think of such a genius in captivity, without mysterious associations of the sky, the sea, the rock, and the solitude with which he was enveloped; I never imagined him but as if musing at dawn, or melancholy at sunset; listening at midnight to the beating and roaring of the Atlantic, or meditating as the stars gazed and the moon shone on him. In short, Napoleon never appeared to me but at those moments of silence and twilight, when nature seems to sympathise with the fallen, and when, if there be moments fit,

in this turbulent earth, for celestial intercourse, one must imagine these would be the moments immortal spirits might select to descend within the sphere of mortality, to soothe and comfort, to inspire and support the afflicted. Under such impressions the present picture was produced. I imagined him standing on the brow of an impending cliff, and musing on his past fortunes; I imagined sea-birds screaming at his feet; the sun just down, the sails of his guardship glittering on the horizon, and the Atlantic, calm, silent, awfully deep, and endlessly extensive. I tried it in a small sketch, and it was instantly purchased; I published a print, and the demand is now and has been incessant; a commission for a picture the full size of life, from one well known as the friend of artists and patron of art, followed, and thus I have ventured to think a conception so unexpectedly popular might, on this enlarged scale, not be uninteresting to the public."

In fine, the simplicity and sublimity of this picture forcibly remind us of the exile in Thomson:

"Day after day
Sad on the jutting eminence he stands,
And views the main that ever toils below,
Still fondly forming in the farthest verge,
Where the round ether mixes with the wave,
Ships, dim-discovered, dropping from the clouds:
At evening, to the setting sun he turns
A mournful eye, and down his dying heart
Sinks helpless."

A subject like this comes home to the understanding of all, and is at once a theme for the moralist, and a lesson to ambition.

ARTISTS' AND AMATEURS' CONVERSAZIONE.

THE last meeting for the season of the Artists' and Amateurs' Conversazione took place at the Freemasons' Tavern on Thursday. It was not perhaps so well attended as on former evenings, nor was there so extensive a display of works of art. Several, however, of a very high class were laid upon the tables: one exquisite sea-view of Bonington's excited considerable attention; and a large collection of lithographic drawings, submitted by a German artist, M. Schloss, were universally admired. His anatomical studies, as formerly stated by us in noticing his publications, are extraordinary specimens of accuracy and delicate finish. To the student, either in anatomy or in art, they are acquisitions of no ordinary value. In bidding our annual farewell to this interesting Society, we would say a few words by way of advice and encouragement. If it be intended to produce effects of greater value than mere amusement, it can only be by the personal exertions of such of its members as are artists—we believe it consists of seventy individuals, about forty of whom live by their profession. To such, therefore, any opportunity of exhibiting proofs of their talents or improvement is of essential importance. As comparatively few of the forty, however, have availed themselves of this advantage, it may be well to impress upon them the policy and the propriety of attending more to this matter hereafter. By so doing, they would at once advance their own interests, and add greatly to the enjoyment of the "Amateurs" and visitors.

We have endeavoured to ascertain whether the Society has led to the purchase and sale of pictures—we believe such has not been the case to any material extent. A main object of the Institution should be to attract customers (we do not use the term disrespectfully) to their meetings; and they may be assured, that the demand will be in proportion to the supply. This talk about buying and selling, and getting gain, may be considered by some as derogatory,

* We willingly insert this letter, as giving further information respecting the National Gallery, and enforcing the opinions we have always maintained on the subject.

and by others as apart from the nature of the Institution. We think otherwise. The Society will do little, if it merely amuses, or affords opportunities of enjoying a pleasant cup of coffee and some agreeable chit-chat. It is capable of leading to more important objects—the advance of art and the benefit of artists. We hope next year these points will have their due weight with the committee and the secretary—to whose industry and attention it is mainly indebted for the popularity it has acquired even in this early, and by no means matured, stage of its existence.

PANORAMA OF MADRAS.

We have frequently repeated our visits to this beautiful painting, and always with increased pleasure. The presence of the sun has made a great difference in its effects, and so much improved its general appearance, that we feel far more at home in the eastern clime than when we stepped into it from an English winter. The water now splashes fervently under the solar rays, and we can prefer a palanquin to a chariot.

DRAMA.

BRUNY LANÉ.

CHRISTMAS brings its puddings and pantomimes; Easter its buns, cakes, and magic-melodramas, and lends its aid in developing that sensible characteristic, of which, in shewing our respect or reverence for persons or seasons, we are never known to lose sight. When we honour public men, it is by eating a large dinner ourselves; and we consecrate our seasons by setting them apart for the consumption of some especial condiment, and the display of some particular spectacle. At this theatre, the *Ice Witch*, by Buckstone, claims our wonder, like the hags of yore, from the multitude of her enchantments. *Harold* (H. Wallack), together with his servant, *Magnus Snore* (Harley), are wrecked on an iceberg, whence they are transported by the hand of the *Ice Witch* (Miss Fawcett) to her fairy palace. Here, like master, like man, forgetful of their lady-loves, they submit to being treated with supernatural hospitality, and are for a time very comfortably bewitched. The spirit of *Harold* becomes at length roused from its lethargy, and his love for *Ulla* (Miss Crawford) revives. The *Ice Witch* dismisses him and his follower in vengeance, and, as might be expected, plays them a very slippery trick. The hand of *Harold* is death to all whom it touches; and the presence of *Magnus Snore*, like that of some other great men, chills all who approach him. The ice and the plot thicken; *Gruthioff*, the rival of *Harold*, scales the castle of *Suena*, *Ulla*'s father, and forcibly abducts both *Ulla* and *Minna*, her maid (Mrs. Waylett); for

“The mistress this was fair, but the maid was somewhat fairer.”

So he also thinks it meet to carry off the latter.”

Harold returns, challenges *Gruthioff*, slays him in single combat, and rescues his betrothed, but dare not give her his hand, “‘cause as how he’d kill her.” At last this dignus vindice nodus is unravelled; the Sun God appears, throws some light upon the matter, and breaks the ice, by completely thawing the power of the *Ice Witch*. Such are “‘the moving incidents of flood and field” which supply the means of displaying the gorgeous pageantry of an Easter spectacle. The scenes are well contrasted; the wild regions of ice, the splendour of fairy palaces, and the grandeur of lordly castles,

succeed each other in rapidity, and surpass each other in brilliancy: our sight, however, was greatly relieved by the green curtain.

On Thursday, a farce called *Nettlewey Hall* was produced: it bears a strong resemblance to the *Midnight Hour*, *Love laughs at Locksmiths*, and other old favourites. The first act went off smoothly; Mrs. Waylett sang a charming ballad: the second act was less prosperous, and there was a considerable uproar at the end. After contradicting each other for a while, the eyes seemed to overtake the nose, and the piece was announced for repetition.

COVENT GARDEN.

THERE was a crowded audience at this theatre on Tuesday, to witness the first representation of the new opera, *Azor and Zemira*. It is the *Zemire und Azor* of Spohr, arranged for the English stage by Sir G. Smart; and it says not a little, not only for his activity, but for the spirit with which every department of this theatre is managed, that (as we are informed) it is not above six weeks since the foreign opera was procured for the purpose of this arrangement; and within this time, the drama has been translated, or rather re-written, the music adapted, the performers prepared, and the scenery and decorations completed. And the praise is the greater, since the performance did not betray the slightest indication of haste in any one of these particulars; for the opera, in the dialogue and English words of the songs, is, at least, equal to any arrangement that has preceded it; the performers thoroughly ready with their parts; and the spectacle as splendid and skilfully managed as almost any thing we remember to have seen. The bringing out of this opera, we conceive, is an important event in the musical world, and must tend greatly to improve the taste, and heighten the relish, for the highest species of dramatic music. There are many, by no means destitute either of natural taste or feeling, by whom the music of Spohr will not be fully appreciated on a first hearing; for it has neither the plain familiarity of the English ballad style, nor the sparkling brilliancy of Rossini's. But, in true simplicity, pure melody, and strong dramatic expression, no music of the present day surpasses that of Spohr. Accordingly, the reputation of this great composer, who has been hitherto little known, and less understood, in this country, is now rising rapidly. His *Last Judgment* is a worthy companion to the *Messiah* or the *Creation*; and *Zemira and Azor* stands in the same rank with the master-pieces of Mozart. It is impossible, indeed, to listen to *Faust*, or *Zemira and Azor*, without feeling that the mantle of Mozart has fallen on the shoulders of Spohr.

Azor and Zemira (we wish the title of *Zemire and Azor* had been retained) is founded on the pretty tale, familiar to all the nurseries of Europe, of *Beauty and the Beast*; and this tale is very well dramatised. A Persian merchant is shipwrecked on an island, the residence of a prince condemned by an enchanter to wear a savage form till the spell should be broken by a damsel, who, notwithstanding his hideous person, should love him for the beauties of his mind! The merchant, wandering in the enchanted gardens of the palace, plucks a rose, which, of course, is a talisman to which the prince's fate is attached. He appears, and threatens the intruder with death; but, at length, allows him to return to his family, on condition of either coming back himself, or sending one of his daughters in his stead. He is instantly transported home; and his youngest

daughter, who had begged him to bring her back a rose, as a token of his affection, resolves to place herself, as his substitute, in the power of the monster. She goes accordingly, and is treated with so much affection and generosity by the prince, that she loves him, notwithstanding his “unprepossessing appearance;” and the result is, the breaking of the spell, and the happiness of the lovers. The dramatic personæ, besides these principal characters, is made up of the damsel's two sisters, whose selfishness serves as a foil to her self-devotion; a comic servant, and a wicked magician, with spirits, good and bad, who fill in as figurantes and choristers.

The piece opens with an instrumental description of a storm, commencing so quietly that the audience is hardly aware of it, till it begins to rise, by a fine climax, to tempestuous fury; and the shipwrecked merchant and his servant are seen approaching a savage and rocky shore, in the midst of a wild chorus of spirits. Nothing can be finer than the manner in which the voices of the bewildered and frightened mortals mingle with the unearthly sounds around them. A fine bass song, by the merchant, Scander, is too much for the physical powers of Morley, though he sings it with intelligence. On the plucking of the fatal rose, *Azor* suddenly appears in a threatening attitude; and his representative, Wilson, made this situation very effective, by the judgment of his costume, and the force with which he poured out his denunciations of vengeance. The trio that follows, in the form of a round, is exquisite; and is succeeded by a noble recitative and air, by *Azor*, in which Wilson exhibited great talent. It was, however, somewhat too low for the pitch of his voice, which diminished its brilliancy, and this was the case throughout the part. We are then transported to the *Dom-daniel* of the enchanter, who, alarmed at what has happened, evokes, by incantation, an oracle to declare his fate. The music of this scene is taken from the *Faust* of the same author, and, we think, has never been excelled. It is as wild as the famous incantation-scene in the *Freischütz*, and more melodious. *Zemira* (Miss Inverarity) does not appear till the second act. Her first song, “*Rose, softly blooming*,” is a divine air; we know of nothing that can be compared to it but the “*Voi che sapete*” of Mozart. Her singing of it was charming, full of tender feeling, and the utmost purity of taste and execution. An air of *Ali* (the servant) in the Spanish, or rather Moorish style, is beautiful. Both in the music and words (which, by the way, are exceedingly pretty), it is full of delicacy; and, though Penson found it necessary (in accordance with his character) to give it a comic effect, yet that is not its true expression, and in private society it will always be sung seriously.

In the last act, *Zemira and Azor* are brought together; and the music assigned to them is in the very highest degree impassioned and delightful. The whole scene in which *Zemira* first sees *Azor*, and is brought by his tenderness to feel compassion and a beginning of affection for him, is charming; and it was very sweetly acted, as well as admirably sung. Wilson has gained prodigiously on the score of feeling, or rather, the power of expressing feeling; for it was always obvious that the feeling was there, though chilled and restrained by timidity. The great scene near the conclusion, sung by Miss Inverarity, was a triumph for this accomplished vocalist. The recitative, which is a long soliloquy, containing much variety of feeling, was delivered in a manner

worthy of an excellent actress; and the *aria* was a blaze of splendid execution. It was received with tumultuous applause, and was almost encored,—though its great length, and the violent exertion which it caused, ought to have put that out of the question with every body. The two sisters found good representatives in the Misses Cawse, who did great justice to the difficult concerted pieces, and sung a duet, in the third act, in a very beautiful manner.

We are happy to be enabled to speak very favourably of Mr. Peake's melodrama at this house. *Neuha's Cave; or, the South Sea Mutineers*, is founded upon Lord Byron's poem "The Island." We may therefore be excused the plot, which consists of little more than the mutiny on board the *Narcissa*, and the preservation of *Torquil* in the submarine cavern, by a princess of the Tonga island. Keeley, as the horticulturist of the expedition, is the life and soul of the piece. The heroine is gracefully enacted by Miss Taylor, whom, nevertheless, we shall be happy to see relieved from melodramatic exertions. The scenery is most beautiful throughout; and our only objection to the drama is its termination. We are sick of explosions, which never seem to harm any body: they should only be employed by writers who are incapable of bringing about a *dénouement* dramatically, and wish to smother up their blunders in smoke. This cannot be said of Mr. Peake. By the way, would not the character of *Torquil* have been more interesting in the hand of a male performer? Mrs. Viuing played with great spirit. We mean not to depreciate her efforts; but there appeared to us to be no reason for pressing her into her blue pantaloons.

VARIETIES.

Toujours Gai.—The *Mémorial Bordelais* of the 26th ult. contains the following characteristic announcement: "*Pour soulager les douleurs de la maternité dans l'infortune, on chantera, on dansera ce soir au Grand Théâtre.* Le parfum des arbustes en fleurs, les sons d'une musique harmonieuse, les vives clartés de mille bougies, l'éclat des parures des dames, la gaieté des danseurs, et cet ensemble délicieux d'un bal, où tout ravit, où tout enchante, voilà ce que nous offrira ce soir cette vaste salle, dans laquelle plus de trois mille personnes seront rassemblées."

Parisian Diorama.—A view of the tomb of Napoleon, at St. Helena, is about to be immediately exhibited at the Diorama in Paris.

Cholera Morbus.—A Russian physician having asserted in a recent memoir that the cholera morbus is not contagious, M. Moreau de Jonnés, at one of the last sittings of the French Academy, brought forward a number of facts to prove that it is. As the coldness of the season diminishes, this terrible malady increases its ravages. In the latter end of February the number of persons attacked by it in Moscow rose from three to seventeen a-day.

Ancient Custom.—"All the public festivals of yore were attended by the 'hot-meat' men, who, in limited numbers, perambulated, unmolested, in front of the line of demarcation, shielded by the divinity of their mission and time-honoured custom. Every where was the ambulatory larder, and its vociferous bearer, a most welcome sight; by all parties were the white cap and apron hailed with joy, as from afar they heralded the coming of the fresh-laden tin-lined basket, with its thick covering of many-folded napery, through which the

steam, nevertheless, cunningly found its way, tickling the nostrils under which the bearer passed with his savoury load, and so fixing the before but half-resolved to arrest his progress; whilst at a nod, his loud announcement of 'hot meat here—all hot and smoking, from Cook's-lane!' changed to the quick technical demand of 'Now, my master, roast or boiled?' till baring his treasure, and flourishing his well-edged knife, he at once decided the indeterminate glance of the epicure by the peremptory hint of 'Quick's the word, master—good meat mustn't be let take cold—hunger's never long a-choosing—roast's the thing—here you are, I know your stomach—thanks, my master, and much good may't do ye!' Then dropping the coin into his apron, off he went again, to charm other ears with 'hot meat here—all hot and plenty, and more a-coming!' accompanying his voice with the rattle of his knives—of which he usually bore two, dexterously balanced, cast-net-wise, between the fingers of his right hand, making the blade and haft play sharply together, so long as any of his stock remained undisposed of."—*The King's Secret.*

New Species of Marine Alga.—Dr. Greville has described two new species of marine alga, under the names of *Phyllophora obtusa* and *Rytidophla canaliculata*. The former is from the Cape of Good Hope, and the latter from the coast of the Swan River settlement.

Application of Electro-Magnetism to the Discovery of Metallic Veins.—In the second part of the Philosophical Transactions for 1830 is a paper by Mr. Robert Ware Fox, on the electro-magnetic properties of metalliferous veins in the mines of Cornwall. These plates were connected by copper-wire, 1-20th of an inch in diameter, including a galvanometer in the circuit, and extending in some cases as far as 300 fathoms. The action on the needle he found to vary generally with the quantity of ore and the depth of the station. Hence from such experiments material assistance may be derived by the practical miner, in attempting to ascertain the amount of ore in particular veins, and the direction in which it is likely to occur in greatest abundance.

Mineralogical Survey of Scotland.—It appears that the details connected with the mineralogical survey of Scotland have been called for by the House of Commons. This was highly necessary, and we hope will be productive of some advantages to science.

Rights of Artists.—It appears, by the following extract from *Le Globe*, that the right of painters to give or to withhold permission to engrave their works, even when sold, which has been for some time the subject of warm discussion in this country, has been brought under the consideration of a legal tribunal in Paris. "Does the right to have an engraving made from a picture belong to the purchaser of the picture, or does it remain with the painter, even after the sale of his picture; and, by consequence, does an engraver, who engraves a picture by the sole authority of the purchaser, expose himself to prosecution for piracy, either by the painter, or by any one whom the painter may have empowered to engrave his work? This was the question brought before the court with reference to an engraving of M. Gérard's picture of *The Battle of Austerlitz*. The court decided in favour of the painter's exclusive right."

French Drama.—From the 1st of January 1809, to the 31st of December 1830, there were represented at Paris 3558 new dramatic pieces. During the last ten years M. Scribe has produced 135; M. Théaulon, 94; M. Braxier, 94;

M. Armand Dartois, 92; M. Carmouche, 92; M. Mélesville, 80; M. H. Dupin, 56; M. Benjamin Autier, 55; M. Dumersan, 53; M. Frédéric de Courcy, 50.

Fossil Bones found near Brighton.—The fossil remains of a large quadruped, supposed to belong to the genus *mastodon*, have been recently discovered about four miles north of Brighton, a few feet below the surface. Among them are two teeth, each weighing about eight pounds and a half. They are, we understand, in the possession of Richard Weekes, Esq. of Hurstperpoint.

Lindner's Cabinet of Natural History.—Mr. Denis Lindner, at Bamberg, who possessed a cabinet of natural history valued at 100,000 florins, has made a present of it to his native town, and has funded a capital of 5000 florins to increase it, and ensure proper care being taken of it after his death.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XV. April 9.]

Mr. Gleig has ceased to be the Editor of the National Library: from the appearance of Bourrienne, which fills the months till July, and the subsequent announcements, it appears as if this branch of the prevalent system were to consist rather of republications than of original productions or epitomes.

Pyrus Malus Brentfordensis: a Descriptive Catalogue of the most valuable sorts of Apples; by Hugh Ronalds. We learn with pleasure that a Second Series of Sketches of Irish Character, by Mrs. S. C. Hall, is about to issue from the press; and a second edition of the First Series is to make its appearance at the same time.

TO CORRESPONDENTS.

P. N. has formed very erroneous opinions. Were every individual to do the same, and expect as much, we should require two secretaries, and two sheets per week instead of one.

In reply to Defensor, we take leave to say, that our opinion on the system of fagging is unchangeable. We never meant to take up the statement of the Dramatic Annual as an absolute fact—it might be true or false without affecting our argument. We were also aware that, since the discussion of Sir A. Hall's pamphlet, Winchester school has been gradually improving, though the masters did not like it to appear, in the first instance, as if they had been dictated to; but with regard to Westminster, we were perfectly informed and well founded. Some of the recent doings there were quite atrocious, and not to be tolerated as forming any part of any system of education.

These very popular Prints are ingeniously composed of Flowers, Insects, Shells, Fruit, Vegetables, Minerals, Antiques, Fish, China, Birds, Books, Jewels, and Pictures. They are all neatly coloured, and adapted for the Scrap-Book, &c. Price 1s. 6d. each, or 12s. the set.

Charles Tilt, 86, Fleet Street.

A Great Variety of Scrap-sheets and Vignettes, containing Landscapes, Groups of Figures, Animals, Birds, Butterflies, &c. suited for the newly invented and beautiful art of transferring Prints to White Wood, China, &c.

WESTALL'S GREAT BRITAIN ILLUSTRATED: A Series of original Views of the principal Towns, Public Buildings, and Picturesque Scenes in the United Kingdom, engraved by William Westall, A.R.A. Engraved principally by E. Pindem.

This splendid work, which has cost the Proprietors upwards of Six Thousand Pounds in its production, is now completed. It contains One Hundred and Nineteen correct and beautiful Views, with appropriate descriptions; and forms a handsome quarto volume. With the expectation of a very extensive sale, it is offered to the public at a price little exceeding that usually asked for a blank album of the same size and style of binding.

The volume is neatly half-bound in green morocco, with gilt tops, price 36s.; or splendidly bound in arabesque morocco, price 45s.

A few India Proofs remain, price 5l. 5s. half-morocco; or 5l. 12s. in morocco elegant.

Beautiful views constitute the decorations of this cheap and interesting publication.—Literary Gazette.
"We never observed any thing more so remarkably beautiful at such very reduced prices."—Monthly Magazine, January.

Charles Tilt, 86, Fleet Street.

By EDWARD HAWKE LOCKER, Esq. F.R.S. F.S.A.
One of the Commissioners of the Institution.The present publication, while it records the achievements of that gallant and ever useful corps, the Greenwich Hospital, an illustrious ornament, will make the humble midday pant for opportunities to emulate Nelson and Trafalgar.—Literary Gazette.
Specimens of the Work may be inspected at every Bookseller's in the Kingdom, and a Prospectus obtained gratis.
Published by Harding and Lepard, Pall Mall East, London, to whom the Names of Subscribers are to be addressed.

For Scrap Books, &c.
This day is published, price 6s. plain; 12s. coloured.
THE ART OF TORMENTING; a Series of Illustrations of the most approved Methods of Executing in this valuable acquisition: comprised in Forty-four Subjects. Price 6s. plain; 12s. coloured.
Charles Tilt, 86, Fleet Street.

Of whom may be had.
Omnium GATHERUM: a Collection of 150 small humorous Groups for Scrap Books. Price 6s. plain, or 12s. coloured.

WILD'S ENGLISH CATHEDRALS.

TWELVE SELECT EXAMPLES of the ARCHITECTURE of the MIDDLE AGES in ENGLAND, consisting of Plates carefully etched, aquatinted, and coloured, in imitation of the original Drawings made on the spot by CHARLES WILD, Esq. being intended to correspond in style and execution with his Select Specimens of Ecclesiastical Architecture in France (also, eleven inches by fifteen), consisting of

Two Views of York Cathedral, Interior and Exterior (the Interior View exhibits the whole of the Choir of the Cathedral as it appeared before the fire).
Henry the Seventh's Chapel, Westminster Abbey.
View of the Transept of Ely Cathedral.
Interior of King's College Chapel, Cambridge.
Choir of the Cathedral Church, Oxford.
The West Front of the Cathedral of Peterborough.
The West Front of the Cathedral of Wells.
The Choir of the Cathedral of Norwich.
The Choir of St. George's Chapel, Windsor.
The Choir of the Cathedral of Gloucester.
A general View of the Cathedral of Salisbury.
Delivered in a Portfolio, 100. 10s.
Twelve original Etchings of the above, delivered in a Portfolio, price 10l. 10s. Only fifty Sets printed.

Twelve aquatinted Plates of the above, delivered in a Portfolio, price 10l. 10s. Only fifty Sets printed.
London: Jennings and Chaplin, 98, Cheapside.

HEATH'S HISTORICAL ILLUSTRATIONS to the New Edition of SIR WALTER SCOTT'S NOVELS and TALES.

Illustrations to the Novels, Tales, and Romances by Sir Walter Scott, Bart. from original Designs by the most eminent Artists. Engraved by Charles Heath, and commencing with Guy Mannering, Six Plates, price 5s. 6d. A very limited number are taken off in 4to. India before the letters, 20s.; India Proofs, with letters, 18s.; Proofs, 12s.

No. II. Rob Roy, containing Six Plates.
The lively interest with which every thing connected with these splendid works of fiction is regarded has suggested the design of offering to the public a Series of Illustrations, which, it is presumed, will prove a source of gratification to the subject.

London: Jennings and Chaplin, 98, Cheapside.

TURNER'S ENGLAND and WALES.

Part XI. now ready.
Mr. Charles Heath begs respectfully to inform the Subscribers to the above splendid Work, that the publication is removed from Messrs. Jennings and Chaplin, 98, Cheapside, to the house of Moon, Boys, and Child, Pall Mall, London, to whom application can be made for Paris to complete imperfect Sets.

Part XII. will be published on May 2, 1831.

THE CHILDREN IN THE WOOD, illustrated

with Eight exquisitely-finished Woodcuts, from Drawings by Harvey, and engraved by Thompson, Nesbit, B. Williams, Jackson, and Branson and Wright. Price 2s., or, on India paper, 4s.

It is intended to republish the whole of the Ballads in "Percy's Relics of Ancient English Poetry" in the same style as the above. No. 2, containing the Beggar of Bethnal Green, is in a state of great forwardness.

"The most popular of old and popular ballads is here adorned in a manner worthy of its interest. We do not think the art of cutting in wood can go beyond the six prints which so happily illustrate this melancholy tale; and we rejoice to anticipate a series from the 'Percy Relics of Ancient English Poetry,' ornamented in an equally beautiful and appropriate style."—Literary Gazette.

London: Jennings and Chaplin, 98, Cheapside.

This day is published, price 4s., or India Proofs, 7s.

LANDSCAPE ILLUSTRATIONS of the

WAVERLEY NOVELS, containing Views of Fast Castle, Copley Pleading; Bothwell Bridge, D. Roberts; York, P. Nash; Castle Rushin, H. Gainsmeu.

"Another exquisite series of four Landscapes, which illustrate scenes in Red Gauntlet, Waverley, Ivanhoe, and the Black Dwarf. The word 'gems' could never be more truly applicable to works of art."—Literary Gazette, April 3.

"A set of them worthy the volumes they illustrate, and the names that are attached to them."—Monthly Magazine, April.

Charles Tilt, 86, Fleet Street.

Henry Colburn and Richard Bentley, New Burlington Street.

THE ILIAD OF HOMER, translated into English Verse.

By WILLIAM SOTHEY, Esq.
"Let it be an office for Mr. Sothey's satisfaction, that we say he is entitled—and we do not know of any person whom we could say as much to deal with that well-booted Grecian (Homer) even at this time of day, after all that has been done in, to, with, and by him of the Iliad and the Odyssey," by not a few of our versing poets. It is an intention to have several—perhaps six articles on Sothey—like and unlike his own; and his merits, which are of the highest order, will be admired wherever *Maga* cheers human life.—Blackwood's Mag. April 1831.
John Murray, Albemarle Street.

THE BRIDAL NIGHT; the FIRST POET; and other Poems.

By DUGALD MOORE.

LITERARY RECOLLECTIONS.
By the Rev. RICHARD WARNER, F.R.S.
Rector of Great Chalford, Wilts, &c.

"We have seldom seen so much good sense, and still more rarely so much good humour, united with the great graces of charitable feeling and innocence of purpose. The style is remarkably forcible, chaste, and elegant."—*Monthly Review*.
Printed for Longman, Rees, Orme, Brown, and Green.

Part XIII. price 6s. of
THE ENCYCLOPEDIA BRITANNICA.

7th edition. Among other Articles entirely new, the present Edition contains Angling, Animal Kingdom, Animals, Antiquities, &c.

Two volumes of the book have now been published with the most perfect punctuality, and the publishers are happy to receive the unqualified approbation of the subscribers for the manifest improvement in the work, and only as regards the literary merit, the best and the most accurate and judiciously embellished. The Third Volume being nearly finished at press, the publishers can now calculate, from the additional matter they have been enabled to include in the enlarged page, that the book will be completed in twenty volumes. Each Part is not only a valuable and a publication of useful and entertaining treatise, by the most distinguished authors of the present day, but the value of the whole is enhanced as the work advances; and when completed it will form a digest of human knowledge of permanent importance, at the same time that it is one of the cheapest books ever published.

Printed for Adam Black, Edinburgh; Simpkin and Marshall; Whittaker, Treacher, and Co.; Hamilton, Adams, and Co.; and Jennings and Chaplin, London; and John Cumming, Dublin.

A new and improved edition, in 1 vol. royal 12mo. price 7s. 6d.

In 3 vols. 8vo. 36s. boards,
THE POLITICAL LIFE of the RIGHT

HON. GEORGE CANNING, with a Short Review of Foreign Affairs.

By AUGUSTUS GRANVILLE STAPLETON, Esq.

"The work is composed in a style of connected narrative, which renders it historically instructive and interesting, and it exhibits, in true and natural colours, one of the most vigorous and expansive minds that ever moved the machine of human destiny."—*Literary Courier*.

Printed for Longman, Rees, Orme, Brown, and Green.

With a Portrait, 2 vols. 8vo. 34s.
THE LIFE AND CORRESPONDENCE OF ADMIRAL RODNEY.

Edited by his Son-in-law, Major-General MUNDAY. "We know of no person who has made more judicious use of his materials than General Munday. He has made, from the joint operation of family feeling and excellent taste and judgment, a literary work which will confer honour on the subject and on himself to the end of time."—*Genl's Mag.*

Lately published, 2 vols. 15s.
The Adventures of Giovanni Finati in some of the Parts least visited of Asia and Africa. Edited by William John Bankes, Esq.
John Murray, Albemarle Street.

With Three very superior Maps, 2 vols. 8vo. 30s.
THE DORIANS. An Account of the early History, Religion and Mythology, Civil and Domestic Institutions, Arts, Language, and Literature of that Race. Translated from the German of C. O. MULLER, Professor in the University of Göttingen.

By HENRY TUPNEL, Esq. and GEO. CORNEWALL LEWIS, Esq. Student of Christ Church. "The profound and varied scholarship of Professor Müller is well known to every classical student of German literature. The present work teems with pregnant evidence of extended and minute research, and so much new and interesting light is thrown, not only upon the early history and mythology of the Dorian race, but also on innumerable passages of classical antiquity, and usages of all the earlier states and tribes of Greece, that we forget the somewhat cold and scholarly bearing of our author's occasional assumptions, in substitution of his unvarnished industry and great knowledge. The translation had the signal advantage of being carefully revised, corrected, and in many important particulars enlarged by M. Müller himself, before it went to press, so as, in fact, to form a new and much improved edition of the original work. The volumes are embellished with three maps. These, together with a complete geographical view of Ancient Greece; and, from inspection, we are satisfied of the justice of the boasts of the translator, that in accuracy and fulness of detail, they rival, if not exceed, all other maps of the same regions."—*New Monthly Mag.* April 1831.

THE LIFE OF NAPOLEON BONAPARTE.
Also, with a whole-length Portrait of Talleyrand, and other Engravings, 5s.

The Court and Camp of Bonaparte. These Two Works contain the Substance of all the authentic part of "Bonaparte's Memoirs of Napoleon."

"We have ourselves reaped no inconsiderable pleasure from a perusal of the first portion of the Life of Bonaparte. Its style is clear and spirited, its views are in general sound and impartial, and the materials ably and lucidly condensed. It is written as it ought to be—not for a party, but for the people, and as such, we trust, it will be appreciated."—*New Monthly Magazine.*

John Murray, Albemarle Street.

New Novel, by the Author of "Marriage," and the "Inheritance." In 2 vols. small 8vo. 11. 11s. 6d.

Crown 8vo. 10s. 6d.
ON THE PROGRESS OF SOCIETY.

By Dr. HAMILTON, of Aberdeen. Author of "An Essay on the National Debt."

"We cordially recommend the volume to those who are, as well as to those who are not, acquainted with the valuable science of which it treats—a science which is now justly looked upon as an essential branch of liberal education."—*Monthly Review*, Dec. 1830.

"This is a book of sensible essays on various topics of political economy, very useful and very interesting, as showing what may be considered the practical part of the subject. On the whole, we may say of Dr. Hamilton's book, that to those who are commencing the study of political economy, it will convey much interesting and important information."—*New Monthly Mag.*

John Murray, Albemarle Street.

With Woodcuts, 2 vols. post 8vo. 16s.
A YEAR in SPAIN.

By a YOUNG AMERICAN. Two agreeable volumes—the writer a very intelligent person.—*Monthly Magazine.*

"It is particularly delightful to meet with a work like this, which gives us an impartial picture of that never-changing and yet ever-interesting part of the peninsula. There is a sustained rapidity and freshness in these sketches, with which even the least-informed reader can hardly fail to be pleased."—*Monthly Review.*

"A lively and pleasant work, reflecting great credit on its author, and affording, in every page, various and agreeable entertainment to the reader. The Young American understands how to travel, and how to write, which all who publish travels are by no means masters of."—*New Monthly Magazine*, April 1831.

"It is indeed the pleasantest book of the kind we ever read."—*Englishman's Mag.*

John Murray, Albemarle Street.

Lyons' Hebrew Grammar, with Points. In 8vo. price 6s. boards, the 4th edition of

THE SCHOLAR'S INSTRUCTOR—A Hebrew Grammar with Points.

By ISRAEL LYONS, Formerly Teacher of the Hebrew Language in the University of Cambridge.

Revised and corrected by HENRY JACOB. Glasgow: Printed by A. and J. M. Duncan; and sold by C. J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, London.

For the Use of Schools.
In 18mo. price 7s. 6d. boards, the 2d edition, revised and corrected of

EXCERPTA ex VARIIS ROMANIS POETIS, qui in scholis raris leguntur.

Lucretii, Lucanum, Virgilii, Statii, Martialis, Juvenalis, Persii, Siliacii, Claudianus.

Notulis illustrata, quæ selectis JOHANNES ROGERS PITMAN, A.M. Venenit apud C. J. G., et F. Rivington, in Gemetriso Palatio, et Vice clero in Actore Place.

In 3 vols. post 8vo. 31s. 6d.
THE INCOGNITO; or, Sins and Poccadillo: a Tale of Spain.
 By the Author of "the Castilian," &c.
 "The merits of 'the Incognito' are not confined to one uniform style. They are various and striking—comedy intervenes tragedy, and the narrative is frequently interrupted, at due intervals, by conversational and descriptive matter. We have not, during the present season at least, met with a more engaging novel."—*Monthly Review*, March.
 Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

In 9 large vols. 8vo. containing about 9,000 pages of close print, 8s. half-bound.
A BIOGRAPHICAL DICTIONARY OF EMINENT PERSONS OF ALL AGES.
 By JOHN GORTON.
 "It is small praise to say this Dictionary supersedes all the prior compilations of the kind; but we have consulted a multitude of articles, and have been surprised at the accuracy, exactness, and intelligence, which they exhibit. We must not omit to remark an important recommendation in a bulky book of reference—its cheapness. Though far more copious, and carried down to a much later period, we believe the work does not exceed the price of the imperfect repositories of biographies."—*Atlas*.
 Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

The 14th edition, in 12mo. with important additions, alterations, and improvements, by the Rev. G. Oliver. Price 3s.
ILLUSTRATIONS OF MASONRY.
 By the late WILLIAM PRESTON, Esq.
 Past-Master of the Lodge of Antiquity.
 By the same Editor,
The Star in the East. 12mo. 5s. 6d.
The Antiquities of Freemasonry. 8vo. 12s.
 Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

In 2 large vols. 8vo. 30s.
THE HISTORY OF ITALY; from the Fall of the Western Empire to the Commencement of the Wars of the French Revolution.
 By GEORGE PERCEVAL, Esq.
 "For the elegance of its style, the generous tone of its sentiments, and, above all, for its faithful reference to original authorities, this work is certainly a valuable acquisition to our historical literature."—*Monthly Review*.
 "The History of Italy fills up a blank long felt in our literature, in a way highly creditable to its author."—*Literary Gazette*.
 Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

With Three Plates, 2s. 6d. the Fourth Number of the New Series of
THE EDINBURGH JOURNAL OF NATURAL AND GEOGRAPHICAL SCIENCE, for April.
 Contents: Descriptions of new or little known species of Birds, by Sir W. Jardine—The Loves of the Moles, by M. G. St. Hilaire—Description of a Fossil Tree discovered near Edinburgh, by H. Witham, F. G.—On the Anatomical Structure of the Lion, by H. Cheek, T. Jones, and R. W. Dumbair on the Aurora Borealis of last Winter—Information from Swan River—Geographical, Zoological, Botanical, and Geological Collections—Proceedings of Scientific Institutions—Notices of New Books, &c.
 Printed for Whittaker, Treacher, and Co. Ave Maria Lane, London; and J. Anderson, Jun. Edinburgh.

In post 8vo. 15s. cloth lettered.
A TOPOGRAPHICAL DICTIONARY OF LONDON AND ITS ENVIRONS.
 By J. ELMES, Surveyor of the Port of London, &c.
 "The object of this work is to describe London in the nineteenth century, in a manner that may at once direct the seeker to any square, street, alley, court, building, &c. It is evidently the result of much labour, and is far more useful, because much more ample, than any directory can ever be. The accounts of charitable institutions, commercial and ecclesiastical establishments, &c. are sufficiently explanatory, and are written with care and attention. We accept the pledge of Mr. Elmes, whose name has been often before the public, as a guarantee for the accuracy of the volume."—*New Monthly Magazine*, April.
 Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

In 18mo. 2s.
THE WRITER'S AND STUDENT'S ASSISTANT; or, a Compendious Dictionary, rendering the more common words and phrases in the English Language into the most elegant or scholastic; and presenting at one view select for objectionable words—a choice of the most appropriate from an assorted variety—and the opportunity of consulting occasional concise notes, interspersed throughout the whole, pointing out, in a familiar way, the distinction between such of the words as are frequently, in error, used synonymously.
 "This little work is calculated at once to promote literary composition, and to assist in establishing a correct and elegant style both in speaking and writing."—*Gentleman's Magazine*.
 "It will be found useful to the finished scholar and orator, as well as to the tyro of letters."—*Sunday Times*.
 "This may be characterized as a very useful little abridgement, with considerable improvements, of Mr. Crabbe's more elaborate work on synonyms."—*Literary Gazette*.
 Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

In a pocket volume, the 5th edition, 5s. in cloth.
THE SECRETARY'S ASSISTANT.
 "One of those useful little books which, having found how serviceable it is for almost daily reference, you wonder that you could ever do without. This Assistant gives you superlatives, lists of ambassadors and consuls, forms of petitions and memorials, and other pieces of instruction for intercourse with society."—*Literary Gazette*, April.
 Printed for Whittaker, Treacher, and Co. Ave Maria Lane.
 By the same Author, 3 vols. 12mo. 31s. cloth,
A Dictionary of Quotations from the British Poets.
 Vol. I. containing Quotations from Shakespeare, &c. 6d.
 Vol. II. containing Quotations in Blank Verse, 7s.
 Vol. III. containing Quotations in Rhyme, 6d.
 "These volumes are what they profess to be, and are honestly and tastefully executed. We have in them the essence of Shakespeare and the British poets."—*Monthly Review*.

Price 1s. 6d.

THE FAMILY LIBRARY OF FRENCH CLASSICS; or, Collection of the Chefs-d'œuvre of French Literature.
 This Collection will be contained in about Eighty Volumes, Two of which will appear every Month until completed. The Drama will form the First Division, and will be comprised in Twenty-three Volumes. Price of each volume, handsomely done up in fancy boards, 3s. 6d.; or on fine paper, 4s. 6d.
 Printed for Treuttell, Wurts, and Co. 20, Soho Square.

3d edition, 8vo. 8s. boards.
THE PARSON'S HORN-BOOK.
 Dublin: Published by Browne and Sheehan; and sold by Simpkin and Marshall, London.

In 8 vols.
SOCIETY; or, the Spring in Town.
 A Novel.
 "This is evidently the production of a lady moving among the higher ranks;—it presents a complete panorama of fashionable life. No female writer since the publication of 'Aimack's' has been so successful in the delineation of character. Many of her portraits are perfect, and will not fail to be recognised in the circles she has so cleverly described."—*Standard*.
 Saunders and Otley, British and Foreign Public Library, Conduit Street.

Botany and Horticulture.
 In 8vo. with a coloured Frontispiece, the 3d edition, 14s. boards,
THE GREEN-HOUSE COMPANION;
 comprising a general course of green-house and conservatory practice throughout the year—a natural arrangement of all the green-house plants in cultivation—with a descriptive catalogue of the most desirable to form a collection, their proper soils, modes of propagation, management, and references to botanical works in which they are figured. Also, the proper treatment of flowers in rooms, and bulbs in water glasses.

2. **The Domestic Gardener's Manual.** By a Practical Floriculturist. In 8vo. with numerous Engravings, 12s. cloth lettered.

3. **The Villa and Cottage Florist's Directory;** being a Familiar Treatise on Floriculture, particularly the management of the best stage, bed, and border flowers usually cultivated in Britain. To which are added, directions for the management of the hot-house, green-house, and conservatory, with the different modes of raising and propagating exotic plants; interspersed with many new physiological observations. By James Main, A.L.S. 6s.

"We strongly recommend this work. Much practical information, of a useful kind, is conveyed in simple and intelligible language, and the art of raising and propagating exotic plants is subordinated to the science of botany."—*Atlas*.

4. **A Concise and Practical Treatise on the Growth and Culture of the Carnation, Pink, Auricular, Polyanthus, Ranunculus, Tulip, Hyacinth, Rose, and other Flowers.** By Thomas Hogg. 4th edition, with coloured Plates, 8s.
 Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

No. 743.

SATURDAY, APRIL 16, 1831.

PRICE 8d.

REVIEW OF NEW BOOKS.

The Iliad of Homer. Translated by William Sotheby. 2 vols. 8vo. London, 1831. Murray. Few will be prepared to deny, that a very general satisfaction and contentment prevails with that version of the *Iliad* with which the genius of Pope enabled him to supply his countrymen. Notwithstanding that the ground is thus preoccupied, and that the flowing versification of Pope leaves neither the need of superior excellence, nor the reasonable hope of extended success in such an attempt; still, the frequent diversion from the literal meaning of his author affords a fair opening to any new aspirant, who, from close adhesion to the original, might ground his hopes of participating in the favour and reward due to so laborious an undertaking as a new version of the *Iliad*. To restore this poem to its original simplicity, and revive its purity, demanded the sacrifice of many a tedious hour, and called for almost endless patience and persevering industry. To the fine feeling and flowing versification of the poet, the leading excellencies of Pope, was to be added the critical accuracy of the grammarian, and the thorough and scholar-like knowledge of the language, accompanied by such a degree of veneration for the original as would secure all its simple and peculiar beauties, and lead the translator to shun all attempts at alteration, or to presume upon improvement. Thus would a literal version be secured; and by attention to this particular, Cowper possesses one marked advantage over Pope. Every poet must lose, to a certain extent, by being transplanted from his native language; and he who takes upon himself the task, and seeks the laurel of a translator, should bear in mind, that to remedy this inherent evil is not in his power; neither can it be reasonably required at his hands: yet it is the fear that this deficiency will be visited upon himself, which frequently leads the translator to substitute some extraneous beauty or attempt of his own upon all occasions when, from the difference of language, his version wears the appearance of degenerating from his author. The translator should nevertheless rest contented to imitate the engraver, who, forbidden the rich colouring of the original, still displays the imagination of the painter's mind, represents the similitude of the picture with rigid exactness, and that without any additional flourishes of his own. When we take into consideration the time and acquirements necessary for undertaking a new version of the *Iliad*, and the high standard of those by whom the lists are already preoccupied, it is greatly to Mr. Sotheby's credit not to have been diverted from, or disheartened by, the prevailing apathy towards such learned lucubrations as that with which he has presented the reading world. The time once was, when to predicate of any one that he was *inter Græcos Græcissimus*, was to extol him as excelling in attainments the most honoured and important; but, alas! the acknowledgment that such a time was, savours strongly of the admission

that it no longer is. We can only regret, therefore, for the gratification of Mr. Sotheby's fair deserts, that his truly *magnum opus* was not published at a more classical era, or when heroic poems were in full blossom. While upon this topic, it may not be incurious to observe the total disregard and neglect with which a literal version of the *Iliad*, by M. Bignan, has been received in France. The journals remark, without in any way passing censure upon the manner in which the author has executed his task, that now-a-days such works excite no interest whatever. Without making further allusion to the hazard of entering the lists with rivals who have pretty well consumed the popularity belonging to Homer, or further canvassing the taste of the times, since we conceive either of these points to be altogether irrelevant to the positive and intrinsic merits of the work before us—we proceed to express our opinion of Mr. Sotheby's poem. The great recommendation to which he may justly lay claim, is the almost invariable rejection of that license so frequently abused by translators: he clings closely to the meaning, and generally renders the very words and expressions of the text as nearly as a poetic translator can do. Thus the simple sublimity of his author is neither lost nor lowered, saving where, from the varying nature of the languages, the idea of the poet refuses any other than its native garb.

"As when th' unwearied blood-hound, stain'd with gore,
Pursues a lion, or a mountain-boar,
Hangs on his flank, and marks with wary eye
When the fierce beast, back-glancing, scorns to fly,—
Thus Hector follow'd, nor e'er ceased to slay
The foe that hindmost linger'd on his way.
But o'er their plex and fosse confusedly fled,
When rush'd the Greeks, and left on earth their dead,
They mild the ships their routed battle staid,
And each in fear inwink'd the other's aid,
Rais'd their clasp'd hands, and pour'd in deep despair
To each celestial power the voice of pray'r.
Then to and fro, fierce-lashing on anain
His fiery steeds through slayers and the slain,
Grim as the god of battle, Hector rode,
And roll'd his gorgon orbs, that glar'd on blood."

Nothing can be more literal and powerful than this. The annexed passage will, we think, bear us out in attributing to Mr. Sotheby pre-eminent excellence where deep feeling and pathos are to be portrayed.

"Then, like a maniac, swifter than the wind,
Flew, and her maidens followed close behind.
But when she rush'd, in that ill-fated hour,
Through the dense throng, and stood on Ilion's tow'r,
And view'd her Hector dragg'd the walls before,
Where the lash'd steeds his bleeding body bore,
Dark night her eye-lid seal'd, she swoon'd away,
Fell back, breath'd out her soul, and breathless lay:
Far fell the band that late her brow had crown'd,
The braid and net that wreath'd her hair around,
And the bright veil that floated round the bride,
Which golden Venus gave, her blush to hide,
When Hector led her from Etion's bow'r,
And for her beauty gave his countless dow'r.
O'er her, yet scarce alive, her sisters bent,
And closely held her, on self-death intent.
But when once more she breath'd, to sense restor'd,
Thus Hector's widow her lost lord deplor'd:
'Hector! ill doom'd alike our natal morn:
Thou, in thy Troy, in Priam's palace born;
I, in far Thebes, mid Hypocleian bow'ns,
Where crown'd Etion rear'd my youthful hours.
Both, miserable both, the sire and child!
Oh! that no light had on my birth-day smil'd!
To darkness and to death thou, thou art gone,
And I, thy widow, left to weep alone."

A boy, sole relic of our union, left,
A helpless infant of his sire bereft.
'Thou canst not guard his weakness, thou, in death,
And vain alike to thee his vital breath.
What, if our child escape the battle-strife,
Toll and dire woe his lot in after-life.
Th' intruder plucks his boundary marks away:
His former playmates shun the orphan's way.
His front cast down to earth with bitter woe,
Down his pale cheek the tears unstop'd flow.
Bow'd with sore want, before his father's friends
The suppliant orphan unregard'd bends:
Here clasps some rich man, cloak, or prostrate there,
Breathes o'er another's robe th' unanswer'd pray'r:
Where one less harsh may yield his helpless age,
A drop to dew his lip, not thirst assuage:
Or some proud youth, with either parent blest,
Drives from the feast the unwitned guest:
Nay, strikes the child, and cries, with loud reproof,
Thy father feasts not, wretch! beneath our roof.
'Tis thus Atryanax seeks Hector's dome,
And weeps within his mother's widow'd home,
Who on his father's knee scarce dæm'd to eat
The richest marrow and the choicest meat:
And who at last, fatigu'd with length of play,
When slumber stole him from his toys away,
In softest bed, upon his nurse's breast
Slept, saturate with joy, his heart at rest:
Reft of his sire, thus poor, afflicted, sham'd,
He, whom Atryanax the Trojans nam'd;
For thine alone, thine, Hector, once the pow'r
To guard each Trojan gate and lofty tow'r.
Now, from thy parents far, in yonder fleet,
When the gorg'd dog shall from thy corse retreat,
The worm shall all thy naked bones consume,
While beauteous vestures grace thy vacant room,
And robes, whose lightness female touch attests,
Lie useless all in thy unopen'd chests:
These will I burn, an undistinguish'd heap:
For not in these wilt thou, my Hector, sleep:
Before all Troy, what once adorn'd thee but,
And honouring thee, all thine to ashes turn."

Occasionally, Mr. Sotheby is led, by his earnest desire to be close and literal, into the use of singular phraseology: we select a few instances. Ajax, in vaunting his warlike experience, does not congratulate himself upon his "march of intellect," but exclaims—

"I am not new to battle, rude in arms
I march'd to manhood, amid war alarms."

Most men are wont to be more *touchy* while living, than after; not so with Hector:

"How mild, forsooth! how tangible his frame!
This Hector, this, who wrapt our fleet in flame."

This is a poverty-stricken rendering of the

ὦ σοῖος, ἡ μάλα δὴ μαλακώτερος ἀμφαφασθῆναι
ἔκτωρ, ἡ οὐκ ἴσως ἐντρέψῃ στυγερὴ κηλίω.

The word *saturate* is also used in a very uncommon manner; the infant Atryanax, *Θαλιῶν ἐμπλησθῆναι κηρ*, is said to be "*saturate with joy*;" horses, *καὶ λυκὸν ἐμπλησθῆναι*, are "*saturate with corn*." If our groom had told us that our hacks were "*saturate with corn*," not having the Greek in such a case to which we could refer, we confess we should have been confoundedly puzzled. There are not, however, many such verbal oversights as these in Mr. Sotheby's version. Having on former occasions had the good fortune to present our readers with long extracts from his *Iliad*, as they were read at the Royal Society of Literature, we the less regret that our limits only suffer us, without more lengthened quotation (the best recommendation we could offer), to dismiss a production which has been the work of years, with our appreciation of its excellence, and admiration of its industry. To the fine feeling of the poet, Mr. Sotheby has united the patient in-

vestigation and the careful accuracy of the scholar.

The Young Duke. By the Author of "Vivian Grey." 3 vols. 12mo. London, 1831. Colburn and Bentley.

WE have not for some time met with a work which has impressed us with a higher idea of the author's powers. The acute remark, the keen sarcasm, the slight trait exhibited in the slight phrase, but whose knowledge is the deep and just—a richness of imagination, occasional bursts of feeling full of the poetry of thought—these are faculties of a high order, and they are the characteristic merits of these pages. Mr. D'Israeli is evidently a young man, gifted with that higher species of the imagination which creates and combines—which out of impressions extracts reflection, and which alone can give a true sense of the beautiful. He is also witty, shrewd to perceive the real motive, keen in catching the ludicrous, and very felicitous in its expression. So much for the author. Of the work itself we have two different opinions to give—one good, the other bad; for it is a singularly unequal production. The original idea is excellent; and the shadows cast from "those brilliant misfortunes," unbounded wealth and unbounded pleasure, are "neither extenuated nor set down in malice"—the best methods of drawing them. The scene opens with great spirit, as does also the young duke's career. We now turn to the critic's more customary office—that of fault-finding; and we do this the less reluctantly, because we hold that Mr. D'Israeli's faults are those of taste, and the mistaken use of his powers. He is essentially a writer of great imagination; his created scenes are infinitely better than his copied ones, and it is chiefly when he copies from nature that he is unnatural. The truth is, that "fashionable life" is the Delilah that shears away the locks of his strength: in his desire to shew his knowledge of its scenes and actors, he merges all his higher powers of moral painting in a series of ill-done caricatures—he becomes affected, wearisome, and flippant. Secondly, the work itself is terribly spun out—he writes too much with the fear of three volumes before his eyes; there is *maïériel* for about two very brilliant ones. Among the scenes which would well bear omission is that of the supper in the Alhambra; it is objectionable in every point of view. Among the characters, we like the young duke himself; so do we May Dacre: the Fitz-pompeys are good; and Charles Annesley is a clever sketch. Mrs. Dallington Vere is a copy of Mrs. Felix Lorraine; and her crimes are very gratuitous, for they really exercise no influence on the story. We wish the donors of the fête at Boyle Farm would announce, as Mr. Bayly does of the songs he publishes in the *Annals*, "This is property." It figures again in these pages. We do advise all writers henceforth to consider intruding on "its fairy ground" as actual poaching. And as for our readers, we refer them to the late novel of *Mothers and Daughters*, as giving its most animated and picturesque description. Perhaps the best idea we can convey of these volumes is, to string some of their sparkles in a series, ranking these extracts under the different heads of true, keen, good, and prettily turned.

"She fell ill, and became that extremely common character, a confirmed invalid. In the present day, and especially among women, one would almost suppose that health was a state of unnatural existence."

"At the end of three years, the Duke of

St. James was of opinion, that he had obtained a great knowledge of mankind. He was mistaken: travel is not, as is imagined, the best school for that sort of science. Knowledge of mankind is a knowledge of their passions. The traveller is looked upon as a bird of passage, whose visit is short, and which the vanity of the visited wishes to make agreeable. All is show, all false, and all made up. Coterie succeeds coterie, equally smiling—the explosions take place in his absence. Even a grand passion, which teaches a man more, perhaps, than any thing else, is not very easily excited by the traveller. The women know that, sooner or later, he must disappear; and though this is the case with all lovers, the sweet souls do not like to miss the possibility of delusion. Thus the heroines keep in the back-ground; and the visitor, who is always in a hurry, falls into the net of the first flirtation that offers. • • • Devoted to pleasure, he had reached the goblet at an early age. • • • He was, indeed, greatly interested by her, but he was an habitual gallant, and always began by feigning more than he felt. She, on the contrary, who was really in love, feigned much less.

Lady Aphrodite was charmed with the idea; for the enamoured are always delighted with what is fanciful. • • • His life was an ocean of enjoyment, and each hour, like each wave, threw up its pearl. • • • I look upon a long-sighted man as a brute, who, not being able to see with his mind, is obliged to see with his body."

These are slight and brief touches; but no one without either originality, truth, or grace. The following is a lively sketch of a scene in the House of Peers:—

"The Duke of St. James took the oaths and his seat. He was introduced by Lord Fitzpompey. He heard a debate. We laugh at such a thing, especially in the upper house; but, on the whole, the affair is imposing, particularly if we take a part in it. Lord Ex-Chamberlain thought the nation going on wrong; and he made a speech full of currency and constitution. Baron Deprivyseal seconded him with great effect—brief but bitter, satirical and sore. The Earl of Quarterday answered these, full of confidence in the nation and in himself. When the debate was getting heavy, Lord Snap jumped up to give them something light. The lords do not encourage wit, and so are obliged to put up with pertness. But Viscount Memoir was very statesman-like, and spouted a sort of universal history. Then there was Lord Ego, who vindicated his character, when nobody knew he had one, and explained his motives because his auditors could not understand his acts. Then there was a maiden speech, so inaudible, that it was doubted whether, after all, the young orator really did lose his virginity. In the end, up started the premier, who, having nothing to say, was manly, and candid, and liberal; gave credit to his adversaries, and took credit to himself, and then the motion was withdrawn."

There is much truth in the following:— "Nothing is more singular than the various success of men in the House of Commons. Fellows who have been the oracles of coteries from their birth, who have gone through the regular process of gold medals, senior wranglerships, and double foists, who have nightly sat down amid tumultuous cheering in debating societies, and can harangue with an unruffled forehead and an unfaltering voice, from one end of a dinner-table to the other, who, on all occasions, have something to say, and can speak with fluency on what they know nothing about

—no sooner rise in the house than their spells desert them. All their effrontery vanishes; common-place ideas are rendered even more uninteresting by monotonous delivery; and keenly alive as even boobies are in those sacred walls to the ridiculous, no one appears more thoroughly aware of his unexpected and astounding deficiencies than the orator himself. He regains his seat, hot and hard, sultry and stiff, with a burning cheek and an icy hand, repressing his breath lest it should give evidence of an existence of which he is ashamed, and clenching his fist, that the pressure may secretly convince him that he has not as completely annihilated his stupid body as his false reputation. On the other hand, persons whom the women have long deplored, and the men long pitied, as having no 'manner,' who blush when you speak to them, and blunder when they speak to you, suddenly jump up in the house, with a self-confidence, which is only equalled by their consummate ability."

We, however, quite differ from his estimate of divers popular speakers. Digressions are favourites with our author—we shall give place to one.

"I am one, though young, yet old enough to know ambition is a demon; and I fly from what I fear. And Fame has eagle wings, and yet she mounts not as high as man's desires. When all is gained, how little then is won! And yet to gain that little, how much is lost! Let us once aspire, and madness follows. Could we but drag the purple from the hero's heart; could we but tear the laurel from the poet's throbbing brain, and read their doubts, their dangers, their despair, we might learn a greater lesson than we shall ever acquire by musing over their exploits, or their inspiration. Think of unrecognised Cæsar, with his wasting youth, weeping over the Macedonian's young career! Could Pharsalia compensate for those withering pangs? View the obscure Napoleon starving in the streets of Paris! What was St. Helena to the bitterness of such existence? The visions of past glory might illumine even that dark imprisonment; but to be conscious that his supernatural energies might die away without creating their miracles—can the wheel, or the rack, rival the torture of such a suspicion?"

We conclude with a very happy parody:— "No more, no more—oh! never more to me, that hour shall bring its rapture and its bliss! No more, no more—oh! never more for me, shall Flavour sit upon her thousand thrones, and, like a siren with a sunny smile, win to renewed excesses—each more sweet! My feasting days are over: me, no more, the charms of fish, or flesh, still less of fowl, can make the fool of that they made before. The fricandeau is like a dream of early love; the friar's-egg, with which I have so often flirted, is like the tattle of the last quadrille; and no longer are my dreams haunted with the dark passion of the rich ragout. Ye soups! o'er whose creation I have watched, like mothers o'er their sleeping child! Ye sauces! to which I have even lent a name, where are ye now? Tickling, perchance, the palate of some easy friend, who quite forgets the boon companion, whose presence once lent lustre even to his ruby wine, and added perfume to his perfumed hock!"

The book is like "the young duke" which gives it its title; it would be better were its scenes of folly and fashion curtailed. But, take good and bad, it is well worth the reading. We alluded to "affectations," as one of the besetting sins; and to specify one or two instances, we would mention, that even feminine

beauty may be over described. If such a thing were possible, we should be tired of "small mouths," &c. Again, the descriptions of dress are quite ludicrous; and being so contrary to any thing ever worn, they destroy the reality of the character.

The Family Library, Vol. XXI.—History of England, Vol. I. (Anglo-Saxon Period.)
By Francis Palgrave, Esq. London, 1831. Murray.

WHATEVER may be the diversity of opinions as to the correctness of some of the views embodied in this volume, there can be no sort of doubt that it is one of the few, as yet produced in these monthly miscellanies, which will retain a permanent place in the historical library of this country. It is written in a more familiar manner than the corresponding one of Sir James Mackintosh—indeed, it seems to be mainly intended for young persons, at least in several of its most interesting sections; yet we are inclined to consider it as the abstract and compression of larger and maturer reading and reflection, as to the Anglo-Saxon period, than any author whatever has hitherto brought before the public. Mr. Palgrave is well known as one of the very foremost of English antiquaries, especially with respect to the earliest centuries of our national existence; and it is impossible not to rejoice that such a man should have been induced to give the fruit of his life-long labours in a shape thus universally accessible and engaging,—in place of editing (as, but for this new species of periodical literature, he no doubt would have done) some unwieldy folios, or quartos, mere "caviare to the million." We do not pretend to enter into a comparison of Palgrave and Mackintosh; their merits are wholly dissimilar, and their books will interfere in no respect with each other. Sir James, one of the most philosophical writers that ever adorned any department of intellectual exertion, has chosen in this popular form to convey a rapid and brief, but masterly, liberal, and profound outline of the philosophy of English history—dwelling but little on the details of events—and not concealing, though far from projecting, the strong tendency of his own political predilections. The *minutiae* of Anglo-Saxon government, manners, and literature, are accordingly but slightly touched on in his delightful pages—if, indeed, such matters had ever engaged any considerable share of his study. Mr. Palgrave, on the contrary, opens this mine with the easy boldness of one familiar with all its recesses—condenses the pith and substance of Turner and his other predecessors, and, without appearance of effort, adds prodigiously to the existing stock of information—contriving, at the same time, to render themes hitherto considered hopelessly dry and wearisome, as full of life and entertainment as if they were part and parcel of a capital historical romance. Who can read such a book, without feeling at every page, that to write really well on any subject, it is absolutely necessary to be master of it? The compilations even of the cleverest men, who merely collect a dozen or two authorities on their desk, and, without previous intimacy with the matter, proceed to manufacture to order, may amuse for the moment—it is impossible they should deserve or obtain solid, lasting reputation. Of such works we have, of late, had but too many. This belongs to a wholly different class. Perhaps we shall convey an inaccurate, though rough, notion of the character of the book, when we say, that it appears to us something intermediate between Sir W. Scott's "Tales of a Grandfather"

(the Scotch Series, we mean), and Voltaire's energetic Expositions of General History; uniting the simplicity and picturesque detail of the one great writer, with the broad, luminous, analytic power, which more than redeems all the mere literary defects of the other. There is a particular feature, however, and, in our opinion, a most important one, which must be noticed. Mr. Palgrave is obviously a deeply religious man, and he makes Christianity far more prominent throughout his narrative than any one who has traversed this ground before him. Some may think he overdoes the matter here; but, though we cannot go along with him in some detached opinions expressed on moral and religious questions, we should be sorry not to appreciate the warmth of piety that breathes throughout, as well as the beautiful language in which it is usually clothed.

To give some idea of the graphic skill of this writer, the clearness of his views, and the amusement as well as instruction which his pages will afford young and old, we cannot perhaps do better than quote part of his dedicatory Epistle to that distinguished Anglo-Saxon scholar, Miss Anna Gurney.

"The primary purposes of this little work forbid my entering into regular discussion upon the Anglo-Saxon laws. Nor could I venture into any lengthened investigation concerning the nature of our Saxon legislature: but as you may possibly think that this subject requires some explanation, we will suppose ourselves placed in the hall of Edward the Confessor, he who, like his predecessors, held the state of 'King of the English—Basileus of Britain—emperor and ruler of all the sovereigns and nations who inhabit the island—lord paramount of the sceptres of the Cumbrians, the Scots, and the Britons,'—and suppose yourself to be Haco, a Norwegian stranger, introduced by an Anglo-Saxon friend, and listening to his explanations of the assembly which you behold:—'Those persons who are sitting and standing nearest to the king are his chief officers of state. That tall, thin, rough-looking man is Algar, the *Staller*, whom the Franks call the constable of the host; and great as he is, I assure you, Haco, that not one of the king's horses is sent to grass without his special order. The portly nobleman, with the huge knife and wooden trencher, is Æthelmar, the *dish thane*—he carves the meat for royalty. Hugoline, that cautious, sly-looking clerk, is the *lower thane*, or chamberlain; he keeps the key of the king's *hoard*. You would be astonished to see the heaps of treasure in the low, vaulted chamber; and yet there is not quite so much in the hoard as there used to be. After we had driven out your countrymen, the usurper Hardacnute, and restored our darling, King Edward, the true and legitimate heir of the right royal line of Cerdic, the *huscarls* of the palace still continued to collect the *danegeld* as rigidly as before; and many an honest husbandman had his house and land sold over his head, within three days after the tax became due, to pay the arrears which he had incurred. Not that our worthy king was ever a penny the better for the *danegeld*. Goodman, he never troubles himself about money, he leaves all that charge to Hugoline. If you were to empty King Edward's purse before his face, he would not bid you stay your hand; he would only say—Take care, friend, that you are not found out by Hugoline. Though the king was so little benefited by the taxes, I suppose that others fared better; and the *danegelt* was levied as rigidly as ever

—until one day, the king rose from his bed, asked Hugoline for the key, and went alone into the hoard. And when he came out again, he told us all, with looks of the utmost horror, that he had seen the foul fiend dancing upon the money-bags containing the gold which had been wrung from his suffering people, and grinning with delight. Whether the king had really seen any thing, or whether we inconsiderately took as a fact, what he intended merely as a parable, denoting his opinion of the iniquity of the taxation, I cannot tell, but from that day the *danegelt* was levied no more. Those quiet, shrewd-looking men, with shaven crowns, are Osbern, Peter, Robert, Gyso, and the rest of the clerks of the king's chapel. He who sits at the head of the bench, is Reinbaldus, the chancellor. These venerable persons have been gradually gaining more and more influence in the Witenagemot; though anciently they were only appointed for the purpose of celebrating mass and singing in the king's chapel; and Reinbaldus, the chancellor, holds merely the place of the arch-chaplain of the French kings; he is a kind of dean, the king's confessor, who takes care of the king's conscience, and imposes very hard penances upon him when he has sinned. But for some time past, our kings have been accustomed to turn their chaplains really to good use, by employing them constantly as their writing clerks. In this capacity the most important matters of public business must pass through their hands. Hence they have much power, and a power which was totally unknown to our ancestors; and in this innovating age, their influence has been greatly increased by a fashion which our good King Edward has brought from France. He has caused a great seal to be made, on which you may see his effigy, in his imperial robes; and to all the *writs* or written letters, which issue in his name, an impression from that seal is appended. It is by such *writs* that our king signifies his commands. If a question of great importance is to be decided before the thanes of the shire, in a manner out of the ordinary course, it is heard before certain clerks, and others, named by the king's writ. If a clerk is promoted to a bishopric, he must have a writ before he can be placed in his chair or throne. If you wish to obtain the king's protection, or his 'peace,' you had best obtain a writ, by which this favour is testified. For this purpose you must apply to the clerks of the chapel. Whether issued by the king's special direction or not, the writ is often a long time in making its appearance; and suitors find, that a golden cup placed in the king's wardrobe, or a bay stallion sent to the royal stable, has a great effect in driving the chaplain's quill. At present, great part of our law business is cheaply, expeditiously, and equitably despatched in the ordinary *Folk-moots*, or courts of the hundred, or of the shire, which go on regularly, by immemorial usage, without any writ, or other sanction from the king. These tribunals we derive from our remotest ancestors. We had law before we had prerogative, and *Folk-moots* long before we had kings; and in your country, Haco, they exist in great measure unimpaired. But if, from any cause whatever, these popular courts should decline amongst us, and the pleas which are now decided before them, be transferred to the king's court, it is easy to see that the whole management of the law will fall into the hands of the chancellor and his clerks, and of those whom the king may depute to administer justice in his name. So much for those who are about the king."

Describing the Witenagemot, the author says:—

"Beneath the clergy sit the lay peers and other rulers, who are bound by homage to the crown. That vacant seat belongs to Malcolm, King of the Scots, or, as some begin to call him, the King of Scotland. The wicked usurper Macbeth had possession of his throne, and of those dominions in Lothian, in respect of which the homage of the King of the Scots is more particularly rendered. Malcolm, the vassal of our King Edward, had a full right to claim the aid of his superior, and it was granted right nobly. By King Edward's command, the stout Earl Siward marched all his forces across the Tweed, with a mighty army. Macbeth had called the Northmen—your countrymen, Haco—to his aid; but his resistance was hopeless: he was expelled, and Malcolm, as King Edward had commanded, was restored to the inheritance of his ancestors. Malcolm ought to be here in person. When he comes up, he is escorted from shire to shire by earls and bishops; and, at convenient distances, mansions and townships have been assigned to him, where he and his attendants may abide and rest. Yet, with all these aids, the journey is most tedious, and not unfrequently accompanied by danger; besides which, it is not altogether safe for Malcolm to leave the wild Scots, his turbulent subjects, uncontrolled during the very long spare of time—seldom so little as half a year—which he must pass upon the road: Watling-street is much out of repair; it has not had a stone laid upon it since the arrival of Hengist and Horsa; and the top of the Roman fosse-way is worse than the bottom of a ditch; and, therefore, the attendance of the King of Scots is generally excused. The King of Cumbria, and the kings or 'under kings' of the Welsh, sit nigh unto the King of Scots. The two latter, Blethyn and Rhivallon, have just now sworn oaths to King Edward, and given hostages that they will be faithful to him in all things, and every where ready to serve him by sea and land, and that they will perform all such obligations, in respect of the country, as ever their predecessors had done to his predecessors. But the Welsh are an unfaithful nation, untrue even to themselves. Griffith, the brother of the Welsh kings, to whom they succeed, was slain by his own men, and his bloody head was sent by Earl Harold to King Edward, at London. The Welsh are constantly rebelling against us; but we keep a firm hold upon them, and compel them, upon every needful occasion, to acknowledge our supremacy.

On the same bench with these vassal kings, sit the great earls of the realm, distinguished by the golden collars and caps of maintenance which they wear. These marks of honour have, however, long belonged to them; for it is thus that the effigy of the venerable Aylwine of East Anglia is adorned, as you may see upon his tomb at Ramsey minster. He who looks so fell and grim is Siward, the son of Beorn, Earl of Northumbria. The good people in the north, who give credit to all the sagas, or lying tales of your Scalds, actually believe that Siward's grandfather was a bear in the forests of Norway, and that when his father Beorn lifted up his uncombed locks, the two pointed shaggy ears, which he had inherited from the bear, testified the nature of his sire. Siward himself takes no pains to contradict this story. On the contrary, I rather think that he considers it as a piece of good policy to encourage any report which may add to the terror inspired by his name. He has declared that he will never

die, except in full armour. * * As to that mixed multitude by whom the farther part of the hall is crowded, and who can be just seen behind the thanes, they consist, as far as I can judge, of the class of folks who come together in vast crowds at the meetings of our hundreds and our shires. It is usual, in these assemblies, that four good men and the reeve should appear from every upland or rural township: their office being to give testimony, and to perform other acts relating to the administration of justice, and also to receive the commands of their superiors. In the Witenagemot, I believe they are seldom or never called upon to act; but they attend from ancient custom, deduced, perhaps, from the old time, when our kings were merely the aldermen of a single shire, and when the court in which they presided was merely the moot of their own little territory. And whatever the rights or privileges of these churls might be in days of yore, I am tolerably sure of what they are not in these modern times. They have no weight or influence in the enactment of any law: voices, indeed, they may have, but only for the purpose of crying out—*Yea, yea!*—when the doom enacted by the advice of the witan is proclaimed. Some of our old men have thought that this kind of assent is a recollection of the customs which prevailed amongst our forefathers, the old Saxons, before they quitted the forests of Germany, when, as it is said, the *leod*, or people at large, gave their consent to the laws which the ealdormen and priests had enacted in their solemn assembly. I am not learned enough to decide this point; it may be so; but nothing is said thereon by Alfric or by Alfred, or by Bede; and now it is our principle, that he who is worth nothing in *land*, is nothing worth in public affairs, unless, as I have told you before, the place of *land* is supplied by *learning*. But Englishmen are sturdy, and not to be easily put down. I have heard strange things said about the charters granted by Athelstane to the townships of Malmesbury and Barnstaple; and if the churls in general should ever be led to imagine that they have a right to be members of the Witenagemot, I should not be surprised if they were one day or another, to pluck up heart of grace, and cry out—*No, no!*—instead of affirming, as in duty bound, what their betters have thought best for them. Yet you must not suppose that these rustics are excluded by any perpetual bar. It was whilome the old English law, that if a merchant crossed the sea three times at his own risk, he obtained the rank of thane. Five hydes of land possessed by the churl for three generations, if held by him, his son, and his son's son, placed the family in the class of those who were gentle by birth and blood; 'Sithcundmen,' as such families were then called, before King Alfred's day; and though such laws are connected with usages and doctrines which have become obsolete, still we retain all the spirit of our ancient lessons of freedom; and, if qualified by station and property, there is no man between the channel and the water of Scotland, who may not acquire a share in the government of our empire."

The closing paragraphs of this volume shall form our only other extract for the present. It is a fair specimen of the narrative, being the conclusion of the battle of Hastings.

"It was now late in the evening. The English troops were entirely broken, yet no Englishman would surrender. The conflict continued in many parts of the bloody field, long

after dark. The fugitives spread themselves over the adjoining country, then covered with wood and forest. Wherever the English could make a stand, they resisted; and the Normans confess that the great preponderance of their force, alone enabled them to obtain the victory. By William's orders, a spot close to the Gonfanon was cleared, and he caused his pavilion to be pitched among the corpses which were heaped around. He there supped with his barons; and they feasted among the dead. But when he contemplated the fearful slaughter, a natural feeling of pity, perhaps allied to repentance, arose in his stern mind; and the Abbey of Battle, in which the prayer was to be offered up perpetually for the repose of the souls of all who had fallen in the conflict, was at once the monument of his triumph, and the token of his piety. The abbey was most richly endowed; and all the land, for one league round about, was annexed to the Battle franchise. The abbot was freed from the authority of the metropolitan of Canterbury, and invested with archiepiscopal jurisdiction. The high altar was erected on the very spot where Harold's standard had waved; and the roll, deposited in the archives of the monastery, recorded the names of those who had fought with the Conqueror, and amongst whom the lands of broad England were divided. But all this pomp and solemnity has passed away like a dream. The perpetual prayer has ceased for ever—the roll of battle is rent. The shields of the Norman lineages are trodden in the dust. The abbey is levelled with the ground—and a dank and reedy pool fills the spot where the foundations of the quire have been uncovered, merely for the gaze of the idle visiter, or the instruction of the moping antiquary. The victor is now installed; but what has become of the mortal spoils of his competitor? If we ask the monk of Malmesbury, we are told that William surrendered the body to Harold's mother, Githa, by whose directions the corpse of the last surviving of her children was buried in the abbey of the Holy Cross. Those who lived nearer the time, however, relate in explicit terms that William refused the rites of sepulture to his excommunicated enemy. Guillelmus Pictavensis, the chaplain of the Conqueror, a most trustworthy and competent witness, informs us that a body, of which the features were undistinguishable, but *supposed*, from certain tokens, to be that of Harold, was found between the corpses of his brothers, Gurth and Leofwine, and that William caused this corpse to be interred in the sands of the sea-shore. 'Let him guard the coast,' said William, 'which he so madly occupied;' and though Githa had offered to purchase the body by its weight in gold, yet William was not to be tempted by the gift of the sorrowing mother, or touched by her tears. In the Abbey of Waltham, they knew nothing of Githa. According to the annals of the convent, the two brethren who had accompanied Harold, hovered as nearly as possible to the scene of war, watching the event of the battle; and afterwards, when the strife was quiet in death, they humbly approached William, and solicited his permission to seek the corpse. The Conqueror refused a purse, containing ten marks of gold, which they offered as the tribute of their gratitude; and permitted them to proceed to the field, and to bear away not only the remains of Harold, but of all who, when living, had chosen the Abbey of Waltham as their place of sepulture. Amongst the loathsome heaps of the unburied, they sought for Harold, but sought in vain,—Harold could not possibly be discovered,—no

trace of Harold was to be found; and as the last hope of identifying his remains, they suggested that possibly his beloved Editha might be able to recognise the features so familiar to her affections. Algha, the wife of Harold, was not to be asked to perform this sorrowful duty. Osgood went back to Waltham, and returned with Editha, and the two canons and the weeping woman resumed their miserable task in the chancel field. A ghastly, decomposing, and mutilated corpse was selected by Editha, and conveyed to Waltham as the body of Harold; and there entombed at the east end of the choir, with great honour and solemnity, many Norman nobles assisting in the requiem. Years afterwards, when the Norman yoke pressed heavily upon the English, and the battle of Hastings had become a tale of sorrow, which old men narrated by the light of the embers, until warned to silence by the sullen tolling of the curfew, there was a decrepit anchorite, who inhabited a cell near the Abbey of St. John at Chester, where Edgar celebrated his triumph. This recluse, deeply scarred, and blinded in his left eye, lived in strict penitence and seclusion. Henry I. once visited the aged hermit, and had a long private discourse with him; and, on his death-bed, he declared to the attendant monks that he was Harold. As the story is transmitted to us, he had been secretly conveyed from the field to a castle, probably of Dover, where he continued concealed until he had the means of reaching the sanctuary where he expired. The monks of Waltham loudly exclaimed against this rumour. They maintained most resolutely, that Harold was buried in their abbey: they pointed to the tomb sustaining his effigies, and inscribed with the simple and pathetic epitaph, '*Hic jacet Harold infelix*;' and they appealed to the mouldering skeleton, whose bones, as they declared shewed, when disinterred, the impress of the wounds which he had received. But may it not still be doubted whether Osgood and Ailric, who followed their benefactor to the fatal field, did not aid his escape?—They may have discovered him at the last gasp; restored him to animation by their care; and the artifice of declaring to William, that they had not been able to recover the object of their search, would readily suggest itself as the means of rescuing Harold from the power of the Conqueror. The demand of Editha's testimony would confirm their assertion, and enable them to gain time to arrange for Harold's security; and whilst the litter, which bore the corpse, was slowly advancing to the Abbey of Waltham, the living Harold, under the tender care of Editha, might be safely proceeding to the distant fane, his haven of refuge. If we compare the different narratives concerning the inhumation of Harold, we shall find the most remarkable discrepancies. It is evident that the circumstances were not accurately known; and since these ancient writers who were best informed cannot be reconciled to each other, the escape of Harold, if admitted, would solve the difficulty. I am not prepared to maintain that the authenticity of this story cannot be impugned; but it may be remarked, that the tale, though romantic, is not incredible, and that the circumstances may be easily reconciled to probability. There were no walls to be scaled, no fence was to be crossed, no warder to be eluded; and the examples of those who have survived after encountering much greater perils, are so very numerous and familiar, that the incidents which I have narrated would hardly give rise to a doubt, if they referred to any

other personage than a king. In this case we cannot find any reason for supposing that the belief in Harold's escape was connected with any political artifice or feeling. No hopes were fixed upon the usurping son of Godwin. No recollection dwelt upon his name, as the hero who would sally forth from his seclusion, the restorer of the Anglo-Saxon power. That power had wholly fallen—and if the humbled Englishman, as he paced the aisles of Waltham, looked around, and, having assured himself that no Norman was near, whispered to his son, that the tomb which they saw before them was raised only in mockery, and that Harold still breathed the vital air—he yet knew too well, that the spot where Harold's standard had been cast down, was the grave of the pride and glory of England."

The volume is illustrated with wood-cuts, representing castles, armour, battles, seals, &c. admirably and profusely. But in this department there is also a striking novelty, which we cannot too highly praise: Mr. Palgrave introduces various maps, shewing how the island was divided at different important points of the history, which, when the series is complete, will form a most valuable adjunct to all histories of England whatever. They present, in a clear and summary way, at a glance—*oculis subjecta fidelibus*—more accurate information than an ordinary reader could ever be able to extract from a whole library of narratives. Altogether, we are inclined to say this is the most valuable volume which Mr. Murray's miscellany has as yet produced; and that, by interlaying his staple material of biography with a few such works as this, the publisher will assuredly exalt as well as extend the reputation of his series.

The Old Man of the Mountain—The Love-Charms—and Pietro of Abano: from the German of Tieck. 12mo. pp. 335. London, 1831. Moxon.

In despite of the many excellent translations which have been of late years made from the literature of our neighbours, we doubt whether the great mass of readers have other than very vague ideas on the subject of German literature. Some sit down contented with a conviction of its immorality and sentimentality; others, that it is a vain shew of ghostly phantasmagoria; while another class turn in indolent dismay at the supposed depths and darkness of its metaphysics. All these conclusions have individual right and general wrong, like most other sweeping conclusions. Perhaps the little volume before us is as fair a specimen as could be selected of the romantic and mystic school. There are three tales, belonging to the ideal and supernatural. Some will read them with an imagination excited by the mere interest of wonder; others, again, will say, "their taste is too plain, too real, for these unnatural marvels." Neither class will do these pages justice, unless they dwell upon the under-current of thought which runs through the whole. With many of the beliefs we are at war; some of the developements of feelings we deem exaggerated; but this work will have been carelessly and unworthily perused if it has not stirred the reader's mind, and induced him to think his own thoughts in having thus disagreed with those of another. "The Old Man of the Mountain" is a benevolent and eccentric being; one who having found his affections the source of sorrow in the beginning of his life, resolves on repressing them, and acting contrary to their dictates in the end. The misery of this repelled and yet exaggerated

sensibility is well contrasted with the cheerful and affectionate temper of Edward; while the miserable and avaricious Eleazar obliges us to recall the extraordinary character of real life ere we can believe in the existence of so wretched a specimen of humanity. We shall leave the story for the benefit of the future readers; and endeavour, by extracts as various as possible, to give an idea of those peculiarities of remark and reflection which make the originality and worth of the work.

"Life is a spectre, before which, whenever I pause to look upon it, I stand shuddering; and nothing but toil and activity, and straining all my faculties, can enable me to endure and to despise it. I could envy the loom and the spinning-jenny, if such a feeling, such a wish, had any sense in it: for what is our consciousness but a consciousness of misery? what is our existence but an unveiling of the madness, the frenzy of all life? to which we either abandon ourselves in chill patience, or weep and struggle against it convulsively, or play through a caricature of happiness and joy, while in our dreary heart we are fully aware that it is all a wanton lie. . . . Day after day has taught me that very few men really live. Most of them are in a state of ceaseless dissipation: nay, what they call thought and reflection is itself the very same thing,—a mere attempt to raise a mist around the nature and inborn feelings of their hearts, and to keep themselves from discerning them; and arrogance starts up, the consciousness of their dignity and strength goads and spurs them on, till they rave with ungovernable pride."

Fine answer to this strain of repining:—"Whatever unprofitable or cheerless meditations I have indulged in, still I have never strayed into these deserts, which lie, it would seem, at the horizon of all such as abandon themselves with too passionate intensity to captious inquiries. I have heard and read of strong minds, who in the recklessness of passion, or in the extravagances of love, strove to burst the bolts of nature and of life, in order to become one with the universe and to possess it. Despair, self-loathing, hatred of God, have often been the doom and the unhappy lot of men thus under the mastery of their impulses. We feel no doubt that reason is not absolutely sufficient to reveal all that we wish to understand, to reconcile all that we wish to see in harmony with the workings of the Deity. But it may be dangerous to seek for help in the regions of our feelings and imagination, to give ear to our visionary forebodings. They try to set up their own supremacy, and may easily fall out with reason, though at the outset they seem to uphold her. If they gain their aim, and this noble mediatorial power, which, seated in the centre of all our spiritual powers irradiating and swaying them, first converts them into true powers, is overthrown and cast into chains by them, then each of our higher impulses begets a giant as its son, that will war against God. For doubt, wit, unbelief, and scoffing, are not the only faculties that fight against God: our imagination, our feelings, our enthusiasm, do the same, though at first they seem to supply faith with so safe and mysterious an asylum. Consequently, my dear, my honoured friend, since our life is surrounded on all sides by these dizzying precipices, and every path, whatever course it takes, leads to them, what remains for us to do, except to trust with a certain kind of light-heartedness, which perhaps is also one among the noblest powers of our nature, with cheerfulness, gaiety, and humility, in the existence

and the love of that infinite inexhaustible love, of that supreme wisdom, which puts on every shape, and can weave into its woof even what to us seems worthless and incongruous? so as to bear our life safely and easily, to take pleasure in our taskwork, and to be happy, which we cannot else be, in the midst of affluence itself, making others happy as far as we are able. Is not this, too, piety and religion? I for my part have never met with them under any other form."

Metaphysics:—"The beating of the pulse is not only a sign of life, it is life itself. No feeling, no thought, no sight or hearing, no taste or sensation, flows along with a rushing stream, but all comes skipping, wave upon wave, drop upon drop, and this is its being. One thought is cast out by another; our feelings are only felt as they shift between life and death: the kiss only thrills on our lips when a chill void has already spread over them; our delight in a picture, in music, merely gushes through us; one moment it entrances us, the next it has vanished. Thus, the sea breathes in its ebb and flow, time in its days and nights, its winters and summers."

We recommend the following passages to the lovers of the sublime art of gastronomy:—

"Believe me, my friends, said the counselor, with great earnestness, the art of eating, the skill men may attain in it, has its epochs, its classical ages, and its decline, corruption, and dark ages, just as much as every other art: and it seems to me that we are now again verging to a kind of barbarism in it. Luxury, profusion, rarities, new dishes, over-peppering, over-spicing, all these, my good sirs, are the artifices now commonly made use of to obtain admiration for a dinner; and yet these are the very things from which a thinking eater will turn away with contemptuous slight. * * * In every field of human action history is man's best master. * * * Eating is only another mode of thinking. * * * We see, too, continued the dissertator, what high importance nature has attached to these processes of devouring, eating, chewing, and swallowing, and how in every sphere of existence they have been her main end and aim. What would become of all the animals upon the earth, of all the birds that roam through the air, and all the swarms of greater and lesser creatures that people the waters and the sea, unless every one of them had received a bill, payable at sight, upon his neighbour. What would they live on, if they did not live on one another? or where, forsooth, would they find room to live? Is not the world perpetually oscillating between the two great works of producing and of devouring? * * *

We are fond of boasting of our universality, and yet in the very art in which Nature herself has so manifestly intended us to be universal, I mean in that of eating, many people scorn to become so, and fancy it is more dignified to treat this whole branch of knowledge with contempt. And yet the flocks of birds of passage, the shoals of wandering fishes, come from distant regions, flying and swimming into our nets, for the mere pleasure of our palates: and the fruits of every climate, of every soil, of every quarter of the globe, blend into enjoyment within us. Who does not perceive in an oyster, if at least he is gifted with a true sense for it, the might and the freshness of the sea! O asparagus! he that has not the wit to enjoy thee, can know nothing of the mysteries which the dreaming world of plants reveals to us! Can one understand anything of the history of the world or of poetry, if one is a stranger to all these natural elementary

feelings, and incapable of doing justice to the worth of a snipe, or even of a turbot?"

The miners in Germany attach great importance to their *caste*, and affect to despise those engaged in agricultural pursuits. Conrad, an old miner, boasts that he has never yet set foot in the plains: to punish his insolent contempt while drinking, some peasants lay him, when asleep, in a field of corn.

"My honour!" he screamed, "my honour as a noble miner! my glory and my pride! all are gone, irrevocably and for ever! and by a pack of base bores, by a puny, cream-faced, chicken-breasted, out-landish starveling, have I been robbed of it. Amid all the mountains round, and doubtless in many others likewise, there was not a miner nor a mine-surveyor who could boast that he had never in his life been down in the beggarly plain. I awoke in the straw, in the corn—such was the rascals' plot to ruin me. The ears were sticking in my nose and eyes when I came to myself—the sorry, brittle, bristly stuff that I had never yet seen except in the pallet of my bed! Scandal and shame! Murder and housebreaking are not so detestable! and no law against it, no remedy, no mortal skill in the whole wide world."

Of the two other stories we like the "Love-charm" the best; but it has already appeared several times in an English dress. "Pietro of Abano" has one or two rich and picturesque scenes; but many of its horrors, and a load of its ugliness, are gratuitous. The translation is executed with much spirit, and an evident understanding of the spirit of the author. We object, however, to one or two expressions—such as "clapperclawing," "man grins and is happy," plants "pricking up their ears," flowers "smiling roguishly," &c. &c. Now, to a genuine German taste, these and similar expressions may seem simple and natural—to an English one, they are only silly and ludicrous. We should think a series of these little volumes would be popular.

Thoughts on Man. By William Godwin.

[Second Notice.]

IN returning to a farther notice of this volume, we resume the subject of the ballot, most ably treated by Mr. Godwin. The opinion of a man whose life has been devoted to the study of opinions, and who has now great experience to support his observations, well deserves attention, and the subject itself is one which at this period attracts universal inquiry.

"Communication and publicity are of the essence of liberty; it is the air they breathe, and without it they die. * * * A shrewd person of my acquaintance the other day, to whom I unadvisedly proposed a question as to what he thought of some public transaction, instantly replied, with symptoms of alarm, 'I beg to say that I never disclose my opinions upon matters either of religion or politics to any one.' What did this answer imply as to the political government of the country where it was given? Is it characteristic of a free state or a tyranny? One of the first and highest duties that falls to the lot of a human creature, is that which he owes to the aggregate of reasonable beings inhabiting what he calls his country. Our duties are then most solemn and elevating, when they are calculated to affect the wellbeing of the greatest number of men; and, of consequence, what a patriot owes to his native soil is the noblest theatre for his moral faculties. And shall we teach men to discharge this debt in the dark? * * *

But the principle of the institution

of ballot is to teach men to perform their best actions under the cloke of concealment. When I return from giving my vote in the choice of a legislative representative, I ought, if my mode of proceeding were regulated by the undebauched feelings of our nature, to feel somewhat proud that I had discharged this duty, uninfluenced, uncorrupted, in the sincere frame of a conscientious spirit. But the institution of ballot instigates me carefully to conceal what I have done. If I am questioned respecting it, the proper reply which is as it were put into my mouth, is, 'You have no right to ask me; and I shall not tell.' But, as every man does not recollect the proper reply at the moment it is wanted, and most men feel abashed, when a direct question is put to them to which they know they are not to return a direct answer, many will stammer and feel confused, will perhaps insinuate a falsehood, while at the same time their manner to a discerning eye will, in spite of all their precautions, disclose the very truth. The institution of ballot not only teaches us that our best actions are those which we ought most steadily to disavow, but carries distrust and suspicion into all our most familiar relations. The man I want to deceive, and throw out in the keenness of his hunting, is my landlord. But how shall I most effectually conceal the truth from him? May I be allowed to tell it to my wife or my child? I had better not. It is a known maxim of worldly prudence, that the truth, which may be a source of serious injury to me, is safest, when it is shut up in my own bosom. If I once let it out, there is no saying where the communication may stop. 'Day unto day uttereth speech; and night unto night sheweth forth knowledge.' And is this the proud attitude of liberty, to which we are so eager to aspire? * * *

In no long time after the commencement of the war of the allies against France, certain acts were introduced into the English parliament, declaring it penal, by word or writing, to utter any thing that should tend to bring the government into contempt; and these acts, by the mass of the adversaries of despotic power, were in way of contempt called the Gagging acts. Little did I and my contemporaries of 1795 imagine, when we protested against these acts in the triumphant reign of William Pitt, that the *soi-disant* friends of liberty and radical reformers, when their turn of triumph came, would propose their Gagging acts, recommending to the people to vote agreeably to their consciences, but forbidding them to give publicity to the honourable conduct they had been prevailed on to adopt! * * * *The first principle of morality to social man is, that we act under the eye of our fellows.*"

The following anecdote, illustrating that grasping vanity which would fain levy a universal tribute, is very happily introduced.

"Goldsmith was a man of the most felicitous endowments. His prose flows with such ease, copiousness, and grace, that it resembles the song of the sirens. His verses are among the most spirited, natural, and unaffected, in the English language. Yet he was not contented. If he saw a consummate dancer, he knew no reason why he should not do as well; and immediately felt disposed to essay his powers. If he heard an accomplished musician, he undertook to enter the lists with him. His conduct was of a piece with that of the countryman, who, cheapening spectacles, and making experiment of them for ever in vain upon the book before him, was at length asked, 'Could you ever read without spectacles?' to which he was

obliged to answer, 'I do not know; I never tried.'"

It is scarcely possible for a periodical, whose space is crowded, and whose time is brief, to do justice to a work like the present. It is, as we have remarked, full of thought—thought to be analysed, and to be weighed; and to admit the thoughts of others among our own without due examination, is making an indolent enjoyment of that which should be an active advantage. Mr. Godwin himself states how a book should be read to benefit the reader. Let his own rule be applied to his own work.

"The book does not deserve even to be read, which does not impose on us the duty of frequent pauses, much reflecting, and inward debate, or require that we should often go back, compare one observation and statement with another, and does not call upon us to combine and knit together the *disiecta membra*. It is an observation which has often been repeated, that, when we come to read an excellent author a second and a third time, we find in him a multitude of things, that we did not in the slightest degree perceive in a first reading. A careful first reading would have a tendency in a considerable degree to anticipate this following crop. . . . There is a doggerel couplet which I have met with in a book on elocution:

"Learn to speak slow: all other traces
Will follow in their proper places."

I could wish to recommend a similar process to the student in the course of his reading."

We must find room for the illustrating anecdote.

"Toplady, a celebrated methodist preacher of the last age, somewhere relates a story of a concomb, who told him that he had read over Euclid's Elements of Geometry one afternoon at his tea, only leaving out the A's and B's and crooked lines, which seemed to be intruded merely to retard his progress. Nothing is more easy than to gabble through a work replete with the profoundest elements of thinking, and to carry away almost nothing, when we have finished."

To some of Mr. Godwin's opinions we do not subscribe, but we always respect them. From some of his conclusions we differ; while to others we cordially assent. But we must say, no one could read the present volume with that attention which it deserves, without his mind being awakened and benefited by such perusal.

Waldensian Researches, during a Second Visit to the Vaudois of Piemont. By William Stephen Gilly, A.M., Prebendary of Durham. 8vo. pp. 560. London, 1831. Rivingtons.

VAUDOIS, Vallenses, Valdesi, or Waldenses—*valles romanes puegn msa*—These various and sounding titles designate only a poor and secluded race of mountaineers, inhabiting a very circumscribed territory, and not exceeding 20,000 in their total numbers. It must live in the memory of all, that this territory was the scene of bloody persecution and desperate conflict many centuries ago. Our sympathies impel us irresistibly to take a lively interest in all that relates to a brave and suffering people; a people who always cheerfully submitted to every privation, and readily laid down their lives, rather than sacrifice the rights of conscience, or relinquish the blessings of liberty.

Whoever is acquainted with the genius and policy of the church of Rome, and the character of its rulers during the iron age of ignorance and superstition, will feel little sur-

prise that these defenceless tribes should become objects of bitter persecution.

For a people so few in number, so mean in station, so obscurely situated, as to be almost unknown to the rest of the world, to dare to refuse subjection to the creed and authority of a hierarchy which then swayed an almost uncontrollable sceptre over the most powerful and civilised nations, must have been a crime all but inexpiable. It followed, of course, that, in order to veil, and even sanctify, the most atrocious tyranny, the poor victims were depicted by their oppressors not merely as dreadful and pestilent heretics, but as monsters of impiety and immorality.

The good offices of the British government have, at times, interposed in favour of the Vaudois, to allay superstitious violence, or procure a redress of their grievances,—and with various success, as weaker or stronger hands wielded the sceptre of power. The interference of Cromwell was to the court of Turin as the command of a sovereign, and proved to the swelling tides of persecution the strong and compelling voice—"Thus far shalt thou come, and no farther." Since that age, British sympathy has been more than once excited to acts of benevolence, moved by the spectacle of a race of men, despite of oppression and the lapse of time, preserving unchanged the religion of their fathers.

It is a natural supposition, that the author of the work now before us may have depicted in too vivid and too favourable colours the inhabitants among whom he sojourned; at least, we know that this complaint has been made by some against his former work, who were disappointed, as they followed his footsteps, at finding that the reality had less of romance, and was more allied to every-day life. We value it not the less on this account:—indeed, there is something so interesting in the rude virtues of the mountaineers, softened and subdued by the simple instructions of their pastors, or kindling into heroism when the sterner sounds of conflict were heard, that the mind cannot but believe that the spirits which walk before it in the forms of flesh and blood must be of a higher and nobler texture than the tyrants that oppress, or the slaves that blindly obey.

Mr. Gilly has expended the first 160 pages of the present work in an elaborate investigation into the antiquity and purity of the Waldensian church;—a subject doubtless valuable in itself, but, though curious to the philosopher and historian, not very interesting to the general reader, who is equally satisfied to resign himself to his feelings and his sympathies, whether the faith of these mountain-churches was a light that still glimmered through the deepest night of the dark ages, or was rekindled at the shrine of some earlier reformer. Our author has presented his readers with a well-drawn sketch of the real doctrines held by this misrepresented and calumniated people, as opposed to the heresies which have been imputed to them. This he has done in a kind of table, consisting of four columns. In the first we have an account of the opinions said by their enemies to have been held by them A.D. 1250; in the second, opinions corresponding with these, as advanced by Italian writers previous to the twelfth century; thirdly, opinions of the ancient Waldenses, collected from their Noble Leyçon, dated A.D. 1100, and from treatises of the same period; and, fourthly, opinions of the modern Waldenses, collected from confessions of faith and catechisms of later times. From these it appears to result,

that the creed of the Waldenses agrees generally with that of the reformed churches, and especially in rejecting what have been stigmatised as the errors of popery. The most ancient record of the Waldensian church seems to be the Noble Leyçon, which presents an abundant feast to the philologist. It gives its own date, A.D. 1100, and commences thus:—

O frayres entude una nobla lenzon
Sovet devê valhar estar en ozon
C nos veyê aqst mot en pe del chavo.

Mr. G. thus states the principal object of his second visit to the Vaudois territory. "I was desirous of judging, from personal observation and inquiry, how certain sums of money placed at my disposal might be best employed, not only for the benefit of the Waldensian church, but for the advantage of the Protestant cause at large, in this its only stronghold in Italy."

He proceeded by Paris and Dijon to Geneva, thence by a steam-boat along that matchless lake, and beheld on its rival banks the contrasted picture of freedom and despotism. "The one beamed and brightened with all that denotes the happiness of a contented people, flourishing under the blessings of free institutions: the other displayed no improvements; few or no trading vessels and small craft in its creeks; no country retreats of wealthy citizens; no indication of prosperity." But we must onwards in our course; and St. Jean de Maurienne blesses the 18th of July for some saint of wondrous power and holy memory through lands that rejoice in the appellation of Catholic, though all unnamed in English calendars; and, despite of tyranny and legitimacy,

The song is heard, the rosy garland worn,
Devices quaint, and frolics ever new,
Tread on each other's knees.

Monkish incense burns,
And love and prayer unite or rule the hour by turns.

Passing the author's description of Turin, we will plunge at once in *medias res*, or rather, in *medias montes*, and present our readers with a view of the peculiarities of Vaudois scenery.

"Few persons can enter La Torre without feeling, that as soon as they have crossed its bridge they are in a new country: that which they have left behind them, even San Giovanni, belongs to the great plain of Piemont, but now they are in the valleys; mountains enclose them on each side, and they are more and more walled in by rock and cliff the further they advance. The roaring Pelice is seldom lost to the eye or ear; its noisy tributary streams are crossed at short intervals. There is no longer the undulating landscape, with green or variegated slopes, and extensive levels of lowland, where abundant grass and corn attest the bounty of nature; but there is the abrupt and broken ground, there is rock contending with soil, and the elements with man. The earth still pours forth her riches in places, but it is only in places; the field or ridge, waving with grain, is immediately contiguous to a mass of crags, torn from the crest that breaks the clouds, or to a bed of sand or stones brought down with the waters. These features increase and become more marked as you ascend this or any alpine valley; patches of cultivation become thinner; the vine, the walnut, and the chestnut, give way to the pine—this too, at last, disappears, and a wilderness of cliffs, assuming a thousand formidable or grotesque forms, proclaims that such wild places are only for the occasional retreat, and not for the habitation of man. The pathways that lead to these rocky summits narrow as they ascend—rugged and more rugged is every access; at last the traces of footsteps disappear; the adventurer makes his way over a *débris* that has

fallen from above, and tells that more may yet fall and crush him; the precipice seems to yawn for him; but the very danger is inviting, and he urges on his onward pace, not only to see more of these stern dominions of the eagle and the vulture, but because he has a pleasure in sounding his own courage, and in trying the strength of his nerves, and proving to himself and to others that he is not to be outdone."

But a glorious recompense awaits the traveller of this wild region, when the mountain's peak is attained, and repays him for his toils and his dangers.

"Seated upon the pinnacle of the rock, which commands a view of the whole valley, both above and below La Torre, we gazed on the enchanting scene, first with inexpressible rapture, and afterwards with those sensations of littleness and inferiority, to which no man can be insensible who finds himself in the midst of the vast and the enduring. Our eyes wandered, on one side, over the plains of Piemont to those of Lombardy, faintly discerned in the distance. Turin was plainly marked on the map before us, and the marble front of the Superga glittered under the rays of the western sun. The Po was seen winding his course towards the north-east, and receiving the waters of many tributary streams and torrents. Such were the remoter objects on which we glanced from our elevated watch-tower. Immediately beneath us, to the left, were the lovely scenes of San Giovanni and La Torre, embroidered with vineyards, corn-fields, and meadows, and here and there shaded with groves and thickets, and spread over a surface varied by hills, knolls, and undulating slopes. To the right we saw Villar and its hamlets, and the dark glens of Val Guichard, L'Envers, and the park-like beauties of Ralebroué. L'Envers is the shady side of the chain of mountains enclosing Val Pellice to the south; and where it is not clothed with natural forests of alder and birch, it is variegated with rhododendrons and flowering shrubs, the former of which were in full blossom at this time, and covering the ground like a mantle of crimson. In bold contrast with the habitations of man, and the work of his hand, and the lovelier features of nature, were the tremendous chasms and fields of rock, which glared upon us in the nearer vicinity of Castelluzzo. From the immediate point where we were perched we looked down into the sheer depth of a precipice; profound gulfs and ravines yawned on every side, and the whole scene was bounded by an indented line of mountains, one peak rising above another in splendid confusion, among which the towering heads of Mont Viso and Visolet, and the Cols St. Julian and D'Abries were most conspicuous."

At Lucerne our author was gratified by a sight of a very different description. A bright moon and a clear starry sky were above, and the balmy air of Italy breathed around, while myriads of fireflies glanced glittering forth.

"The brilliant lights which they emit, their rapid flitting motion through the air, and the cheerfulness which they impart to the spirits, by engaging us to watch for their playful illumination, are quite indescribable. There is no difficulty in catching them; and I had the satisfaction of carrying one home with me, and gazing at its mysterious lamp, without doing it that injury which the poor butterfly and too many other beautiful insects experience, as the penalty they are condemned to pay for the ephemeral enjoyment of their splendid exterior. I placed it on a book in a dark room, and could distinctly read the words which were within the rays of its light. But the light was not so

bright as when it was on the wing and in quick motion; it was more mellow, and like that of the glow-worm in its state of rest; but I did not perceive it to be in any degree intermittent."

Aristotle and Pliny have both of them mentioned this insect; but what is somewhat remarkable, the Greek and Latin poets are alike silent respecting it.

Mr. G. pays, on all occasions, his ready tribute to the characters of the pastors of this interesting people. A remarkable instance is recorded, highly honourable to their perfect disinterestedness—when the British government restored the royal stipend in the year 1827, after twenty years' suspension. This allowance would have given about £21 to each pastor.

"They met in synod, and came to the following resolution: 'We are to receive 6,800 francs a-year from the English government. We will not divide the whole of it among ourselves, but we will reserve part of it for public purposes. We will take 300 francs each, instead of 523, and we will devote the remainder, amounting to 2,900 francs, towards the maintenance of aged or incapacitated pastors, and the widows of pastors, and towards the appointment of two additional curés in the more remote districts.' Not one of these individuals receives, with his recent augmentation, more than £60 a-year."

The excursions of our author extend through each of the three valleys which constitute the abodes of the Vaudois. Though persecution no longer wields the sword and the faggot, the inhabitants of these regions experience considerable hardship from the severe restraints which are imposed by the Sardinian government—being forbidden to extend themselves beyond the three valleys—paying a much heavier land-tax than the Romanists, and being subject to various disabilities. No books, whether of religion or instruction, are allowed to be printed for them in the Sardinian territory; and a very high duty is levied on imported books.

It may be confidently expected that the late changes on the continent will materially alter such a state of things, and that to the Vaudois at least these convulsions of the nations will be productive of unalloyed good. How the change operated when in 1829 took place in the French ministry, when Polignac and his infatuated colleagues assumed the government, may be seen from the following quotation:—

"They told me, that the change of the French ministry, and the tidings of Prince Polignac's nomination as prime minister of Charles X., had so strengthened the Jesuit party, and the enemies of the Protestant cause in Italy, that they could not take upon themselves to advise their countrymen to petition the king at that juncture of time."

There is one characteristic reference to the conqueror of Europe, which we cannot omit.

"Napoleon never lost sight of the church of the valleys, after he had once learnt to take an interest in its fate. I have seen the copy of an order signed by him at Moscow, in 1812, by which he directed a negligent Vaudois pastor to be suspended. Strange! that the invader of Russia, in the palace of the Czars, should be concerning himself with the affairs of a small parish in the remote wilds of Piemont, and the Protestant representatives of the 'defender of the faith' should forget the Waldenses at the Congress of Vienna!"

But we hasten to conclude. There is much information respecting the schools and other useful establishments which have been formed

in the Vaudois. A map accompanies the work, which is also illustrated and adorned by twelve plates in lithograph, representing the most striking views of the scenery of the valleys: they were sketched on the spot by Mrs. Gilly, the lady of the writer, and do great credit to her taste and skill. If we have a fault to find with the author's style, perhaps it would be this—that it is sometimes too laboured and ornate, and savours more of the study than of the

"Air of the iced mountain's top."

Cours Élémentaire de Littérature Française, depuis son Origine jusqu'à nos Jours. Par Henriette Amey. 2 tom. A Londres, 1830. Bossange, Barthés, et Co.

THIS is a most extraordinary work to have proceeded from a female pen; whether we consider the immense research, or the extensive reading, both required and displayed. A production like this seems the work of a life. It embodies the whole history of French literature from the very earliest ages: general and clear views of each successive epoch; a short biographical account of each writer, remarks on his works, and in some instances extracts, shewing excellent taste. Such are the contents of a *Cours Élémentaire* which deserves every possible encouragement from the public. When we look at the thousands (this expression is no exaggeration) of different works to which our author must have referred; the unremitting industry necessary to have become acquainted with their contents; the immense mass of information here collected; the royal road thus laid open to such a general and individual acquaintance with the pioneers and the ornaments of French literature; we cannot but acknowledge that not only the young, but all readers owe a deep debt of gratitude to the talents and industry of the lady who has thus exerted them for such universal benefit. We shall this week confine ourselves to the first volume, and by two or three very brief miscellaneous extracts endeavour to give some idea of its miscellaneous contents. We cannot pay a female writer a greater compliment than to extract an account of another, whose interesting history, thus brought from obscurity, seems like a new discovery.

"Madeleine des Roches was as remarkable for her amiable as for her more exalted qualities. Her daughter inherited her talents, and there is something very touching in their mutual and devoted affection. The mother was left early a widow, and the daughter refused every offer of marriage: the claims of a husband would interfere with the attachment which united her to her parent. 'They were lovely in their lives, and in their deaths they were not divided.' Both were struck with the plague at the same time, and the one died within a few moments of the other."

The following lines from a poem on the death of a young and beloved friend by Madeleine, are full of feeling and grace:

"Las! où est maintenant ta jeune bonne grace,
Et ton gentil esprit, plus beau que la beauté?
Où est ton doux maintien, ta douce priauté?
Tu les avais du ciel; ils y ont repris leur place."
Alas! where is now the sweet grace of thy youth,
Where thy fair mind, more fair than beauty,
Where thy soft air, and thy gentle retiringness?
Thou hadst them from heaven; they are gone back to their place.

There is a pretty idea in some stanzas addressed to Marie de Medicis. The poet bids them not spare the scattering of flowers before her:

"N'épargne pas les fleurs,
Il en remplit assez sous les pas de Marie."

Do not spare the flowers,
Enough will spring up again beneath the footsteps
of Mary.

There is a very interesting memoir of Brantôme, of which we can only extract the end.

"He was buried in his chapel de Richemond, where was inscribed a pompous epitaph, which he had himself composed. In despite of his anger, he willed his property to his nephew; leaving his vengeance, in a codicil, to God, and particularly soliciting that it might be 'little and light.'"

We purpose resuming these volumes next week. It would have added greatly to its utility, as a work of reference, had there been a copious index: this is a great want.

We see these pages are inscribed to Mr. Agar Ellis. We know no one to whom such a compliment could have been more judiciously offered.

Family Library of French Classics. Théâtre Molière. Vols. I. and II. A Londres, 1831. Treuttel and Würtz.

A singularly neat and cheap edition, and belonging to a plan which well merits encouragement. There is a portrait of Molière, with whose works the series commences—Molière, that true, keen painter of both French and human nature. A brief but well-written memoir is prefixed.

Family Classical Library. No. XVI. The Characters of Theophrastus; illustrated by Physiognomical Sketches. 12mo. pp. 159. London, 1831. Valpy.

We shall commence by quoting from the short biographical sketch prefixed to this volume of the Characters of Theophrastus:—"The Characters of Theophrastus bear evident marks of a vigorous and original mind. Although versed in scholastic disputations, their author never neglected the study of human nature. The actions of men furnished him with ample materials for observation, and to instruct them was his aim. Happy in the choice of his subject, he faithfully represents those vices and weaknesses of the human character which are equally applicable to the present time as to the remote age in which they were written. This excellent work will continue to be read and admired until the affections and passions of our common nature cease to interest."

Referring to our Review of the work when published in 8vo, see *Literary Gazette*, No. 375, March 27th, 1824, we may add to the opinions then expressed, that we conceive the chief recommendation these pages carry with them, to arise from the curious sketches, not of character, but of customs; and from the casual insights into the domestic habits of the Athenians, which we find here laid open to censure, or to which sufficient allusion is made to denote their existence. These are points the careful reader will not suffer to escape him, and from which he will derive gratification and interest. We may also, in a more critical mood than we were seven years ago, find fault with Mr. Theophrastus himself. The peculiarities of character subjected to his censures unquestionably have their existence wherever there is man; but traits are assigned as individual which are common to all, while the blemishes and blots peculiar to one are made to bedaub the fair fame of another, upon whom the stigma is improperly affixed. The following is made to delineate "the Plausible:"—

"His house abounds with rarities; he is skilful in training apes and monkeys; he keeps Arabian doves; he cannot play at dice unless

they are carved from the finest buck's-horn; he displays curiously turned crewets; his walking stick is a twisted Spartan staff; his rooms are hung with the figured tapestry of Persia; he has a court always prepared for wrestling, and adjoining to it a billiard-room: hither he is wont to invite those whom he may meet in his rambles—philosophers, sophists, prize-fighters, or musicians; and here they find accommodations for exercising their various arts. All this he does, that when he enters the hall, one of the spectators may say to another, 'That is the master of the palaestra.'"

These are the characteristics of the Ostentatious, not of the Plausible; and if this extract be misplaced, the error must be visited upon the head of the original; if not, upon that of his translator.

We presume the volume is a reprint of Mr. Howell's work, with some abridgements.

Life of John Knox, &c.; the Reformation in Scotland. 2 vols. 8vo. Blackwood, Edinburgh; Cadell, London.

The emphatic words "the fifth edition" on the title-page of this esteemed work, supersede the necessity of our saying a syllable: we have only to repeat "the fifth edition," and leave the rest to the public.

ARTS AND SCIENCES.

ROYAL ASTRONOMICAL SOCIETY.

FRANCIS BAILY, Esq. in the chair. There were read, extract of a letter from M. Chauchoix relative to a new object-glass, of great aperture; a paper by Mr. Pond on the solstices; and a third, by Mr. Little, on the theory of eye-glasses. The discussion to which we alluded in our last notice of the proceedings of this Society, arose from some misunderstanding relative to the charter. This has been happily removed,—the charter has been accepted, and the members, under the authority of the same, now assume the title of F.R.A.S. Several gentlemen were proposed as fellows, and others were elected.

GEOLOGICAL SOCIETY.

WEDNESDAY, April 13th. Roderick Impey Murchison, Esq. President, in the chair.—Fellows elected. A paper was read, on the limestone caves at Wellington Valley, New South Wales; and on the situation near one of them, where fossil bones have been found, by Major Mitchell, F.G.S. surveyor-general in that colony. This memoir was illustrated by numerous drawings, and a large collection of specimens of the breccia in which the bones belonging to the wombat, kangaroo, koala, dasyurus, and phalangista, were found. The whole of this collection was presented to the Society, by Major Mitchell. There was likewise exhibited the tibia of a gigantic Saurian, found in the Tilgate strata; by Robert Trotter, Esq. F.G.S.

ROYAL GEOGRAPHICAL SOCIETY.

W. R. HAMILTON, Esq. V.P., in the chair. A letter addressed to the Society by Mr. Jones, was read, explaining the construction of a portable barometer, lately invented by him, made entirely of metal, consequently not so liable as the ordinary glass ones to be accidentally injured or destroyed; and possessing, at the same time, some other advantages. The height of the mercury, although enclosed in an opaque tube, is ascertained by means of a float on its surface, having a needle which rises through a small hole in the otherwise close cover of the tube; and a double stop-cock nearly

in the neck of the siphon, either entirely closes in the mercury when the instrument is put away, or more or less, at will, contracts its thread when about to be consulted at sea; and when, consequently, the motion of the vessel may make the use of the entire column inconvenient. The thanks of the Society were voted to Mr. Jones for his communication: and the invention appears calculated to be a real improvement in the equipment of scientific travellers.

Afterwards came a geographical and topographical memoir on the empire of Morocco; communicated by Lieut. Washington, R.N., and the result of observations made by him in October to December, 1829; when accompanying a mission to the court of the Sultan, headed by Mr. Drummond Hay, his Majesty's consul-general in the empire. The route was first along the sea-shore as far as Azamor, near Cape Blanco, and thence across the country direct for the imperial city, where the mission was hospitably and respectfully received, and lodged in one of the sultan's palaces for a month. On returning, Mr. Drummond Hay obtained permission to ascend the Atlas as far as might be practicable for the snow; and this forms, accordingly, the chief deviation from the ordinary route pursued by all travellers who have made this journey. But great attention was paid throughout to the determination of positions and heights; noting at the same time minutely the geological character of the country. And thus, aided by a careful incorporation of the best materials at home, (particularly the charts of the coast constructed by the late Captain Boteler, of the navy, who was employed to survey it), Mr. Washington is persuaded that the map accompanying his memoir, and also presented by him to the Society, with a perpendicular section annexed to it, shewing the level, is very much the most correct which has yet been compiled of this empire, the physical features of which are sufficiently remarkable. From the sea to the foot of Mount Atlas, the land stretches away above 150 miles, apparently on about a dead level; but at the city of Morocco, 16 miles distant from the mountains, the height was ascertained to be 1200 feet: and on an attentive examination, three different steps, or breaks, in the continuity of the plain, may be detected, by which altogether, although the ascent is in each easy, the above height is attained. The soil is light and dry, being chiefly sandstone, and the aspect is generally parched and barren. Wherever water runs, however, and there is abundance of it, were it but distributed, the most exuberant fertility is found; and there can be no doubt that, properly cultivated, its productiveness would be very great. But at present the returns are limited, though all of excellent quality, grain, fruits, and vegetables, of all sorts. The wood is generally stunted, not warranting Pliny's accounts of it, and tropical in its character quite to the base of the Atlas, with the eternal snows of which it thus presents a striking contrast. The ascent of the mountain itself is extremely steep and difficult, and the greatest height attained was only 6,400 feet, the travellers being then stopped by the snow. In summer, however, this ascends higher: and an aboriginal tribe, the Shellahs, who neither speak nor understand Moorish nor Arabic, thickly people the clefts and ravines, intermingled, to the extent of almost a fourth, with Jews, individuals of whom take refuge here when singled out for particular oppression by the caprice or tyranny of the Moors below. The mountain, where thus ascended, was chiefly

Doctors in Divinity.—The very Rev. G. Davys, Christ College, Dean of Chester, &c.; the Rev. J. Griffith, Emmanuel College, Prebendary of Rochester, &c.

Doctor in Physic.—E. Morton, Esq. M.B. L.M. Trinity College.

Honorary Masters of Arts.—The Hon. W. H. A. a'Court, son of Lord Heytesbury, St. John's College; the Hon. Major Henniker, son of Lord Henniker, St. John's College; P. R. C. Burrell, son of the Hon. Lindsey Burrell, St. John's College.

Feb. 16th.—*Bachelors of Arts:* W. Hadfield, Caius College; H. P. Cookeley, Trinity College; J. R. Hardy, St. Peter's College.

Feb. 23d.—The following degrees were conferred: *Honorary Master of Arts.*—Lord E. A. C. Bruce, son of the Marquess of Ailesbury, Trinity College.

Master of Arts.—R. W. Myall, Catharine Hall.

Licentiate in Physic.—W. P. Borrett, Caius College.

Bachelor in Physic.—T. P. P. Marsh, Caius College.

Bachelors of Arts.—A. Borron, H. A. Pitman, Compounder, Trinity College; W. Borlase, W. W. Bowen, St. Peter's College; J. Bywater, St. John's College.

The Rev. H. Cotton, D.C.L. of Christ Church, Oxford, was admitted *ad eundem* at this University.

March 9th.—The Chancellor's gold medals for the two best proficient in classical learning among the Commencing Bachelors of Arts, were adjudged to J. W. Blakeley, of Trinity College, and W. H. Hoare, of St. John's College.

The following degrees were conferred:—*Doctor in Divinity.*—The Rev. T. Burnett, Christ College.

Doctor in Civil Law.—The Rev. J. H. Humphreys, Trinity Hall.

Honorary Master of Arts.—The Hon. F. A. Gordon, son of the Earl of Aboyne, Trinity College.

Master of Arts.—R. Sutton, Compounder, St. John's College.

Bachelor in Civil Law.—Rev. E. P. Dennis, Compounder, Trinity Hall.

March 18th.—The following degrees were conferred:—*Bachelor in Divinity.*—R. Cattermole, Christ's College.

Master of Arts.—A. E. Brydges, Trinity College.

Bachelors of Arts.—C. Lowndes, Trinity College; J. B. Clyde, A. Newby, Compounder, St. John's College; J. Cottle, Catharine Hall; E. F. Smith, Christ's College; and on the 21st, R. H. Dolling, Trinity College.

ROYAL SOCIETY.

THURSDAY. The meetings were resumed this evening after the recess, his Royal Highness the Duke of Sussex in the chair. The reading of Colonel Pasley's paper on artificial water cements was concluded. There was also read a paper, entitled, "on meteorological observations, made at the apartments of the Royal Society," by J. W. Lubbock, Esq. The Spanish Nautical Almanac, calculated for the meridian and parallel of the Royal Marine Observatory at Cadiz, for 1833, was presented by the King of Spain. Several other scientific works were likewise presented to the Society. His Royal Highness informed the meeting he had received communications from Lord Melville and Sir Robert Peel, which stated their regret that their parliamentary duties prevented them from acting as efficient members of the council; they therefore begged in consequence that their resignation might be accepted. The president then intimated that two members of council, in lieu of Lord Melville and Sir Robert Peel, would be balloted for on the 28th instant. The chair to be taken at eight o'clock precisely.

SOCIETY OF ANTIQUARIES.

On Thursday evening this Society resumed their meetings; Hudson Gurney, Esq., in the chair. Mr. Britton exhibited some fine drawings of ancient architecture, which, with others lately shewn, are part of a set illustrative of his lectures on architecture at the Royal Institution. Mr. Ellis shewed a very nicely executed tracing, from an original in the British Museum, of a plan or map of the village of Brighthelmston (at the period referred to called Brighthamsted) and the neighbouring coast, and an attack made by the French, with a very considerable fleet of large ships and galleys, on that place in the thirty-seventh year of Henry the Eighth, when, according to Holinshed,

* Sir Thomas Phillips, one of the auditors appointed to investigate and pass the treasurer's accounts for the last year, read the auditor's report on the same, of which, however, we could not gather the particulars.

they effected a partial landing; but the alarm being raised and the beacon lighted, they found the whole country so immediately in arms, that they were obliged to retire; they then attempted the Isle of Wight—but with no greater success: they afterwards tried other parts of the coast of Sussex—but every where found the inhabitants in arms to meet them; and so returned home without doing any serious mischief. The lord admiral of England, in revenge for this *attempt*, despatched a fleet which destroyed twenty-one towns and villages on the coast of Normandy. Mr. Ellis also shewed a map (from the same source) of the town of Dieppe and the country adjacent, illustrative of the battle of St. Etienne, in 1589. The secretary read a further portion of the Rev. H. M. Grover's Essay on the Games, Habits, and History, of the Ancients:—our readers must be aware that it is impossible to do justice to the author or ourselves in attempting to give the details of a long essay on such a subject, read only in detached portions.

FINE ARTS.

SUFFOLK STREET EXHIBITION.

[Third Notice.]

No. 267. *A Dutch Coast, an Indianman on Shore, Fog clearing off.* J. Wilson.—This able artist's works are generally distinguished by some remarkable effect, which gives an interest to the scene beyond its ordinary character. The contrast of light and dark is here admirably introduced; and the glittering and silvery tone is in excellent harmony with the whole.

No. 279. *Indecision.* F. J. Meyer.—The sentiment is well expressed. A pleasing composition, picturesque costume, and the essential qualities of youth and beauty, combine to give attraction to this performance. A little more breadth would, we think, greatly assist the general effect.

No. 282. *The Stingy Traveller.* W. Buss.—And a bold one too, who can thus run the gauntlet of waiter, chambermaid, and boots. We like the execution better than the choice of subject. The labourer is certainly worthy of his hire; but in nine cases out of ten, clamorous demands of this nature are gross impositions, and ought to be resisted.

No. 287. *View; Glengarnock Castle.* Mrs. E. Terry.—This performance does great credit to Mrs. Terry's talents. The point of view is well selected; and she has acquitted herself with much skill in the execution of the complicated forms which it comprehends.

No. 295. *View; looking up the Valley of St. Vincente, on the north side of the Island of Madeira.* W. Westall, A.R.A.—Mountains, cascades, and mists, at all times picturesque, are here rendered still more so by the happy manner in which they are treated.

No. 300. *Eseunt Omnes.* H. Pidding.—The title is at least dramatic, though perhaps a little far-fetched. Would not "A fall in the Fish-market" have been better? Here, as elsewhere, monkey and mischief go together. The characters are well sustained, and the finny *avalanche* is admirably executed.

No. 301. *A Tournament.* F. Howard.—A burlesque on the age of chivalry; harmoniously coloured, and with a good effect.

No. 302. *Near Goodrich, on the Wyfe.* F. W. Watts.—One of those perfect representations of nature by which this artist has so frequently distinguished himself. There is a vivid freshness in the colouring which imparts great value to the picture.

No. 305. *Landscaps.* G. Clint.—Under this simple title we find all the essential qualities of good art.

No. 328. *A Recollection.* W. Boxall.—We have a recollection too,—of something very similar to this female in one of Mr. Newton's works. Be that as it may, it is a clever study, with much of beautiful and harmonious colouring.

No. 329. *Morning Ablution.* T. Clater.—A pretty domestic scene; affording a good lesson to mothers to attend to their children's toilets as well as to their own.

No. 343^a. *On the Look-out.* J. Zeitter.—A very spirited example of the figures and characters frequently met with on the coast.

No. 346. *Coast Scene, Hastings.* J. Tennant.—Distinguished by brilliance of light, and clearness of atmosphere.

No. 351. *A Rocky Scene, Lymouth, North Devon.* Rev. T. J. Judkin.—We have had sufficient specimens of the fidelity of this gentleman's pencil to warrant our receiving this romantic scene as a faithful delineation of nature. We own that our regard for rocks has been continually increasing, since the hammer of Macadamisers has threatened, sooner or later, to make them as scarce as trees in the suburbs of a city.

No. 352. *Adam and Eve lamenting over the dead Body of Abel.* J. Wood.—As well as good composition, colouring, and effect, there is great pathos in this painting; although much of its touching effect is lost by the frequent repetition of the subject.

No. 356. *Killaloe, on the Shannon; Stormy Weather.* C. R. Stanley.—One of the most picturesque cabins that could fall in the way of an artist. Opposed to the strong and gleamy light under which it is seen, is a fine background of storm. The whole is most spiritedly executed.

No. 371. *The Poacher pursued.* C. Hancock.—This seems an animated scene; but it is too high for an examination of its details. Action, whether in man or in beast, is the successful characteristic of Mr. Hancock's works. We think, however, that on some of his animals more pains are bestowed than are useful; and that, in consequence, their coats have the appearance of being somewhat hard and wiry.

(To be continued.)

BRITISH GALLERY.

ALWAYS considering that the Fine Arts, as well as loyalty-loans, cannot be more benefited than by publicly shewing who are their admirers and patrons, we have great pleasure in inserting the list of the purchases made in the British Gallery during the present exhibition. At Suffolk Street, though only open a short period, similar encouragement has been given to our native school.

Subjects.	Artists.	Purchasers.
<i>The Interior of the Picture Gallery, Greenwich Hospital</i>	J. S. Davis.	Lord Farnborough.
<i>View in the Wood at Bromley Hill</i>	F. R. Lee.	Rev. W. Long.
<i>Holm Wood, Bognor Road</i>	P. Nasmyth.	Earl of Essex.
<i>The Young Derotée A. G. Vickers</i>		Ditto.
<i>The Forum of Nerva, Rome</i>	G. Jones, R.A.	Ditto.
<i>American Canals, Citrons, &c.</i>	G. Lance	W. Wells, Esq.
<i>A Fruit-piece</i>	Ditto	R. Vernon, esq.
<i>The Widow</i>	C. Hancock	Lord Nugent.
<i>The Calabrian Shepherd</i>	T. Uwins	Lord Glenorchy.
<i>The Freepiece</i>	Ditto	Sir M. W. Ridley.
<i>A Nesting Parrot</i>	W. Collins, R.A.	Thorp, esq.
<i>The old Boat-builder</i>	Ditto	Hon. Gen. Phipps.

ROYAL INSTITUTION.

MR. W. PICKERSGILL, R.A. has liberally given his fine picture of Mr. Faraday to the Royal Institution. A copy of the picture of Sir H. Davy, by Sir T. Lawrence, is in progress for the Institution. The portrait of Mr. Brande is to be purchased by a subscription of individual members, to be placed as an accompaniment to the others. These are intended as the commencement of a collection of portraits of distinguished scientific individuals connected with the establishment, and are to decorate the theatre. The tea-room is also to contain a collection of engravings of distinguished men, who have been either professors, lecturers, or members. Proof impressions of Sir H. Davy, Count Rumford, Dr. Young, and others, have been already presented to the Institution for this purpose.

NEW PUBLICATIONS.

Hogarth Moralised. Part II. Major.

IN all respects equal to the preceding part. It is really surprising to see how skilfully the various engravers of the plates and cuts which compose this clever little publication, have contrived in so small a space to retain so large a portion of the expression of their prototypes. Much of the descriptive matter, by Dr. Trusler, ably and amusingly elucidates the subjects of the different compositions; but passages occasionally occur in which it is evident that the worthy doctor has drawn largely upon his imagination. For instance, in illustrating "The Enraged Musician," after a tasteless attack upon Italian music, he states that the print in question was intended to ridicule the degeneracy of the age in which such music was encouraged. Now, nothing is more clear than that it is simply a humorous representation of the torturing effect upon a refined ear, of the accumulation of every conceivable discordant sound. Again, in explaining the second print of the series of "Mariage à la mode," Dr. Trusler speaks of an incident as introduced into the work by Hogarth, in order to shew "the great and general extravagance of nobility." To this assertion the present editor has affixed the following very judicious note:

"The editor cannot help observing, that upon this head Dr. Trusler, in many places, carries his remarks much farther than his author warrants. Hogarth never intended these subjects as a general satire upon the upper classes, who are as rational in their amusements, considering their enlarged means, as the rest of mankind. To be as liberal in the expenditure of their incomes as they can possibly afford, is but patriotism, without the ostentation of the name. All that Hogarth means to enforce, as Mr. Walpole expresses it, is, that 'the different vices of the great and the vulgar lead by various paths to the same un-

happiness.' In Hogarth's own descriptions of these six subjects—referred to hereafter, there is no sort of insinuation as to the incompatibility of virtue and talent with rank and station."

Views in the East. From original Sketches by Captain Robert Elliot, R.N. Part VIII. Fisher, Son, and Co.

"THE Mosque of Mustapha Khan, Beejapore," upon the walls of which "the hand of time seems only to have cast the dark shade of age, without in any way injuring the effect of the structure;" "The Ruins of Old Delhi," and "so desolate and melancholy a scene does [do] the remains of this once magnificent and populous city exhibit, that it has more the look of an assemblage of dilapidated mansions of the dead than of the living;" and "King's Fort, Boorhanpore," the high and massive walls of which "have grown gray with age, and have assumed that peculiar degree of picturesqueness which time invariably bestows upon buildings of this description;" afford, especially the first two, additional and pleasing proofs of the elegant and various character of oriental architecture.

England and Wales. From Drawings by J. M. W. Turner. No. II. Descriptions, &c. by H. E. Lloyd. Moon, Boys, and Graves.

ANOTHER delightful fasciculus, replete with this great artist's magical yet natural effects. Ludlow Castle, Folkestone, Tynemouth, and Gosport, are subjects as various as beautiful: wherever we look, we cannot resist the exclamation of "Charming! charming!"

Select Views of the principal Cities of Europe.

From original Paintings by Lieut.-Colonel Batty, F.R.S. Part IV. London: Moon, Boys, and Graves; Rodwell; Jennings and Chaplin.

THIS Part contains Edinburgh Castle, from the Grassmarket (R. Brandard); two panoramic Sketches of Edinburgh, from the Calton Hill, and more finished engravings of the same (Geo. Cooke and J. H. Hernot); the new Royal High School (E. Goodall); Edinburgh, from St. Anthony's chapel (W. J. Cooke); and Edinburgh, from the ascent of Arthur's Seat (W. R. Smith); all interesting representations of this picturesque city, and of those fine objects which so greatly distinguish it from other capitals.

DRAMA.

DRURY LANE.

THE *Pledge, or Castilian Honour*.—Friday, April 8. Mr. Kenny has given us a very spirited and faithful version of Victor Hugo's extraordinary drama of *Hernani*. We almost wish he had not adhered so closely to the plot, for, with his dramatic tact, we feel assured that he would have materially improved the last two acts. But the play having made such a noise in Paris, Mr. Kenny perhaps thought it fair to the French author to present the work to the English public in its integrity, as far as regarded construction; and we rejoice that so honourable a feeling has been rewarded by more than ordinary success. To Mr. Kenny, therefore, we cordially award all praise; and the few remarks we have to make, at this twelfth hour, are applicable only to the original deviser of this most curious and extravagant production. It would seem as if M. Hugo, despising the unnatural fetters of the French classical drama, as it is affectingly called, and inspired by the success of Dumas' admirable *Henri Trois*, which gave the first grand blow

to the school of Corneille, Racine, and Voltaire, had determined to try the temper of the Parisians to the uttermost, by out-Heroding Herod (*i. e.* Dumas himself), and startling even the ultra-Romantics by the violation of every thing but bare possibilities. The success of *Hernani* has certainly settled the question in France; and we now trust that M. Hugo, satisfied with his bold experiment, will calm down into common sense, and favour the stage with such a tragedy as we feel he can write—and in prose too—after the fine example set him by Alexandre Dumas; in our humble opinion, the first French tragic writer now living. Every paper in England having given the plot of the *Pledge*, or *Hernani*, it will scarcely be now required of us. The first act is good; the interest is naturally as well as dramatically awakened. With the second our objections commence.—*Hernani's* leaving *Donna Xanthe* to her fate, is as much out of character as the lady's appearing in the public street with a lamp in her hand, to keep an appointment made with a proscribed lover, is improbable and ridiculous. The third act (with the exception, that *Don Silas* could not feel himself bound to protect a man who had claimed his hospitality under a fictitious title, and with sinister views) is the best in the play. The fourth and fifth we dislike *in toto*. The emperor hides himself in the tomb of Charlemagne, alone, in the perfect knowledge that a meeting of conspirators is to take place beside it; thereby gratuitously putting his life in jeopardy, when it was equally in his power to surround the cathedral and secure the conspirators, without hazarding a finger. And *Hernani*, being pardoned and restored to his titles and his love, consents to poison himself in the evening of his bridal-day, in fulfilment of a promise made in a moment of frenzy, to the man who previously had preserved his life, at the hazard of his own. We shall be told that this overstraining of the point of honour was common to the clime and the period. Granted—but it is now considered ludicrous, and is therefore an unfit subject for a modern tragedy. But to end, as the Italians have it, “with a sweet mouth,” the acting in the *Pledge* would save a more defective and less interesting play. Macready is a most admirable representative of the stern old Castilian; and Wallack, spirited and effective, the romantic and noble outlaw. Cooper, as *Charles V.* (though not so happy as he was in the Hungarian, in *Werner*) is of considerable assistance to the support of the play; and Miss Phillips, if not quite equal to the part of *Donna Xanthe*, has no rival at present to whom it could, with benefit, be transferred. The drama was most enthusiastically received, and continues to be nightly applauded.

VARIETIES.

New Timber Tree.—The French Academy, from the report of some of its members, advise the introduction of the zelhoa or planera (*P. crenata*), formerly called twisted elm of Siberia, and which grows on the coast of the Caspian and Black seas, into our latitudes. It appears that it promises well for carpentry, burning, and other purposes.

Prunierite, a new Mineral.—M. Esmark, in a visit lately made to Copenhagen, has separated from the apophyllite of Hestoe (one of the *Fero Isles*) a very silicious mineral, crystallised in a different manner, which he calls prunierite. M. Esmark's son has found near Brevig herzelite, which contains thorium.

Hoo Loo.—Hoo Loo, the poor Chinese brought all the way from China with a huge

tumour, for the sake of an experiment at Guy's Hospital, had it cut off in the most beautiful manner last Saturday, and died under the knife *secundum artem*. The theatre was crowded to an overflow; and to read the descriptions in the newspapers, with all their horrid dramatic fidelity, one might believe that the performance and the patient went off with the utmost éclat!!

Cleopatra's Needles.—We see from the French journals, that a vessel of extraordinary construction and dimensions, called the *Luxor*, has been prepared at Toulon for the purpose of proceeding to Egypt, and thence transporting one of the famous Needles of Cleopatra to France. This memorable trophy of antiquity might have been in England; but we are too poor or too economical a nation, too indifferent mechanics and sailors, to achieve such an object. Alas, old England!

M. Magendie is the only candidate for the medical chair vacant in the College of France.

Colosseum.—It has been reported in some of the daily paper that the Colosseum was about to be purchased by the Zoological Society for the purposes of natural history. We have every reason to believe that no idea of this kind has ever received any support from any body of the members of that Society; as there are no advantages connected with that splendid building which could authorise the great expense of its purchase.

Lieut. Holman.—A second letter from our remarkable friend, mentions his leaving Canton on the 13th of December; and his intention of sailing from Macao about the end of the week for Van Diemen's Land and New South Wales, in the *Merope*. He speaks indignantly of the conduct of the Chinese authorities, and deprecates the submissiveness shewn on the part of the Company.

Paganini.—We quote the following curious calculation from that amusing paper *Le Furet de Londres*. One of the concerts given by Paganini realised 16,500 francs: he was therefore paid at the following rate:—During the evening Paganini played three pieces of music, of about five pages each. By each of these pages he gained 1,365 francs. For a bar 12 fr., for a natural note 6 fr., for flats and sharps 3 fr. each, for a quaver 1 franc and a half, for a semiquaver 15 sous, for a demisemiquaver 7 sous and a half; and even after this division 120 francs remain over and above. Truly these are “precious notes.”

Giraffe.—There is on its passage from Calcutta to this country, in the Lady McNaughton, Capt. Langley Pope, expected in about three weeks, a camelopard, which is considered, by all those who have seen it, as one of the finest of its species. It is about twenty feet high, and was taken in the interior of Africa, with two others; one of which was sent to the Grand Sultan, the other is in the possession of the Pasha of Egypt. Its age is supposed to be about eighteen months, and it has been with its original possessor, who is accompanying it to England, nearly twelve. It has become so docile as to allow itself to be caressed by strangers. Its food consists of pease and grain, requiring about 6lbs. twice a-day. It was conveyed to Calcutta in the George the Fourth; on board of which ship it was nearly five months, without suffering the least inconvenience. This will be a valuable acquisition to this country; and from its being taken so young, it will be less liable to suffer from confinement.

High and low Theatrical Salaries.—“Whilst now-a-days stars with but few gazers receive

twenty, thirty, and even fifty pounds per night, Mrs. Siddons, in ‘the meridian of her glory,’ only received one thousand pounds for eighty nights (*i. e.* about twelve pounds per night). Mrs. Jordan's salary, in her meridian, amounted to thirty guineas per week. John Kemble, when actor and manager at Covent-Garden, was paid thirty-five pounds per week. Miss O'Neill, twenty-five pounds per week. George Cooke, twenty pounds. Lewis, twenty pounds, as actor and manager. Edwin, the best *buffo* and burletta singer that ever trod the English stage, only fourteen pounds per week; and Mrs. H. Siddons, by far the best representative of Juliet I ever saw, nine pounds per week. After this, may we not exclaim—‘Ye little stars! hide your diminished heads!’”—*Dramatic Annual*.

Auriform Sands of Cyrus.—The *Gazette of Tiflis* publishes the opinion of a person employed in the mines, that it is extremely probable that the alluvial sands met with in the whole extent of the basin of the Kour, or Cyrus, contain gold. This person is said even to have assured himself of the fact, by several experiments in the environs of Elizabetopol.—*Journ. de St. Petersburg. Bull. de Géographie*.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XVI. April 16.]

A second edition of the Gentleman in Black; with Illustrations by George Cruikshank.—A Picturesque Pocket Companion to Margate, Ramsgate, Broadstairs, and the parts adjacent; illustrated by many Engravings on Wood.

LIST OF NEW BOOKS.

Outlines of History (from Dr. Lardner's Cabinet Cyclopædia), for Schools, 12mo. 6s. 6d. bd.—Social Life in England and France, from 1789 to 1830, 8vo. 7s. 6d.—Crotche's Lectures on Music, 8vo. 7s. 6d. bds.—Clarke on Female Complaints, new edit., 2 vols. royal 8vo. 17. 16s. bds.—Landon's Gebir, Count Julian, and other Poems, p. 8vo. 10s. 6d. bds.—The Old Man of the Mountain, &c., Tales from the German of Tieck, fcp. 6s. bds.—Knox's History of the Reformation in Scotland, by M'Gavin, 8vo. 15s. bds.—Moore's (Dugald) Bridal Night, and other Poems, 12mo. 7s. 6d. bds.—Hall's Dictate Book, 12mo. 2s. 6d. shp.—A Mother's Present to her Daughter, 32mo. 2s. 6d. bds. 1/2. 3s. 6d. silk; 5s. morocco.—Morrison's Counsels for the Communion-Table, 32mo. 1s. 6d. cloth. 2s. 6d. silk.—The Evangelical Spectator, Vol. III., 12mo. 4s. 6d. cloth.—Hall's Sketches of Irish Character, Second Series, crown 8vo. 9s. bds.—History in All Ages, 12mo. 8s. cloth.

TO CORRESPONDENTS.

Our friends and correspondents who postpone their communications to the latest possible period previous to our publication, must not blame us if they seem to be neglected.

In spite of the iterations of Mr. Cobbett's friend, we will not depart from our rules. He is wrong, too, about that gentleman's Grammar, which was immediately reviewed in the *Literary Gazette*, and a multitude of its errors exposed. Try back.

Mr. Clarkson has entitled himself to be considered as a late lecturer. We attended at the hour appointed, and waited fully another, but no lecture began; as time is of some value to us, we suspected a hoax, and came away. We see it stated in the *Morning Herald*, however, (morning papers sit up later than weekly journals,) that there was a long and able discourse delivered.

ADVERTISEMENTS,

Connected with Literature and the Arts.

ROYAL SOCIETY OF LITERATURE.

The General Anniversary Meeting for the Election of the President, Vice-Presidents, Council, and Officers for the ensuing Year, will be held on Thursday the 28th Instant, at the Society's Apartments, No. 2, Parliament Street.

The Chair will be taken at Three o'clock precisely.

RICHARD CATTERMOLE, Secretary.

ARTISTS' GENERAL BENEVOLENT INSTITUTION, for the Relief of Decayed Artists, their Widows, and Orphans.

Patron.

H. R. H. the DUKE of SUSSEX, K.G.

President.

SIR MARTIN ARCHER SHEE, P.R.A.

The Nobility, Friends, and Subscribers, are respectfully informed that the Sixteenth Anniversary Festival will be celebrated in Freemason's Hall, on Saturday, the 22d Instant.

The Right Hon. LORD LYNDHURST in the Chair.

Stewards.

Dr. Blundell

Thomas Fairs, Esq.

A. A. Fry, Esq.

Philip Hardwick, Esq.

Theodore Edward Hook, Esq.

J. B. Lane, Esq.

Thomas H. Wyatt, Esq.

Dinner on Table at Half-past Five o'clock.

The Vocal Department under the Direction of Mr. Broadhurst. Tickets, 1s. each, may be had of the Stewards; at the Assistant Secretary's, No. 14, Duke Street, Portland Place; and at the Freemasons' Tavern.

W. J. ROPER, Assistant Secretary.

ROYAL INSTITUTION OF GREAT BRITAIN, Albemarle Street, 16th April, 1831.

The Weekly Evening Meetings of the R.I. at the Royal Institution, which were resumed on Friday, the 15th Instant, will be continued on each succeeding Friday, at Half-past Eight o'clock in the Evening, till the end of the Season.

The following are the Arrangements of the Lectures, which are to be delivered on each day, at Three o'clock in the Afternoon.

Geology.—Thomas Webster, Esq. F.G.S. will this day, Saturday, the 16th of April, commence a Course of Lectures on some of the most important Points in Geology.

Chemical and Natural Philosophy.—Michael Faraday, Esq. F.R.S. F.G.S. Cor. Member Royal Acad. Sciences, Paris, Director of the Laboratory of the Royal Institution, &c. &c. will deliver his Second Lecture on Thursday, the 21st Instant. The subject will be on Lithography.

Poetry and the Poets.—By James Montgomery, Esq. Author of the World before the Flood, &c. &c. To commence on Tuesday, the 25th of April, and to be continued on each succeeding Tuesday till the completion of the Course, on the 31st of May.

Acoustics.—By Robert Willis, M.A. F.R.S. Fellow of Caius College, Cambridge. To commence on Thursday, the 16th of May, and to be continued on each succeeding Thursday till the completion of the Course, on the 16th of June.

Botany.—On Vegetable Physiology and Botany. By John Lindley, Esq. F.R.S. and F.L.S. Prof. of Botany in the University of London, and Assistant Sec. Her Majesty's Botanic Garden, Kew. To commence on Saturday, the 16th of May, and to be continued on each succeeding Saturday till the completion of the Course, on the 18th of June.

Non-Subscribers to the Institution may subscribe to separate Courses of Lectures, on the following Terms:—Gentlemen, Two Guineas; Ladies, One Guinea for each Course.

The Sons and Daughters of the Members of the Royal Institution, under Fifteen Years of Age, may be admitted on payment of half the above Sum for each Course.

Syllabuses of the Lectures may be obtained at the Royal Institution.

The Journal of the Royal Institution, Number III. will be published the 8th of May.

JOSEPH FINCHER, Assistant Secretary.

BRITISH INSTITUTION, Pall Mall.

The Gallery for the Exhibition and Sale of the Works of British Artists is Open Daily, from Ten in the Morning till Five in the Evening.

Admission, 1s.—Catalogue, 1s.

WILLIAM BARNARD, Keeper.

BRITISH ARTISTS' GALLERY,

Suffolk Street, Pall Mall East.

The Eighth Exhibition for the Sale of Works of Living British Artists, is now Open, from Nine in the Morning till Five in the Evening.

Admission, 1s.—Catalogue, 1s.

THE WEST OF SCOTLAND FOURTH EXHIBITION OF THE WORKS OF LIVING ARTISTS,

under the Patronage of the Glasgow Dilettanti Society, will open this Season on the 8th of August. Works of Art intended for this Exhibition will be received from the 11th to the 30th of July.

JOHN CLOW, Secretary.

TO BOOKSELLERS, STATIONERS, AND PRINTERS.

To be disposed of, a well-established Business, in a very profitable Market, in the East Riding of Yorkshire. The Situation the best in the Town, and the Stock small.

Apply (if by letter post-paid) to Messrs. Simpkin and Marshall, Stationers' Hall Court, London; or to Mr. John Henton, Bookseller, &c. Leeds.

BY MR. C. N. WRIGHT.—The late Mr. JOHN PEARSON'S VALUABLE PROPERTY for SALE.

C. N. WRIGHT respectfully announces, that he has received instructions to subvert and preserve, for Sale, by Auction, on Monday, the 18th Day of April, 1831, and Seven or Eight following Days, the valuable Property of Mr. Pearson, and the late Mr. John Pearson, Attorney, Wheeler Gate, Nottingham, consisting of the valuable Household Furniture, handsome Spanish Mahogany Sideboard, curious and antique Indian Cabinet, Cheffier of ebony workmanship, French Table, elegant Sofa and Card Tables, inlaid with Rosewood; rich Brussels and other Carpets, Grand Piano, by Broadwood; other Pianos, Harpichords, and various Musical Instruments; a rich Collection of Ancient and Modern Music, an extensive Assortment of curious antique China, Glass, Dinner and Dessert Services; ancient Marble and other Busts, valuable Remains of Antiquities from various parts of the World, numerous Curiosities found in and near Nottingham, antique carved Chests, old carved Arm Chairs, Electrifying Machine, a Series of Roman, Saxon, and English Coins and Medals, in Gold, Silver, and Copper; Fifty Drawers of Minerals and Fossils, many Specimens of choice and of rare occurrence; a very valuable Collection of Shells, ancient Deeds and Manuscripts, Royal and other Autographs, Missals, Historical Manuscript Collections, about Sixty valuable Paintings, Portfolios of Engravings, containing fine Specimens of the old Masters; the entire Law and Miscellaneous Library, containing about 2000 Volumes; choice Black-Letter Gems, valuable Works in Folio, Quarto, &c.; valuable Relics of Antiquity, Linen, Plate, &c.; and some curious antique Armour.

The known taste of the late Mr. Pearson in selecting Articles of value will no doubt be appreciated; and the Auctioneer, in soliciting the attention of the public to this sale, (perhaps the most varied and attractive that has ever occurred in Nottingham), begs to state, that not one article will be admitted in the sale that was not the real property of Mr. Pearson, or his respected father, and that the Catalogue, containing a choice and of rare occurrence, &c. price 6d. are now ready, and may be had of the Auctioneer, Longman and Co. London; Coombe, Leicester; Drewry, Derby; Ridgway, Newark; Collinson, Mansfield. The Second Part of the Catalogue, containing the Library, is also ready, price 6d. as above.

PORTRAIT OF ENGLAND'S PATRIOT KING.

The Proprietors of the "Weekly Dispatch" (which has the largest circulation of any Newspaper in England) beg to announce that on the 3d of July next they intend to present a most splendid Portrait of his Majesty William IV. to every person who shall have regularly taken in the "Dispatch" during the preceding two months. Those individuals who are not already Subscribers to the "Dispatch," and who wish to obtain the most accurate likeness of our Patriotic King, must commence their Subscription on or before the first Sunday in May, and be careful to order their News-agents to supply them with the successive Numbers up to the 3d of July inclusive. The Print itself will unquestionably be found worth the subscription, as it will be the two months' subscription. It has been engraved in the same style, and will form an admirable companion to the Portrait of his late Majesty George IV. presented to the purchasers of the "Dispatch" in June last.

MUSIC.

MRS. ANDERSON, Pianiste to Her Majesty, has the honour to announce to the Nobility, Gentry, and her Friends, that her Morning Concert will take place at the Great Concert Room, King's Theatre, on Friday, May the 6th, 1831. The Concert will be on the grand Scale of former Years, full particulars of which will be duly advertising. Tickets, 10s. 6d. each, to be had of Mr. Anderson, 5, New Cavendish Street, Portland Place, and at the principal Music Shops. Mrs. A. solicits the favour of an early Application for Boxes.

Valpy's Classical Library of English Translations.

No. XVII. price 10s. 6d.

THEOPHRASTUS. Illustrated by Fifty

Physiognomical Portraits. To which are subjoined, Hints on the Individual Varieties of Human Nature, and general Remarks.

The Characters of Theophrastus possess an interest and value beyond most of the remains of Grecian literature; they are instructive and exact portraits of those very peculiarities of temper that are every day passing under our own observation.

No. XVII. and XVIII. will comprise *Horace*, in which will be introduced Translations of different Parts of the Author, from the Poets of *Drum, Pope, Bentley, Swift, Forster, W. Warfield, Prior, Milton, Denham, Roscommon, Cowley, Byron, Herne Tooke, Chatterton, &c.* &c. and of some of the most eminent Poets of the present day.

No. XIX. will contain *Juvenal and Persius*.

The Fifteen first Numbers of the "Series contain—Demosthenes, Sallust, Xenophon, Herodotus, Virgil, Pindar, Anacreon, and Tacitus. Any Author may be purchased separately, at 4s. 6d. per volume.

"If you desire your son, though no great scholar, to read and reflect, it is your duty to place into his hands the best translations of the best classic authors."—Dr. Parr.

Printed and published by A. J. Valpy, M.A. Red Lion Court; and sold by all Booksellers.

In 2 vols. 8vo. with 2 Portraits, engraved by Dean, price 11s. 6d. in boards,

 Whittaker, Treacher, and Co. Ave Maria Lane, London; and W. Blackwood, Edinburgh.

THE ILIAD OF HOMER, translated into English Verse.
 By WILLIAM SOTHEY, Esq.
 "Let it be at once justice for Mr. Sothey's satisfaction, that we may be entitled—and we do not know another person, of whom we could say as much—to deal with that well-booted Grecian, (Homer) even at this time of day, after all that has been done in, to, with, and by "him of the Iliad and the Odyssey," by not a few of our prevailing poets. It is our intention to have several—perhaps six articles on Sothey—like and unlike this one; and his merits, which are of the highest order, will be admired wherever *Maga* cheers human life."—*Blackwood's Mag.* April 1831.
 John Murray, Albemarle Street.

Embellished with Twenty plain, and Ten coloured Engravings, 40s. of new and rare Plants, price only 11. 12s. Nov. IV. and V. of

 A few Copies of Nos. I. and II. with coloured Plates, 15s. each.
 John Murray, Albemarle Street.

With a Portrait, 2 vols. 8vo. 24s.
THE LIFE AND CORRESPONDENCE OF ADMIRAL ROONEY.
 Edited by his Son-in-law, Major-General MUNDAY.
 "We know few biographers who have made a more judicious use of their materials than General Munday. He has made, from the joint operation of much feeling and excellent taste and judgment, a literary work which will confer honour on the subject and on himself to the end of time."—*Genl's Mag.*
 Lately published, 2 vols. 15s.
The Adventures of Giovanni Finati in some of the Parts least visited of Asia and Africa. Edited by William John Banks, Esq.
 John Murray, Albemarle Street.

With Three very superior Maps, 2 vols. 8vo. 30s.
THE DORIANS. An Account of the early History, Religion and Mythology, Civil and Domestic Institutions, Arts, Language, and Literature of that Race. Translated from the German of C. O. MÜLLER, Professor in the University of Göttingen.
 By HENRY TUNNEL, Esq. and GEO. CORNEWALL LEWIS, Esq. Student of Christ Church.
 "The profound and varied scholarship of Professor Müller is well known to every classical student of German literature. The present work brims with pregnant evidence of extended and minute research, and to much new and interesting light is thrown, not only upon the early history and mythology of the Doric race, but also on innumerable passages of classical antiquity, and usages of all the earlier states and tribes of Greece, that we forget the somewhat overbearing boldness of our author's occasional assumptions, in admiration of his unvaried industry and great knowledge. The translation, had the signal advantage of being carefully revised, corrected, and in many important particulars enlarged by M. Müller himself, before it went to press, so as, in fact, to form a new and much improved edition of the original work. The volumes are embellished with three maps. These, together, afford a complete geographical view of Ancient Greece; and, from inspection, we are satisfied of the justice of the boast of the translators, 'that in accuracy and fulness of detail, they rival, if not excel, all other maps of the same regions.'"—*New Monthly Mag.* April 1831.
 Lately published,
Bock's Public Economy of Athens, 2 vols.
 11s. 6d.
 John Murray, Albemarle Street.

In 3 vols.
AT HOME AND ABROAD. A Novel.
 By the Author of "Rome in the Nineteenth Century."
 II.
 2 vols. crown 8vo. 16s.
A Year in Spain, by a Young American.
 III.
The Marchmont Papers. Edited by Sir George Rose. 3 vols. 8vo. 36s.
 IV.
Souther's Lives of Uneducated Poets. 8vo.
 10s. 6d.
 John Murray, Albemarle Street.

Third edition, in 2 vols. with Fifteen Engravings on Steel and Wood, by Finden and Thompson, the Woodcuts from Designs of George Cruikshank, 10s.
THE LIFE OF NAPOLEON BONAPARTE.
 Also, with a whole-length Portrait of Talleyrand, and other Engravings, 5s.
The Court and Camp of Bonaparte. These Two Works contain the Substance of all the authentic part of Bonaparte's "Memoirs of Napoleon." "We have ourselves reaped no inconsiderable pleasure from a perusal of the first portion of the Life of Bonaparte. Its style is pure and spirited, its views are in general sound and impartial, and the materials are fully and lucidly condensed. It is written as if meant to be read for a party, but for the people, and as such, we trust, it will be appreciated."—*New Monthly Magazine.*
 John Murray, Albemarle Street.

Crown 8vo. 10s. 6d.
ON the PROGRESS OF SOCIETY.
 By Dr. HAMILTON, of Aberdeen.
 Author of "An Essay on the National Debt."
 "We cordially recommend the volume to those who are, as well as to those who are not, acquainted with the valuable science of which it treats—a science which is now just looked upon as an essential branch of liberal education."—*Monthly Review*, Dec. 1830.
 "This is a book of sensible essays on various topics of political economy, very useful and very interesting, as shewing what may be considered the practical part of the subject. On the whole, we may say of Dr. Hamilton's book, that to those who are commencing the study of political economy, it will convey much interesting and important information."—*New Monthly Mag.*
 John Murray, Albemarle Street.

With Woodcuts, 2 vols. post 8vo. 16s.
A YEAR IN SPAIN.
 By a YOUNG AMERICAN.
 "Two agreeable volumes—the writer a very intelligent person."—*Monthly Magazine.*
 "It is particularly delightful to meet with a work like this, which gives us an impartial picture of that never-changing and yet ever-interesting part of the peninsula. There is a sustained raciness and freshness in these sketches, with which even the least-informed reader can hardly fail to be pleased."—*Monthly Review.*
 "A lively and pleasant work, reflecting great credit on its author, and affording, in every page, various and agreeable entertainment to the reader. The Young American understands how to travel—a science which all who publish travels are by no means masters of."—*New Monthly Magazine*, April 1831.
 "It is indeed the pleasantest book of the kind we ever read."—*Englishman's Mag.*
 John Murray, Albemarle Street.

In 8vo. 120 double Columns, and Eight Engravings, price 1s.

Genealogies of the Royal Families of Europe.
 In 4to. price 9s. 6d. half-bound and lettered,
MAPS and TABLES of CHRONOLOGY and GENEALOGY; illustrative of the History of Europe, Selected and Translated from Monsieur Koch's "Tableaux des Révolutions de l'Europe," for the Use of Harrow School.
 "The present work was undertaken with a view to illustrate a course of Elementary Lectures on Modern History lately introduced at Harrow School: the repetition of the Map of Europe, with the Names and Divisions suitable to Seven different Periods of History, the Genealogies of the Royal Houses, and the Chronological Table from the overthrow of the Western Empire, will render this work, it is hoped, a useful companion to the Historical Works of Gibbon and Russell, of Mr. Hallam and M. Sismondi.
 Printed for Baldwin and Cradock, Paternoster Row.

Third edition of *Guy's Historical Question-Book*.

Price 4s. 6d. handsomely bound in green.

THE GENERAL SCHOOL QUESTION-BOOK.

By JOSEPH GUY.

Late Professor at the Royal Military College, and Author of the School Geography, and many other popular school books.

The first and chief object of this manual has been to supply youth with a compendium of general history; and, perhaps, such a body of historical matter has never been compressed in so moderate a volume. It embraces the most prominent features of Ten Ancient and Eighteen Modern Kingdoms and States. The Miscellaneous portion includes the Human Structure explained—the Mental Powers—Productions for Food, Wines, Spices, &c.—Gums, Spices, &c.—Mineralogy, Earths, Gems, Woods, Vegetables—Titles and Distinctions, great Offices, Government, Law, &c.—Titles, Corporations, Trade, and Commerce—Poetical and Literary Terms—the Different Denominations of Christians, &c.

Three large octavo editions of this valuable school book have been called for within twelve months.

Printed for Baldwin and Cradock, Paternoster Row.

The Family Cabinet Atlas of 100 Maps, Romantic Lives and Histories, and Popular Novels.

Just published by Edward Bull, New Public Subscription Library, 30, Holles Street, Cavendish Square.

THE ANATOMY OF SOCIETY.

By J. AUGUSTUS ST. JOHN.

In 3 vols.

"These compositions have reference to the present and past state of society in civilised countries. They teem with thought, with the speculations and illustrations of a meditative, liberal, cultivated, and classical mind."—*Morning Herald*.

Mr. Power's New Work.

2. *The King's Secret*, Author of the "Lost Hair." 3 vols.

"Give it an understanding, but no tongue."—*Shakespeare*.
"The story is as original as it is interesting, and the interest is as well sustained as its mystery. We have the 'King's Secret' to be among the very best of our historic fictions."—*Lit. Gazette*.

3. *The Way of the World*. By the Author of "Do Laide," &c.
"We prefer this to the author's former works."—*Literary Gazette*.

4. *The Family Cabinet Atlas of 100 Maps*, &c. now complete, in 12 Parts, forming a volume of the Family Library size, and presenting, besides new and important features, nearly 50,000 Names of Places—a body of information three times as extensive as that supplied by the generality of quarto Atlases. Each Part 8s. 6d. finely coloured.

"This Atlas far surpasses any thing of the kind."—*Monthly Review*.

5. *Romance of History—France*. From the time of Charlemagne to Louis XIV. Invaluable. By Lettich Ritchie. 2d edition. 3 vols.

"Mr. Ritchie is by far our best writer of romantic and imaginative tales."—*Literary Gazette*.
"He is the Scott of the short, picturesque, bold, and dramatic story."—*Atlas*.

"His stories are the best we have met with."—*Spectator*.
6. *Lives of the Italian Poets*, by the Rev. Henry Stebbing, M.A. In 3 vols. embellished with Medallion Portraits.

"The subject is admirably chosen, and written with elegance. The Italian poets lived as well as wrote it."—*Spectator*.
"These Lives embrace all the most distinguished names of Italy."—*Athenaeum*.

"A very valuable addition to our literature."—*Court Journal*.
"The high merit of these volumes will recommend them."—*Literary Gazette*.

7. *The Life of Mrs. Jordan*, by James Boaden, Esq. 2d edition, in 3 vols. 8vo. with Portrait.
"Mr. Boaden has brought into clear view much that was formerly hidden in obscurity and falsehood. He has had the justice, likewise, to let Mrs. Jordan speak for herself. Her letters, which he has inserted, carry the strongest claims to attention."—*Courier*.

On the 24 May.

THE METROPOLITAN; a Monthly

Journal of Literature.

Edited by THOMAS CAMPBELL, Esq.

Author of the "Pleasures of Hope."

Assisted by the leading Literary Characters of the Day. The professions of which a prospectus is usually composed are so much matters of course, that of occupying the reader's attention with dull repetitions, we shall state our views briefly, and refer to the work itself for every other explanation which may be deemed necessary. The present publication has no other objects than such as are naturally connected with all similar undertakings, but it will come forth free from every sinister shade. Perfect freedom and strict impartiality will be pre-eminently conspicuous in the conduct of the Metropolitan.

The employment of every description of periodical work as a medium for diffusing false impressions of the character of new publications, has in the present day been carried to such an extent as to injure seriously the cause of literature. Authors and publishers have been alike the victims of this prevailing evil. One important feature in the Metropolitan will be impartial and unbiased critical notices. Whether right or wrong in judging, the Metropolitan will never be the means of doing injury to the interests of the proprietors in its criticisms; this is to be understood in the most clear and ample manner. All works will be noticed with the same candour, and as much as possible without asperity; unless, indeed, false taste and immoral feeling justify a contrary course.

Well-known writers of unquestionable talent will be contributors to the Metropolitan, besides many to whom the public have been hitherto strangers. Such as may be tempted by their love of literature to send their contributions to the Publishers, if yet strangers to the press, will have their papers considered with consideration and impartiality, and if not accepted, carefully returned.

Essays, sketches, tales, reviews, poetry, the fine arts, the drama, music, and the sciences in general, will have place in the pages of the Metropolitan, in which the useful and agreeable will be blended as much as possible. The transactions of learned and scientific bodies, including those remote from the metropolis, and Societies of Agriculture, Commerce, and Mechanics, will be noticed as fully as room will allow; and the compilation part will be found replete with interesting notices, and as curious in the sciences, and to the young in particular. Useful discoveries will be found duly registered. A foreign correspondence has also been organised, and no means will be neglected to identify the interests of authors and readers, as well as those of Publishers, by seeking honest and liberal literary returns, and thus justifying their support. It is time a change of system should be carried into effect extensively, for the sake of our national literature.

The topographical arrangements will be of the first character. No consideration of expense will be suffered to prevent this part of the publication from being worthy of public commendation.

All Literary Communications must be addressed to the

Publishers only.

Cochrane and Pichergill, 11, Waterloo Place, Pall Mall. Sold also by Mr. Andrews, 107, New Bond Street; and by all respectable Booksellers and News-agents throughout the United Kingdom.

Roscoe's Novelist's Library (uniformly with the *Waverley Novels*). On Monday the 24 of May, 1831, will be published No. 1. price only 6s. 6d.

The Novelist's Library. (To be continued

Monthly.) Edited by Thomas Roscoe, Esq. With Illustrations by J. G. Harriet. Containing the First Volumes of De Foë's Robinson Crusoe, to be completed in Two Volumes, with a Life of De Foë, written expressly for this edition; an elegant Portrait, engraved on steel, and Eight Engravings.

In announcing a Select Series of Classical Novels, Messrs.

Cochrane and Pichergill disclaim any intention of trespassing on the ground occupied by other publishers. Whilst the productions of writers of fiction, subsequent to the time of Fielding and Smollett, are presented in a periodical form as candidates for public favour, the Proprietors are encouraged to extend the field of rational entertainment, by offering to English readers cheap editions of the Works of those great painters of life and manners who reflect lustre on their respective countries, comprehending only such Novels and Romances as have been unequivocally stamped with popular regard, and which, from their long-admitted superiority over all competitors of their class, and their translation into various Languages, are for ever associated with the literature of the world.

The Novelist's Library will embrace the following distinguished Works:—

Robinson Crusoe—De Foë.	The Man of the World—Mac-
Tom Jones—Fielding.	Kenzie.
Joseph Andrews—Ditto.	The Man of Feeling—Do.
Amelia—Do.	Everlast—Miss Burney.
Roderick Random—Smollett.	Don Quixote—Cervantes.
Peregrine Pickle—Do.	Gil Blas—Le Sage.
Humphrey Clinker—Do.	Guzman d'Alfarache, or the
Vicar of Wakefield—Gold-	Spanish Rogue—Do.
smith.	Arabian Nights' Entertain-
Tommy Shandy—Sterne.	ments.
Gulliver's Travels—Swift.	

With others of equal popularity, whose authors, it is acknowledged, wrote "for all time," and whose happy illustrations of character and manners prove them to have been familiarly acquainted with human nature in all its varieties, and capable of representing life as they found it; thus furnishing an intellectual banquet, replete at once with instruction and amusement. The great estimation in which the productions of these powerful delineators of life are justly regarded, has long ceased to be confined to the land of their birth: they have been transplanted into every clime, appealing with the resplendent voice of genius to the admiration of all nations—and they have been rewarded with imperishable fame.

The best uniform editions of these celebrated works have hitherto been published in forms and at prices which have placed them beyond the reach of any but the wealthier classes of readers. To remove this inconvenience, and supply wants which the Proprietors, in the exercise of their duty, felt to be pressing, they have issued in Monthly Volumes, beautifully printed, and embellished with Plates, at the cheap price of 5s. per volume, neatly bound.

Each Author can be purchased separately. Published by Cochrane and Pichergill, 11, Waterloo Place, Pall Mall. Sold also by J. Andrews, 107, New Bond Street; and by all respectable Booksellers throughout the Kingdom.

1st of April, &c. 6d.

EPITOME OF ENGLISH LITERATURE; or, a Concentration of the matter of Standard English Authors, on a Plan entirely new; with Portraits, Biographical Sketches, &c.

No. I. containing Paley's Moral Philosophy, with a Portrait.

The object of this undertaking is to publish, in monthly Volumes, in a concentrated form, a Series of Standard English Authors, of whose works the present generation know little, and the rising youth must know less.

In history no facts, and in philosophy no reasoning, will be omitted or disguised, so as to render a reference to the original author requisite; and thus the youth especially of both sexes may become perfectly acquainted with authors regular from their bulk alone, at a comparatively little cost of time as well as price. "Were all books reduced to their quintessence, many a bulky author would make his appearance in a pamphlet; there would be scarce such a thing as a folio, and the works of an age would be contained on a few shelves."

"The pruning hand of an editor is to go over the historical and philosophical volumes, and the rising generation are to have all the old lumbering quartos and octavos compressed into duodecimos, and to become masters of philosophy, with a comparatively trifling cost of time, labour, and money. So be it! we only regret that we were born a generation too soon. The present specimen certainly speaks well for the work, and, with its portrait and very excellent biographical sketch, will be welcome to many a freshman, either in or out of the University."

The series will be confined to the popular productions of writers in prose, and the following Authors will be first selected:—Burnet, Clarendon, Gibbon, Hume, Robertson, Bacon, Locke, Paley, Addison, Goldsmith, Johnson, Milton, Swift, &c.

No. II. will be published on the 1st of May, and contain Paley's Evidences of Christianity, and Locke on the Human Understanding, with a Portrait.

Edited and printed under the superintendence of A. J. Valpy, M.A. Red Lion Court, Fleet Street; and sold by all Booksellers in Town and Country.

••• Prospectuses may be had of all Booksellers.

Dr. Lardner's Cabinet Library.

On May 24 will be published, small 8vo. price 3s. the Volume of the

ANNUAL RETROSPECT OF PUBLIC AFFAIRS FOR 1831. In 2 vols.

Being Vol. IV. of "Lardner's Cabinet Library."

Volumes published.

1. Military Memoirs of Field Marshal the Duke of Wellington, in 2 vols. Vol. I. By Capt. George Sherer.
2. The Life and Reign of George IV. in 8 vols. Vol. I.
3. Annual Retrospect of Public Affairs for 1831. Vol. I.

Forthcoming Volumes.

A View of the History of France, from the Restoration of the Bourbons to the Revolution of 1830, in 2 vols. By T. B. Macaulay, Esq. M.P.

A Life of Petrarch, in 1 vol. By Thomas Moore, Esq. Historical Memoirs of the House of Bourbon, in 8 vols. Printed for Longman, Rees, Orme, Brown, and Green.

LONDON: Published every Saturday, by W. A. SCRIPPS, at the LITERARY GAZETTE OFFICE, 7, Wellington Street, Waterloo Bridge, Strand, and 18, South Molton Street, Oxford Street; sold also by J. Chapman, Esq. 10, Pall Mall; J. G. Harriet, Marlborough, Ave Maria Lane, Liberator's Hall; A. Black, Edinburgh; Smith and Son, D. Robertson, and Atkinson and Co. Glasgow; and J. PRICE 8d.

REVIEW OF NEW BOOKS.

Commentaries on the Life and Reign of Charles the First, King of England. By I. D'Israeli. Vol. V. pp. 475. London, 1831. Colburn and Bentley.

MR. D'ISRAELI has now brought his important work to a close; and volumes more illustrative of the spirit of the times they portray were never placed before the public. As we said, when reviewing the former of these volumes, many will draw different conclusions from the very facts to which the author himself points attention; but none will deny the industry with which he collects facts, or the judicious and enlightened manner in which he reasons upon them. He has cleared away a host of prejudices and falsehoods; and as a work of patient investigation and *careful evidence*, these Commentaries are of great value. Like most biographers, he has taken up the honour of his hero as if it were his own; and Charles finds in him the ingenious defender and the eloquent eulogist. We must confess we dissent as much from this extreme praise, as we do from the extreme censure of the opposite. The king was not a sacrifice demanded by liberty, and still less a martyr; he was the victim of a small but powerful military party: his head was neither an offering to the people, nor to the church—it was simply a stepping-stone to Cromwell. The truth is, Charles, like most other individuals, was punished for his follies, rather than his faults. Never was man placed in troubled times, less fitted to comprehend their wants, or meet their difficulties. He had many fine, but no great qualities. His speeches were much nearer perfection than his actions. He ascended the throne at an extraordinary period, with which only an extraordinary man could have grappled. A mighty change had for many years been working in England. The feudal system had left its prejudices, but not its power; wealth had not only greatly increased, but changed its sources and its channels; religious had led also to political discussion; and vague, and often ill-judged persecution deepened on both sides by religion into fanaticism;—while politics wandered, as they usually do, into theory, till corrected and made substantial by practice. The crown was poor, and supported by old and false pretensions, whose wrong, or whose weakness, every day developed. At once irresolute and obstinate, unwilling to concede, and unable to enforce; taking as rules of action either worn-out prejudices, or else expediency, Charles was utterly incompetent to meet the exigencies of his time or place. In nothing was his want of mental power more evinced than in his choice of friends. That well-known and admirable reply of Waller's, when Charles II. was depreciating Elizabeth, and observed, "To whom she had very wise counsellors;" "Yes," says the true and acute answer, "but when shall we ever choose such?" The very weakness of Charles's counsellors was a proof of his own. Strafford was the only minister whose abilities were at all equal to their post; and it

may reasonably be questioned, whether the odium attached to their exercise did not counterbalance the benefit. Here was a striking instance of that deficiency in judgment which was at once Charles's great fault and misfortune. His reign is a very dreary period in English annals; the evil of its experience was even greater than that of its action. To be beneficial, all political change must be gradual;

"For of the wholly common man is made,
And custom is his nurse! Woe, then, to them
Who lay irreverent hands upon his old
House furniture, the dear inheritance
From his forefathers! For time consecrates;
And what is grey with age becomes religion."

To us it appears, that the violence, the fanaticism, the bloodshed of this period, did more to retard the progress of civil and religious liberty, than the example of resistance did to forward it. Principles admirable and immutable bore the blame of their party; and when quiet came at last, people were so exhausted, that they submitted to encroachment, rather than hazard resistance again. All felt that it was "better to bear the evils which they knew, than fly to others which they knew not of." A more enlightened and greater-minded monarch, or a parliament that had adhered to their earlier moderation, would have settled affairs on that best and surest foundation,—a liberal view of the rights of the people; and spared England years of suffering and discord. It is easy to set the past right, but more useful to draw a lesson for the present. We recommend the following passage on civil war to those who dream of revolution, even in their sleep.

"Civil, or intestine wars, are distinguishable from external, or foreign wars, by the personal hatreds of the actors. They are neither combating for ancient glory, nor for new conquests. It is the despair of their passions which involves these fraternal enemies in one common vengeance. Even conquests in civil wars render the victors fearful. Whitelocke was deeply impressed by this sorrowful observation. 'Thus,' says he, 'we may see that even after almost a conquest, yet they (the Parliament) apprehended no safety: such are the issues and miseries of a civil war, that the victors are full of fears from those they have subdued; no quiet, no security!' Where victories are painful as defeats, dark cypress, and not laurels, must be gathered. What can two armies of fellow-countrymen, sometimes two rival counties, opposed to each other with provincial malignity, destroy, but that which was their own? Him who so bravely assaults, and him who so bravely repels, the country might bless had they the hearts to be recreants! What scenes are shifted in this tragic drama! The plundered mansion—the village in flames—the farmer's homestead ravaged! Whose property has the hero of civil war plundered?—his neighbour's! Whom has he routed?—his friends! Who appear in the returns of the wounded and killed of the enemy?—his relatives! The sanctity of social life once violated, family is ranged against family; parents renounce their children; the brother is

struck by the arm of his brother; even the affection of the wife is alienated; and finally they leave the sad inheritance of their unnatural animosities from generation to generation. In civil wars not small is the number of those whose names appear in no list of the sufferers, whose wounds are not seen by any human eye, but whose deaths are as certain as any which flies with the bullet. These are they who retreat into the silence of horror and despair, and die heart-broken—or linger on with sorrows unassuaged, or unutterable griefs. But all are not patriots who combat for patriotism. All sorts of adventurers, looking up to all sorts of hopes, take their stations under opposing banners. There shall we find ambition and avarice, often revenge and ingratitude; so many are the passions civil war indulges and conceals!"

Curious combination.

"In the west of England many country gentlemen were persuaded to raise up a third party in the country, which should neither be royalist nor parliamentarian. It was to consist of an army without soldiers, for they were neither to wear swords nor carry firearms. Suddenly appeared many thousand men, who it is said at one period amounted to a body of fourteen thousand, armed with clubs and flails, sithes and sickles laid on long poles: it was an agricultural war, and the agrarian weapons, no longer wounding the fertile bosom of Nature, directed the whole rural war against man himself. Announcing that they would allow no armies to quarter within their bounds, they called themselves club-men, and decided all matters by their own club-law. They professed only to defend their harvests and their granaries. At any given point they assembled in considerable force, and their ensign bore a motto in rhymes, rude, but plain—

"If you offer to plunder and take our cattle,
You may be sure we'll give you battle."

This third party in the civil wars at first were so strange, that neither of the two great parties knew whether to consider them hostile or friendly. The club-men grew to be so formidable as to be courted by both for timely compliances and temporary aid. Cromwell, too decided a general to allow of any independent force, or of ambiguous favours, attacked this unsoldierly army, and so completely routed the rural troops, that they no longer appear in our history. It is remarkable that the term *plunder*, for military spoiliations and robberies, which we find in the rhyming motto of the club-men, was now first introduced into our language—it was brought from Germany by some of these soldiers of fortune."

Fine remarks.

"The royal army was inspired by honour, and the parliamentary army was led on by liberty."

"Military heroism excites the admiration of the world, more than any other virtue. It seems to be the original sin of our nature to be more interested by action than by repose."

Power which destroys, astonishes mankind more than power which perpetuates. A philosopher once inquired into the cause of that restlessness and disorder in man which he could not discover in any other animal. He might have recollected, that no other animal is endowed with that proud reason, which is doomed to be tormented by glory, and never satiated by self-love.

"Presumption, which is only hope run mad."

"Who suspects the monarchical devotion of Lord Falkland, the Earl of Derby, and the Marquess of Newcastle, or the anti-monarchical spirit of Milton, of Ludlow, and of him who desired no other epitaph than 'Here lies Thomas Scot, who adjudged the late king to die!' All these men worshipped the cause which they had hallowed on their own hearths; sometimes, like Gideon, they had made an ephod of their own—till it became a snare to Gideon and his house." We must not judge of these men by the philosophical spirit of our own age; it had not yet arisen. Men must suffer, before they can philosophise. The wisdom of nations must be the bitter fruit of extinct follies and obsolete crimes."

Cromwell.

"That extraordinary man, who had long witnessed the noble sacrifices of the Cavaliers, now meditated to oppose the spirit of religion to the principle of honour. It is his own avowal in a speech to parliament. We have sometimes smiled at his army halting to sing a psalm—it was as exciting as the Marseillais hymn. Cromwell was a vast genius, because he derived his greatness, not merely from his deeds, but from a higher source, from a principle which, in the present instance, unfolds the philosophy of a Montesquieu. With Cromwell's turn of mind, like another Mahomet, he might have founded a new religion. He prayed, and wept, and had all the unction of inspiration. He rarely disputed on doctrinal points, but he poured himself out on free grace."

Judge Jenkins.

"While the speaker was addressing Judge Jenkins, the old man in a low voice requested his companion not to reply—'Let all the malice fall upon me, my years can better bear it.' The speaker having ended, Judge Jenkins asked whether they would now give him liberty to speak? 'Yes! so you be not very long.' 'No! I will not trouble either myself or you with many words. Mr. Speaker! you said the house was offended at my behaviour in not making my obeisance to you when they brought me here; and this was the more wondered at, because I pretended to be knowing in the laws of the land. I answer, that I not only pretend to be, but am knowing in the laws of the land, having made them my study for these five-and-forty years; and it is because I am so, is the reason of my behaviour. As long as you had the king's arms engraven on your mace, and that your great seal was no counterfeit, and acting under his authority, I would have bowed in obedience to his writ, by which you were first called. But, Mr. Speaker, since you and this house have renounced your allegiance to your sovereign, and are become a den of thieves, should I bow myself in this house of Rimmon, the Lord would not pardon me!' The whole house were electrified—all rose in uproar and confusion! It was long ere order could be obtained, or their fury could exhaust itself. It seemed as if every member shrunk from a personal attack. The house voted the prisoners guilty of high treason, without any trial, and

should suffer as in case of condemnation for treason. They called in the keeper of Newgate to learn the usual days of execution, which were Wednesdays and Fridays. The day to be appointed then became the subject of their debate. At this critical moment, when it seemed to be out of all human chances to spare the life of

'This greatest clerk, but not the wisest man,'

the facetious and dissolute Harry Martin, who had not yet spoken, rose, not to dissent from the vote of the house, he observed, but he had something to say about the time of the execution. 'Mr. Speaker! every one must believe that this old gentleman here is fully possessed in his head, resolved to die a martyr in his cause, for otherwise he would never have provoked the house by such biting expressions. If you execute him, you do precisely that which he hopes for, and his execution will have a great influence over the people, since he is condemned without a jury; I therefore move that we should suspend the day of execution, and in the meantime force him to live in spite of his teeth.' The drollery of the motion put the house into better humour, and the state-prisoners were remanded."

Anecdotes.

"The French secretary of state, when alluding to a proposed bribery for the Chancellor of Scotland, assigns as one reason that his lordship would not be offended,—'parcequ'il est Ecossois qui vaut autant à dire qu'intéressé.' The poverty of Scotland at that time is but a poor plea for this dereliction of honour and of morality; but these were the Covenanters of that brave and shrewd people!"

"When the commissioners were preparing for the trial of the king, they debated whether they should have in court both a sword and a mace; for this huddled government, not having yet had time to order a commonwealth-mace, the one in use bore the royal arms. There was something antithetical in the present process of displaying the regal authority in the moment of the abolition of monarchy. They resolved to have both, the sword alone looking too terrible."

"A domestic incident which occurred the evening preceding his execution, gives a touching representation of the man. Charles taking off an emerald ring from his finger, seemed anxious that Herbert, if possible, should hasten immediately and deliver it to a lady, without saying a word. Herbert by great favour procured the parole, and not with little difficulty threaded his way by the numerous sentinels, at that late hour. At the sight of the ring, the lady, who resided in the neighbourhood, desired Herbert to wait. She returned with a little cabinet, closed with three seals, praying that it might be delivered to the hand which sent that ring, and which was left with her. In the morning the mysterious cabinet was opened, it contained diamonds and jewels, and for the most part broken Georges and Garters. 'You see,' said Charles, 'all the wealth now in my power to give my two children.' The person with whom the cabinet had been deposited by the provident monarch was Lady Wheeler, the royal laundress."

We conclude with the following admirable observation.

"Every age has its character, which is derived from the circumstances of the period, but the principle by which men are actuated has ever been the same. Such vague and disturbed notions of civil liberty were more palpable when these 'rationalists' were denominated 'the levellers.' Then was comprehended the nature of their chimerical republics, every man choosing to live in one of his own."

Then appeared their barbarous independence, and their ceaseless innovations. All the vain hopes of the eternal restlessness of man, placed amidst the corruptions of human institutions, and the conflicting interests of society itself. The greater peril into which a nation is cast, is when the varied land-marks of society are violently removed; then the demagogue shews his towering head, the reckless adventurer grasps at the universal spoil, and the orator invokes liberty, with a heart vowed to the wretched slavery of flattering the passions of the people."

These volumes cannot be too universally read; read attentively and thoughtfully by all who desire to know the history of this interesting and momentous period. Mr. D'Israeli has been indefatigable; and whether we agree or differ with the author's opinions, we cannot but appreciate the author himself. He places Charles's portrait in the best light, and we imagine our own conclusion will be that of most of our readers;—our sympathies of feeling lean to the side of the king; our sympathies of thought to that of the parliament.

Sketches of Irish Character. By Mrs. S. C. Hall. Second Series, pp. 448. London, 1831. Westley and Davis.*

THIS is a work that is both delightful and useful: delightful, for the stories are at once interesting and amusing, and told with all the life of native vivacity; and useful, for to point out a fault is one step towards correcting it; and many indigenous faults are here truly but kindly touched. That liability to excitement which induces an Irishman to act before he thinks, that procrastinating indolence which insinuates itself under the seductive form of easy good nature, the want of that order which is the great excellence of social life,—all these are strikingly painted, and perhaps are the more obvious to every judgment from the simple and natural method in which they are brought out. The scenes are vivid, because they are true. "Mark Connor's Wooing and Wedding," we like much; the difficulties of doing, and yet the much that may be done in the way of improvement, are excellently well shewn. "Mabel O'Neil's Curse" is a very dramatic story; but perhaps the "Rapparee" will be the general favourite. The sketch we extract has the double merit of being essentially Irish, and conveying a most useful lesson—one which points out the misery arising from a national vice (we can call it by no lighter name), that has caused more evil than even "the creature" (*Anglicè* whisky) or the shillelah.

"We'll see about it!" From that simple sentence has arisen more evil to Ireland than any person, ignorant of the strange union of impetuosity and procrastination my countrymen exhibit, could well believe. They are sufficiently prompt and energetic where the feelings are concerned, but, in matters of business, they almost invariably prefer *seeing about* to doing. I shall not find it difficult to illustrate this observation. From the many examples of its truth, in high and in low life, select Philip Garraty. Philip, and Philip's wife, and Philip's children, and all the boys of Garraty, are employed from morning night in *seeing about* every thing, and, consequently, in *doing* nothing. There is Philip, a tall, handsome, good-humoured fellow, about five and thirty, with broad, lazy-looking shoulders, and a smile perpetually lurking at

* There is also a Second Edition of the First Series, pp. 458.

his mouth, for in his bright hazel eyes, the picture of indolence and kindly feeling. There he is, leaning over what was once a five-barred gate, and leads to the hag-yard; his blue worsted stockings full of holes, which the sultan, twisted half-way up the well-formed leg, fails to conceal; while his brogues (to use his own words), if they do let the water in, let it out again. With what unstudied elegance does he roll that knotted twine, and then unroll it; varying his occupation, at times, by kicking the stones that once formed a wall into the stagnant pool, scarcely large enough for full-grown ducks to sail in. But let us first take a survey of the premises. The dwelling-house is a long rambling abode, much larger than the generality of those that fall to the lot of small Irish farmers; but the fact is, that Philip rents one of the most extensive farms in the neighbourhood, and ought to be 'well to do in the world.' The dwelling looks very comfortable, notwithstanding: part of the thatch is much decayed, and the rank weeds and damp moss nearly cover it; the door-posts are only united to the wall by a few scattered portions of clay and stone, and the door itself is hanging but by one hinge; the window-frames shake in the passing wind, and some of the compartments are stuffed with the crown of a hat, or a 'lock of straw,' very unsightly objects. At the opposite side of the swamp is the hag-yard gate, where a broken line of alternate palings and wall exhibits proof that it had formerly been fenced in; the commodious barn is almost roofless, and the other sheds pretty much in the same condition; the pig-sty is deserted by the grubbing lady and her granting progeny, who are too fond of an occasional repast in the once-cultivated garden to remain in their proper abode; the listless turkeys, and contented half-fatted geese, live at large and on the public; but the turkeys, with all their shyness and modesty, have the best of it, for they mount the ill-built stacks, and select the grain *à plaisir*. 'Give you good morrow, Mr. Philip; we have had showery weather lately.' 'Och! all manner o' joy to ye, my lady!—and sure ye'll walk in, and sit down; my woman will be proud to see ye. I'm sartin we'll have the rain soon agin, for it's every where, like bad luck; and my throat's sore wid hurishing thim pigs but o' the garden—sorra a thing can I do all day for watching thim.' 'Why do you not mend the door of the sty?' 'True for ye, ma'am dear; so I would if I had the nails; and I've been threatenin' to step down to Mickey Bow, the smith, to ask him to see about it.' 'I hear you've had a fine crop of wheat, Philip.' 'Thank God for all things! You may say that; we had, my lady, a fine crop; but I have always the hight of ill luck somehow; upon my sowkins (and that's the hardest oath I swear) the turkeys have had the most of it: but I mean to see about setting it up safe to-morrow.' 'But, Philip, I thought you sold the wheat, stradin', to the steward at the big house.' 'It was all as one as sould, only it's a bad world, madam dear, and I've no luck. Says the steward to me, says he, I like to do things like a man of business, so, Mister Garraty, just draw up a bit of an agreement that you deliver over the wheat-field to me, on such a day, standing as it is, for such a sum; and I'll sign it for ye, and thin there can be no mistake—only let me have it by this day week. Well, to be sure, I came home full o' my bad luck, and I tould the wife; and, on the strength of it, she must have a new gown. And now, says she, Miss Hemmsey is just come from Dublin, wid a shop-full o' goods; and, on

account that she's my brother's sister-in-law's first cousin, she'll let me have the first sight o' the things, and I can take my pick, and we'll have plenty of time to see about the agreement to-morrow. Well, I don't know how it was, but the next day we had no paper, nor ink, nor pens in the house; I meant to send the gossoon to Miss Hennessy's for all—but forgot the pens. So, when I was seeing about the 'greement, I bethought of the ould gander; and while I was pulling as beautiful a pen as ever ye laid y'er two eyes upon, out of his wing, he tattered my hand with his bill in such a manner, that sorra a pen I could hould for three days. Well, one thing or another put it off for ever so long; and at last I wrote it out like print, and takes it myself to the steward.—Good evening to you, Mr. Garraty, says he. Good evening kindly, sir, says I, and I hope the woman that owns ye, and all y'er good family's well. All well, thank ye, Mr. Garraty, says he. I've got the 'greement here, sir, says I, pulling it out, as I thought—but, behold ye—I only cotcht the paper it was wrapt in, to keep it from the dirt of the tobacco, that was loose in my pocket for want of a box (saving y'er presence); so I turned what little bits o' things I had in it out, and there was a grate hole that ye might drive all the parish rats through, at the bottom, which the wife promised to see about mending, as good as six months before. Well, I saw the sneer on his ugly mouth (for he's an Englishman), and I turned it off with a laugh, and said air-holes were comfortable in hot weather, and sich-like jokes, and that I'd go home and make another 'greement. 'Greement! for what?—says he, laying down his grate outlandish pipe. Whew! may-be ye don't know, says I. Not I, says he. The wheat-field, says I. Why, says he, didn't I tell you then, that you must bring the 'greement to me by that day week?—and that was, by the same token (pulling a red memorandum-book out of his pocket), let me see—exactly this day three weeks. Do you think, Mr. Garraty, he goes on, that when ye didn't care to look after y'er own interests, and I offering so fair for the field, I was going to wait upon you? I don't lose my papers in the Irish fashion. Well, that last set me up—and so I axed him if it was the pattern of his English breeding; and one word brought on another; and all the blood in my body rushed into my fist, and I had the ill luck to knock him down; and, the coward, what does he do but takes the law o' me—and I was cast, and lost the sale of the wheat, and was ordered to pay ever so much money; well, I didn't care to pay it then, but gave an engagement; and I meant to see about it—but forgot; and, all in a giffy, came a thing they call an execution—and, to stop the cant, I was forced to borrow money from that tame negur, the exciseman, who'd sell the sowl out of his grand-mother for sixpence (if, indeed, there ever was a sowl in the family)—and it's a terrible case to be paying interest for it still.' 'But, Philip, you might give up or dispose of part of your farm. I know you could get a good sum of money for that rich meadow by the river.' 'True for ye, ma'am dear, and I've been seeing about it for a long time, but somehow I have no luck. Just as ye came up, I was thinking to myself that the gale-day is passed, and all one as before, yarra a pin's worth have I for the rint, and the landlord wants it as bad as I do, though it's a shame to say that of a gentleman; for, just as he was seeing about some ould custodium, or something of the sort, that had been hanging over the estate ever since he came to it, the sheriff's officers put executioners

in the house; and it's very sorrowful for both of us, if I may make bould to say so; for I am sartin he'll be racking me for the money, and, indeed, the ould huntsman tould me as much; but I must see about it: not, indeed, that it's much good, for I've no luck.' 'Let me beg of you, Philip, not to take such an idea into your head; do not lose a moment; you will be utterly ruined if ye do. Why not apply to your father-in-law?—he is able to assist you; for at present you only suffer from temporary embarrassment.' 'True for ye, that's good advice, my lady; and, by the blessing of God, I'll see about it.' 'Then go directly, Philip.' 'Directly! I can't, ma'am dear, on account of the pigs; and sorra a one I have but myself to keep them out of the cabbages; for I let the woman and the grawls go to the pattern at Killlaun; it's little pleasure they see, the cratura!' 'But your wife did not hear the huntsman's story?' 'Och! ay, did she; but, unless she could give me a sheaf o' bank notes, where would be the good of her staying?—but I'll see about it.' 'Immediately, then, Philip; think upon the ruin that may come—nay, that must come, if you neglect this matter: your wife, too—your family reduced from comfort to starvation—your home desolate.' 'Asy, my lady!—don't be after breaking my heart intirely; thank God, I have seven as fine flahnlugh children as ever peeled pratee, and all under twelve years ould; and sure I'd lay down my life tin times over for every one o' them; and to-morrow for sartin—no—to-morrow—the hurling; I can't to-morrow; but the day after, if I'm a living man, I'll see about it.' Poor Philip! his kindly feelings were valueless because of his unfortunate habit. Would that this were the only example I could produce of the ill effects of that dangerous little sentence—'I'll see about it!'

This is so long a quotation, that we have left ourselves no space to shew cause why we praise the liveliness with which Mrs. Hall touches all the love scenes. She is exceedingly happy in her feminine amiables. We have been much amused by one little sentence: "I do firmly believe women are a compound of aristocracy and rebellion." The first of these series has already past into a second edition, to which is prefixed a very ingenious and interesting preface by Dr. Walsh. We now leave the two volumes to that public favour which they well deserve, and to which we cordially commend them.

The Cat's Tail: being the History of Childe Merlin. A Tale. By the Baroness de Katleben. 12mo. pp. 31. Edinburgh, 1831, Blackwood; London, Cadell.

THE object of this trifle is not very explicit. In its outset we find the germ of a moral *jeu-d'esprit* on the grand phenomena of education, and the "march of intellect;" but it immediately slides into a real cat's tale; and the life and adventures of Merlin the Cat, interspersed, it is true, with some shrewd remarks on life, bring us to the conclusion. There may be something perdu in this history, but we have not the clue to find it out; and therefore, however it impeaches our critical sagacity, we can only construe the performance literally. The dedication "To the Infant Public" is very good:—

"My dear little Friends,—Your entrance upon the grand theatre of life having, happily for you, been delayed until an era of advanced civilisation, when the march of mind is making such rapid strides towards perfectibility, that every philosopher in swaddling clothes is competent to the office, so pleasingly illustrated by our inimitable Crinkshank, of 'teaching its

grandmother to suck eggs; I dedicate to you the feline epic of 'The Cat's Tail,' more apprehensive that its construction should fall *below* the level of your understanding, than that it should call forth any painful exertion of your comprehensive faculties; albeit the said epic is, doubtless, interspersed and dignified by certain passages and allusions presupposing a precociousness of intellect on your part, which it would have been absurd to build on in those dark days of our fathers and grandfathers, when 'the young ideas,' so far from 'shooting' up to perfection, (as is the case in our glorious age), like mushrooms in a forcing bed, were condemned to struggle their painful way to maturity through hard clods and frosty mornings, without further help than rough hoeing and weeding, and now and then a little thinning and topping too, according to the barbarous fashion of those benighted times. I congratulate you, enlightened juveniles! on your happier destinies, which fully to appreciate, however, you should frequently call to mind the sufferings and degradation to which your less-favoured progenitors and progenitrixes were ruthlessly subjected, not only in their toilsome ascent up the rugged rock of knowledge, but under all circumstances of their hapless infancy. Figure to yourselves, my sweet Angelina Cecilia! and my lovely little Emily Anna Maria! and Augusta Matilda! the contrast of your own perfect *tout ensemble*, all laced and braced, sandalled and trinketed, curled, frizzled, and essenced, trousered, flounced, and furbelowed, like a brood of Bantam's graces, in full preparation to cluster, with the best possible drawing-room effect, round the *chaise longue* of the maternal Venus: figure to yourselves, I say, the contrast of your infant persons, so decorated, to those of your great aunts, Betty, Bridget, and Barbara, as you see them represented in the old family picture, which has so long served your brothers for a target, in the great lumber-room behind your nursery. There they stand, the three antique innocents! as just sent down, hand-in-hand (like the babes in the wood), to ask papa's and mamma's blessing, after a toilette, the mysteries whereof consisted of being tied up (like measures of wheat) in plain white frocks, with plenty of tucks to allow for after-growth; blue, mottled, unstocking legs and chilblained feet, thrust and stamped down into red morocco shoes, the *ne plus ultra* of that day's infant finery; hair brushed smooth, and shining, or left to curl and wave, at Nature the old obsolete beldame's pleasure, about sunburnt polls, or frost-bitten ears, according to the season; and, as the finishing touch, their poor dear little snub noses rubbed up all the wrong way with cold water and soap, and a towel like a currycomb, by a nursery-maid who performed the operation with no more consideration for tender flesh than if she had been dry rubbing a mahogany table. Picture to yourselves this contrast, (no fancy piece, my young friends!), and, as you will find it written somewhere in the subjoined poem,

'Be thankful such woes are not meted to you.'

The poem which follows this neat introduction describes the hero kitten and his attaining to cat-hood. His most perilous trial during kittency was being thrown upon the fire along with coals from the coal-box, where he was wont to roll himself up for a snooze, and being of coal-colour was not seen. We quote the end of it.

"To conclude that adventure, I've only to tell, That, for once, Master Merlin got off pretty well—

The tip of his tail was just frizzled or so,
(A cat's tail is soon whisked on fire, you know),
And the rim of one ear, just enough to smell musty,
And the moustache on one cheek (the right) was mingled rusty;

That, indeed, was unlucky; for by the great care
Most gentlemen take of those two tufts of hair,
I suppose (though the thing I can't quite comprehend)
Their honour and welfare must somehow depend
On the flourishing state, knowing twirl, and all that,
Of those curly curls, twining, twisting, and matting, for a cat
The ornament's all very well in its way—
Appropriate, neat, and so forth. But to say,
In a gentleman's phiz, that I think it engaging,
Would be false—and no falsehood shall enter my page in."

Important as it might be to the feline race, yet as we are not sure that we number any of them among our readers, since we lost our poor favourite Tom about a month ago; and as it cannot be so interesting to our human friends, we shall pass over the marriage, &c. of Merlin to a tabby older than himself, and simply illustrate the talent (or talon) of the Baroness of Katzeleben by a description of his widowhood and its consequences. By his unkindness

"She was struck to the heart—sicken'd—took to her bed,
And never smiled after, nor held up her head.
He was shock'd, made apologies, swore by his beard—
(Twas burnt off, by the by)—'there was nothing he fear'd

Half so much as the loss of so virtuous a wife,
For whom he was ready to lay down his life,
If the Fates would be pleased to accept it, instead
Of her precious existence. It made his heart bleed
To behold her sad state—it was too much, indeed,
For his poor shattered nerves. Just to vary the scene,
He'd step out a minute or two on the green,
Take a turn up and down, and a sniff of fresh air.
So he went; and, by mere chance, encountering there
His cousin (a giddy, young, frolicsome gig)—
'I'll tell you what, Grizy! says he, 'dash my wig!
If I don't think the old lady's hopping the twig!'

His good feelings, indeed—'tis most certain they fall'd
At this critical juncture, when conjugal love
Should have caused him to mourn, like a fond, faithful dove,
For his dear dying spouse. But, perhaps, after all,
(For there's nothing like candour) those words were let fall

In a passion of grief, when unspeakable pain
Had with sudden dullness affected his brain;
Or, may be, he affected that frolicsome air
Just to mask his soul's anguish, his deadly despair:
We know not how doleful appearances are,
And how many examples (without searching far)
May be found, of disconsolate husbands, left lonely
By the death of dear spouses, whose sorrows can only
Be guess'd at, with art so profound they conceal
That 'grief passing show' which we know they must feel.

There's something excessively moving, my dears,
In that grief which the poet calls 'too deep for tears.'
'Tis so very refined—so so deep!—and all that;
And there can be no doubt but our poor widowed cat
(For his lady went off that same day in a dose—
A sweet quiet ending!) felt exquisite throes
Of extremest concern; though to outward appearance
You'd have sworn he consider'd her loss a good clearance.
That night, just as usual, he went out a-mousing,
And up, in the moonshine, I saw him carousing
On the roof of a house, with a frolicsome set
Of his long-tail'd associates. Perhaps they were met
(Indeed, by the clamours I heard over head,
I should think it most likely) to howl for the dead.

One thing, I must own, seem'd at first rather shocking,
And one can't be surprised that it set people talking.
Before his late spouse had departed this life
The short space of three days, he had taken to wife—
(Such indecorous haste turns one's senses quite dizzy
At the first contemplation)—his cousin Miss Grizy!
Good gracious! how people (the ladies most furiously)
Cried shame on such scandalous haste! how injuriously
They bespatter'd poor Merlin! and yet it came out,
After all, that they set up this terrible shout
At an act that had been, on the widower's part,
Perform'd with excessive reluctance of heart,
In compliance with wishes breathed into his ear
With her very last sigh by his poor dying dear!

'Tis surprising how often fond wives, when they're dying,
Make this parting request! and how very complying
The wretched survivors invariably prove
With that sad, solemn, sacred injunction of love!"

The pious match, however, turns out unhappy—the couple quarrel terribly; for the lady is extremely gay, and

"Whole days to some gloomy seclusion he'd fly,
On a rafter perch'd up in the cock-loft so high;
And there, in a sort of brown study or daze,
Would he sit, with the tears trickling off from his nose

To his whiskers, till each to the tip so beest
From his muzzle, stuck out like a diamond algetta."

But
"By degrees (as in time all things here find their level)
Our couple grown wiser, grew distant and civil,
Chose separate lodgings, kept separate table,
(Leaving her the whole house-range, he took to the stable),
And by private convention, where each was a winner,
Never met but to see some set party to dinner.
At such times their behaviour was really quite sterling!
So polite and all that. 'Twas, 'My dear Mister Merlin,
Shall I send you a leg of this mouse? It's so juicy.'
And, 'My dear Mrs. M., sometimes 'dear Mrs. Pussy,
Let me tempt you to try this cock-robin au naturel,
Or a few of these chafers croquant à la pastecalle;
Dip your whiskers, my life, in this cream or this custard;
Do, love! try this fondou—it's made without mustard.'

Now and then there were side-hits, a little bit spiteful,
But perfectly well bred. Enfin, 'twas delightful!
And the Merlins were cited in all their friends' houses
As 'glasses of fashion,' and quite pattern spouses."

With these extracts we trust the public will be satisfied; and we will not anticipate the uncommon catastrophe. Three etchings by G. Cruikshank, the frontispiece of the lady and the cat especially, are very clever, in spite of a little spiteful touch at the science of embellishing books. We quote it, though we can scarcely credit the *insinuation*!

"But, before we go farther, just look, dears, I pray,
There's a sketch done from nature the very same day
By a faithful eye-witness. O! no matter who,
Nor where posted precisely while taking the view:
A book-maker can't be expected, you know,
To explain all those trifles; he tells you 'he so,'
And you're bound to believe him. If folks were so prying,
Half the prettiest stories would turn out sheer lying!
Half the travels and tours, picturesque and poetical,
Interspersed with neat incidents, touches poetical,
All with pictures illustrative, done on the spot,
Might be proved—what my story, remember, is not—
A mere catch-penny humbug."

Bogle Corbet; or, the Emigrants. By John Galt, Esq., author of "Lawrie Todd," "The Life of Lord Byron," &c. &c. 3 vols. 12mo. London, 1831. Colburn and Bentley.

AT this late period of the week it is impossible to do justice to a work which contains the records of a life full of practical experience. It is characterised by its motto, "Truth severe by fiction dress;" and how this plan is to be carried into execution is well set forth in the preface.

"Information given as incidents of personal experience is more instructive than opinion. The author's opportunities to acquire knowledge of the kind which he has here prepared, have been, at least, not common, and it was studiously gathered to be useful to others. He had proposed to offer the result of his observations in a regular didactic form, but, upon reflection, a theoretic biography seemed better calculated to ensure the effect desired. We disguise medicine, and he but mixes truth with fiction. . . .

*** The object of this work has been to give expression to the probable feelings of a character upon whom the commercial circumstances of the age have had their natural effect, and to shew what a person of ordinary genteel habits has really to expect in emigrating to Canada."

We shall now, without further parley, endeavour to give an idea of the miscellaneous contents of these pages. The conversation in which the hero's destiny is arranged by his two doers (*Anglicæ*, guardians) is full of Mr. Galt's peculiar and quaint humour; it is too good to be omitted.

"The punch being ready and the glasses charged,—the king and constitution were previously drank in the wine,—Mr. Macindoe turned himself to me, then about seventeen years of age, and said, 'Bogle Corbet, my lad, this is an occasion made on purpose for you, and may you never get a worse dinner, though certainly the broth might have been better boiled,—ahem! gude wife, do you hear that?—Well, Bogle Corbet, we are here met, and I have duly considered what the doctor has often

said to me—ahem!—or ought to have said,—That there is nothing now-a-days like the manufacturing line.” Mr. Macindoe, interposed the doctor, “I do not recollect that I ever emitted an opinion on the subject.” “Well, well, doctor, we’ll not cast out about that; but if ye did not, no man could better than yourself prove all its advantages. However, we can defer the consideration of that particularity till another time, and keep to the matter in hand, which, Bogle Corbet, as I was saying, is a lucky thing for you; ye have only to put your heel in your neck, and whirl yourself into Mr. Aird’s loom-shop;—I hope, James, ye’ll not object to take him. But how is the punch? don’t you think it would stand a leetle squeeze of the lime?” “I am of opinion,” replied the doctor, “that we should consult the predilections of our ward himself. It has not been the custom for many years—” “You are quite right,” interrupted my other curator, “and I think it smacks too much of the souring; a small knob of sugar will mend all. Ladies, this is real prime; take off your heel-tops, and send me your glasses. No doubt, Mr. Aird, ye’ll have some notion where Bogle Corbet, poor fellow, should be boarded. Don’t you think, doctor, that Mrs. Wadset, if she could be persuaded to take him, would make a capital landlady? Oh! such an alteration it is, to even her, to taking lodgers. There was not a more topping merchant than her husband in all the Virginia trade, before the war. Bogle Corbet, would not you like to bide with Mrs. Wadset?” “He never heard of her before,” said my most worthy Mrs. Busby. “If ye had riddled with a riddle the whole tot of the widows of Glasgow, ye could nae hae chosen from the leavings a more discreet woman.” “But,” said Dr. Leach, “are we not proceeding too fast? I beg to observe—” “Ay, ay,” cried Mr. Macindoe, “I should have given the toast first; this is Bogle Corbet’s health, and good luck to him, both as a weaver, and as a manufacturer!—I’m thinking, gude wife, your teakettle’s boiling;—Bogle Corbet, here’s your health, my lad.” “Really, Mr. Macindoe,” interposed the doctor, “we ought not to be in such haste; I was not aware that the matter had been decided before I came here.” “Doctor, doctor, if ye had been a man of business, ye would have known that matters of trade are best managed by settling them at once, and consulting about them after. However, it is a great satisfaction to me to find your opinion so conjunct with mine. Take off your glass, doctor; and, Mr. Aird, ye’re no’ feared for the road. It’s no’ the length, but the breadth of it, that should trouble you when ye go from my house.” “Deed, Mr. Macindoe, I’ll ne’er deny that your drink’s worth the taking away wi’ us. It’s no’ the first time that I hae stagger’d aneath the burden; but I’ll gie you a sentiment: ‘Let Glasgow flourish by the weaving of cotton.’ Bogle Corbet, ye canna but cock your wee finger aboon your neb to that.” At this crisis the ladies rose and went away. An end was removed from the table, which was wheeled towards the fire; and, after some other adjustments, the deliberation was resumed. “Well,” said Mr. Macindoe, after he had again filled the gentlemen’s glasses, “this has been a highly satisfactory conversation, and I must here before my colleague frankly declare, that in all the three years we have sat together as Bogle Corbet’s doers, we have never once differed. Is not that true, doctor? Indeed, considering your experience, I have had but to bow my head to the suggestions of your practical understanding, and to follow in the right course.” “I am much obliged to you, Mr. Macindoe,” said Dr. Leach, “but in this

matter—” “There could indeed be no difference of opinion. The cotton trade presents a great opening, and we could not shut our eyes to the manifest advantage it is to Bogle Corbet. Don’t you think we would be the better of a biscuit, a slice of tongue, or a capling? Bogle Corbet, touch the bell; we’ll have it to the next bowl. A cobble is but a small boat; I wish the gude wife had thought better of the occasion; and given me the bigger bowl; but women will have their own way sometimes, though I must allow Mrs. Macindoe is one of the best of her kind; but, Mr. Aird, will ye see to Mrs. Wadset? It was a happy thought to think on her.” “And are ye really resolved, Mr. Macindoe?” inquired the doctor, in a tone that betokened compliance. “Not if there is anything to be alleged against the fitness of the lady; and it will help her—she’s cousin to my wife—and you know the old saying, ‘a friend in need, is a friend indeed;’ we’ll make it our sentiment.” Thus was it decided that I was to be a manufacturer. The courteous reader will discern how ably and fully all points of the question were discussed, and with what hilarity it was so unanimously arranged.”

Bogle Corbet himself is a dreamy, imaginative, and somewhat inactive person, ill fitted for a stirring time, and his mercantile prosperity vanishes like a dream, leading eventually to his emigration: on which subject we consider Mr. Galt’s observation and experience so important, that we shall make a separate article of the third volume. In the mean time we shall note a few of the passages which have struck us in this hasty perusal. There are the truths of a long life in the following remarks.

“The outward gladness and the inward grief are often in harsh discord with one another.

• • • • • All sedentary tradesmen are curiously disposed to be politicians. • • • • •

I had observed that the democrats were ever the most ambitious, and the republicans the most arbitrary. • • • • • Casualties generally teach the best lessons of self-knowledge. • • • • •

Poverty begets vile thoughts, which mankind, from a benevolent sentiment, do not like to hear. General flatterers of human nature are as much favoured by the species, as particular sycophants by individuals.”

We leave the rest of our criticism till next week, when we shall enter at some length on the important subject of emigration; and only say now, that a picture of Jamaica in the second volume is of no less concernment to the West India interests, than the descriptions of Canada in the third, to which we have alluded. Indeed, *Bogle Corbet* is of so much general importance, that we can hardly treat it as a novel.

Authorship; a Tale. By a New-Englander Over-sea (J. Neale). 12mo. pp. 267. Boston, 1830, Gray and Bowen: London, O. Rich.

WE do believe Mr. Neale to be a very clever man—one of rich imagination and much thought; but he is one who will never obtain the credit he really deserves. His imagination and his thoughts alike run into the most unbridled extravagance, till the imagery is phantasmagoric, and the feeling ludicrous. He sets out by despising rule, and defying opinion; yet never writer more required to be guided by the one, or to be checked by the other. In his desire of over-exciting, he goes beyond all human sympathy, and quite forgets, that even as discretion is the better part of valour, so taste is the better part of composition. His novel of *Seventy-Six* is a very vigorous and original performance; and whether the stormy time in

which it is laid gives sufficient excitement in the actual scenes, there is less of wild and extravagant creation than in any other of his works. Cut down, pruned, and corrected mercilessly, *Seventy-Six* would be a valuable production. Full of skilful historical painting, *Logan* has some fine bits; and the account of American writers in *Blackwood’s Magazine*, contained a mass of intelligence, vividly communicated. The work before us is a complete extravaganza: why it should be called *Authorship*, we do not understand—except a brief dialogue about magazine writing, there is nothing that describes authorship in any of its bearings: it is the history of a lady whom the hero sees by chance in Westminster Abbey, with whom he also falls in love, and, after the lapse of three years, meets again in company with her husband. The story is incoherent to the last degree, and aim there is none; still, you read the book with an impression on you that the author could do much better things. Woman is a great stumbling-block in Mr. Neale’s way—when “a lady’s in the case,” he forthwith rushes on with a spring-tide of passion and absurdity. It is impossible to treat a subject with worse taste than he does one of this kind. With a high idea of feminine excellence, he yet perpetually revolts you: and when he means to be simple and natural, he is only coarse—he wants both knowledge and delicacy. It is an odd thing for an author to be his own critic; yet his own remarks on his own writings are singularly just: they are thrown into the form of a letter. Speaking of his talent, he says—“You have more than enough. First, then, husband your resources better. Remember that every thing ceases to astonish, to excite, to move, by repetition. Suffering, torture, death, any thing, may become familiar and tamed of its horrors by repetition. Don’t launch your thunder at butterflies and gnats. Don’t make your heroes go raving mad for a cause, an offence, which five rational words would remove or explain. One ceases to sympathise in such gratuitous and self-inflicted misery. Don’t let a scene which might appropriately end in tears, bitter tears and agonised silence, end in fire and fury, whirlwind, tempest, lightning, and the ——. Are you mad, my dear friend? No, you will not be angry with me. I could not write this if I had not a deep interest in all you write. Again: your characters all talk too much the same language—have the same intense and exaggerated and distorted imagination and sensibility. H— and W— A—, the only men deserving the name of characters, talk so that sometimes you could not tell which is speaking. One very extraordinary man is enough—remember, more than one principal light spoils a picture. If there be two extraordinary men, they should be utterly unlike.”

The next extract is one of description:—“Two or three nights before, I had been struck with the amazing beauty of a sunset, which I saw from the Portsmouth side—it was like the sunsets of North America; not so brilliant, however, nor dyed with such exalted and fervent hues; but like them in the stillness of their beauty, when to look at them is enough to bring the water into your eyes, and to make your heart run over—especially if there is a woman at your side. I grew melancholy, and I thought how very little we know of each other in this world—nations of nations, neighbours of neighbours, brothers of brothers. On every side of me was the proof; on every side of me beauty and power that were considered peculiar to America; a real Indian summer—that Sabbath of the whole year; a superb sun-

set, and huge trees overloaded with foliage that appeared like a sort of gorgeous blazonry. Their colours were not so vivid as we have them in America, nor so various, nor did they overhang all the mountain-sides, and all the rocks, and every foot of the earth as far as the eye could reach, with a sort of ponderous and fluctuating shadow; but they had a beauty of their own, a beauty that we never see in the New World—a sort of pomp which is not the pomp of the wilderness, and a sort of wealth which is not the wealth of our everlasting woods, but graver and quieter. They swell up to the eye, cloud over cloud, with colours that we love to see in a picture. Not so with our savage North American landscapes—they would startle and scare you if they were painted with fidelity. If you had gathered your ideas of nature from Claude, or Poussin, or Hobbima, or Both, or Ruysdäl, or from any body that ever painted a landscape in Europe, you would never be able to endure the truth in a landscape of North America. The bright blue, the deep fiery crimson, the scarlet and gold, the orange and purple, the innumerable shades of brown, would appear unworthy of a picture. You would feel as men who have been brought up to the stage do, when they see the terrible passions at work off the stage—you would swear that Nature herself was unnatural. So much for the sunset which I had seen two or three nights before; but nothing that I saw then, though it was all that I have described it to be, could equal the view that I had now of the Portsmouth shore off Gosport, of the shipping, of the military works, and of the far blue sea, with a fleet riding slowly over the dim barrier which hardly separated it from the far blue sky, launching away, ship after ship, into the unfathomable air, as if they knew, like the huge birds of South America when they float over the top of the Andes, into the sky, with all their mighty wings outspread—that there was no power in heaven or earth able to wreck them, or shatter them, or disturb them on their way. It was a picture to be remembered for life—to be carried away on the heart, as if the colours were burnt there, and the movable beauty of a camera obscura had been shut up for another day, or melted into the material and fixed there for ever and ever."

There is great beauty in this passage; and were we the oracle that Mr. Neale would consult, our answer would be one word—discipline. But we take for granted, that either reviewer or friend would have to say what the Scotch husband said of his wife—"She winna be guidit by me."

The Correspondence and Diary of Philip Doddridge, D.D., &c. &c. Vol. V. 8vo. pp. 552. London, 1831. Colburn and Bentley.

WE have always professed to avoid polemical and political warfare. It is enough for a Journal like this, even in the times of the greatest excitement, to endeavour to preserve its own little green field of delightful literature, of everlastingly improving sciences, and immortally refining arts, clear from the contagion of the hour: the ferment and agitation will pass away, no matter how extraordinary and engrossing they may be; and even those who have been engaged in the hottest of the turmoil will look back for purer gratification to the slightest record of better things. But we are not such dreamers as to fancy that it becomes any intelligent beings, at periods of critical importance to the whole structure and welfare of society, to say we will or can abstract ourselves from the business of life, and be quiet worshippers of

some favourite and particular study, while all around us is rocking to the foundation with portent and change: no, this is not the duty of good citizens or good men; and we only advert to the subject by way of explanation, not apology. We desire to keep this publication free from every thought and word that could be attributed to partisanship in religion or government; and if ever we devote a few columns to either principle, it is in the trust that our efforts will be received as impartial analyses of able writers, for the general information, as far as we are competent to digest and elucidate their labours. Thus, when we notice works of the classes referred to, it is simply to make them known: we may praise the style and skill of an author, without agreeing to one of his arguments; we may condemn the want of order and the manner of another, while concurring in every sentiment he utters. In short, we could wish our pages to be consulted as as fair and ample a report of the matters they embrace as could reasonably be expected from unusual facilities and unremitting assiduity: if so, they will be found to be what we have hinted, a pleasant spot for recreation, instruction, and enjoyment, not only during periods of popular ferment, but long after such periods have passed away.

These few reflections have been called from us by the fifth and concluding volume of the remains of Dr. Doddridge. We care not if the Calvinist call the author of the *Family Expositor* a blamably easy and candid man—if the rigid disciplinarian frown upon, or the sanctified zealot condemn him: we take him as he is frankly represented to us by his descendant and editor; and we leave the bickerings of sects and parties to be fought out by the, considering the professions of Christianity, too willing and too ardent combatants. We therefore pass over the introduction to this volume, in which Mr. Humphreys contends that the nonconformists of the last century were liberal, loyal, and social men, as unlike the puritans of the preceding age as the gloomy followers of their creed who affect superior holiness in the present day. Let the *mêlée* of Methodist, Presbyterian, High-churchman, Baptist, Unitarian, Independent, Evangelical, &c. &c. take up the glove: we shake hands with the argument, and shall only produce a few extracts to speak for the volume. In a letter from Dr. Fordyce, dated Aberdeen, March 1748, we meet with some extremely shrewd remark, and a pleasant piece of literary gossip.

"I have (he says) read Colonel Gardiner's Life, and felt my heart melted in many places. I cannot see that there was any impropriety in publishing his letters, but rather think they redound greatly to his honour. He was a most amiable man; and I believe the glorious fruits of his piety will abundantly screen him from the imputation of an ill-informed enthusiasm, even among those who dare not reproach, though little disposed to imitate, his exalted piety. Perhaps there is too just ground for your reflection in the third section: but I must be so frank as to tell you that it has brought your orthodoxy into question among many who cannot see what plausibility there is in the objection against the colonel's character, for his adherence to the principles in which he was educated, i. e. those of the church of Scotland, which are the same upon that matter with those of England, unless upon the supposition of those principles being false or pernicious. If they are neither, where was the harm of adhering to them, especially as you intimate that the colonel did not seek to impose or persecute?—

That infamous libel did not reach this place, and I think you are right to take no notice of it; though perhaps it had been better not to have thrown out so shrewd a hint, which the freest inquirers in both churches will surely think levelled at themselves. The subscription to such large formularies is undoubtedly a grievance in most establishments. But do dissenters enjoy, or dare they use, in fact, in the full extent of the *thing* (not the *word*), that liberty of which they boast? Are they exempt from expedients and salvos, and from phrases of ambiguous or equivocal meaning? I am afraid, doctor, we must always make some concessions to the *foibles* of the *creature* if we mean to do him good; which, if rigidly examined, need to be understood *cum grano salis*. And are assemblies of creatures with such foibles to be less respected than individuals? When you can produce a perfect individual, then will I shew you a perfect society! . . . I shall be prodigiously glad to see Mr. West's Pindar, &c., of which I heard before. I remember a beautiful poem of his, some years ago, in imitation of Spenser. I dare say you will be glad to hear that Thomson's 'Castle of Indolence,' which has lain so long indolent, is in the press. I have got Lowman, but have not yet had leisure to read him. Dr. Sykes writes me that he read him with great eagerness, expecting to have his own work on sacrifices superseded; but he was disappointed, and went on boldly in his own way. He adds that his is a philosophical rather than a theological work. He writes me of an odd book, called 'A full and perfect View of Christianity,' written by one Deacon, of Manchester, a non-jurant; which he calls one of the most consistent books he ever saw, and very extraordinary to come from a non-jurant, who differs but little from a papist: he would have it considered by a good hand. Have you read Roderick Random? It is done by a Scotch surgeon, one Smollett (who has written a pretty good tragedy), and, I am told, is well liked. What is this new play of Dr. Hoadley's? You do not mean the Suspicious Husband? I think Mr. Lyttelton was right not to accept of the Oxonian diploma. Your freethinking wits would have said 'the man wrote for a plume.'"

The following anecdote tempts us by its beauty.

"Some illiberal reflections being cast on the late Dr. Lindsey, Mrs. Humphreys vindicated his sincerity, and right of private judgment. A gentleman present remarked, with more asperity than truth, that he wondered Dr. Doddridge had not rendered his family orthodox! She replied, with perfect serenity, 'Sir, the orthodoxy my father taught his children was charity.'"

Henry Baker, the F.R.S. and founder of the Bakerian lectures, was a frequent correspondent of Dr. Doddridge's, who seems to have entered into his own pursuits in repaying his agreeable letters. For example:

"Northampton, July 2, 1748."

"Dear sir,—The occasion of my writing to you now is to inform you of a remarkable fact which I have just heard from a member of the church of which I am pastor, and in whom I can entirely confide. He tells me that he has in Upper Heyford Field, about four miles from this town, a wether sheep which now suckles a lamb. I know not by what accident the lamb sometime since ran after it and fixed upon it, paps, drawing hard, milk followed. The lamb has subsisted very well upon what it sucks, and at the late shearing time he himself presented the teats, and milk came out in a considerable

quantity. This reminds me of what Mr. Ray tells us, from Bocconi, that a countryman in Umbria nourished his child by milk from his own breast, and Florentinus and Malpighius are quoted on the same occasion. Bartholinus, in his *Anatomy*, p. 215, has some remarkable passages to this purpose: he quotes a passage in Aristotle concerning a he-goat, in Lemnos, which had a great quantity of milk. I shall add to this a short account of a monstrous lamb, which was weaned in a field near Newport Pagnel, about the middle of last March, and was brought to me soon after it died. It had two perfect heads, and two long necks, each as large as that of a common lamb, but sucked only with that of the left side. So far as I could learn, the organs of both were complete. It walked only on four legs, but had a fifth hanging down between the two necks, rather longer than the other four, and the bones and hoof were double, and had four claws; the concave side of it was turned upwards, and whenever the creature walked, this leg moved up and down, as it seemed, spontaneously, and in a manner answerable to the other four: it had two tails."

Philosophical experiment appears to be inherent; for the editor, in a note upon a dangerous accident in the Thames, says:

"It occurred on the Thames, when a boat, in which the doctor had embarked, was nearly swamped. The water is so tempting and fatal in a variety of ways, that the reader will perhaps pardon a momentary digression, while I describe a little invention which may be the means of preserving the lives of persons in jeopardy from the manly and salutary practice of bathing. In accidents of this nature, although several persons are usually present, their efforts to recover the body in time are generally unavailing. In fact, the struggles of the victim in the act of sinking, even if there is no stream, remove him to a distance from the spot where he disappeared, which deceives the eye of a spectator. When reflecting on these circumstances, it occurred to my mind, that if a small line, say a piece of whipcord, twelve feet long, had a ball of cork, painted white and about the size of an orange, fixed at one end, and at the other a cotton belt, made to buckle over the shoulders, and passing round one arm to prevent its slipping, it would, if worn by a person who sunk when bathing, not only immediately show where the body lay, but also furnish a safe and ready means of drawing it out of deep water. This simple apparatus is so easily made, and at so little cost, that it may be expected that fathers and schoolmasters will insist upon its use, while the good sense of 'the bold swimmer' will lead him to adopt the use of the *life buoy*, which may preserve him if seized by cramp, and will be no check to his amusement."

People never will provide against such hazards; we are all, always, too confident—otherwise, this hint might be advantageously taken. But it never will be—such is human character.

Some letters from his secretary, Mr. Parker,* give an interesting account of the last hours of the celebrated Dr. Watts; but we must confine ourselves to a few paragraphs.

* Appendix of this gentleman, Mr. Humphrey states, in a letter—Mr. Parker was, for a long period, the amanuensis and confidential attendant of Dr. Watts. It may be remarked, that the collectors of autographs have been frequently led into a mistake from the first circumstance, as almost all the letters of Dr. Watts were written as immediately from him by Mr. Parker. Of the letters in his possession, only one is in the hand of the doctor; and that has a note on the back, by Dr. Doddridge, to that effect. The writing is feeble, disjointed, and tremulous, as might be expected from a person suffering from nervous debility. It may be added, that the signature of Dr. Watts is very closely imitated by Mr. Parker."

"Several of the last weeks of his life were intermingled with much pain of body, and he was reduced to a state of great feebleness, and has been confined to his chamber almost three weeks, but has been able for the most part every day to sit up three or four hours. He wanted much to get up yesterday morning, and accordingly we gratified him; but one hour tired him, and we put him to bed again for the last time. Dr. Clark, his physician, was with him about two hours ago, and told us he was going off apace. Through the goodness of God he lay tolerably easy, and fell into a dose, in which he spent the night—would not receive any cordial; but half a spoonful once or twice—took no notice of any body, yet answered rationally when any question was asked. I fulfilled your request last night at five o'clock; he took notice of it, but in such broken language that I cannot inform you in what manner. I never knew his mind any other than calm and peaceful, and so it will remain, I trust, to the time of his departure, which we think must take place in a few hours, at least before it is possible this can reach your hands. And I doubt not he will have a triumphant entrance into the heavenly kingdom of his Lord and Saviour Jesus Christ, after almost fifty years of painful, yet delightful and successful labour for the gospel of Christ, and in the seventy-fifth of his age. . . . He is quite sensible, and his mind in a state of great serenity. I told him this morning that he had taught us how to live, and was now teaching us how to die. He replied, 'Yes.' I told him I hoped he experienced the comfort of these words, 'I will never leave thee nor forsake thee.' He answered in these words, 'I do so.' It was his desire, since this last confinement to his chamber, that he might behave so as to teach us all to die, and God has granted his request. His animal powers have been for a good while gradually impairing; and he says comparatively but little now to what he has said in times past, when he has dropped such expressions as these—'I would be waiting to see what God will do with me; it is good to say, as Mr. Baxter, 'what, when, and where God pleases.' The business of a Christian is to do and bear the will of God; and if I was in health I could but be doing that, and that I may be now. If God should raise me up again, I may finish some more of my papers, or God can make use of me to save a soul, and that will be worth living for. If God has no more service for me to do, through grace, I am ready. It is a great mercy to me that I have no manner of fear or dread of death; I could, if God please, lay my head back and die without terror this afternoon or night.' At another time, 'My chief supports are from my view of eternal things, and the interest I have in them. I trust all my sins are pardoned through the blood of Christ. I have no fear of dying; it would be my greatest comfort to lie down and sleep and wake no more.' . . . He has desired to be buried in Bunhill Fields, deep in the earth, amongst the relics of many of his pious fathers and brethren, with whom he desires to be found in the resurrection; but with as little show as possible: and has expressly directed that no rings shall be given, and that his funeral be attended by two Independent ministers, two Presbyterian, and two Baptist."

This is all we can allow to illustrate the Correspondence: the latter half of the volume is filled with Doddridge's Diary—in all its parts a very edifying and pious production. Yet, as we cannot, from their length, copy these pas-

sages, we shall, in our next No., refer to what will be more generally acceptable, as a curious illustration of feelings and belief.

Omnipotence: a Poem. By Richard Jarman. pp. 134. London, 1831. Chappell.

SHAKESPEARE, with his usual knowledge of human nature, puts the well-known question of "What's in a name?" into the mouth of a very young lady, exceedingly in love, who could not reasonably be supposed to analyse her meanings very closely. For example, among the many other things which there is in a name, there is a great deal of disappointment—*ex. gr.* the volume now before us. Omnipotence seems to imply every thing. We cannot say that any such promise has been fulfilled: Mr. Jarman has a musical ear for verse, much good feeling, and we cordially agree with the opinions he expresses; while a true and strong sense of religion is a very redeeming excellence. But we exceedingly doubt his possessing that original genius which alone commands attention for the poet.

Petit Théâtre de la Jeunesse, composé pour mes Elèves. Par Madame Backker, auteur du "Souterrain," des "Soirées de Londres," et la "Château de St. Valérie." 12mo. pp. 330. Londres, 1831. Dulau et Co.

M^DME. BACKKER tells us in her preface, these dramas were composed for her pupils to perform, and that she has found this plan of dialogue most efficacious in forwarding their progress in speaking the language. The plan appears to us an excellent one; and the dramas themselves embodying an interesting story, in a pleasant and animated form, are well calculated for our young friends. They will recognise "Cinderella" and "Bluebeard" dramatised for the occasion.

Gebir, Count Julian, and other Poems. By Walter Savage Landor, Esq. 12mo. pp. 388. London, 1831. Moxon.

THERE is much of poetical feeling, rather perhaps than of poetry, in this volume. There are some fine passages and very fine lines, though, as a whole, we much doubt its popularity. "Gebir" is a sort of classical tale, the production of youth, and scarce calling for strict criticism. The minor poems are very bad,—silly and affected where they mean to be simple and natural. The tragedy of "Count Julian" is the best specimen of the author's mind: some of the speeches have touches of a high order. Plot there is none, and the characters are drawn in a vague and unsatisfactory manner. Mr. Landor seems to affect obscurity, or else falls into that common fault of authors, and imagines that his meaning is as obvious to others as it is to himself. We shall extract two or three passages which appear to us most worthy of selection.

"Truth costs me more than falsehood e'er cost thee.
Divested of that purple of the soul,
That potency, that palm of wise ambition,
Cast heedlong by thy madness from that high,
That only eminence 'twixt earth and heaven,
Virtue, which some desert, but none despise.

"He left
To self-reproof the mutinies of vice;
Avarice, that dwarfs ambition's tone and mien;
Envy, sick nursing of the court; and pride
That cannot bear his semblance nor himself;
And malice, with his visage half decried
Amid the shadows of her hiding-place."

A father's lament for his children.

"Ermenegild! thou mightest, sure, have lived!
A father's name awake no dread of thee!
Only thy mother's early bloom was thine!
There dwelt on Julian's brow—thine was serene—
The brightened clouds of elevated souls,

Feared by the most below: those who looked up
Saw, at their season, in clear signs, advance
Rapturous vaunt, calm solicitude,
All that impatient youth would press from age,
Or sparing age sigh and detract from youth:
Hence was his fall! my hope! myself! my Julian!
Alas! I boasted—but I thought on him."

Striking remark.

"Guilt hath pavilions, but no privacy."

Fine vein of reflection.

"Justice, who came not up to us through life,
Loves to survey our likeness on our tombs,
When rivalry, malevolence, and wrath,
And every passion that once stormed around,
Is calm alike without them as within.
Our very chains make the whole world our own,
Bind those to us who else had past us by,
Those at whose call brought down to us, the light
Of future ages lives upon our name."

Love.

"Some are there whose close vision sees but one
In the whole world, and would not see another
For the whole world, were that one out of it.

"Such grief is yet unknown to me: I know
All tears are not for sorrow; many swell
In the warm depths of gratitude and bliss;
But precious over all are those that hang
And tremble at the tale of generous deeds.
These he relates when he might talk as you do
Of passion; but he sees my heart, he finds
What fragrance most refreshes it. How high,
O Heaven! must that man be, who loves, and who
Would still raise others higher than himself
To interest his beloved!"

Mr. Landor is evidently a man of cultivated intellect. It is a strange contrast to mark in him much of prejudice, and that petty vanity which shews itself in petty affectation. Now, we consider his spelling a mere affectation; and a small distinction is, when of our own seeking, the mark of a small mind.

Memoir of the Life of Robert Henley, Earl of Northington, Lord High Chancellor of Great Britain. By the Right Hon. Robert Lord Henley, his Grandson. 12mo. pp. 64 of Memoir, and 81 of Judgments pronounced by Lord N. London, 1831. J. Murray.

THERE was not much in the legal and public life of Lord Northington to record; and it is to the credit of his "pius Æneas" that he has not given us a large book. Though not possessed of much popular interest, therefore, this little volume deserves to hold a place in good libraries; while its appendix of decisions, during the nine years of his lordship's holding the seals, will recommend it to lawyers. Having stated the character of the work, it may be anticipated that our extracts need be but very slight. The principal event in Lord N.'s life was the prominent part he took in overthrowing the Rockingham administration, which is, indeed, mainly attributed to him. In his youth he was, like most of the men of that day, a *bon vivant*; and we are told that "many a severe fit of the gout was the result of his early indulgencies. When suffering from its effects, he was once overheard in the House of Lords to mutter, after some painful walks between the woollack and the bar, 'If I had known that these legs were one day to carry a chancellor, I'd have taken better care of them when I was a lad.'"

In 1757, when a new ministry was formed with much difficulty, the disposal of the great seal was one of the troublesome points.

"In the opinion of many, says his biographer, Sir John Eardley Wilmot was the person to whose custody it would shortly be committed; an event, the possibility of which that modest and excellent person seems to have regarded with the greatest apprehension. In a letter to his brother, he says, 'the acting junior of the commission is a spectre I started at, but the sustaining the office alone I must and will refuse at all events. I will not give

up the peace of my mind to any earthly consideration whatever. Bread and water are nectar and ambrosia compared with the supremacy of a court of justice.'"

Yet this burden Lord Northington undertook to bear; and the author relates,—"There is an amusing anecdote respecting this transaction current in the profession, and which the late Lord Ellenborough used to relate with his characteristic humour. Immediately after Willes had refused the seals, Henley called upon him at his villa, and found him walking in his garden, highly indignant at the affront which he considered that he had received in an offer so inadequate to his pretensions. After entering into some detail of his grievances, he concluded by asking, whether any man of spirit could, under such circumstances, have taken the seals? adding, 'Would you, Mr. Attorney, have done so?' Henley, thus appealed to, gravely told him, that it was too late to enter into such a discussion, as he was then waiting upon his lordship to inform him that he had actually accepted them."

We have recently had a good deal of discussion respecting Lord Lyndhurst's declension in the scale of office. Lord Henley, in a note, reminds us, that "Pemberton, after having been chief justice, first of the King's Bench and then of the Common Pleas, upon being displaced, practised for many years at the bar."

Three neatly-engraved heads of Lord N., and two other of the Henley family, adorn the Memoir.

Select Library. Vol. II. Fisher and Co. This is the second volume, also, of Mr. Ellis's *Polynesian Researches*, and with very considerable additions and improvements. The original work has been so highly commended in reviews of every kind, that we need add nothing to our notice of Vol. I. to recommend this neat and cheap edition.

Five Years of Youth; or, Sense and Sentiment. By Harriet Martineau. 12mo. pp. 264. London, 1831. Harvey and Darton.

WE stumbled at the preface, which is not very intelligibly expressed. The volume itself is intended to shew, by the example of two sisters, that sense leads to utility and happiness, while sensibility is the source of vain imaginations and misery. We prefer the design to the execution; yet the young will read the story with advantage, for it contains many good precepts.

State Papers, published under the Authority of his Majesty's Commission. (King Henry the Eighth. Parts I. and II.) Vol. I. 4to. pp. 902. London, 1831. J. Murray.

WE have just seen this very important work, which will, of course, occupy many of our future columns. The preface gives an interesting account of the preservation (and we are sorry to say loss too) of state papers, from a very early date: the collection itself is rich in data to correct the history of the eventful period to which it relates, and furnish curious views of men and things.

ARTS AND SCIENCES.

ROYAL INSTITUTION.

MR. J. F. DANIELL, who has been appointed Professor of Chemistry at the King's College, and whose meteorological and chemical investigations are well known to all our scientific readers, opened these evening meetings after the Easter recess with some interesting observa-

tions on the forms and attractions of the particles of crystals. He first briefly described and illustrated the cleavages of calcareous spar, and other crystalline bodies, shewing that with each substance the variety of forms found in nature were reducible to one constant and primitive form, into which all the particles could be brought. He then explained Haily's beautiful theory of the manner in which the secondary or resulting forms are produced by the grouping of the primitive particles; and referred to those substances which, like fluor spar, not being reducible to particles, are all of one form, and seem to be inconsistent with the theory of spherical, or spheroidal atoms, produced by Dr. Wollaston. Mr. Daniell next referred to his former researches in this curious branch of science, by which a difficulty connected with the construction of the cube and spherical particles was removed, and shewed some magnificent samples of dissection, by which crystalline arrangement had been developed. Finally, he noticed a recent observation by Mitscherlich upon the expansion of bodies by heat in different directions, and demonstrated its close association to the spheroidal theory. Mr. Daniell, in his progress, took occasion to remark, that Haily's disciples said more for him than he had for himself; and that his words were not so strongly in opposition to the spherical theory as many persons had supposed. With respect to fluor spar, for instance, although he concluded, that a mass must consist of tetrahedra, with octoedral spaces, or else of octoedra with tetrahedral, he urges that whatever be the form of the particles, his theory of decrements will hold good; and so it will though spherical and spheroidal atoms should displace those of polyhedral forms.

In the library were numerous specimens of Ceylonese productions, brought from Ceylon by Lieut. Smith, B.A. These were highly interesting, and afford an illustration of the comparative states of the arts in other parts of the globe.

SOCIETY OF ARTS.

At the Annual Meeting of this Society on Wednesday, H. R. H. the Duke of Sussex was unanimously re-elected president; and Messrs. Hoblyn, Wm. Hughes Hughes, Wm. Pole, and Alderman Winchester, were chosen *vice* those officers who went out by rotation. Layton Cooke, Esq. was elected chairman of the committee of agriculture; H. Hennel, Esq. chemistry; R. H. Solly, Esq., correspondence and papers; Messrs. Joseph Payne and Henry Roberts for miscellaneous matters; and Henry Singleton, Esq., for the polite arts. The house officers remain as before. On the Tuesday preceding, Mr. Savage delivered a lecture on architecture, which was illustrated by a vast variety of very beautiful drawings and models: among the latter was an exceedingly well-executed one of York Cathedral.

HORTICULTURAL SOCIETY.

DR. HENDERSON in the chair.—A paper was read, entitled, "An account of the different modes of keeping fruit, which have been tried at the Society's garden for the season 1831." The statement was drawn up at the garden, and enumerated eight different modes; the three best and most practicable of which were, the covering of the fruit in pure and perfectly dry sand, dry fern, or in a deal box buried in the earth. By any of these modes it was preserved, free from shrivelling and any disagreeable flavour: in all it must be deposited in a cold situation. By the other five modes,

although the fruit was preserved in a pretty sound state, a musty flavour was found to be communicated: this was especially the case where oat-chaff was the medium. A portion of the Society's Meteorological Journal was likewise read. A superb collection of flowers was exhibited. Amongst them were nearly 30 varieties of the polyanthus, narcissus, and some beautiful specimens of the camellia. Several gentlemen were elected.

LONDON INSTITUTION.

MR. BRITTON's fourth lecture on Architecture was read last Monday evening, and embraced an account, with numerous illustrations, of the great and splendid buildings of the Romans; their temples, baths, aqueducts, bridges, amphitheatres, fora, &c. In allusion to these splendid works, the lecturer quoted passages from Byron, Rogers, &c.; and also commented on the peculiar merits and qualifications of several other authors who have published their opinions on the architecture, arts, and antiquities of Italy generally, and of Rome in particular. After complimenting Piranesi, Hake-will, Williams, Forsyth, and Wilson, the last of whom is not much known; and particularly the new work of "Italy," by Mr. Conder; the once popular "Tour," by Eustace, was described as very erroneous and deceptive. Mr. Britton concluded an impressive lecture by referring to a novel by Mr. Lockhart, called "Valerius," for a view and powerful description of the Colosseum at Rome, when supposed to be filled with spectators, &c. in the time of Trajan.

On Wednesday evening, Mr. Thelwall gave a very eloquent lecture on the advantages of studying elocution, and on other mental and personal accomplishments.

MR. ADAMS'S LECTURES.

MR. ADAMS, of whose lectures, at the Adelphi and at Willis's Rooms, we have spoken in former Numbers, is now delighting various audiences in the country. Having just concluded a course, and we are happy to say, a profitable one, at Enfield, he next week visits Canonbury Tavern, at Islington. Since Mr. Adams was at the Adelphi, he has added much to his astronomical apparatus; and not being limited to one night's lecture, treats the subject at much greater length than at either of the above-named places; and it is no small expression in favour of the lecturer's able remarks, to state, that from this very circumstance the lectures receive additional interest. Mr. Adams has added to his astronomical lectures, a course on pneumatics, which he also illustrates by an extensive apparatus; but of this we shall speak more fully in a future Number.

LITERARY AND LEARNED.

A SOCIETY FOR BRINGING FORWARD UNKNOWN AUTHORS.

THE object of the Society forming to assist unknown authors, Mr. Editor, is a benevolent and useful one; but I quite agree with you, that the plan proposed has no chance of succeeding. It will bring the Society into disrepute, while it will even fail in accomplishing its generous purpose.

The design, however, is so praiseworthy, that it is a pity it could not be effected. I have long thought of another plan, which in all probability would produce the intended benefit: and I have the sanction of some experienced booksellers to whom I have mentioned

it, in favour of it. They think with myself, that if it were managed with prudence, it would work well, and could scarcely fail of success. As the public attention is called to the subject, I trust you, as a friend to literature and literary men, will make it known in your universally read *Gazette*.

It is, I believe, admitted by "the trade," that the sale of 300 copies at the trade price will pay the expense of 500 copies. Let a society for encouraging authors yet unknown be formed on the plan of subscribing to take so many books a-year,—say to the value of five pounds. Subscribers may agree to purchase as many more as they please: but, perhaps, it will be difficult to muster 300 regular subscribers at a higher minimum.

It will be a matter for consideration, whether the subscribers should receive the books at the trade or retail price; but to induce subscription, I think it would be better to adopt the former rate. The half of the first year's subscription should be paid down as soon as the Society commences publishing. After this, the rule should be *prompt payment* on the delivery of each book. The enforcing of this regulation would be found to be of much practical advantage, and prevent many unpleasant consequences.

This plan is one of easy execution, provided the requisite number of 300 subscribers, or upwards, is obtained. It would give writers of merit, whether in the instructive or amusing lines, who cannot find a bookseller willing, under the circumstances, to venture,—a fair opportunity of becoming popular. The writer would by means of it exhibit his pretensions to the subscribers, moving, as they must be, in various ranks of society. If they are pleased, they will make him known to their connexions, and thus assist the further sale. The approbation of the committee, who should be literary men of more or less eminence, would also be a powerful advertisement in his favour. If the work, thus effectively published, was successful, he could carry it with these recommendations to the trade, and in most cases he might easily find a bookseller who would now think it prudent to purchase the remaining copies, and if called on by the demand, to continue the publishing. Or it might be retained in the hands and under the auspices whence it had emanated.

So much for the author. And for the subscriber, he would not merely encourage deserving men, most of whom he might even specially wish to patronise, at a small yearly expense, without any risk whatever, but he would get works of merit, at their fair value, to the full amount of his subscription.

With respect to the trade, too, and this is a consideration of great practical importance, as all will find to their cost who under-rate it, I am satisfied, that instead of setting their face against such a plan, they would encourage it, provided none got the works at the trade price but *bonâ fide* yearly subscribers. It would, in fact, tend to promote their sale; and it would do what would be agreeable to most publishers in the case of new literary candidates. It would bring fairly forward writers whom they would wish to see encouraged, though they did not consider it prudent to venture the publication of the first works. In truth, it would take away the most hazardous part of their business, by advertising and fairly trying the merits of new men. I have very little doubt that many of them would become subscribers to a well-organised plan of this sort.

Under the natural difficulties in the circum-

stances of literature, the want of some such plan has always been felt. Many excellent works have been lost to society; while many worthy and gifted individuals, who would have shone as successful writers, and contributed to the advancement of science or taste, as well as to the benefit of their country, have pined away in obscurity and died unknown.

S. G.*

ROYAL SOCIETY.

SIR ASTLEY COOPER in the chair.—A paper was read, on the errors in the course of vessels, occasioned by local attraction, with some remarks on the recent loss of his Majesty's ship *Thetis*; by Peter Barlow, Esq. Sir M. A. Shee was elected a fellow. Professor Buckland presented his work on the occurrence of the remains of elephants and other quadrupeds in the cliffs of frozen mud in Eadscholtz Bay, within Beering's Strait, and in other distant parts of the shores of the Arctic seas.

ROYAL ASIATIC SOCIETY.

SIR GEORGE STAUNTON in the chair.—A great number of valuable and interesting donations were made to the Society: amongst them were several curious Burmese musical instruments, also a carved chair from Malacca, which had been used in thequisition when the country was in the possession of the Portuguese: these, and several MSS., were presented by Mr. Fullerton, late governor of Prince of Wales's Island. From Capt. Rainer, R.N. several mineralogical specimens from Egypt, including a piece of the vocal statue of Memnon; † fragments from Mounts Horeb and Sinai; and a fine mass of double refracting spar from Shaikh Eridi, supposed to be the Diamond Garden of the Arabian Tales. From Capt. Robertson, of the Bombay service, a coloured drawing or plan of an Indian game called the *Shastree's* game of heaven and hell, with specimens of the dice and men used in playing it. An account of this game was read. It appeared to be founded upon some of the metaphysical dogmas of the Hindoos, and was intended to illustrate the progress of a soul from hell to heaven! A letter from M. Jacquemont, communicated by Sir Alexander Johnston, was also read. M. Jacquemont has been sent to India as a naturalist, at the expense of the French government. On the recommendation of Baron Cuvier he came to England previously to his setting out, for the purpose of procuring letters of introduction from the learned here. He speaks in the highest possible terms of the liberality and attention shewn to him by every British authority in India. He dates from Ladakh, in Thibet; and in a postscript he calls attention to the philological labours of M. Csoma de Kőrös, a Hungarian, who has resided four years at Thibet, for the purpose of compiling a vocabulary and grammar of the Thibetan language, in which he has succeeded; and, at the date of this letter, he was about to proceed to Calcutta with the fruits of his labour. A letter from Capt. Rainer was likewise read: it comprised a short account of an avenue of sphinxes, discovered by him in the early part of 1829, at Beni Hassan, in Egypt.

* On admitting this letter, the interest and importance of most of the hints contained in which we highly appreciate, we shall, for the present, content ourselves with inviting to it the consideration of the friends of literature, and pointing also to the possibility of uniting the plan with that of a *Capital Subscription Fund in Shares*.—Ed. L. G.

† A shameful spoliation, in our opinion.—Ed. L. G.

FINE ARTS.

SUFFOLK STREET EXHIBITION.

[Fourth notice.]

No. 383. *Interior of a Ship's Cabin, with Smugglers playing.* H. P. Parker.—But for smugglers and poachers, and such gentry, many artists would want subjects for their pencils. With these rude materials, and their rude accompaniments, a picturesque composition is easily achieved. In the instance before us, the variety of character and costume, and the effect of light and colour proper to the scene, are most successfully depicted.

No. 403. *A Tornado passing over an American Forest.* T. Cole.—If the tempest has done its part in the production of this terrific chaos, so has the artist in its representation; and that in a style which would not discredit the pencil of Gaspar Poussin.

No. 404. *My Child! My Child!* H. E. Dawe.—How many an artist seems, in his works, to say with Zanga, "Horrors are not displeasing to me." Martyrdoms being out of date, wrecks and drownings supply their place. But can any one suppose that such subjects, however well executed, are either instructive or ornamental?

No. 405. *Marble Coppice, Isle of Wight; finished on the spot.* W. R. Earl.—Both in the tangled underwood of the fore-ground, and the open space of the distance, this clever picture, like all that we have seen of Mr. Earl's works, bears the stamp of truth and taste.

No. 411. *Landscape, with Gipsies.* J. Stark.—Every observer of nature, and every lover of art, will find in Mr. Stark's works all the truth and simplicity which distinguish the best productions of Ruysdael and Hobbima, but without any servile imitation.

No. 423. *Heath Scene.* F. W. Watts.—A similar character may be given of Mr. Watts' pencil. He has imparted to his *Heath Scene* an interest not often found even in subjects of a more varied nature.

No. 426. *A Gravel-pit in Windsor Forest.* R. B. Davis.—A pleasing example of the picturesque, united with an admirable tone of colour.

No. 435. *Catherine Seyton.* H. Liverseege.—How many pencils have already been employed, and how many will in future times be employed, in embodying the conceptions of that great writer, one of whose beautiful mental images Mr. Liverseege has here so happily made "sensible to sight!" There is no surer test of descriptive power.

No. 436. *A Cottage Scene.* P. Nasmyth.—The name of this artist is associated with all that is exquisitely finished in landscape scenery.

No. 437. *The Absent.* E. T. Parris.—Every thing we have yet seen from Mr. Parris's hand shews he is of opinion, with Lord Chesterfield, that "whatever is worth doing at all, is worth doing well." Accordingly we find no slovenliness, no mere hints at form. The tear in this little work is a perfect representation of one; the pearl has all the lightness and transparency of that delicate gem. What is still better, however, is, that the sentiment is finely expressed, and that the whole is full of character and grace.

No. 438. *The Enchantress Armida, from Tasso.* F. Y. Hurlstone.—We have always thought highly of Mr. Hurlstone's talents, and we never saw them exhibited to greater advantage. Bold, striking, and imaginative, we feel it difficult to say whether we are more charmed with the powerful expression, or with the rich and deep tones of this noble performance.

WATER-COLOUR EXHIBITION.

OUR fascinating and peculiar annual exhibition of Paintings in Water Colours opens for private view to-day, and on Monday to the world. It is with great pleasure we can state, that no former year has excelled the present, either in the number and variety, or the beauty and excellence of these productions. The whole is a delightful monument of English art.

NEW PUBLICATIONS.

Illustrations of the Bible.

WE have just seen the first part of a "Series of Prints to illustrate the Old and New Testament," the publication of which will, we understand, be commenced next week by Mr. Martin. In a prospectus which he has issued of the work, Mr. Martin observes that "Though he is aware that the Bible is a source from which many artists have drawn subjects, adapted to their individual styles of treating them, he is nevertheless satisfied that the supply is inexhaustible; and he is induced to hope, that his own peculiar mode of representing the events recorded in sacred history, is one which will be found to possess advantages that have hitherto been overlooked by his distinguished predecessors. No attentive reader of the Bible will fail to observe, that it abounds in subjects singularly fitted for graphic illustration. The grandeur and importance of the events described,—the awful and mysterious character of so many of the incidents,—the romantic scenery of the countries in which they occurred,—the picturesque costume of their inhabitants,—and the extent and majesty of their public buildings,—form altogether a mass of materials particularly calculated for pictorial display. If, indeed, the painter fails to fix the attention, to raise the imagination, and to satisfy the judgment of the spectator, he fails certainly from lack of power, not from a deficiency of materials, and those of the very highest order. The truth is, that in by far the greatest portion of the sacred history there is scarcely a page that does not seem to afford a subject for a picture; and the real difficulty lies, perhaps, in making the best selection. In the early books especially, they abound in almost every kind. Some of them, indeed, may not come within the proper sphere of the painter's art; but the more extended field of action adopted by Mr. Martin,—his method of availing himself of all the objects afforded by inanimate nature, as well as by the passions and ingenuity of man,—of bringing before the eye the vast and magnificent edifices of the ancient world,—its forests, wilds, interminable plains,—its caverns, and rocks, and mountains,—of freely employing the aid of those powerful and primitive elements of air and water, which, when agitated by their Almighty Disposer, (using the language of the poet,)

'Between the green sea and the azure vault sets
roaring war;'

—with the aid, he repeats, of all such available agencies, the artist may perhaps be enabled to select subjects that have been hitherto set aside as impracticable, and thus give new features to his illustrations that may not be without their attractions, and which, in his judgment,—whether he can successfully employ them or not,—are absolutely necessary to the due display of the great and supernatural events related by sacred historians."

The subjects of the two prints which will form the first part of Mr. Martin's publication, are the Divine command, "Let there be light!"

and Eve presenting Adam with the fruit of the forbidden tree. They are both full of the high and distinguishing characteristics of this artist's pencil. Whether the first is altogether a fitting subject for pictorial representation—whether "the Spirit of God moving upon the face of the waters" can ever be adequately or satisfactorily depicted—we will not take upon ourselves to decide; but we can unequivocally say that Mr. Martin has in this composition shewn extraordinary power in the production of grandeur of effect. With regard to the second print, it is a rich assemblage of exquisitely beautiful scenery, such as might well compose an earthly paradise, and over which Mr. Martin has shed that magic of light and shade of which he is so great a master.

Six Views of Windsor Castle, from original Sketches by S. Scarthwaite; drawn on stone by W. Westall, A.R.A. Dickinson.

VERY pleasing representations of this ancient and magnificent palace, in all its renovated splendour.

The History and Topography of the United States of America. Edited by John Howard Hinton, A.M. Parts X. XI. XII.

THIS work appears to be "progressing" in a very successful manner. Of the plates, the only portion of it on which we can at present speak at all, we can speak with much praise. We were especially struck in the numbers under our notice with two of the views; the one of a magnificent production of nature, the other of a magnificent production of art: we allude to "The Fall of Niagara," and "The Capitol, at Washington."

Visits of William IV., when Duke of Clarence, as Lord High Admiral, to Portsmouth, in the year 1827; with Views of the Russian Squadron. By Henry Moses. No. II.

WE are glad to see that her Majesty has been graciously pleased to take this clever and pretty little publication under her especial protection.

The Traveller Disturbed. Painted by W. Kidd; engraved by T. L. Busby.

WE are sorry we cannot say much in favour of this performance. The subject is not very agreeable; and the art of engraving stands too high to admit of the success of mediocrity or inferiority.

Sketches in Italy. Engraved on stone by W. Linton. No. III.

WE have the artist sustained the character we gave of the two former Numbers of this truly splendid work: nor can we, from the great improvement in this, pretend to say where the climax of his talents will end; for, like the epicure of old, he continues to cater so well in his intellectual banquet, that "increase of appetite doth seem to grow by what it feeds on." The fact is, the present Number is so full of interest both in subject and style of execution, as to call forth fresh admiration: nor can we for a moment doubt but that each succeeding part will equally establish the integrity as well as the skill of the artist. "The Convent of the Holy Trinity" is very magnificent. "The Crater of Vesuvius" may be considered as unique, since no other artist ever ventured to sit within the very vortex of its horrors. "Civita Castellana," the subject of a picture by this artist, now in the Suffolk Street Exhibition, "The Convent of San Benedetto," and "Rome from the Villa Barberini," are beautiful in composition and grand in subject. "Procida Castle," interesting from

its associations; "Assisi," at once elegant and sublime; while "Eboli" exhibits in its dark towers, deep ravines, and unscalable cliffs, the haunts and lurking dens of fierce banditti, invested with all of the romantic that the fancy of the painter, or the imagination of the poet, can form in its sublimest flights.

Rome, February 20, 1831.

THE artists, Italian and foreign, established here last year a society for the exhibition of their paintings and sculpture. The collection this year, just opened, does not, I fear, say much for the state of the arts in Italy. Some of the best artists seem to withhold their works, which is to be regretted, as the institution could not but be advantageous to the fraternity, and ought certainly to be encouraged among themselves. Our own works hold a pretty high place among the others. In the statue-room there is very little: by far the best thing is a cast by Gibson of his well-known group of Psyche and the Zephyrs. Wyatt, perhaps the cleverest sculptor in Rome, after Thorwaldsen, has sent nothing: his *Nymph*, done for Sir R. Lawley, was the gem of the exhibition last year. Galt's dogs are perfect. Among the pictures there are two clever and well-studied portraits by H. Vernet, with whose name and works you are so well acquainted. By another French artist, Bonfond, we have a picture of a ceremony in the Greek church; full of feeling and expression, well put together, and brilliantly coloured. The best picture is certainly one by Robert, a Swiss, and a beautiful picture it is, though perhaps deficient in the two great principles of chiaro-scuro and natural colour. It is most admirably drawn, and full of Italian character. The subject represents a harvest-home in the Pontine Marshes, but he has thrown an almost historic interest into it. Eastlake has left us for England. His friend Severn, of the same school, has one or two very pretty things, particularly a new production, painted, I believe, for Sir M. Ridley taken from the vintage. There is a beautiful little full-length portrait by Uwins, which will not diminish his high reputation, and makes us regret that he has shewn nothing else. A very clever head by Edmonstone (of Edinburgh), which reminds us of the spirit and manner of Opie. Atkins has surpassed himself this year in a portrait of Lord Belfast: he has also a good one of Lord Meath. Of Perry Williams it is enough to say that he has three pictures in the gallery; all the world knows they must be beautiful: the large landscape, however, is not in my eyes the foremost production of his very skilful pencil. But the most remarkable English picture in Rome is not in the exhibition room. It is the *Judgment of Socrates*, by Mr. Salter. For simple grandeur of composition, classical dignity, vigour of pencil, richness and harmony of colour, and true conception of the subject, it forms an admirable exception to the poverty, glare, triteness, or negligence, which so often characterise the tasteless and tame pictures of our day. The figure and head of Socrates standing before his judges is singularly happy, and indeed the air of the heads throughout (and there are many), is remarkably grand, simple, and varied. There is an astonishing force of chiaro-scuro and relief in the picture—the drawing, the natural and dignified grouping, merits a high degree of praise; the story is well told, and every thing is appropriate. A general calmness and repose reign through the whole, both in colour and attitude; all is

still while the philosopher speaks, and the groups that are in conversation seem to whisper. You will be prepared to conclude from this that Salter is a young man of the greatest promise; in fact, here is promise and performance too. The picture has excited much curiosity in Rome, having gained him the distinguished honour of being elected a "Professore della prima classe" of the Academy at Florence, from which place he has lately arrived. Few young artists are enterprising enough to enter upon the line of historical painting; and when they cease to be young artists, and have established, perhaps, a competency, which would justify their attempting a bolder flight, their manner, and probably their taste, has become formed upon petty productions—their genius is cramped—and the flight fails. I hope Salter, on his return to England next year, will meet with a degree of patronage which will enable him to prosecute this branch of the art. Lord Burghersh had the discernment to discover and appreciate the painter's merit some years ago at Florence; and a picture which he painted for his lordship, a portrait of two of his children, is not likely to disgrace his future fame. If a man of fortune were to offer a sufficient sum for the best picture on a given subject, of a certain size, to be completed within a certain time, and to be judged by a committee, he would probably get an excellent picture, and the best of the unsuccessful ones would be pretty sure to find purchasers. This is an idea which has just struck me: I wish some one would make it public, and still more that some one would make the experiment.

MODEL OF LONDON.

AMONG the present sights of London we have to notice a sight of London itself. This model, at which we took a glance yesterday at the Western Bazaar, is on the scale of 4½ feet to a mile. It is a production of great diligence and accuracy, and has, we were informed, occupied three years in its construction. The effect is very good, and the labour a curious example of industry in an extraordinary pursuit. The river, bridges, streets, docks, churches, and other public buildings, are all correctly figured, and the general appearance is singular as well as original.

Another very curious exhibition is one of Pictures worked in cloth, in Soho Square. Without seeing it, it is impossible to conceive that such performances could have been executed from such materials.

ORIGINAL POETRY.

BAGATELLES, BY MRS. CAREY.

On the proposed Mode of conveying articulate Sounds through the Manchester and Liverpool Railway.

OH, news of wonder! news of joy,
To gossip through the nation!
'Twill Rumour's hundred tongues employ,
And cause a great sensation.

Scandal was wont to travel post;
But she'll disdain that stale way,
When she shall hear her votaries boast
Of railing by the railway.

Think how delightful, thus to send
The on-dit of the minute
To some dear sympathising friend,
Who'll take an interest in it!

Who, should this novel plan proceed,
May, in her turn, convey it
To ears attent, on Thames or Tweed,
As quick as she can say it.

Grave folk, indeed, who value fame,
May read this rare invention:
I care not; be it theirs to blame,
While I go on to mention

How lovers, doom'd by fate to part,
May thus hold sweet communion,
Pour forth each feeling of the heart,
Or plan a private union.

No need of writing—*billets-doux*
Will go quite out of fashion,
When tubes, that sound the gossip's news,
Shall breathe the lover's passion.

No letters passing! Pause and think,
Ye rulers of the nation,
How low the revenue might sink
Through such a defalcation!

Yet ways and means might be devised
The due supplies to handle:
Yes! ministers might be advised
To lay a tax on scandal!

On the Marriage of Miss Dear.

Beloved! while single, woo'd, and won,
Thy lot might seem severe—
Thy honeymoon but just begun,
Thyself no longer Dear.

But Hope suggests a happier fate
Thy wedded life to cheer;
Though changed thy name, a faithful mate
May ever call thee Dear.

MUSIC.

ON Wednesday, the last of Mr. Phillips' course of four lectures was delivered in the concert-room of the Royal Academy, before a highly respectable audience. The chief subject was the defective state of our national psalmody. The lecturer contended that it required but little knowledge of music to effect a very decided improvement in the vocal service of our parish churches, if the choirs were taught a proper emphasis in the delivery of the words, instead of that total violation of rhyme and reason which issues from the parish-clerk and his adjuncts. The barbarous taste of allowing a multitude of discordant voices to sing in what is called *unison*, has been too long the reproach of the English school of sacred music. The different effect produced by solo singing, even when excellent, as compared with fugue and contra-point, was illustrated by Mr. Phillips and the pupils of the Academy singing the same air as solo, and then harmonised. A similar illustration was given on the old favourite Scots air, "We're a' noddin," harmonised by Mr. Phillips with great taste, and deservedly honoured with an *encore*. The illustrations selected by the lecturer from the works of Mozart, Sir John Stevenson, Lord Burghersh, and others, were equally creditable to the judgment of the lecturer and the talent of his juvenile assistants. The execution of the favourite terzetto in *Così fan tutti*, first in the Italian, and then adapted to English words, shewed that the English language is not so defective as the self-interest of foreign artists describe it.

As the express object of these lectures appears to be that of rescuing this country from the imputations of barbarism, which have been too long and too justly applied by foreigners when speaking of English music, we think Mr. Phillips entitled to the thanks of his countrymen, and to extended support and patronage.

SOCIETÀ ARMONICA.

ON Monday another beautiful concert was given by this Society.

DRAMA.

DRURY LANE.

ON Saturday last, the public were indebted to the indefatigable and popular pen of Mr. Planché for a new drama at this theatre, entitled *The Legion of Honour*; and taken from *Le Centenaire* of the French. Like all the author's productions, (and we believe it is about the *seventieth*!) it is excellently adapted for the stage; and affords another proof of the discrimination with which he selects, and the skill with which he finishes, his theatrical compositions. In spirit and essence the piece is unquestionably more French than English; and we have been amused to observe this objection made to it by some of our fellow-critics,—as if the national stage were to be literally so national that it should never represent foreign feelings and manners! This is truly being national with a vengeance: but as we have no antipathy to amusement on account of the quarter whence it is drawn, we can say of the *Legion of Honour*, like many other pleasing plays of the same class, that we are glad to see them redeem our Drama from its otherwise inevitable sterility. Under the present system, no living author could run the risk of writing original compositions for the stage; throwing away the labour of many months, or even of years, upon the risk of capricious managers, capricious actors, and a capricious public. No; till dramatic literature is better rewarded and protected, let us not find fault with entertaining importations and adaptations. Of these, the present is one. Four generations of Galliards flourish in it, consisting of *Philippe* (Farren), an old soldier, aged 102; *Jérôme* (Downton), his son, aged 70; *Pierre* (Liston), his grandson, aged 50; and *Capt. Antoine*, his great-grandson, a young military hero, (Mr. Bland). Besides these, there is Harley, as a half gardener, half-corporal of dragoons; Benson Hill, as a drum-major; Miss Poole as his adopted child, and a drum-boy of the first water; Mrs. Orger as an auvergiste; and Mrs. Waylett as her niece, a pretty soubrette. The story involves the loves of Jérôme and Pierre for the two ladies, and their being ousted by the drum-major and gardener; and the bestowal of a long over-due cross of the Legion of Honour upon Philippe Galliard. The details, however, are not so interesting as the general action. The march of Time on a century of men is a striking spectacle, and it is treated in a striking manner. Farren's is a wonderfully fine picture of extreme old age; every touch is nature, and every peculiarity redolent of military France. His son and grandson are rendered more diverting from their relative and comparative ideas of their own juvenility; and Downton and Liston are two famous old youths. Harley and Hill are both excellent; and no less can be said of Misses Orger and Waylett. The little girl Poole is "prodigious;" we are almost sorry to see a child act so well; for it always puts it into our head, that to be a first-rate performer is not so difficult as the leaders would teach us to believe. *The National Guard* is, to use the common phrase, having a run; and we will not close our notice of it without again adverting to the great fund of entertainment with which Mr. Planché has supplied the public. On Tuesday night the pieces were, this opera, *Charles the Twelfth*, and *the National Guard*,—all his justly successful productions!

COVENT GARDEN.

ON Wednesday night Miss Fanny Kemble made her appearance in *Camilo*, the heroine of Massinger's *Maid of Honour*; a play and character understood to have been especially selected by herself, and, as far as regards her own part, a very judicious selection. Arch, graceful, and throwing into the last scene the most touching pathos, both her fine poetical conception of the heroine, and her skilful embodying, not only shewed her continued improvement, but gave promise of much higher excellence. Her delivery is rapidly losing its monotony; her voice is as sweet, but more varied, though we must still protest against one or two peculiarities of pronunciation: to instance one, the sounding *o* as *u** has all the vulgarity of a cockneyism. The expression of her brow is very beautiful and intellectual; but she deteriorates it by making her eyes, like patriotic opinions, too movable. Still, as a whole, *Camilo* is a very exquisite impersonation of the poetry of our old English drama. With the exception of Warde, who gave an excellent delineation of the high-minded and chivalric General Gonzaga, none of the other *dramatis personæ* call for particular criticism. Charles Kemble had a very disagreeable part to support, and which he acted most languidly. Neither Abbott's *Fulgensio*, Blanchard's *Asutio*, nor Keeley's *Sylli*, could be better than the author made them, and that is not much. With regard to the play itself, it is equally deficient in action and in interest; all its sympathies belong to an age gone by; and its humour, then an obvious and applicable satire, is now absurd, not laughable. There is one great inconsistency in the plot: *Camilo*, in the first act, refuses *Bertoldo*, he being a knight of Malta; and when he proposes a dispensation, says,—

"Oh, take heed, etc!
When what is vowed to heaven is dispensed with
To serve our ends on earth, a curse must follow,
And not a blessing."

In the fourth act, however, she makes his marriage with her a condition of his ransom,—conduct liable to two objections: first, as not delicate thus to make a debt of love; secondly, as quite forgetting her religious scruples. There was a pretty story in a collection called *Tales of Fact and Fiction*, in which this difficulty is much more neatly managed: *Camilo*, in these, desires the contract as a means of inducing the king's consent, who objects to the disparity of birth. Again, the sudden and avowed passion of *Aurelia* revolts all our present notions of feminine propriety. We conclude by expressing our conviction that the older dramas are unfit for the modern stage; the great, the exquisite poetry in which they abound, is a beauty only to be appreciated in the closet. How finely is the following idea rendered from Horace!—

"Virtue, if not in action, is a vice."

Again, the description of England, as

"The mistress of the ocean, her navies
Putting a girdle round about the world."

Or,

"Now lose not, by too sudden rashness, that
Which but be patient, will be offered to you.
Securely ushers ruin."

None of these fine passages produced the least dramatic effect. Our English audiences seem to carry into the theatre only one faculty—that of sight. They see, feel, hear, and understand, through their eyes; and to these merely true poetry makes no appeal. We do not know to what age we should refer this play; but the costume was of all ages, and some of it of no age.

* As in confusion, which Miss Kemble calls confusion.

ADELPHI.

ON Monday we found the ever-entertaining Adelphi, Yates and Mathews, again at Home for a season, and ready to see company thrice a-week. The performances consisted of three divisions. In the first, Mr. Mathews, alone, presented us with fragments of a Comic Annual, personating various characters, relating various amusing stories, and singing various patter songs. There are a great many facetiæ in this part, and they are supplied with all the gusto of Mathews's rich humour. A Scotsman, who has stood too long for politeness with his back to the drawing-room fire, is complimented on his being *done*; as a *raw* Scotsman is so very disagreeable. The slang of *cads*, *à hoc genus*, belonging to the Paddington Omnibuses, together with the journey of one of these vehicles, in which a family of spoilt children travel, are quite in the performer's style, and enable him to make some palpable hits. An original, who suffers every petty annoyance to make him miserable, merely because his tormentors "have a right" to act as they do, is another excellent sketch. The services of a lazy footman, another; but it would be vain to attempt particulars—suffice it to say, that the whole resembles preceding racy and laughable representations, by the same inimitable imitator. Part the second consists of Yates (also alone, though multiplied like a root by himself) in Italy, where he enacts a pretty French barmaid, the landlady of the inn, a hunch-backed virtuous lord, a travelling mayor, Fra Diavolo, an English dandy, and Jacksonini, an opera and ballet performer, all with incredible alacrity, changing his appearance like a very Proteus, and assuming shapes so rapidly, that the spectator is often obliged to doubt his identity. The barmaid and her dancing are capital burlesque. The third part, strange to say, in which Mathews and Yates were together, did not go off so well, though it opened with the former as a cobbler, in the most promising style. We do not think there is much in this division itself to recommend it to popularity; but the immediate cause of its unfavourable reception, was the personation of two females, well known in London as frequenting the Bank and Treasury, and who seemed to have some relatives or friends in the house, who strenuously objected to their infirmities being exhibited on the stage. They are, we are told, insane persons, reduced to that condition by misfortunes, and the victims of harmless delusions as to the possession of wealth and power: if so, however faithfully and curiously copied, we incline to the opinion, that it was a mistake to choose them for dramatic exposure. Indeed, both Mr. Mathews and Mr. Yates appeared to acquiesce in this sentiment; and we have no doubt that, on the succeeding nights, every thing which could hurt a good feeling has been omitted.

Next week promises us a striking novelty in our dramatic annals, namely, a regular and original five-act English comedy, from the pen of a foreigner. We understand that this play, called *The Esquises*, and a picture of our own manners, is the production of Don Telesforo de Trueba, the well-known author of several clever novels. From these we augur well of his greater attempt upon the stage, and especially as the strength of the Covent Garden company is included in the cast. Another remarkable novelty, in preparation at the King's Theatre, is a full Italian opera, written and composed by Mr. Monk Mason, an Irish gentleman!

VARIETIES.

New Species of Medicago.—Dr. Schmidt has discovered a new species of medicago, which he calls *M. corymbifera*. It places itself near the *M. lupulina*, and grows on the island of Uedom, near Swinemunde, on the shores of the Baltic.

New Species of Fucus.—M. Mertens describes a new species of fucus, under the name of *F. Lutkeanus* (after the captain of the *Siniavin*). It grows on the shores of Sitcha, and is of very great length, and extremely thin.

Great Scientific Meeting to be held at York.—Arrangements are now making for holding at York, in July or August next, a meeting of the cultivators of science from every part of the British islands. The object of the association is similar to that of the German Society of naturalists and philosophers. The sittings will continue for a week. The lord mayor and the authorities at York have, as might have been expected, entered heartily into this plan, and the Philosophical Society of that city have kindly offered to charge themselves with any preliminary arrangements which may be necessary. Scientific individuals who propose to attend, or to become members of the association, are requested to communicate their intention to John Robinson, Esq. secretary to the Royal Society of Edinburgh.

Natural History.—It is a fact, that there is at the present moment a rook's nest, built upon a tree which grows at the corner of Wood Street, within ten yards of Cheapside, and that one of the birds appears to be in the act of incubation, whilst the other is busily employed in supplying her with food.—(April 21.)

Geographical Botany.—The *Fucus pyrifera* is not, as has been supposed, an inhabitant of only warm latitudes. M. Mertens, in the expedition of the *Siniavin*, met with it first in the neighbourhood of the Falkland Islands. It is very abundant along the coast of Chili, more especially in Concepcion Bay; and it is found again on the north-east coast of America.

Geological Society of Paris.—A Geological Society has been established at Paris. M. Cordier is the president; MM. Alex. Brogniart, De Blainville, Constant, Prévost, Brochant de Villiers, vice-presidents; MM. Boué and Elie Beaumont, secretaries; and MM. Dufrenoy and J. Desnoyers, vice-secretaries. The Society has already 150 members.

Willemit, new Mineral.—Mr. Levy has discovered, near Liege, a new mineral, composed of silica and of oxide of zinc, with a little oxide of iron. The primitive form is a rhomboedron, with a cleavage in only one direction, which is perpendicular to the axis. He calls it Willemit.

Globular Copper Pyrites.—M. Freiseleben has found specimens of copper pyrites under the form of rogenstein, or radiated globes, in the *Sanders* of Langerhausen, which explains the analogous quartzose formation sometimes observed in the *Weiss Leigende*.

Fibrous Glauberite in Gypsum.—M. Wanger d'Aran announces the discovery of the fibrous glauberite in gypsum, a mile and a half from Brugg, near Mühlingen.

Aurora Borealis.—It is very curious that the gentlemen attached to the northern expeditions of Captain Sir John Franklin and Captain Beechey, never observed that the aurora was accompanied by any noise. The Rev. Mr. Dunbar inserts a paper on the subject in the last number of the *Edinburgh Journal of Geographical Science*, in which he asserts, that during six years' residence in one of the islands

of the Hebrides, he heard a crackling noise almost every winter evening when the phenomenon was visible.

A Miner!—"In Africa, as the story goes, people used to find little grains of gold in a sandpit, which they had to deliver up to the poor black king as his property. With the help of these he would then buy all sorts of things from foreigners. One day going a little deeper they fell in with two good-sized lumps of massy solid gold. The slaves in great delight carried the fruit of their labours to their black master, it being more than they had found for ten years past, and they thought how overjoyed the poor man would be at becoming rich thus all at once. But they were mistaken. The wise old king said: Look ye, my friends, these pieces are the father and mother of that little brood of gold grains which we have constantly been finding for ages; carry them back immediately and set them in the very same place, that they may be able to go on producing fresh ones."—*Old Man of the Mountain*.

Mergus cucullatus.—Mr. Selby thinks that this beautiful species of mergus may be added to the list of British birds, one having been killed near Yarmouth, in Norfolk, in the winter of 1829. This is the first instance of its capture not only in Britain but in Europe. We are decidedly of opinion, that the taking of a single specimen does not entitle it to be considered a British bird.

Anatomical Characters to distinguish venomous from harmless Serpents.—Travellers in Brazil, Africa, and India, relate, that many serpents, regarded by naturalists as harmless, because they want fangs in front of the palate, are, nevertheless, reputed to be very noxious by the natives. M. Duvernoy, a French naturalist, has made a number of researches, on a point so important to science and humanity; and the fact appears to be correct in many genera. It seems that in these, as far as examined by M. Duvernoy, there is behind the series of maxillary teeth another larger tooth, separated from the first by a vacant interval, and hollowed by a more or less marked groove along its convexity. These serpents also possess a venomous gland.

Scientific Titles.—The pecuniary arguments of Mr. Charles Babbage against the folly of a number of titles being appended to the name, like a comet, have assumed a different character since the rising metropolitan institutions have admitted the fair sex to the honour of a rank among scientific men. Observing a celebrated ornithologist subscribe his name F.Z.S., we inquired of a friend, who has a slight provincial accent, what the ladies would call themselves? "Undoubtedly," he replied, "Fellow-asses (esses)."

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XVII. April 22.]

Mr. J. F. Pennie, the author of the *Royal Minstrel*, *Rogvald*, *Etchell*, and other poems of a high class, announces, by subscription, and under the patronage of the King, a volume entitled *Britain's Historical Drama*; being a Series of National Poems, intended to illustrate the Manners, Customs, and Religious Institutions of different early Eras in Britain.—*Gospel Truth*, by the Rev. Messrs. James Hog, Thomas Boston, Ebenezer and Ralph Erskine, and others; occasioned by the re-publication of the *Marrow of Modern Divinity*: with various Improvements, &c., by John Brown, Minister at Whitburn.—*A System of Endowments for the Provident Classes in every Station of Life*, exemplified by the Rules of the Southwell Endowment Society; by the Rev. John Thomas Becher, M.A.—*The Life of the Rev. John Wesley, M.A.*, including Notices of the Rev. Charles Wesley, M.A.; by Richard Watson.—*What is a Revolution?* and what are the Signs of its approach? A Letter to the King; by the Silent Member of Blackwood's Magazine.—A second edition of the *Five Nights of St. Albans*—*The History of*

Poland, from the earliest period to the present times, with a Narrative of the Recent Transactions; by a Polish Nobleman.—*Captain Marryat*, the author of the *King's Own*, has another work ready for the press, to be entitled *Newton Foster*; or, the Merchant Service.—*The Young Muscovite*; or, the Poles in Russia: an Historical Novel on the subject of Russian History; edited by Captain F. Chamier, R.N.—*The Staff Officer*; or, the Soldier of Fortune: a Tale of Real Life; by Oliver Moore.—*The Club Book*; consisting of Original Tales by the following authors: Theodore Hook, John Galt, G. P. R. James, and other well-known writers.—*The Fifth and Sixth Parts of Mr. Booth's Analytical Dictionary of the English Language*.—*The Parliamentary Pocket-Book*, or Key to both Houses of Parliament.

LIST OF NEW BOOKS.

Wilson's (W. R.) *Travels in the Holy Land*, &c. 3d edit. 2 vols. 8vo. 1l. 10s. bds.—*Four Words on Many Subjects*, Grave and Light, 12mo. 6s. bds.—*Joanna Baillie on the General Tenor of the New Testament*, regarding the Nature and Dignity of Jesus Christ, 8vo. 5s. bds.—*History in all Ages*, 3d edition, 12mo. 8s. cloth.—*Held's Offices of Devotion*, post 8vo. 10s. 6d. bds.—*Rev. Macgillivray, A.M., 8vo. 14s. bds.

METEOROLOGICAL JOURNAL, 1831.

April.	Thermometer.	Barometer.
Thursday... 14	From 42. to 57.	29.83 to 29.87
Friday... 15	— 34. — 60.	29.90 Stationary
Saturday... 16	— 40. — 60.	29.98 — 29.94
Sunday... 17	— 29. — 56.	29.92 — 29.94
Monday... 18	— 27. — 57.	— 29.92
Tuesday... 19	— 33. — 57.	29.90 — 29.83
Wednesday 20	— 34. — 58.	29.79 — 29.68

Wind variable, N.W. prevailing.

Generally clear; a few drops of rain on the morning of the 17th.

Edmonton.

CHARLES H. ADAMS.

Latitude..... 51° 37' 39" N.
Longitude..... 0 3 51 W. of Greenwich.

Extracts from a Meteorological Register kept at High Wycombe, Bucks, by a Member of the London Meteorological Society, March 1831:

Thermometer—Highest.....	60.50°
Lowest.....	27.
Mean.....	49.6112
Barometer—Highest.....	30.23
Lowest.....	29.89
Mean.....	29.61376

Number of days of rain and snow, 17.
Quantity of rain and melted snow in inches and decimals, 2.8875.

Winds.—0 East—10 West—2 North—1 South—6 North-east—3 South-east—7 South-west—3 North-west.

General Observations.—There has not been so much rain in the month of March since 1827. The mean temperature was higher than any in the last eight years, excepting last year; but the barometer was generally low; and there was much dull, heavy weather, with very few fine days. A little snow fell on the morning of the 24th; and thunder was heard, and lightning seen on the 13th, about 8 p.m. A faint lunar halo was observed on the 19th, and slight appearances of aurora borealis on the nights of the 7th and 11th. The evaporation 0.3125 of an inch.

TO CORRESPONDENTS.

The circular from Bodmin, on the Elective Franchise, is entirely political, and inconsistent with any literary page. We may say, with Mathews (as a cobbler) in the new entertainment, we won't be induced—"nobody shall this French cheese us."

We must say "No," to G. D., though very graceful and sweet.

From a known Correspondent.—A paragraph appeared in the *Literary Gazette* a fortnight ago, relative to an experiment made by Mr. Trevelyan, which announced that it had failed of success as conducted by several persons in London. Now, as I shewed the experiment last evening in the Royal Institution, to the entire satisfaction of Mr. Faraday, Mr. Wheatstone, and others, I hope you will, in justice to Mr. Arthur Trevelyan, correct the false impression which the paragraph is likely to make. The heated bars of brass, when placed upon cold blocks of lead, were seen to vibrate, and heard to sound, as long as a proper difference of temperature was maintained.

We thank "an Old Amateur," and shall attend to his suggestions.

Extractum.—In the report of the proceedings of the Society of Antiquaries in our last week's *Gazette*, for Royal Institution read London Institution.

Interesting Works.
Just published, by Henry Colburn and Richard Bentley,
New Burlington Street.

THE YOUNG DUKE. In 3 vols.

PRICE 8d.

REVIEW OF NEW BOOKS.

State Papers. Vol. I. King Henry VIII.
Parts I. and II. J. Murray.

Is our last we briefly but truly characterised this national work, with which we had considerable acquaintance during its progress through the press, and could therefore justly report its value. That it illustrates and corrects our history at an era like the present, of no common importance, will be found in very many instances; and a careful analysis of the volume with reference to this object will reflect credit upon the largest and ablest of our periodical reviews. For ourselves, limited in space, occupied with such various details, and subject to weekly interruptions, it would be vain to attempt such a task; but we trust it will be acceptable to our readers to have the most prominent points seized, and the book fairly exemplified by selections from it of the most curious and interesting matters.

The notice of the preservation of the State Papers appears to us to be one of these extracts.

"It will be readily conceived how rapidly the mass of correspondence must have accumulated in the office of the secretary of state, after the revival of letters in the sixteenth century; yet no provision was, for some time, made, for its being received into any certain depository. Each succeeding secretary had it in his own custody; the apartments provided for him were extremely confined; and the future destination of his official papers depended, in great measure, upon accident, upon the care or the negligence of the individual, or his clerks, and, above all, upon the good or evil fate which awaited the secretary when he resigned his seals. Even in the office of the Privy Council (the office, in which, in those days, and until the Revolution, all the affairs of the realm were debated and resolved on), no written record of the proceedings was preserved until 1540, when it was ordered that a regular register should be kept, and two clerks (Paget and Petre) were appointed to keep it. This register commences on the 18th of August in that year. The necessity of a repository for state papers began soon afterwards to be felt; and, in 1578, an office for keeping papers and records concerning matters of state and council, was established, and Dr. Thomas Wilson (who was then master of requests, and afterwards became one of the secretaries of state), was appointed the keeper and register of those papers. Before this establishment was formed, it is not surprising that numerous papers of great importance should have been entirely lost, and others have fallen into the possession of private persons. Sir Robert Cotton, in the reign of James the First, and Sir Joseph Williamson, in that of Charles the Second, were most assiduous and successful collectors of those scattered papers. The collections of the former now form a portion of the library of the British Museum. Sir Joseph Williamson placed his

collections in the State Paper Office, where they still remain. Another mass of papers, consisting principally of letters addressed to Cardinal Wolsey, and to Crumwell Earl of Essex, remained in the custody of the crown; but, instead of being deposited in the proper place, found its way into the Chapter House at Westminster, and is there preserved. The three great receptacles, therefore, of state papers, antecedent to the year 1540, and partially down to the year 1578, are the State Paper Office, the Chapter House, and the Cottonian Library. And so entirely accidental seems to have been the preservation of many of the papers, that, of a series relative to the same subject, a part will frequently be found in each of these three libraries. Nay, of two letters, written by the same person, to the same correspondent, on the same day, one will be discovered in one of these receptacles, the other in another, and the answer in the third; and several instances will be seen, where one portion of a letter is found in one part, and the residue in another part of the same collection. A few are to be met with in the Lambeth Library, the Harleian Collection, the University Library of Cambridge, and in private hands."

The preface proceeds with a list of the keepers from the end of the sixteenth century to the present hour, when the office is held by Henry Hobhouse, Esq.

"In the reign of James I. considerable attention appears to have been paid to this office. On the death of the Lord Treasurer Salisbury, in 1612, the king's commands were given to his successor, Thomas Earl of Suffolk, the lord privy seal, Edward Earl of Worcester, and Sir Julius Caesar, chancellor and under-treasurer of the Exchequer, to take possession of the late lord treasurer's papers, and deliver them to Muncke and Wilson. The subsequent patents expressly mention the office to contain the papers of Robert Earl of Salisbury. At this period, the papers, which had been hitherto kept in chests, were reduced into the form of a library, and the king assigned certain apartments in his palace of Whitehall for their reception. Wilson seems to have experienced difficulty in getting possession of some of those apartments, and has left a curious memorandum of the presents and douceurs, which he deemed it prudent to give to the lord chamberlain and Lord Worcester, and their servants, to obtain one room, which had been the larder of the lord privy seal. The part of the palace finally appropriated to this purpose, was the tower over the gateway, which connected the eastern and western parts of the edifice, standing across the street, now known by the name of Whitehall. The apartments are described by Tucker as consisting of two rooms, three closets, and three turrets. Of these Wilson did not get entire possession till 1618, when he presented a memorial to the king, complaining that he had received no new papers since Lord Salisbury's. This tower fortunately escaped the conflagration, which

destroyed great part of the palace on the 12th of January, 1619,—an escape which gave Wilson occasion to congratulate the king on his prescience in removing the papers, equal to that which led him to the detection of the Gunpowder Plot. But though Wilson boasted that the archives under his care had not, on this occasion, sustained so much hurt as the loss of a blank paper, Raymond, his successor, complained that they were thrown into great disorder, by having been hastily and confusedly cast into blankets, the better to preserve them from the fire. The events of the succeeding reign were very adverse to the regular preservation of public archives. Sir Joseph Williamson states, that he had been told by Sir Edward Nicholas, that Secretary Windebanke's papers were, on his retirement, delivered to Sir Edward, and were, when the latter went to the king from London, seized by the rebels and disposed of, he knew not how, as were all Nicholas's own up to that time. Some of them, afterwards, reached the State Paper Office, but probably in a very imperfect condition: Williamson further learned from Nicholas, that the papers, which he had subsequently collected while the king was in the north, and till the surrender of Oxford, were designedly burnt by Nicholas at that place, through fear that the rebels intended, notwithstanding the articles of Oxford, to seize him and his papers; and that he, at the same time, committed to the flames a cabinet of the king's, full of papers of a very secret nature, which his Majesty had left there upon his retirement to the Scots, with directions to Nicholas to burn them rather than let them fall into the rebels' hands. Among these were thought by Nicholas to be all the queen's letters to the king, and things of a very mysterious nature; but he looked not into one of them, in obedience to the commands of the king, who thanked him for that justice. Besides the destruction which is thus recorded, and much more, which must of necessity have occurred amid the disorders of civil war, the office is stated to have suffered spoliation, from papers, after being deposited there, having been taken from it, particularly by President Bradshaw, Secretary Thurloe, Scobell the clerk of the parliaments, and Milton the secretary for the Latin tongue. And several warrants were issued by the king in 1660 and 1661, requiring papers to be delivered up to Raymond, which had fallen into the hands of the three first of those officers of the commonwealth. Much pains were taken, after the restoration, to lodge in the State Paper Office the documents relative to the affairs of the usurpation. Thurloe is said to have destroyed some of them; but a large portion was secured, and now remains in the office; enough indeed to shew that, amid all the turbulence of that era, the transactions of the state were never more regularly recorded. Williamson has left considerable traces of his assiduity, during the early part of the long period for which he held the office; but his successor, Tucker, made great complaint of its having

been neglected in Williamson's later years; and it was found in a great state of neglect when it was visited, in 1705, by a committee of the House of Lords appointed to inquire into the method of keeping records and public papers in offices. In consequence of a report from that committee, compiled from a return made by Tucker, an address was presented to the queen, in which it was stated, that, with the exception of the papers of three secretaries of state, viz. Sir Edward Nicholas, the Earl of Arlington, and Sir Joseph Williamson, and those left by Sir Leoline Jenkins, few papers had been delivered into the office since the year 1670, and even those so delivered were not perfect, and many deficiencies are particularised. The address observed, also, upon the deficiency of space, and the inconvenience arising from many papers being kept in bundles; and recommended the repair and enlargement of the office, and that the papers should be sorted, and digested, and bound in volumes. After a reference to Sir Christopher Wren, it was determined that the upper floor of the lord chamberlain's lodgings, at the Cockpit, should be fitted up and appropriated to the State Paper Office. This work was accordingly done, and an apartment of eighty feet long and twenty-five feet wide, which is known by the name of the Middle Treasury Gallery, was then added to the office. In this state it remained until the old gateway was pulled down, about 1750, when the contents were found to have greatly suffered from vermin and wet. The papers contained in the gallery, which was left standing, remained there; but the contents of the rest of the office were removed to an old house in Scotland Yard, where they remained, and suffered still further injury from wet, till 1819, when it became necessary to pull down the last-named house; and the papers were again removed to another old house in Great George Street, in which and in the Treasury Gallery they are now deposited. It will be readily believed that the various casualties to which they have been thus exposed have led to serious loss and injury. In the last session of parliament a plan was approved, and a vote passed, for erecting a new fire-proof building for the reception of the state papers, adjoining to St. James's Park, at the north end of Duke Street. This building is now in progress, and affords good hope that these historical treasures will be rescued from further devastation. In the year 1764, Sir Joseph Ayloff, Dr. Andrew Coltée Ducarel, and Thomas Astle, Esq., all antiquaries of considerable note, presented to Mr. George Grenville (then one of the secretaries of state) a memorial, representing the bad condition of the State Papers, and the want of indexes and calendars, and proposing to undertake the principal labour of methodising, regulating, digesting, arranging, and binding them, and of making proper catalogues, calendars, and indexes. Sir J. Ayloff, Dr. Ducarel, and Mr. Astle, received a commission from the crown accordingly, which continued in force till 1800; with no other change, than that the vacancy made by Sir J. Ayloff's death, in 1781, was filled by John Topham, Esq.; and that caused by the decease of Dr. Ducarel, in 1789, was supplied by Thomas Astle, jun., Esq. But though this commission was thus in existence for thirty-six years, it cannot be asserted that there remain any great traces of the constancy of their labours, nor denied, that their arrangements were very superficially and incorrectly performed. In 1800 this commission was revoked, and a small establishment of clerks was allowed to the keeper of State Pa-

pers, to carry on the necessary work under his control. Since that period, great progress has been made in rendering the valuable documents of this collection accessible to those who have occasion to refer to them. In 1825 his late majesty issued the commission which is printed at the commencement of this volume. Under this commission it was found, that though much had been done in arranging the papers in the office, yet those of earliest date had not been the first objects of attention, and that there remained a very large mass of valuable papers, of the reigns of Henry VIII. and his three children, without assortment, without index, or any other means of reference, and many of them in a great state of decay. It was resolved to proceed chronologically in the execution of the commission; and the first step taken under it, therefore, was to direct the assortment of the whole of the papers of those four reigns, and the preparation of calendars (divided according to the subject-matter), in the first instance, of those of the reign of Henry VIII. The difficulty of this task can only be estimated by those who know that, before 1528, the instances are rare of any letter bearing the date of the year; and that it was not till the close of Henry's time that the practice of giving such a date became by any means common: so that it was generally necessary to arrive at the dates by inference, either from the subject-matter of the letter, or from some extrinsic circumstances. And this difficulty was frequently increased by the errors committed by those who had undertaken the task of arrangement, either in the reign of James I. or in that of George III. The difficulty has, however, been surmounted; and there is not now in the office a single paper of Henry's reign which is not arranged both chronologically and according to the subject to which it relates. And it will be obvious that in making this arrangement for the first period, much has, of necessity, been incidentally done with respect to the subsequent reigns. The table of contents which will be prefixed to each part of the work will distinguish what portion of the date of each letter is fixed by the writer, and what is supplied either from inference or conjecture; the latter being included between brackets. The commissioners, having determined to confine their publication, in the first instance, to the reign of Henry VIII., next proceeded to consider how the papers of that date could be best arranged. If they had been published in one chronological series, letters on the same subject would frequently be placed at such a distance from each other, and so intermixed with matter wholly irrelevant, as to perplex the general reader, and to offend one who should be in the pursuit of information on one particular subject. It was therefore determined to classify the papers; and the following division was, after much consideration, agreed on, as that best adapted for this reign:—I. The correspondence between the king and Cardinal Wolsey. II. That between the king and his other ministers at home. III. That between the governments of England and Ireland. IV. That between the government and the king's representatives on the Scottish border. V. That between the government and the king's representatives at Calais and its dependencies. VI. That between the court of England and foreign courts, each forming a separate subdivision. VII. Miscellaneous. It was further resolved to select, under these heads, not only papers of historical interest, but whatever might throw light on the religion, the morals, the manners, the habits, the naval

or military history, the commerce, or the literature of the day."

Such is the work before us, which having thus explained, we shall, for the present, quote only one extraordinary letter: it is from the Duke of Norfolk to the king, upon the committal of his near relatives to the Tower for their part in the affair of Ann Boleyn.

"Most noble and gracious soverayne lord. Yesterday came to my knowledge, that myn ungracious mother in lawe, myn unhappy brother, and his wiff, with my lewde suster off Brydgewater, were committed to the Towre; wiche, by long experience, knowing your accustomed equetie and justice, used to all your subiectes, am sewer is not done, but for som their fals and traytorous procedynges agaynst your royall majestie. Which, revolvyng in my mynd, with also the most abhominable dedes done by 2 of my niesys agaynat your highnes, hath brought me in to the grettest perplexite, that ever poure wretche was in; fearyng that your majestie, havynge so oftone, and by so many of my kyn, bene thus falsly and traytorously handled, myght not only conceyve a displeure in your hert agaynst me, and all other of that kyn, but also, in manner, abhorre to here speke of any off the same. Wherefor, most gracious soverayne lord, prostrate at your fete, most humble I beseeche your majeste to call to your remembrance, that a gret part of this mater is come to light by my declaracion to your majeste, accordyng to my bounden dutie, off the wordes spoken to me, by my mother in lawe, when your highnes sent me to Lambithe to serche Derhams coffers; without the wiche I thynke she had not be further examyned, nor consequently her ungracious childerne. Wiche my trew procedynges towardes your majestie considered, and also the small love my two fals traytorous niesys, and my mother in lawe, have borne unto me, doth put me in som hope that your highnes well not conceyve any displeure in your most jantle hert agaynst me; that, God knoweth, never did thynk thought, wiche myght be to your discontentation. Wherefor, fetsynys prostrate at your royall fete, most humble I beseeche your majeste, that by suche, as it shall please you to commande, I may be advertised playnly, how your highnes doth way your favour towardes me; assewryng your highnes that onles I may knowe your majeste to contynew my gode and gracious lord, as ye wer befor their offensys committed, I shall never desire to lyve in this worlde any longer, but shortly to fynishe this transitory lyff; as God knoweth, who send your majeste the accomplishments of your most noble hartes desires. Scribled at Kenynghale Lodge, the 15th day of Desember, with the hande off your most humble servant and subject,

(Signed) T. NORFOLKE."

All the letters relative to the proceedings against Ann Boleyn are deeply interesting, not only from their detailing the tragic events connected with that memorable transaction, but from their shewing how the laws, or rather the king's commands, were administered, and incidentally, the state of families, and their mode of living at the time. Among other documents we have the "*Charges against the Duke of Norfolk and Earl of Surrey*."—If a man cummynge of the colaterall lyne to the heyre off the crown, who ought not to beare tharines of England but on the seconde quarter, with the difference of theyre auncestre, doo presume to change his right place, and beare them in the first quarter, leaving out the true difference of thanuncestre, and in the lieu thereof, use the very place only of the heire masle apparant;

how thys mans intent is to be juggyd; and whether thys importe any danger, peril, or alaudre to the title of the prince, or very heire appasant; and howe it wayeth in our lawes. If a man presume to take into his armes an olde cote of the crown, whyhe hys awnesteer never bare, nor he of ryght ought to bear, and see it without difference; whither it maye be to the peril or alaudre of the very heire of the crown, or be taken to tende to his disturbance in the same; and in what peril they be that consent that he shuld soo doo. If a man cumpassing with hymselfe to governe the realmes do actually goo about to rule the kinge, and shuld, for that purpose, advise his daughter or suster to become his herlot, thynkyng thereby to bring it to passe, and soo wolde rule bothe fader and soon, as by thys nexte artycle dothe more appere; whatt thys importyth. If a man saye thies wordes,—‘If the king dye, who shuld have the rule of the prince but my father or I,’ what it importeth? The depraving of the kinges counsaill. If a man shal saye thies wordes of a [man] or woman of the realmes—‘If the king were dede, I shuld shortly shitt him upp,’ what it importeth? If a man, provoked and compelled by his diente of allegiance, shal declare such matier as he herethe touching the king, and shall afre be continually threatened by the per[son] accused, to be killed or hurte for it; what it importeth? If a man take upon him to use in his lordshipp, or to kepe ples himself lres wren in his grom[de, without] lyence; what it importeth? If a subject presume without lyence to] gyve armes to straungers; what it imp[orteth].’

From the following paper—being “a bridg-ment of all such billes, warrantues, letters, and other writings, to the number of fourescore and six, whiche the kinges majestie caused me, William Clare, to stampe with his highnes secrette stamp, at dyverse tymes and places in this moneth of Januarie, Anno 38^o Regni dioti Regis nostri Henrici Octavi, &c., in the presence of Sir Anthoine Denny, Knight, and Mr. John Gate, Equier,”—we copy a few entries.

“A warrant for a diete of 26s. 8d. a daie for Mr. Richarde Morison, sent ambassadour into Denmarke, and for 5s. a daie for Jacques Granada, pensioner, appointed to beare him companye; whereof there was an other bill signed at Westminster the 28th of December, which was cancelled. Preferred by Mr. Secretarie Pagett.”

“A licence for Edwards Warner to transport eight hundred tonnes of beere beyonde the seas. Preferred by Mr. Secretarie Pagett.”

“A passport for Monsieur le Baron de St. Blancharde, a Frenchman, with his servantes, two horses, and 12 mastive dogges. Preferred by Mr. Secretarie Pagett.”

“A passport for Sir John de Leuclerc, your majesties gardynier, whom your highnes sendeth presently into Fraunce, for certain trees and grafes. Preferred by Mr. Secretarie Pagett.”

“A letter to give thanks unto for certain apple trees and grafes, whiche he lately sent unto your majestie out of Fraunce, and praisie him to helpp and assiste the said Sir John, whom your highnes sendeth thither for that purpose. Preferred by Mr. Secretarie Pagett.”

“Richarde Newport and John Holte to be xy lorde princes tailours, and have the wages of a daie, and their lyverie cootes yerely, from Michaelmas last past, during their lyves, and the longer lyver of either of them. At the suite of Mr. Harbert.”

“Your majesties last will and testament, bearing date at Westminster, the thirtieth daie of December last past, written in a booke of paper, signed above in the beginning, and beneath in thende, and sealed with the signet in the presence of thErl of Hertford, Mr. Secretarie Pagett, Mr. Deanny, and Mr. Harbert, and also in the presence of certain other persons, whose names ar subscribed with their own handes, as witnesses to the same; whiche testament your majestie delyvered then, in our sightes, with your own hande, to the saide Erl of Hertforde, as your own dede, last will, and testament, revoking and adnulling all other your highnes former willes and testamentes.

“(Signed) W. CLERC.”

“A commission to my Lorde of Hertforde, my Lord Privei Seale, &c. to pronounce in the parliament house, your majesties assent for thatteindour of the Duke of Norfolk, by acte of parliament. Preferred by Mr. Secretarie Pagett.

“(Signed) W. CLERC.”

The immediate death of Henry saved the duke, and put an end to stamped signatures.

Calmus Tartary; or, a Journey from Sarepta to several Calmus Herdes of the Astracan Government; from May 26 to August 21, 1823; undertaken on behalf of the Russian Bible Society. By Henry Augustus Zwick and John Golfried Schill. 12mo. pp. 262. London, 1831. Holdsworth and Ball.

This little volume contains much interesting intelligence respecting the Calmucs; and its statements will not be considered less deserving of attention from their being combined with the efforts to diffuse Christianity throughout these wild and wandering tribes, who inhabit the steppes on both sides of the Volga and northward of the Black Sea and Caucasian chain.

After the peace of Hubertsburg in 1763, a Moravian mission was established at Sarepta (at the confluence of the Sarpa and Volga), and laboured to 1816, by translating and circulating the Bible, and other zealous efforts, to propagate the Gospel among the surrounding heathens, whose prince, Thummen, did not discountenance their proceedings. On his death, July 11, 1816, his son and successor, Schwedechal, however, was found to be hostile,—“as little as he honoured the priests, (for he had reduced their number from 800 to 250,) he would not willingly either hear or speak of Christianity.” Individuals were nevertheless converted; and about 1820-1-2, the Missionary Schill, and some of his native disciples, were established near Sarepta. In 1823, on the 12th of October, “fifteen Calmucs from the Derbodian tribe, headed by a priest, made a plundering incursion upon their believing countrymen. Larum escaped with difficulty from their hands. Nothing remained for the oppressed, but to put themselves under Russian protection, at Zaritzyn. Sodnom and his brother were baptized there, into the orthodox Greek church (in November), upon application to the patriarch. So ended the attempts of the brethren of Sarepta for the conversion of the Calmucs! And this too at a time, when the colony itself had lost two-thirds of its dwellings, by a fire on the 9th of August preceding. Before this misfortune, and during the residence of the believing Calmucs in their neighbourhood, assistance had kindly been offered to them, for the furtherance of the work amongst the five hordes of wandering Moguls. The Petersburg Bible Society, at that time zealously active, had sent to the brethren at Sarepta, in the year 1822, a considerable number of copies of the Calmus Gospel of Matthew, and other small

Christian tracts, with a commission to get them distributed by brethren sent out for the purpose. This was the origin of the journey, on behalf of the Petersburg Bible Society, of which the account is now presented to the reader. Detached portions, contained in the letters of brother Zwick, have already been published in the Memoirs of the United Brethren (for 1823, chapter 6, and for 1824, chapter 1). It is here given as a whole; and its connexion with the preceding labours of the brethren amongst the Calmucs appears from this sketch.”

The journeys performed include visits to the Torgud horde, the Erkedan horde, the Yandykschan horde, the Baganzokhan horde, the Coschudan horde; with accounts of their princes, and their camps where the travellers resided. And from these we have chosen the following characteristic sketches.

“The steppes in the government of Astracan, extending northward from the Caspian Sea, on both sides of the Volga, over which the Calmucs and Tartars wander for pasture, are amongst the most desert parts of the Russian empire. The soil consists almost entirely of yellow clay, without stones, and abundantly impregnated with various salts. This fact, as well as the pits and salt lakes, and the great quantity of unfossilised shells still to be found on the surface of the earth, confirms the opinion of some of the learned, that these steppes were formerly the bottom of a sea, which, in some convulsion of nature, has made its way into the Mediterranean, by the Straits of Marmora. Supposing this to have been the case, the Caspian, the sea of Asoph, the Black Sea, and all the other seas in the neighbourhood, as being the deepest parts of that primitive ocean, remained when the waters had elsewhere run off. Except Mount Bogdo (which is noble), there are no mountains amongst these steppes; they seldom, however, present a complete plain, but are more or less hilly, alternately rising gently, and again falling in valleys, so that the prospect is always confined, and seldom allows a view of many miles in extent. Vegetation is exceedingly scanty, consisting chiefly of low-growing wormwood, interspersed with tufts of grass, which never fully cover the ground, or form a uniform turf; these two principal productions of the steppes growing in solitary bunches, between which the yellow ground is seen on all sides. In the valleys, there are here and there places more fertile, but they are commonly covered with salt herbs, fit only for camels. Many parts of the steppes are adorned, in spring, with the brilliant flowers of the iris, the tulip, and other bulbous-rooted plants, till the raging heat of the sun, which is intercepted by no hill or tree, together with the scarcity of rain during this scorching heat, kills them all.

“The animals inhabiting these steppes, between the Taik and the Volga, are wild horses, abundance of antelopes (antelopa sagax), foxes, wolves, the dipus jerboa, and the mus jaculans. Serpents and lizards are very common. There are no bees, nor any of those insects which are beneficial to man, but many of those which are hurtful. Swarms of those locusts which devastate whole provinces (for example), and other less formidable varieties of the same family, have their birth here, and often darken the air with their rustling armies, laying waste wherever they settle. Scorpions, I believe, are confined to Mount Bogdo; but millipedes, six or eight inches long (scolopendra millepes), tarantula (aranea tarantula), and the still more poisonous scorpion-spider, which the Calmucs

call the black widow (belbussun chàrra), are every where to be met with, and are much dreaded. These steppes are, on the whole, rich in objects which would be welcome to the cabinet of the naturalist; but on account of their difficulty of access (which even Asiatic hospitality cannot remedy), they are seldom visited by Europeans, except by the few whose office and duty compel them. In a desert, where for a day's journey together you find neither the habitation of man, nor a pool of water, where the pastoral tribes continually change their position, the traveller is in danger of perishing in the wilderness, if he be not provided with an experienced guide. The Russian cattle-dealers, and pedlars, who are induced, by the love of gain, to overlook danger and toil and wants of various kinds, are the only people who are occasionally tempted to enter these deserts. The native inhabitants are Moguls, Tartars, Kirguses, and pastoral Cosacks. The wealth of this nation consists in their camels, horses, oxen, sheep, and goats: these supply all their wants, or the means of procuring from merchants what else they require. The Calmucs, to whom we were directing our steps, are divided into five hordes,—in the Mogul language, *orda*. These are the Derbodian (the nearest to Sarepta), the Torgudan, the Erkedian, the Baganzokhan, and the Coschudan, each under its own khan or chief. The two first reside usually on the east of the Don and Sarpa; the two next between the Sarpa and Volga; and the last on the Aktubak, on this side of the Volga. The winter quarters of some extend much farther, for in the winter the Calmucs drive their herds from the steppes, and withdraw to regions better furnished with water. The Derbodians to the Kuma, the Erkedians to the well-wooded shores of the Caspian above Kislar—one part of the Torgudans (the Yandykushes) to the same neighbourhood, while the other division, under the Khans Erdeni and Zeren Ubaschi, remain in the Sarpa marshes. The camps of the two Tartarian princes, just mentioned, were our first destination, after we had entered the steppes."

On coming to Prince Erdeni's camp, of about 100 tents, the writer says—

"Having learnt from the Calmucs, that the day of our arrival (the 2d of June) was marked as fortunate in their astrological kalendar, we hastened to make our first visit to the prince the same evening. When we approached the tent, a servant came out to meet us, and inquired what we wanted. We desired to be announced as people who had brought letters from the capital to the prince; upon which we were readily admitted. We drew near to the tent from the right side, according to the Calmuc custom; for it is considered unmannerly to advance directly to the door, or to approach from the left side. We also took care not to tread on the threshold, an old Mogul ceremonial, which Ruisbroek observed in the camp of Monkettumner. We made the usual salutation to the prince—*Mende saun tabe tiniger buis ta?* 'Are you quite hale and well?' To which he replied, 'Munde' (well); after which we were obliged to sit cross-legged upon a carpet, in the Asiatic fashion. The prince sat in the same position, on his cushion in the interior of the tent, by his wife Dellek; on their left was the little prince Raachi Sangdeschai Dordsche, attended by his nurse. Erdeni is in his forty-second year, of a short squat figure, and good countenance. He is intelligent, good-natured, lively, and agreeable. When we entered he was playing on the Dom-

ber, or Calmuc guitar. His wife, Dellek, is six-and-twenty, of a robust figure, and truly Calmuc face, with prominent cheek-bones. The prince was dressed in a short Calmuc coat of blue cloth, white trousers, a mottled silk waistcoat, and a thick velvet cap trimmed with sable, and ornamented with a red tassel and gold loop. The princess wore a blue and white dress, over a red silk petticoat ornamented with gold flowers; she had on her head a high square Calmuc cap of Persian gold muslin, trimmed (like her husband's) with sable, and with a large silk tassel. The tent was about ten yards in diameter, and as many in height, and furnished all round, in the inside, with carpets, for the accommodation of visitors. Opposite to the door was the prince's throne or cushion, about an ell high, and covered with green cotton, and over it a kind of canopy of the same material. On each side was suspended an image; the left represented one of their dreadful idols, *Bansarakza*; the right was a collection of astrological circles, and many figures of different colours. Both were designed for the protection of the young prince, and to shield him from evil. To the left of the prince's couch was the altar, with a bench in front of it, and on the altar were silver vessels, with rice and other offerings; behind it a number of chests piled upon one another, and covered with a Persian cloth. Above was a wooden shrine, with a well-formed gilt image of one of their principal idol-deities, *Schagdschamuni*, the founder of their religion. On the right of the prince there was also a heap of chests, covered with Persian cloth, on which stood a few trinket-boxes belonging to the princess. These chests probably contained the valuables of the royal family; and those on the left of the throne the sacred writings, the idols, and other things pertaining to the altar. In the middle of the tent there was a hearth, with a cresset and a common tea-kettle; on the left of the door stood a few pails and cans ornamented with brass hoops, containing sour mares' milk, or *tchigan*, the chief subsistence of the Calmucs at this time of the year."

Of the Buddh religion among the Calmucs the description is curious.

"Buddhism knows nothing of one Almighty God, the Maker of heaven and earth; in its creed, God is one with the world, and every thing was produced out 'of the eternal existence of the universe.' From infinite space (in the Mogul language, *chagossun agur*), every thing that is and was, material and immaterial, animate and inanimate, arose by circular motion! Highest in the scale of spiritual existence, is Buddha (in the Calmuc, *Burchen*), the divine being, who is manifested in many Buddhas, or *Burchens*, some complete, but most of them incomplete. Next in order are the six classes of pure spirits (*Tangri*), amongst whom is Chormuzd, the guardian angel of the earth; the impure and unfriendly spirits (*Assuri*); the pure inhabiting the summit, the impure the foot of Mount Summer, in the centre of the earth's surface, and waging ceaseless war against one another. These are followed by men and terrestrial animals, and these again by the monsters of purgatory (*Birid*), and the hellish brood of the interior of the earth. These six classes of living beings continue in regular and unalterable order, that is to say, in a regular gradation of good and bad; but the separate individuals of each class, in the perpetual transmigration of souls which takes place, change from one class to another. This circle of migration is called, by a metaphorical image, *Ortschilang*, the infinite stormy ocean.

On its shore, that is exempt from farther migration, are the complete Buddhas. All other beings, from the highest of the *Tangri*, to the lowest of the hellish monsters, are destined to reach the shore from the *Ortschilang*, that is, to rise by transmigration to the ranks of Buddhas. If this should be accomplished by all, in the *Galap* or *Kalpa* (the complete period containing one million years): if all creatures have become united with Buddha, then Buddha himself is to be again swallowed up in the eternal and original universe. We are now in the fourth period, under the direction of the Buddha *Schagdschamuni*. At its commencement, this god left his divine abode, and was born in the kingdom of *Magad*, in India, that he might be an instructor and saviour of all beings, by freeing them from the *Ortschilang*. Eighty years after, when he had perfected himself as a Buddha, he left this disguise, to govern the world for a period of a thousand years. He sent the divine *Chomschin-Bodhissadea*, into the snowy *Tangut* (or *Thibet*), to whom he imparted his instructions, and particularly the formula *Om-ma-ni-pad mel-chum*, the meaning of which nobody has ever revealed: it is, however, the root of all knowledge, the path of salvation for all creatures; and the mere repetition of it, though it be but *once*, is an infinite merit in the estimation of the Buddha *Schankiamuni*. *Chomschin* is the most revered of all the Buddhas in *Thibet* (except *Schagdschamuni* himself), since it was he who undertook the conversion of the nation, and introduced the form of prayer, which is for ever on the lips of all the Buddhists. He is at all times incarnate in the person of the *Dalai Lama*, who lives (as *Chomschin* once did in his own person) in a temple on the *Thibetian Mount Putala*, where he receives divine honours. Another *Bogdo*, or grand *Lama*, (a title which is taken by all the high priests of *Thibet*), lives at *Teschilambo*, and is also an incarnate Buddha; indeed, the soul of a Buddha, or *Burchan*, is considered to be united to every *Lama*. The *Gellongs* also, and the khans, or princes, have souls of a higher order; the 'blacks,' or common people, of an inferior; but all souls, in the process of transmigration, may rise by good works, or fall by bad. Self-inflicted tortures and penance, such as the *Hindustan* fakirs endure, are not accounted meritorious by the Buddhist, as they are by the disciples of *Brama*; but good works of mercy towards all living creatures, without limit or exception, such as preserving the life of an animal instead of putting it to death; also the strictest observance of the written rules, and more particularly the frequent repetition of the above-mentioned form of prayer, and a great veneration for the priests. The three costly jewels (*Ardani*), or the summary of all that deserves respect, according to the doctrine of the Buddhist priests, are *Burchan*, religion, and the ecclesiastical order; and these three are all united in the *Lama*. The poor man is accordingly directed to reduce his complex system of theology into an attachment to the three jewels. To this is added many a popular superstition, handed down by the poets, of *Tangris* and *Assuris*, domestic and mountain spirits, dwelling in mountains and streams, and interfering, with a beneficent or malicious influence, in all human affairs; of the fabulous *Mount Summer* in the centre of the surface of the earth, surrounded by seven golden hills and four continents, some inhabited by men, and some by creatures resembling men, of different forms and habits of life; of the earthly paradise (or the kingdom of *Snokawadi*), west of *Thibet*, the heaven of

distinguished saints, who have risen to the rank of imperfect Buddhas, and can only descend to earthly existence, in the person of a Khan, or a Lama; of the dwelling of the Asuri (Erluk-Chan) in the interior of the earth, in a palace with sixteen iron walls, surrounded by the purgatorial fires of Birid, and of the hell beneath, &c. The ecclesiastics of this religion are high priests or Lamas, priests or Gellongs, Gezulls or ministers, and Manschi or pupils: they are all unmarried, and are revered by the common people, as beings of a higher order. Their learning, amongst the Calmucs at least, is confined to reading prayers and holy writings in the Thibet language, which few of them understand. They are very numerous in all the herdes."

These quotations will shew the nature of the book; and we shall only add, that in other places the missionaries were not very kindly treated, that in none were they allowed to distribute their books, and that on their return they found Sarepta in ruins from a recent conflagration.

Cuvier's Animal Kingdom: with additional Descriptions by E. Griffith and E. Pidgeon. Vol. IX. *Class Reptilia*. London, 1831. Whittaker and Co.

BEFORE the progress of knowledge banished the wild dreams of imagination from the regions of science, the history of reptiles was a series of the most romantic fictions ever devised by the human fancy. The total dissimilarity in physical conformation, in habits, in residence, and in vital principle, between these animals and the classes with which we are most familiar, became the pregnant source of fables, some disgustingly absurd, but others rich in all the interest which exuberant ingenuity could supply. As if the almost infinite variety of forms which nature exhibits in the reptile kingdom had not been sufficient, poetic philosophers and philosophic poets taxed their powers of invention to devise new combinations equally whimsical and formidable; dragons, griffins, basilisks, serpents with flowing beards, and hydras with innumerable heads, were described as the inhabitants of remote regions; and grave writers, nay even venerable fathers of the church, asseverated that they had themselves seen these fearful monsters. The universal dread of the powerful crocodile and poisonous serpent induced the world to lend a credulous ear to these extraordinary narratives,—for terror is always the most prolific source of credulity. It is true that these creations of sportive or distorted fancy have been long since consigned to the science of heraldry, there to abide for ever with the generations of red lions, blue boars, and all the other monstrosities which have been taken under the special protection of the college of arms; but other tales, equally groundless and equally absurd, still receive ready credence. Even at the present day, the accounts of reptiles, in many of our most popular works, merit to be ranked as the Apocrypha of Natural History.

Superstition has lent its aid to the propagation of these fables: the Septuagint translators of the Old Testament having no better word to express their idea of the animal that tempted Eve, called the Hebrew *nachash* "a serpent," and in this interpretation have been followed by all subsequent commentators. Of course, when the serpent became in men's imagination the embodied representation of the principle of evil, there was no story of its powers too extravagant to be believed, no exaggeration of its mischievous propensities too outrageous for

human credulity. In another part of the world veneration produced the same effects that fear had caused in Palestine: the ancient Egyptians saw in the serpent casting its slough, and renewing, as it were, the vigour and brilliancy of youth, a lively representation of those great periodic revolutions to which they believed the universe subject. With them the serpent typified the productive powers of nature; when coiled up it represented the great cycle, after the termination of which "a new heaven and a new earth" should be prepared for a new generation of beings. The formidable powers possessed by the animals themselves, their poisonous bite, their muscular energy, and their long retention of vitality, would have been sufficient, in an age of ignorance, to produce countless legends; but when to these were added the character of Satan in one country, and the wild speculations about eternity in another, while in a later generation all these notions were mixed together in inextricable confusion, we cannot be surprised that this portion of natural history should become a mass of fables far more extravagant than Ovid's *Metamorphoses*. The nature of human credulity, the causes by which it is influenced, and the effects it has produced on men's thoughts and actions, is a subject that has never been investigated proportionately to its merits; but we must unwillingly defer our observations on the topic until some more favourable opportunity shall arise, and proceed to lay before our readers a brief analysis of the orderly system into which Baron Cuvier has formed this interesting but difficult department of natural science.

The baron's entire system in the arrangement of the animal kingdom is, as we have said in a former number, based on the peculiarities of organisation belonging to the several classes of animated beings: he shews how the vital principle and the habits of life are dependent on the varieties which nature has made in the respiratory, medullary, muscular, and circulating systems; and, as nature seems to have observed some general law in the arrangement of the bony skeleton and the disposition of the organs of sensation, he makes this very intelligible basis the foundation on which the history of peculiar structure should be placed. The first and most obvious characteristic of the reptile world is the coldness of their blood, and the languidness of its circulation; the heart, which, in the higher classes of animals, impregnates the blood with vital air, receives but a small portion of that which circulates through reptiles,—hence it is feebly oxygenated and slowly propelled. In the mammalia and aves, the brain is the centre of the nervous system, and there the vital principle seems to be aggregated; but in reptiles there is little or no centralisation of life, and irritability seems equally diffused over every portion of their system; hence they retain life, or at least the appearance of vital motion, under circumstances apparently incredible. A tortoise has been known to live eighteen days after its brain was removed; a salamander lived several months after the head was taken off, effusion of blood being prevented by a ligature tied tightly round the neck. The respiratory system in reptiles is remarkably simple; as they do not want atmospheric air to oxygenate the blood, they could not use the complicated and powerful organisation with which other animals are supplied; hence we find that these animals retain life when almost wholly deprived of air. Toads have been found alive in the centre of the hardest rocks; vipers have

lived for months shut up in close boxes. The last peculiarity of the reptile race which we shall notice, is their power of re-producing certain parts, such as the tail, the feet, &c. when they have been lost. This fact seems to have been known from the earliest ages, and is not the least extraordinary of the characteristics belonging to this wonderful class.

Notwithstanding all the varieties of shape, size, and habitation, in the reptile kingdom, these general principles will be found to pervade the entire, and therefore are the points which the zoological student should imprint most carefully on his memory. The varieties of the species may then be easily acquired, for the causes which produce the difference will be understood.

The elucidations added by the translators in the present volume are as valuable as those in the preceding. They have the additional recommendation of novelty; for the reptile kingdom has been greatly neglected by British zoologists. On the nature of serpents and their poison, more especially, they have collected a vast mass of useful information, derived from the most authentic sources. The illustrations fully maintain the character of excellence which those in the former parts obtained; and, on the whole, the volume now before us is worthy of forming a part of the great work on zoology, which the spirited proprietors have projected, and now partly executed.

We have just received Part XXVIII. of this valuable work, Part I. of *Insecta*, of which we shall take an early notice.

Waverley Novels, Vol. XXIV. The Pirate, Vol. I. Edinburgh, 1831, Cadell; London, Whittaker.

THERE is nothing very striking in the preface to the *Pirate*, only that Sir Walter throws the peculiar charm of his style round the account of a voyage with the commissioners of the light-houses, which first suggested the idea of the *Pirate*. The notes are very various and interesting: we select from them two anecdotes; and preface the first by observing, that the Picts are supposed to be endowed with supernatural life and powers.

"About twenty years ago, a missionary clergyman had taken the resolution of traversing those wild islands, where he supposed there might be a lack of religious instruction, which he believed himself capable of supplying. After being some days at sea in an open boat, he arrived at North Ronaldshaw, where his appearance excited great speculation. He was a very little man, dark-complexioned, and from the fatigue he had sustained in removing from one island to another, appeared before them ill-dressed and unshaved; so that the inhabitants set him down as one of the ancient Picts, or, as they call them with the usual strong guttural, Peghts. How they might have received the poor preacher in this character, was at least dubious; and the school-master of the parish, who had given quarters to the fatigued traveller, set off to consult with Mr. S——, the able and ingenious engineer of the Scottish light-house service, who chanced to be on the island. As his skill and knowledge were in the highest repute, it was conceived that Mr. S—— could decide at once whether the stranger was a Peght, or ought to be treated as such. Mr. S—— was so good-natured as to attend the summons, with the view of rendering the preacher some service. The poor missionary, who had watched for three nights, was now fast asleep, little dreaming what odious suspicions were current respecting him. The

inhabitants were assembled round the door. Mr. S——, understanding the traveller's condition, declined disturbing him; upon which the islanders produced a pair of very little uncouth-looking boots, with prodigiously thick soles, and appealed to him whether it was possible such articles of raiment could belong to any one but a Peght. Mr. S——, finding the prejudices of the natives so strong, was induced to enter the sleeping apartment of the traveller, and was surprised to recognise in the supposed Peght a person whom he had known in his worldly profession of an Edinburgh shopkeeper, before he had assumed his present vocation. Of course he was enabled to refute all suspicions of Peghtism."

The next is also characteristic.

"The ancient Zetlander looked upon the sea as the provider of his living, not only by the plenty produced by the fishings, but by the spoil of wrecks. Some particular islands have fallen off very considerably in their rent, since the commissioners of the light-houses have ordered lights on the Isle of Sanda and the Pentland Skerries. A gentleman, familiar with those seas, expressed surprise at seeing the farmer of one of the isles in a boat with a very old pair of sails. 'Had it been His will'—said the man, with an affected deference to Providence, very inconsistent with the sentiment of his speech—'Had it been *His* will that light had not been placed yonder, I would have had enough of new sails last winter.'"

Bogle Corbet; or, the Emigrants.

[Second Notice.]

WE now, according to our last week's promise, resume these volumes, with a view to collect together some of the most striking passages relative to emigration.

"Why, for example, should there be such a total absence of all arrangement at home, that in the colonial office itself there is no department which can furnish the slightest information respecting the colonial lands open for settlement? And yet emigration, so long as we have colonies, ought ever to obtain no inconsiderable degree of attention from government. The formation of an institution to supply this desideratum might be accomplished for little more expense to the nation than the cost of a single master in chancery. Let but diagrams and maps of the townships and colonies be lodged in every custom-house of the United Kingdom, to be from time to time amended as the lots are successively taken up; the emigrant, by consulting them, would be enabled to make a contingent selection of his location before his departure, and much of that uncertainty would be obviated which hangs so gloomily before him as he quits his native land. Why, also, should not the colonial lands have a specific value set upon them?—but, instead of money-price, a labour-rate? Nothing can be more erroneous in principle, or jejune in conception, than the system in practice. For example, occasionally great public works are undertaken in the colonies, such as the Rideau canal in this province,* vast sums are drawn from the United Kingdom to pay for them; why, instead of offering them to be executed by contract, like the works in an old country, are the public lands not valued to those who receive grants, and so many days' labour on such works required in lieu of payment? The main expense might be thus defrayed without touching the pocket of John Bull at all. . . .

"In this country local attachments scarcely

* Upper Canada.

exist, and there is not a farm that by a little judicious negotiation may not be obtained. Land in Canada is a commodity as vendible as any other merchandise; but we bring with us Old-world notions, and require to be some time in the country before we become properly sensible of the fact.

"The turbulent argument of the tempest effectually convinced the settlers that the original design of keeping them in community until they had fixed a local habitation, was the best expedient that, in their circumstances, could be adopted. But the fault lay in their own nature, and could only be changed in its direction, not expunged. A constant yearning for something new in scene or occupation is peculiar to emigrants, whether industrious or dilatory. The same spur in the side which impels them from their native land, goads them wherever they go, and is the main cause of that restless irritation characteristic more or less of them all. While the association were busy under Andrew Gimlet in erecting the house of general shelter, all went on smoothly. The storm had silenced their crave for independence, they saw that without co-operation for some time they must incur hardships that might be lessened, and their patience and activity were commendable; but when it was finished, and their families had removed into it, new objects began to attract their attention aside from their duty, and the management of them became a task of delicacy and address. Several of the Glasgow men being artisans and craftsmen, Stockwell was intended chiefly for them, and those who might come after of the same kind. The town plot was divided into half acres, a moderate price set upon each, with the privilege of living in the shelter-house until their own should be finished, for which three months were allowed; no money was expected to be paid for these lots, but they were to give me three days' labour in the week, computed at a certain rate of wages, the other three days was for their own purposes. Except in respect to the town, no part of the land was to be sold, but cross roads were to be made through it, and it was to form them that I stipulated for their labour. The first undertaking, after having provided shelter, was the opening of these roads, and the construction of separate houses for the emigrants themselves; but they had not proceeded far in accomplishing either, when they proposed to work for me only two days. I represented to them the injury they would incur, as it would prolong the payment of their debt, and tend to increase it, by obliging them to provide for the additional day's living from their own means. But it was not until after some free altercation, that they again consented to adhere to the original plan. Indeed, no sooner was one proposal silenced, than another was ready at the back of it. When their respective cottages in the village were about finished, which the irksomeness of living in community urged them to use the utmost diligence in doing, and when the roads were shaped out, the majority came in a body with a signed request to me, praying me to take the lots that had been chosen for them in other parts of the township, and give them farms along my roads for them. To this I gave a decided negative; but it was evident, that although they submitted to the refusal, they considered themselves ill-used, and one of them had the modest absurdity to say, that after having so worked on the roads, they had surely a right to a preference. 'It may be so,' said I; 'but the land is not for sale, and you have been paid for your labour.' 'We're no' con-

testing that, Mr. Bogle Corbet,' replied one Angus M'Questein; 'but ye see it would be a convenience, and make us more obligated to you, if ye would just in a way consent.' 'Angus, I thought you not wanting in common sense: when a weaver in the Gorbals, had you any right to the webs you were employed to work?' 'But there's a wide difference, sir, between the Gorbals and this wild country, which was all ta'en from the Indians, who have the best right to the land, if any body has a right; and I am sure you would na go far ajeer frae justice, if ye would think of our request.' 'Depend upon't, Angus, I shall think of it, and the reasons ye have stated to make me comply; for the king's law is here as well as in the old country; and I can assure you that I am as little disposed to indulge covetousness in Canada as I would have been in Glasgow, had you pretended such a right to any property of mine there.' Altercations of this sort, as the work of the summer proceeded, and individual character became more prominent, were vexatiously frequent. At first, when it was necessary to bring supplies from a distance, the sheltering-house was furnished in kind with whatever was requisite, and even after several families had retired to their own houses, the practice was continued to them. But as the place prospered, a storekeeper settled at Stockwell, and provided the different articles that he saw would be required; in consequence it became the practice to give orders on his store, instead of the articles, and he from time to time rendered his accounts. These orders, however, the settlers soon cunningly discovered were as good as bank notes, and it was ascertained that they were in the habit of exchanging them for articles different from those for which they were obtained. Beef was easily convertible into tea, and flour into spirits and sugar, till the increase of consumption in the necessities led to an investigation. In a word, there is something in the emigrant's condition that makes his honesty flexible, and this, among their other ever-germinating wants and fancies, constitutes the difficulty of regulating them, even when they see it is for their own benefit. When the roads were completed, I caused the men to be assembled, and inquired what they proposed to do next; but strange as it may seem, they had formed no plan. Accustomed to the superintendence of a master, it had never entered their heads to think of the future at all. Dependents of chance, they would probably have remained without reflection so long as their wants were supplied, and then they would have scattered themselves, as thoughtless of to-morrow as beasts and birds of prey when they have devoured the carcass. I was grieved at the discovery of their helplessness; it explained how so many emigrants fall into misery; and it also demonstrated how imperative it has become that government should establish some law for their regulation. Thousands on thousands annually reach Canada, undirected and unprotected, with only their own separate small means; for those who undertake to conduct them across the Atlantic are, in all that relates to settlement, as ignorant as themselves. When they reach their intended locations in the wood, many of them, in consequence, like the innocent babes, wander for a time up and down, and then die or stray away, they know not whither, and are heard of no more."

The following is a judicious remark:—

"I imagined the dulness might be brightened, and the monotony varied, merely by a regular appropriation of my time to different objects.

But a brief experience soon convinced me how difficult it is to carry such a purpose into effect. Incidents unexpectedly occur, as well as occasional visits, that disorder all systematic arrangement. Besides, the mind tires of exerting itself in leisure, and like a dwarf in a giant's robe, struggles in constant motion, but accomplishes nothing. To do much, one must have much to do."

We now close these instructive pages. As a mere novel, *Bogle Corbet* is inferior in amusement and humour to *Laurie Todd*; but as a work of information and reference, we hold it to be one of high value.

Correspondence and Diary of Dr. Doddridge.
Vol. V.

WE resume this volume for the purpose of finishing our notice, without occupying readers with farther remarks.

"Of the memoranda (observes the editor) it may be desirable to speak a little more at large; they are narratives of what Dr. Doddridge considered the especial dealings of Providence, with regard to himself and some persons of his acquaintance. The reader is already aware that he believed not only in the constant superintendence of God in the course of natural events, but also in an occasional direct interference of the divine power, in consequence of prayer, and on other occasions; and he will learn from a perusal of this diary, that Dr. Doddridge thought he had reason to suspect that this interference sometimes assumes a supernatural character. I am perfectly aware of the shallow sarcasms with which it is the fashion to meet every idea of this nature. On metaphysical subjects men too often reason from theories as if they were facts, and consequently become positive without being sure. Mental habit has much to do in these matters: mathematicians, and other students of the more perfect sciences, draw the magical circle of *system* according to their preconceived ideas, and forget that Nature has a world beyond it. My own attention has been principally devoted to physiological inquiries, where, as I find, in the animal organisation, some of the most essential principles inexplicable, I am ready to admit all positive results in action unquestioned. On the same grounds I am willing to confess, that I view the matter of supernatural agency as depending solely upon *evidence*, and as one in which all we can do is to scrutinise supposed facts. A belief in a preternatural influence from God was almost universal in the times of Dr. Doddridge. Many celebrated names might be referred to in support of this assertion; I will only mention two or three. Dr. Watts believed that miracles had not ceased. I have in my possession a very curious little book, relating three apparently miraculous cures. The first is a MS. in the hand of Dr. Watts, who has also added notes, confirming the second, and has written in the fly-leaf of the book, 'Modern Miracles, confirming the Gospel and the power of Christ.' It may be proper to add, that the more recent advance of science affords an explanation in these instances, which could not be before obtained; so that the belief of Dr. Watts was not credulity. Bishop Warburton had faith in a modern power of prophecy. This fact is shewn by his acute and striking observations on the *circumstantial* predictions of Rice Evans, at the time of the death of Charles the First, relative to the restoration of the monarchy and the second revolution. Dr. Johnson's opinion on the matter in question is well known; I will, however, quote his expressions, as given by Boswell.

The family ghost of the Wesleys had been mentioned, when the doctor observed: 'I am sorry John did not take more pains to inquire into the evidence for it.' Miss Seward, (with an incredulous smile,) 'What! sir, about a ghost?' Johnson, (with solemn vehemence,) 'Yes, madam; this is a question which, after five thousand years, is yet undecided; a question, whether in theology or philosophy, one of the most important that can come before the human understanding.' Dr. Jortin, the learned author of the 'Remarks on Ecclesiastical History,' may be also quoted on this occasion. After speaking of magicians, he says, 'Setting aside these sorts of divination as extremely suspicious, there remain predictions by dreams, and by sudden impulses upon persons who were not of the fraternity of impostors; these were allowed to be preternatural by many of the learned pagans, and cannot, I think, be disproved, and should not be totally rejected. If it be asked whether these dreams and impulses were caused by the immediate inspiration of God, or by the mediation of good or evil spirits, we must confess our own ignorance and incapacity to resolve the question.'"

With this explanation we shall give Dr. Doddridge's own experience, such as it was!

"*Memorable passages in Providential occurrences relating to the Wills of Pisford, as I collected them from their conversation and united testimony.*—This day I visited this pious, though poor and afflicted family; and I heard the following narrations, which I thought so remarkable that I could not forbear setting them down as circumstantially as I could recollect them. Mary Wills was converted in an extraordinary manner. Having determined to hear no more at the meeting, and even stopped her ears against the word, an occasion happened which obliged her to put her hand into her pocket, and at that moment a word came which reached her heart, and was the blessed means of bringing her home to God. Some time after, a person, jealous of the regard which a young person in the neighbourhood had for her, attempted to poison her, by putting poison into some beer which she was going to drink. In a moment she found the use of her arm taken away, when she would have lifted the beer to her head; and having attempted in vain to give it to the hogs, she threw it down into the sink. Some time afterwards Mrs. Spencer told her that the party whom she suspected had confessed to her the design of poisoning her, and that the attempt was made as above. Some time afterwards she lived in the house of a profligate fellow, who, having locked her in, attempted her chastity by violence. She prayed earnestly, and had those words given in her mind, 'Only believe, and thou shalt see the glory of God!' and immediately the ravisher fell down with an oath in his mouth, and lay as dead all night. She had extraordinary communion with God all that night and the next day; but the wretch thus struck down in the very act of his sin continued hardened, and waxed worse and worse. Being once under some doubt as to her spiritual state, she begged that God would afflict her with some sudden judgment as a token of his love. Immediately she was seized with a violent pain, and lost the use of one arm, in which she greatly rejoiced. In the night she lost the use of one side, and being brought home on horseback the next day, lay many weeks so helpless that she could scarcely turn herself in her bed; and they expected that every day would be her last. On a sudden, while her sister was standing by her, and apprehended her to be almost dying, she confessed the rashness of her former

prayer, entreated the Divine favour, and begged an immediate cure in great confidence of faith. Immediately all her bones cracked, as if they had been put in place again; and she rose up cheerfully, and in two or three sabbaths more was able to walk to Northampton, being then cured in a moment. Her sister declared she was present when this happened, and her mother was in the house during the whole progress of the affair. The family was once reduced so low that they had nothing left but a crust of bread and a little flour. The two sisters prayed for supplies; and both of them felt a strong persuasion that a brother of theirs, who lived ten miles off, would that day come to their assistance; accordingly Mary determined to make a pudding for him, but having nothing but flour, declared herself persuaded that some assistance would come for making it. Immediately after, a neighbour brought in milk, and another eggs, and before the pudding was baked, the brother came in, bringing corn and other presents, and declared he was so uneasy about them that he could not forbear coming that very day, although he had heard nothing of their difficulties, and had particular business to engage him at home. (A lamb caught in a thicket in answer to prayer; the ewe brought a lamb every year after it.) A while after, her sister continued ill, who could think of eating nothing with pleasure but a pigeon. She went to all the persons that kept dove-houses in the town, but could get none. Returning home with a heavy heart, a pigeon flew into the house before her, which they took up and killed as a supply sent immediately from Heaven. This both the sisters and the mother also attested. As they were coming one day from Northampton, after her sister was but just recovered from a fit of dangerous sickness, they saw a cloud gathered about them, a thunder-shower came, and they were in expectation of being wet to the skin, which might have been attended with the most fatal consequences to Catherine, as being then in so bad a state of health. Mary earnestly prayed to God that he would appear for them. A wind came and broke the cloud over their heads, so that part went on the right and part on the left; it rained violently all round them, but they, to the amazement of the neighbourhood, came in dry. The mother assured me that she warmed clothes for them, expecting that they would be wet through, and saw them come home perfectly dry, when it had rained almost all around. In their late illness, which happened this winter, they were assisted in an extraordinary manner. Mary, who is a poor weakly creature, sat up with her sister seven weeks, without any sleep but on the Saturday night, and continued perfectly well; and, which is very extraordinary, their drink and their wheat, when they had but enough to last for six weeks in the winter, lasted them six months, though they ate and drank nearly as much as usual; and the miller that ground it, taking notice of their having so much more than they had bought of him, strongly suspected their dealing with some other person. In the account of this they all agreed as positively as could be, as well as in all the rest in which there was any room for their testimony. I confess I heard their stories with the utmost amazement. The persons by whom they were told are all people of eminent devotion, and of a very extraordinary life. They live retired, are continually employed in prayer, praise, and religious converse; and have, upon the whole, as much of heaven among them as I ever saw in any persons whom I have known. What shall we say to

these things? or, rather, why should we be so much astonished, considering what God has done for his people in times past, and that his power is still the same?"

We have farther accounts of this Mary Wills' "remarkable conversations;" but what we have quoted is enough; and we shall now conclude with an extract of a different kind. It is entitled—

"An account of several of those Maxims upon which I propose to proceed in future life, under the following various characters:" and for its single-mindedness and simplicity may well be received as a remarkable document:—

"1. *As to the conduct of every day.*—To breathe out my heart to God before I rise; to pray while dressing; to make prayer the first work, if possible, before I read one word; to make the Scriptures the first book; to do something every morning at monthly letters before breakfast; to begin every lecture in time, with the watch before me, and not to run on so far as to preclude those of the junior class; to get out soon in afternoons; to be at home at evening prayer; to expound when I can; not to exceed a limited time at a place; to be animated in conversation, providing useful materials for that purpose; to take notice of children; to keep a register of my visits; to relate religious remarks then made to the elders; to write before supper; to prepare social entertainment, and demand it; to sup moderately; to go to bed before eleven when I can; if the prayer be slightly passed over in the morning, to introduce it again in the evening; never to acquiesce merely in praying with my wife, without some fervent, though short petitions, alone; to get a little time for meditation on Friday evenings. 2. *As a Husband.*—To be more careful to keep up the spirit of religion in conversing with my wife; to avoid pettishness; to make great allowance for the tenderness of her constitution; to reflect often on her distinguished wisdom and goodness; blessing God for her; recommending her to the Divine blessing, and begging the continuance of her life, as one of the greatest blessings that life can afford, and that on which, under God, most of my own depend. 3. *As a Parent.*—To intercede for my children daily; to converse more or less about religion with each, weekly; to pray with them once a fortnight, and endeavour to dispose them for communion; to endeavour to oblige them; to drop short hints, when there is not room for long discourse; also to speak on religious subjects to the servants, at least once a fortnight. 4. *As a Tutor.*—To maintain a strict inspection; to inquire after each from his respective tutor; to have expositions, prayers, and devotional lectures, as suitable as may be; to exhort and pray with each before the vacation, where it has not yet been done; to get a society of lads established if I can. 5. *As a Pastor.*—To review the state of my flock if possible, at least in town before the vacation; to visit, exhort, and inquire into family religion, &c.; to inquire after every village, referring to the last visit in the catalogue; to pursue a plan for monthly sermons, keeping four schemes beforehand in the book of such papers. 6. *As a Correspondent.*—To be exact in the catalogue of letters with regard to dates; to review that catalogue to determine when, and in what order, to write; to guard against excessive length; to use as many assistants as I can, to get clear before vacation as far as possible. 7. *Miscellaneous matters.*—To draw up a scheme for every week, and then for every day, to be reviewed the next; to make my

will; to adjust the account of the lads' society, and to fix on thirty letters at the beginning of the month, to which one hour a day, if possible, is to be given: to read over these maxims once a month."

To resolve to make your will every month is a curious sign of the infirmity of human purpose: but we have no room for comments, and can only again speak of this work as affording abundant grounds for useful reflection, and containing a great deal to interest every intelligent mind.

ARTS AND SCIENCES.

ROYAL INSTITUTION.

MR. MARSHALL on the origin and utility of cow-pox, with the cause of failure in the practice of vaccination. After some preliminary observations on the history of the small-pox, and the introduction of vaccination, Mr. Marshall particularly noticed the odium which attached itself to the propagators of this precautionary measure. Thirty years before its introduction by that benefactor of the human race, the late Dr. Jenner, a humble grazier in one of the English counties accidentally discovered the efficacy of inoculation for the cow-pox: in consequence of the opinions he entertained on the point, he was laughed at by the villagers, and became subject to other and more serious annoyances. The declared opinions also of Jenner himself were considered merely as the reveries of a rural enthusiast. Even that august assembly the Royal Society (we speak of it as it was constituted half a century ago), in answer to certain communications of Jenner on the subject, sarcastically hinted, that he had better not promulgate his sentiments, lest he should incur the ridicule of the scientific. Mr. Marshall paid a warm and just eulogy to the late Duke of York, who, having been made aware of the happy results of vaccination, issued a general order recommending its adoption throughout the whole of the British army; thereby securing for the discovery a certain popularity. In the course of his observations, Mr. M. directed the attention of his auditors to a statistical account of vaccination in Great Britain, as compared with other countries, from which it appeared that the annual mortality in cases of small-pox was reduced in Copenhagen from 450 to 9; Prussia, the average was as 12 to 1; Berlin, in 1819, only 25 had died, being about 1 in 8,000; Bavaria, in 11 years, only 5 persons had died; Anspach, the disease had been completely exterminated; Norwich, in one year, the small-pox cut off more persons than any disease except the plague; Edinburgh, similar havoc; London, in one year, 13,000 died; Russia, from the year 1804 to 1812, there were upwards of 1,200,000 individuals vaccinated. After noticing the causes of failure in the practice of vaccination, which embraced sundry technical details, well expounded in our medical schools, Mr. Marshall closed a very interesting lecture.

On the library-table was the exceedingly beautiful odoriferous lamp, founded upon the principles discovered by Davy and Doberienner, by the power of which bodies combine, and produce not full combustion, but still a temperature equal to incandescence, as is well known to our chemical readers. In the present instance the alcohol was aromatised, and as the spirit burnt around the ball of platinum wire and sponge, the aroma was diffused through the room.

GEOLOGICAL SOCIETY.

APRIL 27th. Mr. Murchison, the president, in the chair. An extract was read from a letter of the Rev. George Greg, explanatory of certain subterraneous sounds occasionally heard at Nakooos, near Tor in Arabia; and communicated by the president. A paper was then read, "on some effects of the atmosphere in wasting the surface of buildings and rocks;" by John Phillips, Esq., curator of the Yorkshire Philosophical Society, &c. Some valuable donations were received.

ROYAL GEOGRAPHICAL SOCIETY.

JOHN BARROW, Esq. V.P. in the chair. Mr. Washington's account of Morocco was concluded: and a general view, communicated by Captain P. P. King, R.N., of his late survey of the Straits of Magellan and adjoining coasts, was begun. The first of these papers we have already noticed. The second we shall advert to when concluded. In the mean time we seize the opportunity of introducing the following intimation, for which we have not previously found space.

Royal Premium.—The President and Council give notice, that his Majesty's annual premium of fifty guineas, for the year 1831, will be given to the author of the best memoir, accompanied by sufficient plans and views, which shall describe in detail any important and unpublished discovery made by the candidate in any branch of geography—provided that the same be considered worthy of this distinction. The Council consider as coming within the meaning of this proposition—a detailed account of any excavation or research made by the candidate, the result of which is the establishment of any lost site of antiquity, and the recovery of any object sufficiently important to history, science, or the arts.

The President and Council also give notice, that his Majesty's premium of fifty guineas, for 1832, will be given to the author of the best work transmitted to the Society, of the following nature:—A Traveller's Manual—containing a clear and concise enumeration of the objects to which a geographer's attention should be especially directed; a statement of the readiest means by which the desired information in each branch may be obtained; a list of the best instruments for determining positions, measuring elevations and distances, observing magnetic phenomena, ascertaining temperature, climate, &c.; directions for adjusting the instruments, formulae for registering the observations, and rules for working out the results;—adapted to the use, not of the general traveller alone, but also of him who, in exploring barbarous countries, may be obliged to carry and often conceal his implements. Each candidate is requested to send his dissertation privately (without his name, and, if he chooses, transcribed by another person, but revised and pointed by himself,) to the secretary, on or previous to the second Monday in March of the years 1832-3 respectively, with a motto written on it; and he is at the same time to send a paper, sealed up, with the same motto on the outside, which paper shall enclose another paper, folded up and sealed, with his name written within. The papers containing the names of those candidates who shall not succeed will be destroyed unopened. And in all cases the successful competitor will be at liberty to publish his communication on his own account, under the sanction of the Society.

The President and Council further give notice, that it is their intention at future

periods to propose the following as prize subjects:—An essay on the actual state of geography in its various departments, distinguishing the known from the unknown, and shewing what has been, and what remains to be done in order to render it an exact science; together with an indication of the best processes to be adopted in order to supply the several desiderata. An extensive series of geographical tables, (with reference to authorities), shewing the various names, written in the native language and character, by which the same places have been known, in different countries, and at successive periods of history. The best mechanical inventions for facilitating the acquisition of geographical knowledge, or rendering it more available to the public. Under this head may be included the simplification of instruments, more compendious methods of determining positions, and all improvements in the art of drawing and engraving maps, whereby their precision and distinctness may be increased, and greater scope and expression given to what may be called the language of topography.

NATIONAL REPOSITORY.

The Repository of New Inventions and Improvements in the Arts, Pall Mall East, was opened on Wednesday for private view; and during the latter period of the morning, this national Institution was honoured by the attendance of a great number of persons of rank, and other patrons of the arts. This is as it should be; for the nobility and gentry of this country are more worthily employed in encouraging the useful arts and manufactures of their own nation, than in patronising those of foreign nations, which fall under the usual denomination of luxuries; and for which articles they are content to pay often double their real value at home, merely on account of their being foreign manufacture.

The articles which are strictly entitled to the name of novel inventions, are perhaps not so numerous in the present as in the last exhibition; yet it is only justice to observe, that the committee of management were unable to prepare catalogues for the opening of the gallery, through the neglect of parties, in not forwarding their specimens destined for exhibition in proper time.

The first article in the catalogue, and, in our opinion, the most important invention in the Repository at present, is the new safety-coach, invented by Mr. Daniel Stafford, of Liverpool. Both a working model in the gallery, and a full-sized four-horse stage coach, of very elegant construction, were exhibited to the visitors. This coach is built on the principle of the ordinary mail-coach, with spacious front and hind boots for luggage; but instead of the usual horizontal springs placed beneath the body, and consequently below the centre of gravity, which always renders a coach liable to overturn, from great inequalities in the road, Mr. Stafford suspends the body of his carriage considerably above the level of gravitation, even when loaded with its full complement of passengers. This is effected by fixing a transverse upright over each axle, which pedestal passes through apertures in fore and hind boots, when it carries an elliptical spring, on the top of which is attached a circular or curved block, on which another block, curved the opposite way, rests; the upper block being attached to a shelf or cornice, projecting about six inches beyond the roof at the front and back. The entire weight of the body and loading may be therefore said to work on

rollers, which can shift the centre of suspension according to the inequalities of the road, and thus preserve the body at all times in the horizontal position, so as to render it quite impossible to overturn in case of accident. It was shewn by the model, that, in the event of removing one of the hind wheels, and the carriage part falling on the axle, the body of the carriage very nearly maintains its horizontal position, and allows the passengers to alight in safety. The common inequalities of the road are provided against by the elliptical springs before mentioned, while that oscillating motion, which would result from suspending the weight on two rollers, or segments of circles, is ingeniously counteracted, by the upper block being cut horizontally near the centre, and circular near the ends. The model of this coach is highly creditable to the inventor. It is equally elegant and compact, and much more deserving the name of a safety-coach than any yet brought into use.

In the department of Mechanics there are three or four improvements in pumps, fire-escapes, paddle-wheels, and propelling apparatus. The compound paddle-wheel of Mr. Murdoch is highly ingenious; but it could not be rendered intelligible to our readers without a drawing.

Among the Fine Arts we must mention with high approbation, a plaster bronzed statue of his late majesty, in his coronation robes (size of life), by Mr. Tate, of Leicester Square. Several small models in wax, by the same artist, are also beautifully executed. Some spirited groups are modelled in clay with extraordinary delicacy by Sig. Giovanni.

In the department of Engraving, a beautiful new specimen of *grounding* (or graining) for steel or copper-plate engraving is exhibited by Mr. S. Russell. The Death of Cleopatra is a specimen, though far from perfect, worthy of the notice of artists. Some exceedingly fine specimens of silk and lace manufacture attracted the notice of the lady visitors, while a self-acting superb pianoforte of Rolfe's was polite enough to volunteer its services, by occasionally playing a brilliant concerto of Herz for the amusement of the company. We purpose returning to this exhibition when it is more complete.

CELESTIAL PHENOMENA FOR MAY.

"'Tis most apparent that the succession of things upon the face of the earth is purely the result and effect of the vicissitude of seasons, and is as constant and certain as is the cause of that vicissitude, the sun's declination: so certain, that were a man kept for some time blindfold, in such a manner that he could have no notice how the year passed on, and were at length turned forth into the next field or garden, he would not need any other almanac to inform him what season of the year it then was."—Woodward.

THE northern regions of the earth are arrayed with the beauty of spring. The Moon exhibits a canopy of boundless azure, and the night reveals the wintry constellations sinking in the west, with the advance of those stars to the mid heaven which declare that the time of the singing of birds is come, and that the summer is advancing. The flower and the star appear each in its season, and send forth, the one its ray, and the other its fragrance, with unfailling precision. The lovely train of Flora delights the senses with its perfume and beauty; the thrush and blackbird fill the woods with melody; and Arcturus in the east, and Capella in the zenith, shed forth their brightest scintillations: the rose, the nightingale, and bright star in the hand of the Virgin, bloom, sing, and shine together; the violet from its shady bank, the lark from its "watch-tower in the

sky," send forth their tribute of odour and harmony, as the stars in the soft Pleiades faint away in the glowing twilight of the vernal eve. As the fervid heat of summer increases, and light is more copiously diffused over the northern world, the stars shine with a subdued brilliancy, the melody of the grove ceases, the Aster tribe of flowers, with their diversified colours and radiations, decorate the field and the garden, and with pure adoration expand their bright florets to receive the full effulgence of the summer's sun.

21^d 9^h 6^m—the Sun enters Gemini.

Lunar Phases and Conjunctions.

	D.	H.	M.
☾ Last Quarter in Capricornus ..	4	15	35
☾ New Moon in Aries	11	12	1

J. T. B.

LITERARY AND LEARNED.

ROYAL SOCIETY.

H. R. H. the Duke of Sussex in the chair. A paper was read, entitled, on the Anatomy and Physiology of the minute and Capillary Vessels, by Marshal Hall, Esq. The object of this paper was to shew the peculiar manner in which the blood is thrown out of the arteries at their extremities into minute meshes, and taken up by the veins; and likewise to shew the varied construction of the lungs in different living creatures, in connexion with their tenacity of life. The author is of opinion that many writers on this interesting subject appear to be guided more by imagination than actual observation, so delusive are their results. With the achromatic microscope of Dollond he had pursued his researches with perfect success. After some comparative details on the minute and other vessels of various animals, such as the toad and frog, the author noticed the curious phenomenon which takes place on plunging one of the former species into water of a temperature about 120° of Fahrenheit: the animal becomes stiff, and appears to die instantly without pain. Mr. Hall, however, on application of the object-glass, in opposition to the generally received theory, observed the heart's motion—the venous, arterial, and capillary vessels all performing their separate functions. Sir M. A. Shee was introduced. The President addressed him to the effect, that he considered an honour to have been conferred on the Society by the election of an individual so distinguished as an artist, a man of letters, and President of the Royal Academy. Strangers having withdrawn, the fellows proceeded, in pursuance of a former notice, to ballot for three members of the council. On examining the lists, it was found that the gentlemen elected were George Dollond, Charles Koenig, and Fred. Daniell, Esqrs. The Transactions of several learned Societies were presented.

SOCIETY OF ANTIQUARIES.

ON Saturday last, being St. George's day, the Society met, pursuant to their charter, to ballot for the election of president, officers, and council for the ensuing year; H. Gurney, Esq. in the chair: after which, the members dined together at the Freemasons' Tavern. On Thursday, Mr. Gurney in the chair, the Secretary read a paper by Mr. Duppa, containing observations on one of the English articles, namely, *the*, and on pronouns misalled articles. He observed that the Greeks and Latins had no articles; the *α, η, υα*, of our Greek grammars, and *his, heo, hoc*, in Latin, being pronominal adjectives, and the same with the word *the* in English (usually termed the definite article), whenever it was used to designate any one thing as pre-eminent to others of the same kind. Mr. Duppa observed, that Dr. Johnson had censured the custom of sinking the final letter of the article in versification, but he (Mr. D.) considered that the syllable *the* could not be fully and openly pronounced without becoming a pronominal adjective, and it was only when deprived of the final letter that it was an article. A further portion was read of Mr. Grover's communication on ancient history.

ROYAL SOCIETY OF LITERATURE.

THE general anniversary meeting, for the election of council, officers, &c. for the ensuing year, took place on Thursday; the president in the chair. His lordship delivered an address replete with interesting facts and valuable literature.

rary and philological opinions. It contained a summary of the varied instances of munificent patronage afforded to literature by his late Majesty, the founder of the society; which, in justice to the memory of a sovereign whose taste and learning have not been duly known and appreciated, we hope to see laid before the public.

The secretary read a report of the last year's proceedings, with an analysis of numerous important papers that have been read before the Society.

The following noblemen and gentlemen were elected to preside over its affairs for the next year:—

President.—The Lord Bishop of Salisbury.
Vice-Presidents.—The Duke of Rutland, The Marquess of Lansdowne, the Lord Bishop of Bath and Wells, Lord Bexley, the Earl of Carlisle, the Right Hon. Charles Yorke, the Right Hon. G. Agar Ellis, Colonel Fitzclarence, Archibald E. Impey, Esq., the Rev. G. Richards, D.D.
Council.—Lord Goderich, the Lord Bishop of Bristol, Lord Prudhoe, Lord Carrington, Sir Thomas Phillipps, Bart., the Rev. H. H. Baber, Decimus Burton, Esq., John Caley, Esq., the Rev. R. Cattermole, the Rev. H. Clissold, W. R. Hamilton, Esq., W. Jacob, Esq., W. Jordan, Esq., W. Martin Leake, Esq., Lewis Hayes Pettit, Esq., W. Sotheby, Esq.
Treasurer.—W. Jacob, Esq.
Auditors.—D. Pollock, Esq., W. Tooke, Esq.
Librarian.—The Rev. H. H. Baber.
Secretary.—The Rev. R. Cattermole.
Foreign Secretary.—The Rev. H. A. Delafite.
Accountant and Collector.—Mr. Thomas Paull.

THE LITERARY FUND.

WE see with great satisfaction, that the Lord Chancellor, Brougham, is announced to preside at the Literary Fund Anniversary, on Wednesday week. Our readers are well aware that nothing of politics mingles with this benevolent Institution; and its friends anticipate a brilliant rally of the literary and the distinguished round a chairman of such eminence for literary attainments, and *ex officio* the guardian of literary rights and property.

FINE ARTS.

EXHIBITION OF THE ROYAL ACADEMY.

WE can promise our readers much gratification from the Exhibition of the Royal Academy, which will open on Monday next, and of which we shall, as usual, give a detailed notice in our following numbers. At present, we must content ourselves with stating that Beechey has several portraits, among them those of their Majesties, that of the Queen strikingly like; Callcott, eight landscapes and sea-pieces; Leslie, "Ford's Dinner," admirable; Wilkie, two fine portraits; Landseer, three pictures, a series of "Poachers;" Collins, four coast scenes; Etty and Hilton, several scriptural and historical works; Pickersgill, lots of clever portraits; Allan, a happy re-appearance after a long absence; Newton, three pictures, one "Lear and Cordelia," particularly good; Witherington, a charming "Market Cart;" Lee, a fine landscape; Chantrey, exquisite busts of the King, the Duke of Sussex, &c. We regret to add, that Jackson and Stanfield have been so ill, that they have not been able to send any thing.

SOCIETY OF PAINTERS IN WATER-COLOURS.

THE well-known talents and skill of the artists who form this society are a sufficient assurance to the public of the treat which they are annually to expect. Inexhaustible as nature herself are the diversified stores which the exhibitions of the Society of Painters in Water-colours present; and we every year return to their rooms with unsated delight. In point of execution, it would seem to be impossible that they can

excel their former efforts; and yet we own it appears to us that, in the collection of this year, the paper has been more completely got rid of, and the effect of firm and solid painting more completely obtained, than in any of its predecessors.

No. 3. *Belinda*. Miss E. Sharpe.—It is not gallantry which induces, but justice which compels us, to say that this is one of the most fascinating works of art we ever beheld. Mock allegory is a subject of great difficulty; and especially when gnomes and sprites are to be mixed up with costume which, however gorgeous, is at variance with the creations of the imagination. Yet such is the skill of the fair artist, that she has rendered all her materials subservient to the purposes of art; and has embodied with the happiest effect the playful and elegant fiction of the poet.

No. 9. *English Pastoral*. G. Barrett.—It is seldom, indeed, that English landscape is seen under such a blaze of light. It is evident that it has been Mr. Barrett's object to exert his utmost power in that respect; and he has reached a climax which we could scarcely have anticipated.

No. 8. *View near Ludlow*. P. De Wint.—We hardly think that a subject was ever brought forward more replete with variety, and yet more in union with the true principles of grand composition. Of Mr. De Wint's transparent, juicy, and harmonious colouring, this, as well as all his other beautiful works in the present exhibition, is a perfect example.

No. 16. *Meyningen, Canton of Berne*. W. Evans.—Distinguished by its picturesque forms, by its colouring and effect, and by the skill of its execution.

No. 49. *The Captives*. G. Cattermole.—Those possessed of highly imaginative powers will not fail to find sufficient matter in Mr. Cattermole's works on which to exercise them. Character and chiaroscuro he supplies finely and abundantly; the spectator's fancy must do the rest.

No. 71. J. D. Harding.—The artist has depicted the classic ruins of departed greatness in the very spirit of the poet whose lines he has made the foundation of his picture.

No. 113. *Loch Marce, Ross-shire*. G. F. Robson.—We pass by several of Mr. Robson's well-painted scenes to this, which, in point of sublimity and repose, has, we think, never been surpassed, and on which he has expended all the powers of his wonderful execution.

No. 104. *Brigands*. D. Cox.—Salvator-like, both in character and in effect.

No. 127. *The Breakfast—Good News*. F. Taylor.—Deserving of a better situation. Mr. Taylor has treated a pleasing subject in a pleasing and clever manner.

No. 149. *The Arrival of the New Governess*. Miss L. Sharpe.—This is a work which will come home to the feelings of but too many who have been compelled thus to undergo the severe and scornful scrutiny of the rich and the proud. The characters are admirably contrasted and sustained, and the whole is beautifully painted.

No. 158. *Shipwreck Scene on the Coast of Yorkshire*. Copley Fielding.—Much as we are accustomed to admire the productions of this artist, we are inclined to think that he has never equalled, we are sure that he can never have excelled, either in vigour of effect or in dexterity of execution, this magnificent representation of the terrible conflict of the elements.

No. 238. *An English Farm-yard*. R. Hills.—We cannot refrain from bringing in contrast

the above, this picture of an English farm-yard, cheerful, and exciting ideas of perfect security, comprehending all that sustains and makes life, comfort and snugness. It is finished, and especially the cattle, with Mr. Hills' usual care.

(To be continued.)

SUFFOLK STREET EXHIBITION.

[Fifth Notice.]

No. 447. *Meditation*. B. R. Faulkner.—A beautiful and pleasing variety from the pencil of this able artist, whose portraits in the gallery of the present year do him great credit.

No. 453. *River Scene, Morning*. J. Tennant.—The compositions of Cuyper or Potter seldom exhibit a more brilliant display of light and colour. It is a perfect blaze, without any adventitious aid derived from extreme contrast. When time has a little mellowed its freshness, our collectors of foreign art may go far ere they will find a finer example of its class.

No. 498. *A Scene in the Mountains*. J. A. O'Connor; No. 502. *Gobling Den*. Rev. J. Thomson.—Both highly romantic, but different in style: the former deep and intense in tone, although still clear and brilliant; the latter light, free, and broad, like some passages in the pictures of Salvator, or Wilson, or Sir George Beaumont.

The visitors to the gallery will find as much talent and variety in the Water-colour and Miniature Room, as in any other part of the Exhibition. Among the most striking in the imaginative class of works are No. 756, *The Countess of Leicester and Janet Foster*, Miss M. A. Sharpe, a beautiful example of contrast, both in costume and character; No. 572, *The Shrew*, Miss F. Corbeaux, a bold, but a successful venture, from a female pencil; No. 777, *Miss E. Tree, as Christina in the youthful Queen of Sweden*, J. W. Wright, divested of theatrical display, and exhibiting all the simplicity and generalisation of an historical figure; No. 680, *The Graces conducting the Loves to the Temple of Hymen*, J. Green, classically conceived, and highly finished; No. 605, *The Wrecked African*, R. Brandard, a bold, spirited drawing, and full of character.—Of the subjects in familiar life, No. 559, *Fruit Girl*, E. Parria, No. 606, *Cullercoats Fish Girl going for Bait*, H. P. Parker, No. 591, *The Country Blacksmith*, T. Wageman, No. 614, *The Shrimp Girl*, J. Holmes, No. 733, *Water Carrier*, S. A. Hart, No. 788, *The Itinerant Potter*, J. P. Knight, No. 776, *Greenwich Pensioner*, J. Holland, and several others, deserve particular notice.—The landscape department of drawings is also replete with excellence. Among the foremost of these are No. 749, *Four Views in Germany, France, Portugal, and Holland*, and No. 616, *Study of Trees in Northwick Park*, D. Roberts. It was by making such close and beautiful studies as the latter, that the veteran Wilson at length arrived at his grand results. No. 519, *A Sketch in Windsor Forest*, R. B. Davis, No. 528, *St. Gotthard, Switzerland*, W. de la Motte, No. 529, *Composition*, J. W. Allen, No. 584, *Waiting the Arrival of the Boats*, J. M. Ince, No. 535, *After a Storm*, J. Ward, No. 590, *Maggie Lane, Oxford*, A. G. Vickers, No. 600, *Delphely*, J. M. Ince, No. 708, *Cottages, East Cliff, Hastings*, H. Melville, No. 762, *Landscape*, J. W. Allen, No. 778, *At Honfleur, Normandy*, C. R. Stanley, No. 734, *View of Amsterdam*, J. B. Crome, &c. &c. &c. are all beautiful.—In portraiture, the drawings of Mr. D. McClise are distinguished for their character, taste, and composition. We were particularly struck with No. 563, *Portraits of a Child*, and No. 718,

Portraits; the latter of which is a perfect gem. Nos. 646, 647, 648, *Portraits*, Miss Daniell, are no less remarkable for their light and beautiful execution.—In fruit, flowers, and still-life, there is also much to attract. It would be difficult to surpass No. 560, *Birds' Nests*, No. 618, *Plums*, Miss Byrne. No. 551, *Fish*, G. S. Shepperd, and others by the same artist, are admirable for their truth, and for their facile but efficient execution.

NEW PUBLICATIONS.

Samson carrying off the Gates of Gaza. Designed and engraved by James G. S. Lucas. Lacey.

"WHEN two men ride on the same horse, one must be behind." Mr. Lucas is evidently possessed of considerable imagination and talents; and we strongly advise him to dismount from Mr. Martin's crupper, and to bestride the saddle of a nag of his own.

Henry Fuseli. Engraved by F. C. Lewis, from a Drawing by G. S. Newton, A.R.A. Colnaghi and Co.

It does not strike us as very good taste, in depicting a man of genius, to select a period of life, and a situation, which impart to the portrait a character almost ludicrous. As well might the tremulous autograph affixed to the sketch under our notice be considered a just representation of the energetic Fuseli's handwriting in his days of physical, as the sketch itself can be considered a just representation of his features in his days and moments of mental vigour. It is cleverly executed, nevertheless.

Mrs. Wolff. Engraved by Samuel Cousins, from a Picture by the late Sir Thomas Lawrence, P.R.A. Colnaghi and Co.

MANY years have elapsed since the exquisite work of which Mr. Cousins has here given us so masterly and admirable an imitation, was exhibited on the walls of Somerset House; but the impression which the elegance of the composition, the taste of the drawing, the loveliness and delicacy of the expression, the splendid arrangement of the drapery, the beauty of the colouring, and the breadth and vigour of the effect, made on our minds, remains as freshly as if we had seen it only yesterday. Painted *con amore*, from a most fascinating original, it was one of Sir Thomas's happiest efforts. The print is superb.

Ancient Building at Dieppe. R. P. Bonington del.; C. G. Lewis sculp. Colnaghi and Co.

EVERY scrap from Bonington's pencil has in it a charm and value.—A very pleasing portrait of this admirable and lamented artist has just been published by Carpenter and Son. It is engraved by J. P. Quilley, from a picture by Mrs. Carpenter.

Lieut.-Colonel Denham, F.R.S., late Lieut.-Governor of Sierra Leone. Engraved by John Bromley, from a Picture painted on his return from Bornou, in Central Africa, in 1825, by Thos. Phillips, Esq., R.A., in the possession of John Murray, Esq. Colnaghi and Co.

A FAITHFUL and expressive resemblance of the amiable, highly gifted, and enterprising original, whose career was unhappily terminated at the very moment when it promised to be speedily productive of the highest public benefit.

Cadland. Painted by J. Ferneley; engraved by E. Duncan and J. Webb. Ackermann, Jun.

A animated representation of the celebrated winner of the Derby, in 1828.

The Knights of the Tournament. Same Publisher.

THE lovers of chivalry are here presented with a dozen brave knights, mounted on as many spirited steeds, glittering in every rich variety of armour, weapon, and trapping, and eager for the encounter which is to honour or degrade them in the eyes of their fair mistresses.

ARTISTS' GENERAL BENEVOLENT FUND.

THE anniversary of this excellent Institution took place at Freemasons' Hall on Saturday; Lord Lyndhurst in the chair. His lordship frequently addressed the company, which was numerous, and comprised most of the eminent artists of the day, and pleaded the cause of the charity with great feeling and effect. His lordship alluded to his own connexion with the fine arts as a source of pride to him, for he esteemed the distinction won by talent to be far superior to any other honour. Sir M. Shee and Mr. Phillips spoke on several occasions, and a large subscription was made.

ARTISTS' AND AMATEURS' CONVERSAZIONE.

THE last meeting for the season of the above Society took place on Thursday week at the London Coffee House. We are gratified at seeing that the activity of the measures in establishing this novel feature in the city of London has been crowned with such success, and that the citizens have requited the exertions of its projector, by coming forward to support the undertaking. Until now, the idea has unfortunately too much prevailed among men of business, that art has and can have little relation to commerce; forgetting the almost entire dependence of manufactures upon fashion, fashion upon taste, and taste upon the successful cultivation of the fine arts. The meeting this evening was more fully attended than even upon the former occasions, and the various works of art were numerous and well selected. We rejoiced to see that the artists, especially the rising ones, have attended to our observations on the *conversazioni*, and evinced more confidence and alacrity than hitherto in producing their works: their own interests, and the vitality of the Society, depend entirely upon their continued attention to this important point.

MR. VERNON'S PICTURES.

THE sale of Mr. Vernon's pictures, which were lately brought to the hammer at Christie's, has been the subject of much talk among the lovers of art, from the enormous pecuniary sacrifice stated to have been sustained by that gentleman in consequence of the low prices obtained for what might be deemed capital works. Now, unfortunately, many people have the idea that wealth, with profusion for its attendant, is the only requisite to form a sterling collection of pictures; and that refined taste, combined with mature judgment, is of little use, or acquired by intuition; and when they find themselves the just victims of their own error, they attempt to divert ridicule by proclaiming themselves martyrs to fraud and deception. In the present instance, as regards the Virgin and Child, by Raphael, it is really surprising how any body in their senses, with a knowledge of the facts of this picture having been in the Orleans Gallery, and obtained thence for 500*l*.

by Mr. Hibbert, and then at the sale of his collection, a short time since, bringing but 280 guineas, should immediately after take it from the last purchaser, a foreign dealer, at the advanced price of 1000 guineas: at Mr. Vernon's sale it was knocked down at 290 guineas. Again, the Farewell Picture, by Both, which brought, at the dispersion of the late Mr. Josi's collection, something above 300*l.*, was acquired shortly afterwards by Mr. Vernon, at the price of 600*l.*: it has now produced him 297 guineas. These are not single instances of a want of judgment, but we could select, did our limits allow it, many others from the same source. Our object in this animadversion is to prevent any discouragement being given to such as are duly led by fortune, disposition, and knowledge, to admire and patronise art for art's sake, and who do not hang furniture-pictures, but thoughts, upon their walls. The large prices given in many cases for worthless rubbish, by uninformed youth and older vanity, has been exceedingly injurious to the due progress of art in this country: it has been one of the inducements to the large importation of indifferent pictures, and has tempted the *chevalier d'industrie* to the trade of picture-dealing, which has become one of general discredit, although many honest and well-informed men are, to our knowledge, among its members.

ORIGINAL POETRY.

APATHY.

No words of mine confess a woe,
And tearless is mine eye;
Nor sad my brow, nor blanch'd my cheek,
Nor escapes one startling sigh;
Not oft I wander forth alone
In melancholy mood,
Nor seek distraction in the crowd,
From dread of solitude.

A barren void is in my breast,
Alas! I cannot feel;
No tumults of the heart in me,
Or joy or grief reveal;
No feverish thoughts accelerate
The current in my veins,
Nor banished sleep, nor troubled dream,
Give sign of mental pains.

Not thus, when late I met the blow,
And fresh was my despair;
Then keenly felt—of human woes
The heaviest to bear,—
The maddening contrast, with'ring pang,
Which naught of hope allays—
In present misery's gloomy hour,
The thought of happier days."

MUSIC.

PHILHARMONIC SOCIETY.

BOTH the vocal and the instrumental pieces of the fifth concert, on Monday last, were well selected; and as they were also well performed, the concert proved to be one of the best of the year. Beethoven's scena, "Per pietà, non dimmi addio," is not the worse for savouring in style and melody of Mozart; and Mr. Braham was not the less applauded for singing it without those flourishes which cannot adorn such music. The beautiful quintet of Beethoven in E flat, for two violins, two violas, and violoncello, was in good hands; and though Mr. Mori shone conspicuously in it, Messrs. Watts, Moralt, Griesbach, and Lindley, sustained their

parts extremely well. The scena, "Deh calma," from Hummel's "Matilda von Guise," remarkably well sung by M^{me}. Stockhausen, is a fine composition, and gained much in interest by M. Hummel himself presiding at the piano-forte. He was heartily welcomed both by the audience and the band. Marschner's overture, "Der Templer und die Jüdin," did not please either the professor or the amateur, being destitute of a striking subject. Beethoven's seventh symphony, in A, with which the second act commenced, would not perhaps be so great a favourite if it were not for the inimitable andante and the sprightly scherzo. Signor Santini earned the compliment of being encored in Mozart's "Qui sdegno," from "Il Flauto Magico." The compositions for the French horn are not very numerous; but Signor Puzzi might still have found something better than Costa's fantasia for that instrument. After the delightful treat of Mozart's "Fuggi crudel," by M^{me}. Stockhausen and Mr. Braham, the concert concluded with Weber's excellent overture to "Oberon."

DRAMA.

KING'S THEATRE.

ON Tuesday *II Pirata*, which was unsuccessful last season, was again brought forward with a new cast, and introduced Signor Rubini and his wife to the British public. The signor has become a stout gentleman to what he was a few years ago, when his slim figure and sweet tenor were seen and heard in Italy. His voice bears a considerable resemblance to Donzelli's, but has neither the same volume nor compass; at least so far as we could judge from this part, which is by no means a favourable one for the performer. Under all circumstances, however, the *début* was justly applauded, and the signor welcomed as a valuable accession to the company. The lady also took her share in the triumph of carrying through *II Pirata*, and displayed a voice of great extent.

DRURY LANE.

Alfred the Great; or, the Patriot King, was produced at this theatre on Thursday evening. Mr. Sheridan Knowles, the well-known author of *William Tell* and *Virginus*, has again reaped the satisfaction of entire success. The present drama is replete with allusions to regal patriotism, which were seized upon with avidity, and welcomed as so many opportunities for the display of popular love and gratitude towards our beloved Monarch. The impersonation of the King by Macready, his utterance, action, and chivalrous bearing, did the author the fullest justice; and the grace and dignity with which Miss Philipps sustained the character of *Ina*, cannot fail to rank her yet higher as a public favourite of the foremost order. The drama is to be repeated every evening, till theatrical proclamations are issued to the contrary.

We have hastily glanced over the play, which has just been published, but, at our eleventh hour, we must postpone criticism till next week.

THE performers at both theatres-royal were thunderstruck on Monday evening last, by the unexpected announcement that it was the intention of the lessees and proprietors to play only on alternate nights for the remainder of the season. Meetings were immediately called by both companies; and on Tuesday morning the performers and band of Drury Lane signified to the management their positive intention of

leaving the theatre *en masse*, and playing for their own benefit at the Haymarket. Mr. Lee, in this emergency, took upon himself the responsibility, in the absence of his partner, Capt. Polhill, to rescind the obnoxious order; a decision which was received with cheers by the company. An inquiry was then set on foot to discover from whom the proposal had emanated, but no positive information could be gained upon that point; and, contented with having effected their principal object, the performers separated. A similar scene, in the meanwhile, was acted at Covent Garden; and Mr. Bartley, on the part of the proprietors, yielded to the remonstrances of his brother comedians. The two theatres were therefore opened on Wednesday night; and the new comedy of the *Esquisses*, which had been postponed, re-announced for Friday at Covent Garden.

That both houses had been playing a losing game for some time past, was sufficiently obvious to the initiated, from the extravagant declarations of "triumphant success," "increasing attraction," &c. &c. &c. in the playbills; and it is certainly not to be wondered at, that the lessees should prefer closing their doors to the certainty of losing upwards of £100 nightly by keeping them open. It is, however, rather too much to propose that the speculators, who, if they realised £20,000 by their season, would content themselves by simply paying the performers their salaries, should, when circumstances prove adverse, coolly decline fulfilling the contracts they have voluntarily and warily entered into,—particularly when it may be a question how far their own mismanagement has contributed to place them in this unfortunate predicament.

VARIETIES.

Death of Capt. Foster.—It is with much regret we learn, by letters which we received on Thursday, the untimely fate of Captain Foster, of his Majesty's ship Chanticleer, who had been employed for the last three years on a scientific expedition in various parts of the globe, and was about to return to this country. Captain Foster had left his ship, for the purpose of making a series of rocket observations on the Isthmus of Panama; and on his return down a small and shallow river in a canoe, he is said to have fallen overboard and to have been drowned. But strong suspicions exist for believing that this young, gifted, and meritorious officer was most treacherously murdered.

Berlin.—There is now publishing at Berlin a periodical review, entitled "Kritischer Wegweiser." The object of it is to improve geography, mathematical, physical, and hydrographical. The first part of the review contains notices of maps, with remarks on their wants and defects. In the second part, we find geographical and hydrographical observations, with many useful results that have been obtained in various departments of science.

Geological Structure of the Country round Algiers.—The additions made to science by the occupation of Algiers have already been considerable, and are scattered about in the numerous periodicals of France. Among others the *Journal de Géologie* contains a memoir by M. Roget on the geological structure of the country round this city, in which he traces a striking resemblance to that of the coast of France on the opposite side of the Mediterranean. The formations are, 1st, a coarse schist, passing into mica slate. On the schist the town of Algiers is built. 2d, Brown

* — Nessun maggior dolore,
Che ricordarsi del tempo felice
Nella miseria.—*La Divina Commedia.*

mica slate, irregularly stratified, with quartz and tourmaline passing into gneiss. 3d, Coarse calcareous sandstone passing into conglomerate. 4th, Diluvium. M. Roget thinks that from this situation of the gneiss the beautiful theory of M. Cordier is verified, that in the primary formations those deposits are the most recent which occupy the lowest level; which means, that as the lowest formations, according to the theory alluded to, are the result of the consolidation of fluid masses from loss of heat, while the upper beds are the result of the attrition and subsequent deposition, partly mechanical, partly chemical, or entirely mechanical, of the first crust of oxidation; that in the primitive or crystalline rocks those must be the most recent which have been latest formed, and which consequently occupy the lowest level; in the sedimentary rocks the formation being from inwards outwards, in the crystalline from outwards inwards. But in both cases we hitherto have only judged of the relative age of the different rocks by their superposition, or their succession as terms of a series; for though modern geology has derived the most important assistance in determining this simple problem from the variety in organic remains in one part of the series; yet this is as much applicable to the identification of similar formations in different countries as to the succession of different formations. It will be observed, then, that by a singular error in ratiocination, M. Roget has been led into an important one in geology; for if we only know that granite, gneiss, mica slate, talcose slate, &c. are terms in a series, like the letters *a, b, c, d*, because we find them so superposed with regard to one another, if we find *d* before *b*, ought we to say that the series retrogrades, or, as is always the case in geology, ought we not to say that the terms *b* and *c* or *b* have been repeated after *d*? If, in other words, we know talcose slate to be newest, only because we find it above gneiss and mica slate, how can we assert that it is also recent when it occupies the lowest level? we cannot deprive it of its real situation in the series, because we were only acquainted with that situation by comparative evidence; but if we find gneiss above, that gneiss must have been of a more modern formation than the talcose slate. We make these remarks, because they are not only of importance with regard to M. Roget's or even M. Cordier's views, but to the fundamental principles of geology; for if we inverted the order of reasoning, and with the celebrated professor considered the lowest of the primitive formations as the most recent, we should have talcose slate, mica slate, gneiss, and granite, as *a, b, c, d*, according to most observations hitherto made on the structure of the globe, then there can be no objections in position to granite, as occupying the lowest level, being the newest of the crystalline rocks; but if, as in the present case, talcose slate is found beneath gneiss, the oldest primitive rocks, or those which should be oldest according to M. Cordier's reasoning, are newest according to his own views, and occupy the lowest level. M. Roget's supposition, that talcose slate, usually among the highest of the crystalline rocks, being found beneath mica slate and gneiss, verifies M. Cordier's views, is then quite erroneous, and brings into contact two doctrines which are not compatible with one another.

The Play of the Stranger.—To Kotzebue, its author, the total profit produced never exceeded two hundred German dollars; whilst Madame Moté, its literal translator, soon amassed a property of sixty thousand livres; and which

odd circumstance is thus accounted for:—throughout France, every night's theatrical receipts are divided into three parts, of which the author or translator receives a seventh of one-third; and this sum is paid him as long as he lives, and to his heirs ten years after his death.—*Reynolds's Dramatic Annual.*

Mineral Forest.—A subterranean forest has been discovered in the coal formation near Glasgow. The trees are numerous, they occur many feet below the surface, and are vertically imbedded in the sandstone. The trunks of the trees are abruptly cut off by the superincumbent shale. The bark is converted into coal, but the woody structure, for a considerable space downwards, is of a shaly nature. A naturalist, struck with the extraordinary appearance presented by this deposit, actually asserts that these trees are *in situ*!

Potatoes.—A French publication denies to Sir John Sinclair the merit of having discovered the means of producing a fine colour from the flower of the potato; and asserts that the Frenchmen of science have long stated the practicability of applying the water and the flower of the potato to the purposes of dyeing. It says that M. Fouques has shewn by experiments that linen and cotton, plunged into potato-water, acquire a grey colour; and that in 1817 a chemist of Copenhagen pointed out, in a scientific journal, a simple method of obtaining a fine yellow colour from the flowers of the *solanum tuberosum*. He dyed with it linen, cotton, and even woollen cloth, which took a very solid green colour on immersion in a blue dye.

Tanning.—An apothecary in the neighbourhood of Narbonne has published a treatise, extolling the husks of grapes which have been deprived of their alcohol by distillation, as an excellent substitute for bark in tanning leather. After having prepared the skins in the usual way, he places them in the pits, and covers them with the grape-husks. From five-and-thirty to five-and-forty days are sufficient to complete the tanning. This method, according to the author of it, offers the following advantages:—The operation is much more rapid; it is much more economical; the leather has an agreeable odour instead of that of tan; and it is twice as durable as leather tanned by bark.

Novel Application of Steam.—Steam has lately been applied with great success in some of the French forts, in the destruction of vermin on board of merchant vessels. After having carefully closed the hatches and every aperture, the steam is suddenly introduced, and in twenty-four hours every living thing which may have been brought in with the cargoes is destroyed.

Rouen.—The spirit shewn by our continental neighbours in the encouragement of useful knowledge, is well worthy of imitation in this country. The Royal Academy of Sciences, Belles Lettres, and Arts, at Rouen, has just offered prizes of considerable value for the best treatises on the following subjects:—On the best organisation of the school established in consequence of the will of the late Major-general Martin, for instruction in the useful arts, especially those connected with the Lyonnaise manufactures; on some portion of the statistics of the department of the Rhone, or the city of Lyons in particular; on the principles upon which, in the present state of civilization in France, the gradation of offences and punishments ought to be established, &c. &c.

"The 'ancient Irish' invariably denominate the more recent settlers, 'Cromelians.' A whimsical illustration of this fact occurred

within my own knowledge. The following conversation took place, a few months ago, in the streets of Cork, between an English house-keeper and an Irish market-woman:—"Good morrow, ma'am. I hope ye want a basket this fine morning, ma'am?" "I believe I shall." "Why, then, long life to you, ma'am, I hope you'll take me. I b'lieve you're English, ma'am?" "Yes." "I thought so, ma'am; I'm English, too." "Indeed! when did you come over to Ireland?" "Oh, ma'am, I came over wid Oliver Cromwell, ma'am."—*Sketches of Irish Character.*

Artificial Spermaceti.—When the method of making artificial spermaceti had become newly known, Dr. Schmeisser of Hamburg formed a quantity from some half-decayed human muscles, by means of nitric acid; and, making it into candles, sent some of them to Blumenbach, with a notice that they were prepared from the legs of a man who in his life-time had done no good. Upon which this veteran naturalist observed, "Mortui lucent, qui in vitâ obscuri fuerunt."

Existence of Copper in Vegetables and Blood.—M. Sargeau has confirmed the discovery of Meissner, that copper exists in vegetables. He has obtained small quantities from coffee, wheat, madder, blood, &c. M. Sargeau has found that one milligramme of copper may be detected by the cyano-ferrure of potassium in one kilogramme of water.

Maximum Height of the Supermedial Formations in England.

	Feet.
Red Marl—Ashley Heath	803
Newer Magnesian Limestone—Brandon Mount	875
Lias maximum of elevation	500
Lower Division of Oolites—Eastern Moorlands of Yorkshire	1029

BRITISH INSTITUTION, Pall Mall.

The Gallery for the Exhibition and Sale of the Works of British Artists is Open Daily, from Ten in the Morning till Five in the Evening.

Admission, 1s.—Catalogue, 1s.

WILLIAM BARNARD, Keeper.

LITERARY FUND.—The Anniversary

Festival of this Institution will be celebrated in Freemasons' Hall, on Wednesday, May 11th, 1881, on which occasion the LORD CHANCELLOR will preside.

Stewards.

Right Hon. Lord Henley
Right Hon. Lord Mahon
Sir W. A. Chatterton, Bart.
Sir James Mackintosh, M.P.
H. Lytton Bulwer, Esq., M.P.
J. T. B. Beaumont, Esq.
William Behnes, Esq.
Rev. J. H. Canan, B.D.
Dr. Conolly
T. G. R. Esouart, Esq., M.P.

Captain Basil Hall, R.N.
Samuel Carter Hall, Esq.
Benjamin Hopkinson, Esq.
John Murray, Esq.
J. R. Planché, Esq.
John R. Rickard, Esq.
William Stothey, Esq.
Robert Spottiswoode, Esq.
Frederick Waller, Esq.
John Wilson, Esq.

Tickets, 5s. each, to be had of the Stewards; of Mr. Snow, 4, Lincoln's Inn Fields; and at the Bar of the Freemasons' Tavern.

Dinner at 6s. precisely.

ARTISTS' BENEVOLENT FUND,

under the Patronage of the King, established in the year 1810, incorporated by Royal Charter, August 2, 1837. The Friends of the Arts and Subscribers to this Institution are respectfully informed that the Twenty-second Anniversary Dinner will take place in Freemasons' Hall, on Saturday, the 7th of May.

His Grace the DUKE of WELLINGTON in the Chair.

Stewards.

The Earl of Roslyn.
The Lord Morsen.
The Hon. R. H. Clive.
Sir William Herries, K.G.H.

John V. Shiley, Esq.
Charles H. Weigall, Esq.

Tickets, 17s. to be had of any of the Stewards; at the Bar of the Freemasons' Tavern; or of the Secretary, 118, Mount Street, Grosvenor Square. Dinner will be on table at half-past Five for six precisely.

JOHN MARTIN, Secretary.

CASTLEBAR PARK SCHOOL, Ealing,

Middlesex, conducted by the Rev. J. C. HELM, M.A. Chaplain to the Right Hon. the Earl of Stirling. At this School, Pupils are prepared for the Universities, or qualified at an early age, for the fifth form at Eton, Rugby, Harrow, Winchester, or the corresponding form at the Charter House; and the System of Instruction pursued is that which is sanctioned by successful experience at these Institutions.

The Terms, which are moderate, and an Outline of the Plan of Tuition, may be had at Castlebar Park, where also the beautiful and superior accommodations of this healthy situation may be seen by Parents and Guardians.

Mr. Helm is further desirous of preparing Two or Three Young Gentlemen, completely, for either University.

William IV.

This day is published, by Colnaghi, Son, and Co. Pall Mall East,

A PORTRAIT OF WILLIAM IV.; from the last Drawing by Sir Thomas Lawrence, P.R.A. Engraved by Lewis. Price 7s. 6d.; Prints 6s.

Prints, 11. 1s.; Proofs, 11. 11s. 6d.

THE FISH MARKET, from a Picture by the late R. P. Bonington. Engraved in Mezzotint by J. P. Quiller.

"Every lover of art remembers this admirable picture of Bonington, in which the grasping and composition might vie with the best masters of the Flemish school. The engraver has made a faithful copy of it, and proves himself a rising artist."—*Literary Gazette*.

Published by James Carpenter and Son, Old Bond Street.

Of whom may be had.

A Series of Subjects from the Works of the late R. P. Bonington, Lithographed by J. D. Harding. Atlas 4to. price 21. 10s.; Proofs, 31. 6s.

SKETCHES IN ITALY.—Just published,

under the Patronage of His Majesty, the Third Number of "Sketches in Italy," by W. Linton.

"The Sketches are so many accurate copies of nature by a master-hand; and the brief letter-press descriptions illustrate them in a very agreeable manner."—*New Monthly Magazine*.

"This superb and interesting work, from its style and character, is justly deserving general encouragement and patronage. In the facile and efficient sketches of the artist we wander 'fancy free,' and may be said to enjoy with him the pleasures of his tour."—*Literary Gazette*.

"This novel and beautiful work supplies a deficiency which has long existed, from a total absence of anything approaching to a digest of the great and imposing features of Italian landscape."—*Observer*.

Published by the Artist, 16, Blenheim Street, Great Marlborough Street; Moon, Boys, and Graves, Pall Mall; Colnaghi, Son, and Co. Pall Mall East; and Rodwell, New Bond Street.

GERMAN SPA, BRIGHTON.—The

efficacy of the Mineral Waters of this Establishment, in Obstructed Discretion of the Digestion of the Liver and Urinary Organs—in Derangements of the Female Constitution—in Nervous Complaints, and many other inveterate Diseases,—has been fully established under the observation of several eminent Physicians. Satisfactory Testimonials will be found in the Prospectus. The Pump Room is now open for the Season. Hot Mineral Water, Carlsbad, Ess; Cold ditto, Spa, Pyrmont, Marienbad, Eger, Pullna, Seltzer, &c. &c. London Agents for the sale of the Cold Waters—Messrs. J. and G. Waugh, Chemists to the King, 177, Regent Street; Mr. R. A. Coward, Chemist, 68, Chesapeake, where the Prospectus may be obtained, gratis.

MUSIC.

MRS. ANDERSON, "Planiste to Her

Majesty," has the honour to announce that her Morning Concert will take place in the Great Concert Room, King's Theatre, on Friday, May 6th, to commence precisely at Half-past One o'clock. Vocal Performers—Madame Stockhausen, Miss Mason, Miss Cranley, and Miss Laverity; Signor Rubini, Mr. Bennett, Mr. Parry, Jun., and Signor De Bagnis. In the course of the Concert Mrs. Anderson will perform Hummel's New Concerto in A flat, and a brilliant Fantasia by Herz; Mr. Nicholson a Solo on the Flute; and Mr. Mori a Concerto on the Violin. Local Musicians—Messrs. Welch and Spagnoletti. Conductor—Sir G. Smart.

Tickets, 10s. 6d. each, to be had of Mrs. Anderson, 2, New Cavendish Street, and at the principal Music Shops. An early Application for Boxes is requested to be made to Mrs. A. only.

BOOKS PUBLISHED THIS DAY.

A new edition, post 8vo. 5s. 6d.

THE VERACITY OF THE GOSPEL

AND ACTS. Arranged from undesigned Coincidences to be found in them, when compared in their several Parts.

By the Rev. J. J. BLUNT.

Fellow of St. John's College, Cambridge.

Also, by the same Author,

The Veracity of the Five Books of Moses.

In small 8vo. 6s. 6d.

"Mr. Blunt has already signalled himself by his work on the Acts of the Apostles, as an individual intimately conversant with the most minute particulars of holy writers, and a very successful disciple of Dr. Paley, in the management of that species of Christian evidence, which arises from the discovery of undesigned coincidence of revealed truth. This volume cannot fail to increase his reputation. It is both a pleasing and instructive work, and is creditable to the talents, learning, and piety of the respected author."—*Evangelical Magazine*, June 1880.

"We think Mr. Blunt's clever and very ingenious web of argument will be read with pleasure, as it certainly must with profit."—*Monthly Review*.

John Murray, Albemarle Street.

THE POETICAL WORKS of the Right

Hon. LORD BYRON, complete (with the exception of Don Juan), in 8 vols. 18mo. with Portrait and highly finished Engravings, only 37s. Vol. V. and VI. which are now for the first time published, contain many Poems never included in any previous Collection of the Works, and some that were suppressed; besides several printed for the first time; rendering this the first and only complete edition ever published.

John Murray, Albemarle Street.

THE FRIEND of AUSTRALIA; or,

Plans for Exploring the Interior, and for carrying on a Survey of the whole Continent of Australia.

By a RETIRED OFFICER of the HON. EAST INDIA

COMPANY'S SERVICE.

In 1 thick vol. 8vo. with Maps and coloured Plates, price 16s. This is an interesting book to lovers of geography. It contains a numerous collection of facts on the above important subject, combining much sound advice to travellers and settlers, and amusement to the general reader. It strongly advocates the benefits of emigration, and points out the most interesting features of the above-mentioned country, and the places most desirable to be colonized. This useful work has been produced at considerable expense, and only a few Copies remain unsold.

London: Published for the Author, by Hurst, Chance, and Co. 68, St. Paul's Churchyard.

Price 8s. 6d. boards,
CHANGE OF AIR; or, the Pursuit of Health on an Autumnal Excursion through France, Switzerland, and the Rhine, with Observations and Reflections on the Moral, Physical, and Medicinal Influence of Travelling Exercise, Change of Scene, Foreign Skies, and Voluntary Expiration, in Sickness and in Health.
By JAMES JOHNSON, M.D.
Physician to the King.
Published by S. Highley, 174, Fleet Street; and T. and G. Underwood, 39, Fleet Street.

Critical Notice.
"Of all the popular tomes, of which British literature has recently been so prolific, this is immeasurably the best. To attempt an analysis of a work embracing such a treasure of anecdotes and instruction, would be an idle task. There is no class of general readers which may not derive pleasure and profit from the perusal of this volume."—*Bell's*.
"This work is so spirited, so full of sound moral reflection—so correct and so impartial, that we scarcely know where to find its equal. It is a classical and philosophical tour. It is impossible to dip into any part of it without having the attention riveted and the fancy pleased."—*London Med. and Surg. Journal*.
"Dr. Johnson is a vigorous and independent thinker, while his opinions are slightly tinged with cynicism, which gives them an agreeable relish. His style is plain, bold, and expansive, so that when he least aims at effect, he leaves a more vivid impression on us of the object of his reflections, than others would by an elaborate description."—*Morning Herald*.

In 8vo. price 6s. in boards,
THE INSTITUTION AND ABUSE OF ECCLESIASTICAL PROPERTY.
By EDWARD HALL, M.A.
Of St. John's College, Cambridge, and Minister of St. Mary's Chapel, attached to the School for the Blind, in Liverpool.

The 6th edition, with Index of Proper Names.
London: Printed for Thomas Tegg, 75, Cheapside; and sold by all Booksellers.

A new edition (being the Tenth), 12mo. 3s. half-bound, of
STORIES from the HISTORY of ENGLAND.
Recently published, 12mo. price 2s. half-bound,
2. Progressive Geography for Children. By the Author of "Stories from the History of England."
"A very useful and well adapted to the purpose for which it is intended."—*Brighton Gazette*.
"It is written in a plain, clear style, and the information contained in it appears likely to implant a sound knowledge of the rudiments of geography in the juvenile mind—thus rendering natural and easy the progress to the higher parts of the science. It is a clever and really useful little book."—*Plymouth Herald*.
"The plan, the simple and demonstrative manner in which it is followed up, the little maps which even a child might understand, and the promiscuous index of names, whereby a cross-examination may be made on the accuracy of the names, their proper order, form a work likely to prove useful in communicating the rudiments of geography to children long before it has been usual to give them any instruction on the subject."—*Tyne Mercury*.
John Murray, Albemarle Street.

1 vol. 8vo. 12s. to correspond with D'Oyley's Life of Sancto,
THE CORRESPONDENCE OF ISAAC BASIRE, D.D. Archdeacon of Northumberland, and Prebendary of Durham, in the Reigns of Charles I. and II. With a Memoir of his Life.
By W. N. DARNELL, B.D. Rector of Stanhope.
John Murray, Albemarle Street.

On Health and Longevity.
In 12mo. 2d. edition, enlarged, price 8s. boards,
SURE METHODS OF IMPROVING HEALTH and PROLONGING LIFE, by regulating the Diet and Regimen. Embracing all the most approved principles of Health, Longevity, and exhibiting the remarkable Power of proper Food, Wine, Air, Exercise, &c. in the Cure of obstinate Chronic Diseases, as well as in promoting Health and Long Life. To which are added, an Account of the Art and excellent Effects of Training for Health, Rules for reducing Corpulence, and Maxims for the Silliness and Nervousness. Illustrated by Cases.
By T. J. GRAHAM, M.D.
Author of the "Modern Domestic Medicine."
"We are disposed to think it the most useful and rational work of the kind we have met with. It contains many hints novel to us, and is altogether an admirable code of health."—*Atlas*, Sept. 1857.
"The tendency of this volume to advance the important objects which it proposes is unquestionable; and we warmly recommend it. It is intelligent, practical, and highly interesting."—*New Literary Gazette*, Sept. 1857.
"That men of all habits will derive information from it, calculated to increase their comfort and extend their days, is firmly our conviction."—*Edinburgh Observer*, Jan. 1858.
London: Published by Simpkin and Marshall, Stationers' Court; sold by all Booksellers.

In 1 vol. 8vo. price 12s.; or in 1 vol. 12mo. price 8s. 6d. boards, with an Introductory Essay, by the Author of "Natural History of Enthusiasm,"

DUNBAR and BARKER'S GREEK and ENGLISH LEXICON. A Greek and English and English and Greek Lexicon, for the Use of Schools and Colleges, containing a Variety of Critical, Philological, and Scientific Matter, not hitherto found in any Greek Dictionary. Also, a number of Idiomatic Phrases for the Use of more advanced Students.

By GEORGE DUNBAR, F.R.S.E.
And Professor of Greek in the University of Edinburgh; and
E. H. BARKER, Esq. of Thetford, Norfolk.

This Lexicon extends to nearly 1800 pages of three very closely printed columns, and contains a greater number of references to the classic authors, and more valuable matter, than most dictionaries of the kind, though nearly double its price.

Printed for Macleachrie, Stewart, Mackenzie, and Simpson and Marshall, London.

THE DIVINE ORIGIN OF CHRISTIANITY, deduced from some of those Evidences which are not found on the Authenticity of Scripture.
By JOHN SHEPPARD.

"The author of this work is well known to the public by his beautiful little work on Private Devotion: the present is of an entirely different character, but does no less credit to his talents, his learning, and acuteness. He has been a Baxter for his scrupulousness in weighing and balancing proofs, and much more judiciously in his manner of urging them. The lower of close argument and satisfactory information will be amply repaid by the judicious examination of these volumes."—*Orme's Life of Baxter*, vol. i. p. 84.

By the same Author,
Thoughts, chiefly designed as preparative or
persuasive to Private Devotion. 5th edition, 18mo. 6s. And
Two Discourses, occasioned by the Deaths of
the Rev. E. E. Daniell and the Rev. R. Burton. 18mo. 3s.
 Printed for Whitaker, Treacher, and Co. Ave Maria Lane.

Just received, price 2s.

SATURDAY, MAY 7, 1831.

PRICE 8d.

REVIEW OF NEW BOOKS.

The Cabinet Cyclopædia, Vol. XVIII. History of England, Vol. II. By Sir J. Mackintosh. London, 1831. Longman and Co.

HISTORY, like all other branches of literature, may be divided into divers species, differing from each other, as amusement or utility, simple narrative or elaborate research, have preponderated in the mind, or been within the power of its numerous writers. First come the chroniclers of early antiquity—full of fables, which, like the allegories of the ancients, often contain important truths. Secondly, the chroniclers of their own time—vivid, picturesque, but under all momentary influences; often swayed by passion, and still oftener darkened by prejudice. Then comes another stage of history;—the nation has reached a high point of civilisation; and civilisation is a species of moral Nile, to trace whose sources is matter of strong attraction. Experience looks back to the past for its instruction; our present pride finds food in former dignity or national progress. Theories seek to support themselves on facts, and preceding days are found replete with amusement and information. Modern historians may also thus be divided into two classes: the antiquaries, who usually bring more of industry than mind to their task; men of indefatigable industry, to whom research is a passion; who compare and collect, find curious documents, bring private papers to bear upon public ones, and are, like the first voyagers to America—full of discoveries. To use a simile, they dig the mine for its ore, the quarry for its marble, whereof the future palace is to be built. The antiquaries furnish the materials of history; and one remark will shew their usefulness and importance. It is from the fact that the inference must be deduced; and if the fact be false, of what value is the inference?—Next comes the philosophical historian, to whom the past is a mighty moral lesson, to be applied to the benefit of the present; who is to draw from facts their instruction; and in the dangers or the triumphs, the errors or the benefits, of our forefathers, is to find so many beacon-lights of warning and warning to their children. Such an historian is Sir James Mackintosh. We would place this work (if it continue as it has begun) in the hands of a young man entering public life, as the most valuable and enlightened of commentaries on our English constitution. Every page is marked by the reflection and knowledge thrown out by a mind as highly gifted as it is highly cultivated. We shall endeavour to collect such passages as may enable our readers to form some judgment of the thought bestowed on this work,—thought as acute in its analysis, as it is clear in its expression.

Restored dynasties.

"A restoration, after an establishment of many years, is a revolution, and leads to an entire series of revolutions. The revived establishment is as untried by the existing generation as if it had not subsisted in past times; it is as little known from experience

whether it will be suitable to their needs; combined, as it must be, with new and unknown agents, no man can foretell its future course from a remembrance of its former power in a simpler form, or in other combinations."

View of the rise in the commercial classes.

"That the rise of the pacific and industrious classes should coincide with the discoveries of a new continent and of eastern commerce, can only be thought accidental by shallow observers of human affairs. When we consider the previous discoveries, the coincidence of the voyages of Columbus with that of Gama, and with the conclusion of the treaty now under consideration, it appears evident that the growing wealth of the trading body was the parent of the passion for discovery, and the most important agent in the expeditions against the new world. The attractions of romantic adventure, the impulse of the fancy to explore unknown lands, doubtless added dignity to such enterprises, and some of the higher classes engaged in them with a portion of the warlike and proselytising spirit of crusaders. But the hope of new produce, and of exchanges more profitable, were the impelling motives of the discovery. The commercial classes were the first movers. The voyages first enriched them, and contributed in the course of three centuries to raise them to a power of which no man can now either limit the extent, or foretell the remote consequences. As America was discovered by the same spirit which began to render all communities in their structure more popular, it is not singular that she should herself most widen the basis of government, and become the most democratical of states. That vast continent was first settled for her rich commodities."

How just are the ensuing remarks on the progress of reason!

"All the inventions and discoveries of man are only various exertions of his mental powers; they depend solely upon the improvement of his reason. With the vigour of reason must keep pace the probability of adding new discoveries to our stock of truth, and of applying some of them to the enjoyment and ornament, as well as to the more serious and exalted uses of human life. By a parity of reasoning we perceive, that those who remove impediments on the road to truth, as certainly contribute to advance its general progress as if they were directly employing the same degree of sagacity in the pursuit of a particular discovery. The contrary may be affirmed of all those who oppose hindrances to free, fearless, calm, unprejudiced, and dispassionate inquiry: they lessen the stores of knowledge; they relax the vigour of every intellectual effort; they abate the chances of future discovery. Every impediment to the utmost liberty of inquiry or discussion, whether it consists in the fear of punishment, in bodily restraint, in dread of the mischievous effects of new truth, or in the submission of reason to beings of the like frailties with ourselves, always, in proportion to its magnitude, robs a man of some share of his rational and moral nature. Truth is not often dug up with ease: when it

is a general object of aversion,—when it is represented as an immoral or even impious search,—the difficulties that impede our labours are increased; the most irresistible passions of our nature, and the most lasting interests of society, conspire against improvement of mind; and it is thought a crime to ascertain what is generally advantageous, though thereby only can be learned the arduous art of doing good with the least alloy of evil."

Again, on intolerance.

"The flagrant inconsistency of all Protestant intolerance is a poison in its veins which must destroy it. The clerical despotism was directly applicable only to works on theology; but, as religion is the standard of morality, and politics are only a portion of morality, all great subjects were interdicted; and the human mind, enfeebled and degraded by this interdict, was left with its cramped and palsied faculties to deal with inferior questions, on condition even then of keeping out of view every truth capable of being represented as dangerous to any dogma of the established system. The sufferings of the Wickliffites, the Vaudois, and the Bohemians, seemed indeed to have fully proved the impossibility of extinguishing opinion by any persecution in which a large body of men can long concur. But the two centuries which followed the preaching of Luther, taught us, by one of the most sanguinary and terrific lessons of human experience, that in the case of assaults on mental liberty, Providence has guarded that paramount privilege of intelligent beings, by confining the crimes of mankind, as it has seen fit for a season to allow that their virtues should be circumscribed. Extirpation is the only persecution which can be successful, or even not destructive of its own object. Extirpation is conceivable; but the extirpation of a numerous sect is not the work of a moment. The perseverance of great bodies in such a process, for a sufficient time, and with the necessary fierceness, is happily impracticable. Rulers are mortal: shades of difference in capacity, character, opinion, rise among their successors. Aristocracies themselves, the steadiest adherents to established maxims and revered principles of rule, are exposed to the contagion of the times. Julius aimed at Italian conquest; Leo thought only of art and pleasure; Adrian burned alike with zeal for reforming the clergy and for maintaining the faith. Higher causes are in action for the same purpose. If pity could be utterly rooted out, and conscience struck dumb; if mercy were banished, and fellow-feeling with our brethren were extinguished; if religion could be transformed into bigotry, and justice had relapsed into barbarous revenge,—even in that direful state, the infirmities, nay, the vices of men—indolence, vanity, weariness, inconstancy, distrust, suspicion, fear, anger, mutual hatred, and hostile contest—would do some part of the work of the exiled virtues, and dissolve the league of persecution, long before they could exterminate the conscientious."

Luther is finely sketched.

"To follow Luther through the perils which he braved, and the sufferings which he endured, would lead us too far from our proper province; but, in justice to him, the civil historian should never omit the benefits which accrued to the moral interests of society, from the principle on which, to the end, he founded his doctrine—that all rites and ceremonies, all forms of worship, nay, all outward acts, however conformable to morality, are only of value in the judgment of God, and in the estimate of conscience, when they flow from a pure heart, and manifest right dispositions of mind. Wherever the outward acts are considered as in themselves meritorious, it is apparent that the performance of one outward act may be conceived to make amends for the disregard or omission of other duties. Some notion may be formed of the possibility that the justice of a superior may be satisfied for a theft or a fraud by a self-inflicted suffering, or by an outward act of unusual benefit to mankind. But it is evident that no such substitute can be conceived for a grateful and affectionate heart, for piety or benevolence, for a compassionate and conscientious frame of mind. Where these are wanting, outward acts can make no compensation for their absence; because the mental qualities themselves are the sole objects of moral approbation. When the whole moral value of outward acts is ascribed to the dispositions and intentions, which, in the case of our fellows, we can understand only from the language of their habitual conduct, it becomes impossible for any reasonable being to harbour so vain a conceit, as that he can compromise with his conscience for deficiency in one duty, by practising more of another. From the promulgation of this principle, therefore, may be dated the downfall of superstition, which is founded on commutations, compromises, exchanges, substitutes for a pure mind, fatal to morality; and upon the exaggerated estimate of practices, more or less useful, but never beneficial otherwise than as means."

We have not room for the admirable summing up of the causes whence arise the laws of property; but we must extract the commencement.

"Thus was completed the confiscation of a fifth or a fourth part of the landed property of England and Wales within the space of five years. It may be a fit moment therefore to pause here, in order calmly and shortly to review some of the weighty questions which were involved in this measure. There is no need of animadverting upon the means by which it was effected, though we must assent to the affirmation of a great man, 'that an end which has no means but such as are bad, is a bad end.' But the general question may be best considered, keeping out of view any of those attendant misdeeds which excite a very honest indignation, but which disturb the operation of the judgment. Property is legal possession. Whoever exercises a certain portion of power over any outward thing, in a manner which, by the laws of the country, entitles him to an exclusive enjoyment of it, is deemed a proprietor. But property, which is generally deemed to be the incentive to industry, the guardian of order, the preserver of internal quiet, the channel of friendly intercourse between men and nations, and, in a higher point of view, as affording leisure for the pursuit of knowledge, means for the exercise of generosity, occasions for the returns of gratitude; as being one of the ties which join succeeding generations, strengthening domestic discipline, and keeping up the affections of kindred; above all, because it is the principle to which

all men adapt their plans of life, and on the faith of whose permanency every human action is performed; is an institution of so high and transcendent a nature, that every government which does not protect it, nay, that does not rigorously punish its infraction, must be guilty of a violation of the first duties of just rulers. The common feelings of human nature have applied to it the epithets of sacred and inviolable. Property varies in the extent of the powers which it confers, according to the various laws of different states. Its duration, its descent, its acquisition, its alienation, depend solely upon these laws. But all laws consider what is held or transmitted agreeably to their rules as alike possessing the character of inviolable sacredness. There may be, and there is, property for a term of years, for life, or for ever. It may be absolute as to the exercise of the proprietor's rights, or it may be conditional; or, in other words, held only as long as certain conditions are performed. There are specimens of all these sorts of property in the codes of most civilised nations. But in all these cases the essence of property is preserved, which consists in such a share or kind of power as the laws confer. The advantages may be extremely unequal. The inviolable right must (by the force of the terms) continue perfectly equal. The legal limits of the authority of the supreme legislature are not a reasonable object of inquiry, nor indeed an intelligible form of expression. But to conclude that, because the law may, in some sense, be said to create property, the law is to be deemed on that account as entitled rightfully to take it away, is a proposition founded on a gross confusion of two very distinguishable conceptions. It uses the word property in the premises for a system of rules, and in the conclusion for a portion of external nature, of which the dominion is acquired by the observance of these rules. It is only in the first of these senses that property can be truly called the creature of law. In the second sense it is acquired or transmitted not by law, but by the acts of a man when the acts are conformable to legal rules. It is impossible within our present limits to canvass the small or apparent objections which may occur to this scheme of reasoning. It is sufficient, perhaps, here to remark, that these are the generally acknowledged principles, and that deviations from them in practice are no more than partial irregularities, to which the disturbing forces of passion and interest expose human society."

We entirely subscribe to the following analysis of the causes which led to the downfall of the Jesuits. "They owed their decay to the use of the fatal expedients to which many of them, doubtless, trusted as the strongest props of their greatness. However shallow statesmen may be deluded by some short and superficial appearances to the contrary, it is a truth proclaimed by the whole course of human affairs, that public bodies and associations vested with legal rights cannot very long survive the decline and downfall of their moral character. General contempt and disgust are fatal to institutions which can flourish only by reverence. The corruption of those who profess to teach morality, or are appointed to enforce it, is an inconsistency which in the course of time shocks even the profligate. The Jesuits split on this rock. They had too carefully cultivated the dangerous science of casuistry, the inevitable growth of the practices of confession and absolution, which, by inuring the mind to the habitual contemplation of those extreme cases in which there is a conflict of duties, and where one virtue may or must be

sacrificed for the sake of a greater, does more to lessen the authority of conscience than to guide its perplexities. Casuistry has generally vibrated between the extremes of impracticable severity and contemptible indulgence. The irresponsible guides of the conscience of kings were led to treat their penitents with a very compliant morality, by the belief that no other could be observed by such penitents, by making too large allowances for the allurements which palliate royal vices, by the real difficulty of discovering when more austerity might plunge a prince into deeper depravity, by the immense importance of rendering his measures and counsils, if not his example, favourable to religion: to say nothing of the subtle snares with which selfishness and ambition, often without the consciousness of the individuals, surrounded their narrow and slippery path. These and the like circumstances betrayed some of their doctors into shocking principles, which were held out to the world as the maxims of the society itself by the wit and eloquence of Pascal, one of the greatest, and, except to the Jesuits, one of the most just of men. The order certainly did not adopt the odious extravagancies of some members. But the immoralities were not sufficiently disavowed. The selection of particular cases, as matter of charge against a large body, has often the unjust effect of exaggeration. Yet it must be owned that invidious selection, and even gross exaggeration, are the indications of a proneness in the accused body towards the vice which appears in its harshest and most hideous shape in some of their worst members; and that they are a sort of natural, though not nicely equal, punishment of the wrong disposition which has infected the whole mass."

We conclude with a curious instance, shewing how early undue influence was exercised at elections—a fact of peculiar interest just now.

"The secret history of the election for the parliament of 1455 affords some curious proofs of the solicitude of the lords to acquire an ascendant in an assembly which was waxing stronger. The Duke of York, and Mowbray Duke of Norfolk, had an interview at St. Edmund's Bury, to settle the election. The names of the candidates favoured by these lords were written on strips of paper, which were distributed among their yeomanry. The Duchess of Norfolk also desired the votes of her friends for John Howard and Sir Roger Chamberlain, to be knights of the shire, 'it being thought right necessary for divers causes that my lord have at this time in the parliament such persons as belong unto him, and be of his menial servants.' These practices are spoken of familiarly, as if they were the old and general custom, of which no man then living remembered the origin, or censured the observance."

The period treated in the present volume is one of the least interesting in our history: the wars of the Roses were chiefly important as they broke down the exorbitant power of the great barons. But the times which next come under Sir James Mackintosh's pen are full of the most intense and important interest. We look anxiously forward to the volume promised in November.

A Vision of Hell: a Poem. 12mo. pp. 165. Glasgow, 1831, J. Reid; Edinburgh, Constable; London, Hurst and Co.

WE remember, in a very curious, and now a very scarce book (our copy of which, by the by, was stolen from us, like too many other tomes), called *Scotch Presbyterian Eloquence*, a worthy minister gave his hearers a vision of

hell almost as droll as this epic. The good man was, it seems, very angry with his transgressing flock, yet so warmed with sympathy for them, that he could not bear the thought of their being utterly lost. He accordingly spoke in terms something like these—"Ye ken, Lord, what a perverse set o' ne'er-do-weels I ha' to do wi'; ye ken the pains I tak wi' them, and ye see with hoo little effect. Oh, tak them, the sinners, gude Lord; tak them, and shake them weel o'er the lum (chimney) o' hell—but, gude Lord, dinna let ane o' them fa' in!"

Our present author gives us a good shake o'er the lum; and we do not think any one will fall through—except it be himself. The poem is inscribed, by permission, to Thomas Campbell, Esq.; and the conception is superb. Having lost his Leonora, the author turns sceptic, when, to his astonishment, the ghost of the lady appears, and invites him to a ramble

"Through realms invisible, where he should see
Vice, virtue recompensed;"

and thus have his impious doubts resolved, without earthly suffering. He agrees most poetically, saying

"Lead, lady, on; my love is lost in fear—
Timid no more thou seemest, but thy looks
Are of another nature, and I feel
Humbled at recollections which arise.
'Blush well thou may'st,' she answered;"

and then throwing him into a deep slumber, they commence their voyage. The first appearances which strike him are certainly new; for,

"Central above, the sky appeared wherein
The moon rode perpendicular; black shades,
Beasts of evenom'd sting and hideous form,
Swarm'd frequent; roosted on a leafless tree,
A monstrous owl waded slow its sable wings;"

&c. &c. &c.; but he is recalled from the unpleasant view of these monstrosities by his fair guide, who addresses him thus:

"Dost thou see, she said,
'The cause of the small circumference,'"

which is described to be a horrid hole, though only the beginning of his adventures, for worse remained behind. So fatal, indeed, were the ensuing dangers, that he is obliged to be secured against them by a metamorphosis.

"With her wand she touch'd my eyes,
My ears, and trunk;"

by which process, it seems, his senses were "made like what Adam's were are fallen."

Her next touch affords him a pair of "wings, of plumage fair, wide waving;" and their use is curiously painted:

"Another pit now open'd circular,
And looking down its sides, vapours were seen
To roll, the sky of the infernal world,
To which this roof of rock served canopy.
And here my guide address'd me shortly thus:
'Clasp thy wings, so they delay thee not,
With me plunge down—expand them when thou
seest
Me spread mine wide. Now fall!"

and down they go—to (we do not like to mention it) hell. But our author's hell is very different from Virgil's, or Dante's, or Milton's, or any preceding writer's—

"From east to west,
From north to south, like populous ants were seen,
Myriads to swarm in agitated life,

(Life after death, of course),

Of these whose hope is lost, yet busy still,
For still the hope, worst portion of their curse,
That this their dreadful state may be repair'd,
Remains."

The idea of hope being the worst portion of a curse, is entirely new, if not entirely true. Some of the damned are drinking; but the author confesses,

"What wine they quaff'd I know not."

A party of these Bacchanals, however, speedily kicked up a spree; for

"They led on.
As at the Olympic, when the charioteers
Fas'd furious, the beholders op'd their ranks,
Then, closing, watch'd them long—so now the dam'd,
Flocking from right and left, gazed curious,
In vacant mood, upon the merry group.
As oft dejected men are seen to laugh
Without a cause, when they should weep; even so
The lost, moved by those strains, sharp, high, but
now
Melodious to their ears, unstrung so long
By dissonance, in circles took their stand,
And soon the dance went gen'ral o'er the wild!"

Unstrung ears are unknown to earthly operas. But our poet does not dwell on the scene; for the guide bids the hero "strike anew his slumbering wing," and they fly from hell to Elysium, a sort of pleasant purgatory. In their way they take a peep at Sisyphus, Danaus and his forty-nine daughters, Cleopatra, Sappho, Thais, Laïs, Phryne, Semiramis, and other distinguished infernals; and then visit a very noisome marsh, where the souls of sensualists, consigned to reptile forms, grovel in the mud and slime. Leonora proceeds with her charge, and though he is furnished with such superb wings, she bids him "accept her guiding hand," because "the steep asks cautious tread;" and takes him to see King Agrippa, on whom she bestows a hearty scolding; *æz. gr.*

"Behold the persecuting Jew; his fate
How just! Wearied and spent the sufferer seem'd.
And while in air gasp'd hideous, like a fish
Pluck'd from its natural element. I look'd
Upon the sinner now, now on my guide.
Her face, unwonted passion ruddy'd o'er,
Regain'd that virgin beauty which I saw
In youth, in hope. I marvel'd what so changed
The bright serene of her celestial brow.
Quitting me quick, till now she held my hand,
To the capacious cistern's brink she strode;
Forth to the fatal wheel she stretch'd her waad;
Unwillingly it creak'd to rest, and stood
Suspended; o'er the wave its victim hung.
And slowly raised his torpid eyes, to learn
Wherefore the pause. Then Leonora thus—
'Agrippa! impious vanity here reaps
Its fruits, well earn'd; yet not that only gullt:
The righteous blood of Zebedee's slain son,
And Peter's meditated death, the ill
Thy father and thy father's sire contrived,
Stuporous of blood and prey, here, without hope,
Thus them and thee have wrought accomplish'd wo.
Nor far from hence, lustful Drusilla waits!
Hapless he heard, but answer'd not, like one
Abject in grief, that heeds not to reply;
And droop'd his eyes, rather composed to bear
What further wretchedness, than colloquy.
On this the black machine, released, began
Heavy to roll, sluggish at first and slow,
Soon quickening to its wonted speed. 'Again,'
Said Leonora, as she nigh approach'd,
'Twill never permit its sinful whirr!
'But tell me, ere we go, lady,' I said,
'Why near the brink on either side, two groups
Of shades, all drench'd in mud, dejected stand,
As if forestall'd of some expected woe?'
'Look close, and you will see that one on this,
Two on the farther side, are habited,
Though soil'd, in Roman purple. He more near
Is the twelfth Cæsar; the remoter twain
The fourth and fifth. These latter reign'd in Rome
When Herod lived; from them he held his crown.
Moved with compassion for their satellite,
But now they have essay'd the vain attempt
'T' arrest the ponderous solitary wheel.
And in that grievous plight are new escaped.
Now let us to the plain ascend once more."

But this is enough of Tartarus and of Elysium: so good night! There are poetical thoughts and lines; but the language is so involved, the composition so crude, and the general conception so absurd, that we are compelled to wish we had never seen the book.

The Anatomy of Society. By J. A. St. John.
2 vols. 12mo. London, 1831. Bull.

There is some pleasant occupation for a leisure hour in these pages, but nothing of either energy or novelty. Mr. St. John is evidently a man who reads much, reflects much on what he has read, and then puts forth the materials he has broken up in his mind, in a shape somewhat different to that in which they entered: but he has no peculiar or first-rate talent.

The following are, we think, some of the most favourable specimens.

"Happiness is self-satisfaction, however produced. • • • Seclusion is the paradise of proud minds divested of power. • • • Men perpetually individualise, if that will express our meaning, the universal feelings of our nature; they think those things peculiar to themselves which are common to the species; and a writer that describes with tolerable accuracy his own sensations, pleasurable or painful, will describe those of the whole race, and appear to have looked into every body's bosom. Upon how many authors has love bestowed immortality!"

"The *Utopia* has, perhaps, never been equalled, as a philosophical romance, except by the relations of Gulliver, which, having been moulded for very peculiar purposes, reject all comparison, and stand up in the world of literature a species by themselves. In them, the interest hinges upon an individual, whose adventures all along appear the main object, while the manners and customs of the strange nations he visits, though minutely described, seem to be brought before the eye incidentally, as they happen to bear a relation more or less remote to the hero of the narrative. Had Sir Thomas More adopted a similar method, the popularity of his *Utopia* would have been far greater, as the fable would have been more complete and beautiful. No series of adventures, confined within the bounds of possibility, and represented as happening to one individual, can ever be too extravagant to excite admiration, and obtain a mitigated kind of belief; for as no one knows what is falling out daily to some of our species, within the vast circle of society, all are ready to lend an ear to a revelation of individual experience, acquired in remote parts of the world, or in any part where they have not the means of observing for themselves. When the greater portion of the globe was unknown, fiction might be as bold to create imaginary countries and nations, as now to create imaginary individuals, provided it preserved some shew of probability; but since science has curtailed the realms of ignorance so thoroughly, invention must alter her track, and no longer dare to take any liberties with the map of the world. In Sir Thomas More's times, the recent discovery of America excited wonderful expectations: 'space may produce new worlds' was the word; and, in reality, as navigation pursued her researches, the terraqueous globe seemed to swell and enlarge its circumference like a bubble. The *Utopia* was, therefore, built upon the general feeling, and, geographically, did not in the least outrage probability."

Just remarks on Franklin.

"As a writer, Franklin's merits are very considerable. His thoughts are generally clear and weighty, his views practicable, his sentiments kindly and correct. But he rarely rises to great warmth or energy, is seldom imaginative, and never sublime. The current of his thoughts flows equably, like a gentle river, which, winding away from the mountains, is never hurried through chasms or dashed over foaming precipices. It is quiet, or gently stirring, like the cheerfulness of old age. His style, like his character, is remarkable for artful simplicity. Caution has left the marks of her footsteps upon every period. No warm wild gushes of nature, no impetuous passions, no fiery metaphors scarcely curbed on the very limit of resemblance, ever meet you there. There are writers among whose thoughts you move with as much awe as you would among the prodigious domes and pillars of some ancient

forsaken city. But Franklin is none of these. His thoughts and language rather resemble the domestic style of architecture, in which, though there be no magnificent porticoes, colonnades, or friezes, there is every convenience that can contribute to the comfort or corporeal enjoyment of life. His meditations centre perpetually in the useful. They are bounded by the visible world. They turn on life, or the arts which render life agreeable. In fact, you never for a moment forget in Franklin's company, your artificial wants and feelings; he holds no communion with untutored nature; cares not for her solitudes and her wilds; or, if he casts an eye upon them, it is only to reconnoitre their weak points, in order to discover how man may best carry into their utmost recesses the invasion of the arts. Bear him into the depth of the 'howling wilderness,' his first thought would be, to pitch upon a convenient spot for the site of an insurance office, or of a stocking manufactory. He would prefer the sound of Don Quixote's fulling-mill to the roar of a desert cataract. His inquiries always tend to ascertain what can be made of Nature, caring little for the feelings which Nature, as she is, is calculated to inspire. His ideas, therefore, can scarcely be called sublime, perhaps, but they are sane and useful; more so, very possibly, than those which generate more lofty aspirations and more daring wishes."

Excitement.—"The habit of delighting in powerful excitement is quickly created, and the appetite increases in proportion as it is more abundantly fed. The world had been shocked by the murder of Nero, but it had also been pleased, perhaps in the same proportion, as the event tended to keep alive the persuasion that Heaven had not ceased to watch over the affairs of this world, or to punish the guilty. But when the powerful emotions caused by this catastrophe had died away, lassitude of mind succeeded, and a desire was secretly felt to be again moved in a similar manner. This tremendous disposition of mind, compounded of hope and terror, which always prevails among the multitude during revolutionary times, is invariably the parent and the avenger of crimes; first hungering for the excitement caused by their commission, then for that which is produced by their punishment."

"It may, in general, be remarked, that as civilisation advances, pleasures grow more expensive."

We can scarcely agree with the following:

"There undoubtedly is great persuasive power in the countenance, independent of words. A picture or a statue, representing man or woman, regarded attentively, has a very strong influence upon the spectator's state of mind. When it is clothed with bland, sweet looks, the person contemplating it will involuntarily adjust his own features into the same kind of expression, and adopt the smile of the stone or canvass. In gazing steadfastly at the Venus and Adonis of Titian, we have often detected our own countenance relaxing into the softness and alluring fondness of the goddess, and, an instant after, into the gentle reproachfulness of the youthful hunter, delayed for a moment by her tenderness from his favourite sport."

According to this theory, one would go forth at once and buy a beautiful bust, that, by gazing on it, we might become beautiful too. One closing remark against the wide and unfulfilled promise of the title. Some dozen essays, principally with a literary reference, is strangely misnamed in being called the *Anatomy of Society*.

Alfred the Great; or, the Patriot King. By James Sheridan Knowles, author of "Virgilius," &c. 8vo. pp. 85. London, 1831. Ridgway.

OUR patriotic and historic associations are all, with much judgment, enlisted by our author on his side; and never was a poet's conception of moral and intellectual dignity more finely embodied than it has been by Macready. The part of Alfred is one that calls forth an actor's utmost power of declamation; and the dignity of Macready's eloquence could only be equalled by its energy. Plot there is none, the historical outline having been religiously followed; and the subordinate love-story is matter of necessity rather than of interest. Mr. Knowles's talent lies in fine energetic passages, of which the following are specimens.

"Guthrum. Is he thy friend, whose life Thou count'st a thing so precious, thou would'st give Thine own to purchase it?"

Oscar. He is!

Guthrum. What rich And heavy debt hast thou incurr'd to him, To pay so large return as takes thy all?"

Oscar. And think'st thou friendship barters kindness?"

"Tis not because that such or such a time He help'd my purse, or stood me thus or thus In stead, that I go bound for him, or take His quarrel up. With friends, all services Are ever gifts that glad the donor most. Who rates them otherwise, he only takes The face of friend to mask a usurer. I give my life for him, not for the service He did me yesterday, or any day, But for the love I bear him every day, Nor ask if he returns."

Alfred. So much for poverty! Adversity's The nurse for kings; but then the palace-gates Are shut against her!—they would else have heard Of mercy oftener—gems not always dropp'd In fortune's golden cup. What thought hath he How hunger warreth honesty, whose meal Still waited on the hour? Can he perceive How nakedness converts the kindly mill Of nature into ice, to whom each change Of season—yes, each shifting of the wind, Presents his fitting suit?—know'st he the storm That makes the valiant quail, who bears it only Through the safe wall—its voice alone can pierce; And there talks comfort to him with the tongue, That bids without the shelterless despair? Perhaps he marks the mountain wave, and smiles So high it rolls! while on its fellow hangs The fainting seaman glaring down at death In the deep trough below! I will extract Riches from penury; from sufferings Coin blessings; that if I assume again The sceptre, I may be the more a king By being more a man!"

Alfred. Hold! This victory I will perpetuate by such an act As shall from future kings remove the power To make their public functions pander to Their private gust. Select twelve men, his peers, And swearing them upon the book of God, As they shall answer at his judgment-day, To try their prisoner fairly. Let the charge Be brought before them; and as they decide, Be finally his innocence or guilt Established. Hence, hereby shall private right, Which, guarded, fortified, more than arms, The conservator of the public weal, Be sacred even from the sceptre's touch! Thus to a people faithful to their king, A faithful king an institution gives That makes the lowly cottage lofty as The regal dome—holds justice paramount Of all: before her throne the peasant and The king himself on equal footing bring! A gift which you'll preserve for ever whole! From which, as from your blood, pollution keep! Which, if you're asked to render back, by all You owe yourselves, your country, and the throne, You'll answer no! Which, when you'd name, you'll call

Trial by Jury!"

We doubt, however, whether Alfred be destined to that immortality on the stage which he enjoys in history. The want of interest is at present supplied by political excitement—too temporary a resource to be an author's reliance. Mr. Knowles has a noble vein of poetry, and a fine perception of the exalted and free: what he wants is a greater knowledge of feelings,

and a more general command of our sympathies.

STATE PAPERS. HENRY VIII.

(Third Notice.)

As this important work is not likely to be commonly read, though no good library can be without it, we shall continue our extracts from those parts which possess the greatest novelty and consequence; thus contributing our share to the diffusion of its historical knowledge, not only in our own country, but throughout every quarter of the globe where the *Literary Gazette* circulates: and we are not aware of one civilised country in the world where it does not find its way in considerable numbers."

We set out by supplying an omission. In our last we should have stated, that the words in *italics* in the Charges against the Duke of Norfolk and Earl of Surrey, which we extracted, are in Henry VIIIth's own hand—a fact which certainly doubles their interest. Returning to an earlier date, we may remark, that all the papers relative to Wolsey's splendid embassy to France (June 1527) are particularly deserving of attention. On his journey from Calais, he tells, among other honours conferred upon him, "The French king hath signified unto me, how his pleasour is, I shuld, as I thought good at my owne arbitre, in all suche placis as it shall fortune me to passe by in this journey, to relase, pardon, and put at libertie, all suche transgressours as be detain'd in prison, of what soo ever qualitie ther offence bee; soo as ther is here pretermitted nothing, that may be any argument or token of my wellcommyng hether; neyther on the said Frenche kinges behaulf, ne his subgettes, who hath hetherto shewed themself very glad and joyeulz therof, for the good expectation and hope they have of theeffect of the same."

Yet, notwithstanding, he says, "thair humanite and enterteynment is so good, the state of the cuntry considered, that the same can not be amended: howe be it, in the townes and places wher I have arrived, I fynde grete derthe, skarcite of vitails, moche disolacion, mysery, and povertie in the commen people, and very yl logeing for me, and suche folkes as attende upon me, far discrepant and inferior to the lodging of England; notwithstanding they make the best shifte and provision that they may, with as good will and herty maner, as can be wysed or divised."

His reception and entertainment by the French is a good picture of the courts of those times; and we select the letter as a specimen of the whole.

"Sir,—After my most humble and lowly recommendacions, this shalbe to advertise your highnes, that on Saterdaye last passed, I removed from Abivile to a town called Pykeney, wher, in a castell belonging to Mons. de Vidams, accompanied with the Cardinal of Lo-reyn, and som parte of his and myn trayne, leaving the residue at Flisco, I was lodged that night. On Sunday, after dyner, about oon of the cloke, I, likewise accompanied with the said cardinal, the Counte Brian, and suche other gentlemen as met and encountered with

"It is not merely a fair puff of this Journal, but a literary curiosity, to say, that it is published on the banks of the Mississippi as regularly as on those of the Thames, and at the same price—for we have an American edition; and that frequent correspondence on learned and scientific subjects shews us that it is much read in Russia, Turkey, Greece, Persia, and even more distant parts, where English literature could be least expected to penetrate, and where nothing but its collected information, its avoidance of politics, its independent character, its convenient form, and its easy transport, could recommend or enable it to travel.—Ed. L. G."

me at my first entre into this realme, I departed from Pykeney, taking my journey towards Amyas, wher, the day bifore, at 5 of the cloke in the afternone, the Frenche king, with my lady his moder, the Queene of Navarre, and many other nobles and grete personages, arrived. And passing thiderwarde, appoching and drawing nigh to the said town, within 2 myles of the same, met and encountred with me the bailif therof, with the burgenses and aldermen of the same, who, by the mouthes of thair secretary, had an ornat oracion unto me, comprising not only thankes and congratulacions of myn commyng and arrivaile into these parties, but also by the same recognised, howe as well they as al other the subjectes of the realme of Fraunce, were most astringed, obliged, and bounde to your highnes, for that it pleased your majesty (thair soverain lord being in captivite) to take peax, at the humble pursuite and mediacion of the excellent princeesse madam regent with the realme of Fraunce; wherby they were not onely delyvered of your graces grete, puisante, and formidable power, whiche to resist they were insufficient and unable, but also, therby, thair king was restoured to his said realme and liberte; wherfore they recognised and accompted them selves, all thair successours, and posterite, to be perpetually astringed and bounde to beire unto your grace thair herty service, honoring the same no les thanne thair own soverain lord and prince. And forasmuche as they knewe that myn intervention and mediacion toward your highnes did not a litle conferre therunto, they, for the same, gave unto me thair most herty thankes, with demonstration that my commyng into those parties was to thair singler joye and comforte; with feste hope and confidence, that like as by your gracious meanes and auctorite, and myn intervention (it liked them so to say), the said peax was concluded and thair master delivered, so they trusted the Frenche kinges children shulde be restoured, and universall peax throughout all Christendome ensue, with many other good eloquent wordes, tending to that purpose and effect. Wherunto after myn answer made, we marched forward; and, within a litle distance, eftsones mete with me the bailif, ministres, and justices of the saide cite, who, with a semblable oracion, of like purporte and contynue, saluted and welcomed me; wherunto after convenient answer made, we proceeded further, and within a myle and a halfe of the cite, the Frenche king, riding upon a grey jenet, apparelled in a cote of blak velvet, out in diverse places for shewing of the lynnyng therof, whiche was white satyn, accompanied with the King of Navarre, the Cardinal of Barbon, the Duke of Vandome, the Counte Saintpole, Mons. de Gize, Mons. Vaudamont, the grete mestre, the Senechall of Normandy, with diverse archbishops, bishops, and other noble men, advanced him self towards me, to whose person (assone as I had the sight therof), deviding my company on bothe handes, in most reverent maner, sole and alone, I did accelerate my repaire and access; and his grace doing the semblable for his parte, being discovered, with his bonnet in his hande, encountred, and with most herty, kinde, loving countenance and maner, embraced me, presenting unto me the king of Navarre, with the Cardinal of Barbon, the Duke of Vandome, and the forwarde noble personages, by whom also I was likewise welcomed; in the tyme of doing wherof, the Frenche king saluted my lord of London, my lord chamberlain, master comptroller, the chaunceler of the duchy, and such other your servantes and gentlemen as accom-

panyed me. After whiche salutations fynished and made, on bothe sydes, the said Frenche king retourned with loving and joyewes countenance, most hertely demanding of your highnes good welfare and prosperite, wherof to here was most to his consolacion and comforte, for your highnes was the prince whom he most loved, honored, and esteemed, and was most indebted unto, forasmuche as by your only meanes his realme was preserved from all perrell and daungiers, and he hym self, deteyned in captivite, was also restoured to his said realme and liberte; for the whiche your noblenes and gratitude, he, duerine his lif, shal not only be to your highnes as most humble servaunt, but as a slave; accumylating as many good and well set wordes to that purpose, as coude be devised, in suche a constant, assured, and loving maner, that the same appered not to be fayned, but to procede of an entier mynde, affection, and hert. Wherunto, after I had gyven suche answer as apperteyned, with making of your graces most cordiall recommendacions, declaracion, and rehearsal of the herty good mynde and will, that your highnes beireth unto hym, I shewed that hering of his and my ladies, his moders, diseases, was verely hevry, and sory that he and she had taken so grete payne, in making so grete jorneyes and travaile to mete with me; for the alleviacion wherof I was not only desirous, yf I might have been suffred so to have don, but also I had in commaundement from your grace to have repaired unto Parys. To the whiche he sayde and answered, the innumerable benefites of your highnes considered, and that I was sent from the same as your lieutenant, being alwaies propice and redy to entercorre, as a loving minister, for the establishing, contynuance, norishing, and encrease of god amyte bitwene your highnes and hym, your realmes and subjectes, hit had ben his duete to have met me in the confynes of his realme. And so, passing to gedre by the waye, placing me (albeit I refused the same) on his lift hande, he was glad to fynde and take occasion to talke and speke of your highnes vertuous noble personage, excellent qualities, and pastyme; remembring oftentimes, and alwaies repeting, the grete humanite, kindnes, and gratitude, that he hath founde in the same. And to thintent, as me semed, I shulde thinke that he gretefully esteemed all suche thinges as were sent from your highnes unto hym, he caused the Counte Saint Pole, Mons. de Gize, and Mons. de Vadamont, to ryde next affore hym, upon three of the horses, that your highnes had sent unto hym; wherof the one, being a beye, he sayd was the best, the lightest, and most mete for the warre, of any that ever he sawe, or coude be founde in Christendom, and most resembled, as he had apparelled hym, to the horses of Turkey, farr surmounting any that might be founde or recovered in the same. And thus entering and passing thorough out the cite, whiche was merveilously replenished with people, crying 'Vive le roy!' he forgate not, farre above my dessertes, to recognise howe moche he, his moder, and realme, were bounden unto me, and howe hertely I was welcome unto them. And because he did knowe (so it pleased hym to say) that your highnes used me in al your affaires, as your chiefe and principall counsaillour, so he from hensforth wolde do the same; praying me, therefore, to be contented with no les affection to embrace his affaires, than I dailly do, and have done, your graces own; assuring me, that whatsoever I shulde thinke to be don therin, he wold folowe, and put the same in execution accordingly; taking and repeting me, from this tyme for-

warde, as a common chaunceler and minister; trusting therby, that all his causes, whiche hitherto, for lak of good handling, have not had the best and most fortunate successe, shulde revive, and be of a better sorte, than they have ben heretofore. Declaring, furthermore, howe that Mons. Moret had distrussed, taken, and brent 2 grete carrikes of Jeane, laden with ordonaunce, municions, and vitall for defence therof; and that themporous chaunceler, nowe arrived ther (for the apprehencion of whose person ther be practises set forthe not unlikely to take effecte), skaped narrowly the handes of the said Mouret. And so still riding thorough the stretes, in the principall places wherof were diverse pagentes well divided, expressing the grete desire that they have to peax, the reparacion of Christes church and see apostolique to the pristyne dignite, with perfite hope and trust that the same shall succede by your graces high policy, wisdom, auctorite, and mediacion, intermyxting me, in the abett of a cardinal, as your graces minster and servaunt, for thaccomplishment and attayning therof. And albeit I often demanded what his graces intent was, seing we were past his palaice, wherin he was lodged, to go and procede any further thorough the cite, connecting therby that his intent was to accompany me to my lodging, whiche to do I refused, with as many humble persuasions and exhortacions as I could devise; yet it was not in my power to disuade hym, but in any wise he wolde accompany me to the same, without suffering me to retorne with hym to his palaice. And so, after demande whider I wolde see my lady that night (wherof I shewed my self to be verry glad and desyrous), I departed from hym, and, by the cardinal of Loreyn, was brought and accompanied into my lodging, whiche I founde richely and pomposely apparelled with the Frenche kinges own stuff; as the utter chamber, with riche clothe of tysue and sylver, paned, embroderd with freres knottes, wherin was a grete and large clothe of astate of the same stuff and sorte. The seconde chamber was apparelled with crymson velvet, embroderd, and replenished with large letters of gold, of F and A, crowned, with an other veray large clothe of astate, of fyne aras. And the thrid chamber, being my bedd chamber, was apparelled with riche clothe of tysue, raised, and a grete sparver and counterpointe to the same. And the 4th, being as a closet, was hanged with clothe of bawdikyn, wherunto was annexed a litle gallery, hanged with crymson velvet. And after a litle pawse, and shifting of my self, ther was sent unto my lodging the cardinal of Burbon, the duke of Vandome, with many other prelates and noble men, to conduce me to my ladies presence, who was lodged in the bishops palacies; in the hall wherof, being large and spacious, richely hanged and apparelled with aras, was placed and set in right good order, on bothe sydes, the Frenche kinges garde, my lady his moder, the Queene of Navarre, Madam Reynet, the Duches of Vandome, the King of Navarres suster, with a grete number of other ladies and gentlewomen, standing in the myddes; to whose presence I sumwhat appoching, and drawing nigh, my said lady also avaucing her self forwardes, in most loving and pleasant maner, encountred, welcomed, and embraced me, and likewise saluted my lord of London, my lord chamberlain, master comptroller, the chaunceler of the duchy, and most parte of suche gentlemen as came with me, and most specially therle of Derby, whom it liked her grace to kisse, and right lovingly to welcome. In the tyme of doing wherof I, for my parte, semblably saluted the

Queene of Navarre, Madame Reynet, the Duchesse of Vandome, the King of Navarres suster, and a grete party of thother ladies; whiche done on bothe sydes, my lady returned, and taking me by the arme, ledd and conveyed me into her inner chamber, wher, under a riche clothe of astate, were sett two cheyres garnished, oon of blake velvet, and thother with clothe of tissue; wher, after delyvery and reding of your graces letters, whiche seemed to be veray pleasant unto her, and making of your highnes most cordiall recommendations, she demanded right hertely of your graces welfare and prosperite. Wherunto after I had made answer, her pleasour was, that we shuld sitt down, to entre into further communication; in the begynnynge and commencing wherof, she, with well sett and cowedd wordes, declared and accumulated the grete benefites and gratuities, whiche your highnes, in her perplexite, hevendes, and adversite had exhibite and shewed to her, and the king, her sonne, whose deliverance and restytucion to liberte, she only referred and ascribed unto your highnes; for the whiche bothe she, her said sonne, and all those whiche were, or shuld hereafter, descende of hym and his, were bounden to do service unto your highnes, and dailly to pray for the contynuauunce and prosperous astate of the same. And after a right pleasant and elequent discourse made to this purpose, she diverted her communication to the rehersall of suche travaile, as I have taken for the conducing and setting forth of good amite and peax bitwene your highnes and her son, whiche she trusted, by my repaire into these parties, shulde not only be corroborate, but also, by som good alliance, made perpetuall. In the advauncement and setting forward wherof, she wolde, with all her power, auctorite, and industry, with no les desire and affection, concurre with me, than she had hitherto done in making of the peax temporel, and all other treaties concluded bitwene your highnes and her said sonne; offring and declaring, furthermore, that if in the communication or debating therof, either with her sonne, or his counsaill, ther shulde insurge any doubt or difficulte, whiche might be to the impechement or hindrance of the said peax and alliance, she wolde so interpone her auctorite, and helping hande, that all thinges shulde be brought to honorable ende and effecte. For the whiche her offes after I had geven convenient thankes, shewing that your highnes had chiefly sent me hidre for that purpose, without descending to any other particuler pointe of my charge, forasmuche as it was 8 of the cloke, and my lady had not supped, I toke my leve, and returned home to my lodging, accompanied with the forsaid Cardinal of Burbon, and Duke of Vandome. Thus is the summary rude discription and rehersall of suche thinges, as was don at this our first meting and entervien. On Monday, in the mornynge, ther came unto my lodging temperourous ambassadour, here resident; who, after mutuall salutations, sayde, that forasmuche as he was informed, that your highnes, for the delyvery of the Frenche kinges children, and conducing of the peax bitwene him and temperour, had not only, by your oratours, proponed certain offes, and condicions to his majesty, but also sent me hidre for the advauncement and speedy setting forward therof, he could no les do, but to repaire unto me, and to desire and pray me, for the sele and good will that I have alwaies borne to the peax, and in consideration of the grete trust and confidence that his master hathe in your highnes, at whose request and contemplation he had departed from oon of the weightiest and most importane ar-

ticle of the treaty of Madril, and was commended and descended to certain reasonable demandes, whiche were delyvered in writing to your graces and the Frenche kinges orateurs, that I wolde induce and persuade the same Frenche king to condescende and agree therunto, considering they were but reasonable and honorable. To whom I made answer, that it was not unknown, but manifest and open, aswel to temperour, as to al other Cristen princees, what grete zeale and ardent desire your grace hathe, and alwaies hathe had, like a most noble, vertuous, and catholique prince, to the procuring and setting forth of peax bitwene Christen princees, and what studye, labours, expences, and travaile, aswel by sending of oratours, as letters, your grace hathe susteyned in and aboutes the same. And to thintent the said peax might speedely be conduced, and take effect, as the thing most necessary, the grete calamite, ruyn, and myserable state of Cristendome considered, and for putting over of further delaies and tractes of tyme, your highnes had sent me hidre to the Frenche king, to induce and persuade hym, at your graces contemplacion and instance, for the attayning of his children, and the said peax, to condescende to all reasonable and honorable condicions; and likewise by my letters, on your graces behalfe, to exhorte and move temperour, for his parte, to do the semblable, whereby universal peax following, som notable provision and expedicion, by common consent of all princees, might be had and made for the redubbing of the said calamities, repressing of heresies, and withstanding the malice of the Turke. And because temperour, in diverse his commynications and confernces with your ambassadours, hathe affirmed and sayde to them, that he is not mynded to stik upon his hole demandes, but, at your contemplacion, instance, and arbitre, to mitigate som good part therof, it woll nowe pleas and like his majesty, sithins that I am sent hither by your highnes commandment, chiefly and principally for the avancement of the said peax, to shewe and declare, by his dedes, in what pointes he wolde, for your graces sake, so relent; wherof I, being advertised, I doubt it not, but the Frenche king, for the reverent love and affection that he hathe and beireth toward your highnes, woll and shall agree to asmoche of his desires, as with honour, equite, reason, and lawe shall stonde and accorde: being nevertheless in utter dispaire, that if his majesty, having no regarde to your graces mediacion and intercession, wold persist in his hole demand, it shall not lye in your graces power, to bring and induce the Frenche king therunto; the same being so excessive, and farr discrepant from al conscience and reason, tending by the exsample therof to the prejudice of al other Cristen princees, whiche be subject to like chanches of captivite, as the Frenche king hathe been. And thus the said emperours ambassadour, promysing that he wolde certifie his master of all this our commynication, departed from me. At after none, aboutes 3 of the cloke, the Counte Saintpole, sent unto me from the Frenche king, brought me word that, if I were so content, his grace wolde that I shulde eftsones comme to his presence, for declaracion of my further charge, whiche, with grete expectation, he was desirous to here: upon whose advertisement I repaired, with the said counte, to the Frenche kinges lodging, wher in the hall on bothe sides were placed his garde, bothe of Scottes and Swices, being in nomber (as I coude, passing by the waye, esteeme) 300. And at my entring into the grete chamber, ther mete with me the king of Navarre, who conduced me to the

Frenche kinges bedd chamber, wher he lay upon a cowntche, covered with a white shete, without any clothe of astate, or sparrer, over the same, made for the easement and staying of his legg, whiche, by the travaile of the day before, was moche altered, and in suche wise swelled, that, without grete paine, he could not goo, ner stonde upon the same. On the right syde wherof, was placed my lady the Frenche kinges moder, the Queene of Navarre, and a litle distance byneth them, the Lady Reynet, the King of Navarres suster, and other ladies and gentlemene to a grete nomber; and, on thother side, the Cardynalles of Burbon and Loreyn, the Duke of Vandome, the Counte Saint Pole, the grete master, with many other prelates, nobles, and gentlemen. And incontinently, as I was commended to the Frenche kinges presence, he excusing the maner of his lying ther, and being sorry that he could not use hym self other wise unto me, and I again repeting howe glad I wolde have ben to have taken more payn upon me, wherby I might have alleviated his grace of the grete labor and travaile that the same hathe susteyned, by the whiche I perceyved that his disease was not a litle augmented and encreased, he sayde he knew well my good wyll and mynde in that behalfe; nevertheless, for declaracion of his duetie towards your grace, he wold not have omittet any thing of that he hathe done, though the same shuld have put hym in gretter daunger; whiche his paine, that he now susteyneth, proceeding of a light hurt in his legg, is not, by Goddes grace, to be moche regarded or feared. And herewith he (taking with hym my lady and me) withdrew hym self into a litle secrete chamber, excluding all other; wherin was a litle cowntche for his grace to lye upon, for staying of his said legges, and by the same, two cheyres sett, thone for my lady, and thother for me. And albeit standing I wold have delyvered your graces letters, and, the same redd, proceeded to the further declaracion of my charge, yet his grace, tyll I and my lady were sett, wolde in no wise permyt and suffre me so to do. Wherfore, conformyng my self to his pleasour, I made delyvery of your said letters, with declaracion and repeticion of your graces most herty recommendations; in thextending wherof, I did not omitt to shewe, what herty entiere love and affection your highnes bare unto hym, for the parilite of your mutual indumentes, bothe of grace and nature, with the like symylitude in your pastymes, maners, behaviours, and appetites; the rehersall wherof, as I might perceyve by his countenance, was to his comforte, and nothing to hym displeasing, ne tedyous. And so, further proceeding in declaracion of my charge, I shewed that I was sent unto his grace, for the accomplishment, determynacion, and final perfiting of suche thinges, as hath ben left to be determyned and concluded at your mutual meting and entervien, according to the treatie; oracles at the sending of suche personage as his grace, as shulde represent your own spryte and person. And albeit I was ferre unmete, unable, and not worthy to have so high a charge committed unto me, yet it hathe pleased your highnes, more of your goodness than of my desertes or sufficiency, to auctorise me, as your lieutenant for the doing and final concluding of the premises, in as available maner as your highnes were here present; offring my self to be ready at all tymes, to common and devise with hym upon the same; wherwith he being contented than anther, to here what I wold say further in that behalfe, I shewed unto his grace, that my principall charge consisted in three poynts, that is to say, the determynacion of the ad-

native for the marriage of my lady princes; neither was for the procuring of peace, bitwene his grace and temperour, for the speedy attayning and delyverance of his children; and the third was to devise with his grace, by what meanes and waies the popes holynes might be delyvered oute of captivite and thralldom, and the church of Crist, with the see apostolique, restored to their prystyne dignite."

Recollections of Seven Years' Residence at the Mauritius, or Isle of France. By a Lady. 12mo. pp. 308. London, 1831. Cawthorn.

THERE is scant *matériel* in this volume to justify the publication; but it is pleasantly written, and must be an agreeable memorial to the author's friends. We select the following passages.

Toilette at a pic-nic:—

"A party, consisting of English and French, had arrived at the spot appointed for dining, and had taken their seats on the grass, when a great bustle was observed amongst the French ladies: two blacks, with small boxes, had approached, and displayed a variety of articles for the toilet: it was soon evident that these ladies intended to dress for dinner; and the grass was covered speedily with combs of various sizes, vials of perfume and oil for the hair, necklaces and bracelets, and all the et-cetera of feminine decoration; the fair owners of these articles retired into a grove to change their dresses, and soon came forth *en grande parure*; whilst the English were in their plain morning gowns.

"It is a singular fancy of the French Creoles to build their houses in detached pieces, instead of being joined in one—so that a great deal of ground is covered by the buildings belonging to one residence: this is a most inconvenient arrangement, as it is by no means agreeable to go through the sun or the rain in passing from one's bed-room to the drawing-room, and from thence to the dining apartment;—in an island, moreover, peculiarly liable to violent hurricanes, and when strength and compactness of building seem absolutely required, such a mode of scattering a house into several divisions, appears injudicious and unsafe: these separate pieces are called pavilions, and have frequently a veranda attached to each. The principal streets are the Rue de Rampart and the Rue Marengo, so called in commemoration of Buonaparte's victory over the Austrians. The fragrant flowers of the Bois Blanc at one season of the year perfume the streets delightfully; and the tree itself is a very pretty one, with its light green foliage and profusion of white blossoms."

The next is a history for the novelist.

"Charlotte Christina Sophia de Wolfenbattel, wife of the Czarovitz Alexis, son of Peter I., was unfortunately an object of aversion to her husband, although beautiful and amiable; in a fit of passion he gave her one day a blow, which caused her to be prematurely confined with a dead child. The Countess of Kamsimark, who attended on the princess, being aware that if she recovered she would only be exposed to further acts of violence, determined to declare that she had died. The czarovitz, to whom this was agreeable news, ordered her immediate interment; couriers were despatched to inform the czar of the event, and all the courts of Europe went into mourning. The princess escaped to America with an aged domestic, who passed for her father, and a female attendant. Whilst she was living in privacy at Louisiana, an officer of the name of D'Auband, who had seen her in

Russia, recollected her, and made her an offer of his services. Soon after, they heard that the czarovitz was dead; and D'Auband then engaged to conduct the princess back to Russia: but she found herself happier in a private station, and declared her intention of remaining in retirement. The old domestic dying about this time, she was without any protector, and D'Auband, who had been long attached to her, offered her his hand;—she accepted it. Thus she who had been destined to wear the imperial diadem, became the wife of a lieutenant of infantry. The princess had no reason to regret her second marriage;—happy in the affection of a man she had wedded from choice, she lived in uninterrupted peace and comfort ten years, without a wish to mingle again in the splendid scenes where she had known only misery;—but D'Auband fell into ill health; and his wife, anxious above all things for his recovery, proposed that they should go to France to procure the best medical advice, and to try the effect of a change of climate. They accordingly embarked for his native land; and soon after, he was restored to health. He then solicited an employment in the Isle of France, where he was appointed major. The princess, however, previous to their quitting France, had been recognised by the Marshal de Saxe, who, after having called on her and heard the story of her adventures, informed his king of the discovery he had made. His majesty desired his minister of marines to write to the governor of the Mauritius, directing that every mark of distinction should be showered on Mona. and Madame D'Auband, and that they should always be treated with the highest consideration. These orders, we are told, were punctually obeyed: the princess lived in tranquil happiness in that island until 1747, when her beloved husband died; she then returned to Paris, where she lived to a great age."

Upon the whole, the descriptions are literally correct; and, with what might be questioned on one point of fact, the book is a true book.

The Metropolitan, No. I. Cochrane and Pickersgill.

THIS is the first Number of a new monthly magazine. As matter of literary information, it has always been our custom to welcome into the field such periodicals as have started in our time; but we have also always abstained from criticising them, on the ground that we do not hold it to be correct to discuss the merits or demerits of contemporaries in the same line of publication with ourselves. Such productions can best speak for themselves; and it is neither by the interchange of fulsome flatteries (generally by writers who are employed both by the work *puffed* and the work *puffing*), or by the abuse which springs from low competition, that the judicious public will be led to form its opinion. It is an ill bird, says the proverb, which befools its own nest; and we cannot help regretting, therefore, that so many of our fellows should fancy their own dirty jealousies and petty squabbles to possess an interest with readers; and occupy their pages with their own personal follies, instead of general intelligence. The world, they may believe us, beyond their own noisy circle, cares nothing for their disputes or them.

We throw out these hints, however, without particular reference either to the Metropolitan or any other magazine; though they are suggested by this novelty's having been set up in declared opposition to the New Monthly Magazine, and under the direction of parties who were, till very recently, connected with the

latter. With their dissensions or agreements the *Literary Gazette* meddles not.

The Sunday Library. By the Rev. T. F. Dibdin, D.D. Vol. III. pp. 332. London, 1831. Longman and Co.

ANOTHER volume of this salutary production claims our warmest welcome. The editor has not failed to dedicate the same judicious taste to the present volume, which he so ably and amply displayed in the selections comprised in its popular precursors. Dr. Dibdin states it to be his intention to carry the *Sunday Library* to the extent of six volumes: this will form a compact and valuable body of divinity. We cannot but presume, however, that from the success which has crowned his first efforts, he will be induced to enter upon a second series.

Epitome of English Literature. Edited by A. J. Valpy, M.A. Vol. II. pp. 284. London, 1831. A. J. Valpy.

THIS concentrated form, in which the vigorous thoughts of our English philosophers are embodied, cannot fail of recommending them to the healthy intellect. In proportion as their propositions are divested of ornament, and stripped of all encumbrance, the more is their strength bared to the eye, and they stand forth in all their native force and unscreened might. We look upon the *Epitome of English Literature* as one of the most valuable series of periodical libraries which now flood our country. We have only to hint to the rising mind of the day, that if they get aboard such craft as the present, they need not fear to be borne along with the tide. The second volume completes Paley, and commences with the philosophy of Locke.

Family Classical Library. No. XVII. Horace. Colburn and Bentley.

Stirling's Horace. By Dr. Nuttall. 4 vols. Ward.

THE merits of Dr. Francis's version of Horace have long since been canvassed, admitted, and admired; for these we have no comment: our office, and it is one we can cordially fulfil, is but to announce the appearance of an old friend under a new face. We have, in the present instance, to commend and recommend the form which Horace has taken in the trig and trim evergreen garb of the *Family Classical Library*. The old Epicurean was rather too stout to be squeezed into a single volume, and intends cutting a very snug figure in a couple.

We believe it was Johnson, who, upon having an edition of Horace presented to him, inter-leaved, with the original on one side and the translation on the other, sagely remarked, that he approved the ingenuity of the author, who had supplied so ready a method of separating the good from the bad. Against any similar attempt Dr. Nuttall has prudently and effectually provided; for, by going a step beyond inter-leaving, and adopting interlining, he has rendered such a separation in his case totally hopeless. Some shrewd criticism on the works, and some clever papers on the metres of Horace, precede the text.

La Montagne de Saint-Lie; ou, la Ferme Champenoise. 2 vols. 12mo. Paris, 1830. Pigeon; Rheims, Ledoyen et Brissart-Carole.

THE fair author of these slight volumes deprecates criticism with the "*Je n'ai que seize ans*"—(I am but sixteen.) The character assumed by an author in his preface is often somewhat apocryphal; but in this case we are inclined to believe we have before us the pro-

duction of a very young writer: as usual, the imagination is the chief faculty developed; but imagination is good *matériel* for hereafter. The story is very extravagant; the beauty, virtue, love, &c., carried to the extreme. These are common faults at a beginning; but there is an ingenuity of invention, and a grace about the earlier scenes, that lead us to think the juvenile talent from which they emanated is worth cultivating.

The Daughter of the Air. A Mythic Tragedy, after the idea of P. Calderon; translated from the German, by Dr. E. Ranpach. 12mo. pp. 104. London, 1831. W. Marsh.

THIS singular and original work well deserved an English dress. Translations from a foreign literature are like earth brought from afar, renewing and invigorating the soil with which they mingle. The present pages are the work of an industrious and ingenious writer rather than a poet: still, the choice deserves praise; and it is something to attract attention to a language like the German, which so well repays its cultivator.

Lord Byron, with Remarks on his Genius and Character. By E. Bagnall, B.A. 8vo. pp. 59. Oxford, 1831. D. A. Talboys.

THERE is much good feeling and considerable talent displayed in parts of this little work: as a whole it is a failure; it throws no new light on either Lord Byron or his works. Indeed, throughout, the writer seems to be wielding weapons too heavy for his grasp, and, moreover, mistakes a flourish for a blow.

The Albanians, a Dramatic Sketch, and Miscellaneous Poems. By G. J. Bennett. 8vo. pp. 229. London, 1831. W. Kidd.

"Ah! who can tell how hard it is to climb
The steep where Fame's proud temple shines afar!"
If difficulties deterred, it is a pity that these lines are not uppermost in the memory of most poets. We have many pleasant recollections of Mr. Bennett to which we would sooner refer than to the present volume.

The Fakcer of Jungheera, and other Poems. By Henry Louis Vivian Derozio. 8vo. pp. 213. Calcutta, 1828. S. Smith.

The Shair, and other Poems. By Kasiprasad Ghosh. Calcutta, 1830. Scott and Co.
BOTH these works are literary curiosities, as the productions of native East Indians. They are curious, however, only as regards their writers; for both oriental histories and oriental imagery, Sir W. Jones, Southey, and Moore, have already made familiar to English readers. Indeed it is from their works that our present aspirants have drawn their inspiration; and we are chiefly reminded with how much more grace and power the gorgeous fictions of the East have been before employed. An original simile is every day getting scarcer: what do our readers say to the following one, belonging to Kasiprasad Ghosh?

"Young beauteous maids are lightly dancing,
Their eyes like little carps are glancing."

Both these volumes ought to be inscribed to Moore—if gratitude were not a debt which, of all others, poets are most reluctant to acknowledge.

The Twelve Nights. pp. 404. London, 1831. Whittaker.

THIS is a very amusing volume, containing a variety of tales, chiefly translations, where our author shews much taste in selecting, and

much spirit in executing. Most of them having before been published, we refrain from extract, and content ourselves with pointing attention to "The Eve of Walpurgis," "Joniotto," and "The Handkerchief."

Society; or, the Spring in Town. 3 vols. London, 1831. Saunders and Otley.

THIS novel does not belong to a class that calls for very strict criticism; it has one merit, that of not indulging in the offensive personality of many of its compeers; and, as for the rest, it is full of parties, and adventures, and love-making, which, we dare say, will be all very pleasant to many of our readers.

The Vale of Obscurity, the Lavant, and other Poems. By Charles Crocker. 8vo. pp. 120. Chichester, 1831, printed for the Author; London, Longman and Co.

USHERED in by a respectable list of subscribers, we trust this slight volume will repay its author's toil. The preface is very interesting, as giving an account of the writer's life—one who to the toil of a lower rank has united the mental cultivation of a higher. We select the following little poem as a specimen.

"Verses addressed to * * *, whom I accompanied to the Grave of a Friend.

Of old, the patient pilgrim sought
His saint's remote and hallow'd shrine,
And with devotion's fervour fraught,
His kindling spirit grew divine,
While there his orisons he said,
And meekly bow'd to earth his head.
How sweet his solace, when again
Returning to his peaceful cell,
If he some relic chanced to gain,
On which his secret soul might dwell,
When earth-born thoughts should not intrude
To break his hallow'd solitude!
Now with less ardent zeal and love,
My friend, didst thou thy way pursue,
The joy that springs from grief to prove,
And all thy past regrets renew,
While musing near the spot, where blend
With earth the ashes of thy friend.
What thought to him who slept below
Thy faith forbade thy lips to pray?
What thought no relics thou canst shew?
Yet, never pilgrim bore away
A heart surcharged from holy shrine
With feelings more refined than thine.
While lingering there Remembrance woke,
And joys, long dead, again appeared;
Of joys to come, Hope, smiling, spoke;
Her accents listening Fancy heard:—
'Yes, on eternity's calm shore
Ye soon shall meet—to part no more!'"

We recommend these pages to the notice of all who would extend kindly encouragement to a clever and amiable man.

The Novelist's Library. Vol. I. Edited by T. Roscoe, Esq. With Illustrations from original Designs. *Robinson Crusoe* (De Foe). 12mo. pp. 391. London, 1831. Cochrane and Pickersgill; J. Andrews.

IT is just a hundred years since the author of *Robinson Crusoe* died (April 24, 1731): what a pity 'tis, that, after the lapse of a century, a writer who has earned immortality, cannot take a peep from his grave, just to see how his works are going on! If he could, we think Daniel would like this neat edition, with its sketch of his life, portrait, slight illustrations, pretty binding, and gold-lettered back. "When De Foe (says his biographer) first offered *Robinson Crusoe* to the booksellers, he could with difficulty find a purchaser for the work; in which difficulty he merely experienced the same want of penetration on the part of these only true Mæcenas, as Johnson styles them, speaking of them as a body, which Milton had done before him with respect to his *Paradise Lost*; and as many of our best authors have done after him with respect to works which have afterwards made

the fortunes of the very men by whom they were rejected in the first instance. So it was with *Robinson Crusoe*. Taylor, the fortunate purchaser, who probably calculated with some distrust as to a few pounds more or less when treating for the copyright, made a thousand pounds by his bargain. The work acted on the public like a charm; it made its way through all ranks, it won all hearts; and in four months it passed through as many editions." How many thousands of copies have been sold since, of this delight of the young and old! An edition like the present is well calculated to sell a great many more. The designs, it is true, might be better; but we observe with pleasure that George Cruikshanks is to illustrate the whole series, of which this is the commencement; for, from what he has already done in this way, we may fairly anticipate a treat of character and humour. He begins, we understand, with *Humphrey Clinker*, in the volume after the next, which concludes De Foe. Altogether we are much pleased with this publication, though it adds another to the lengthy train of monthly productions, and consequently another to the system which is making literature so much a matter of journey-work in these days.

ARTS AND SCIENCES.

ROYAL INSTITUTION.

WE have noticed the curious experiments made by Mr. Trevelyan, on the production of sound, when heated pieces of metal were laid upon cold masses of lead: vide *Literary Gazette*, No. 738.* At the last evening meeting of the Institution, these experiments were demonstrated by Mr. Faraday, who, at the same time, gave what he considered to be a correct account of their cause. As we have already described the effects, we need not here refer to them further than to observe that they consist of vibrations, or oscillations, of the heated mass of metal; when slow, they are large and visible; when quick, they are small and isochronous, and produce sound, higher or lower, according to their number. The mixture of other sounds due to the ringing of the metal, the subdivision of the whole vibrating system, with the true sound produced by the blows of the rocker, were referred to and illustrated; and a method shewn of easily distinguishing the latter from the others. It consisted in pressing perpendicularly with a small stick or pointed metal rod on the back of the rocker, exactly over the groove, so as to make the vibrations quicker, but not to disturb their regularity; the true sound of the beats of the rocker immediately rises in pitch, and may be sometimes made to pass through an octave or more at pleasure, falling again as the pressure is removed. As the sound was evidently due to the rapid blows of the rocker, the only difficulty was to discover the true cause of the sustaining power, by which the rocker was continued in motion so long as any considerable difference of temperature existed between it and the block of lead beneath: this Mr. Faraday referred to the ultimate expansion and contraction, as Professor Leslie and Mr. Trevelyan have done. He then gave a minute account of the manner in which such expansion and contraction could produce the effect. When the heated rocker is resting upon a horizontal ridge of lead, it touches at two points, which are heated and expanded and form, as it were, two hills; when one side of the rocker is raised, the point relieved instantly cooled by the neighbouring lead, &c.

* See also our notice to correspondents in No. 744.

expansion ceases, and the hill falls. When the rocker, therefore, is left free, the raised side descends through a greater space than that through which it was lifted, and also to a lower level than the other side; in consequence of which a momentum is given to it, which carries its centre of gravity beyond the point to which it would pass if there had been no alteration in the heights of the sustaining points. It is this additional force which acts as maintaining power; it comes into play twice in each vibration, i. e. once on each side; the force is gained by the whole rocker being lifted bodily by the point on which it is for the time supported, and comes into play by the side of the rocker which is descending having a greater space to fall through than that which it passed over during its previous rise by the mere force of its momentum. A curious consequence of this action is, that the force which really lifts the rocker is on one side of the centre of gravity, whilst the rising side of the rocker itself is on the other.

This, however, is not the only maintaining cause or mechanical force generated by the alternate expansion and contraction of the lead. If the vertical direction of the forces be put out of consideration for a time, and the two points of support be examined, it will be found that whilst the rocker is quiescent, both (with their neighbouring parts) being heated, will expand and compress the lateral portions of the lead until the tension of the latter is equal to their own. When one side of the rocker is raised, the point it rested upon instantly cools, and therefore contracts; but as the neighbouring parts retain their tension, they move toward the contracting parts, the other point of support moving with the rest. When the rocker returns in its oscillation, it reheats and re-expands the first point of support; whilst the second, now out of contact, is cooled and contracted, and the first point moves toward the second. A necessary consequence of this mutual relation of the points is, that the one under process of heating is always moving towards the other, and consequently to a perpendicular from the centre of gravity: but as it at the same time is the supporting point to the rocker, that supporting point is, by irresistible impulse, carried in a direction under and towards the line passing from the centre of gravity towards the earth, at the same instant that the centre of gravity of the rocker is, by the momentum of the latter, moving in the opposite direction. Hence a very simple maintaining power; sufficient, whenever the rocker continues to vibrate, to compensate for the loss of force in each half of the vibration, which would occur if the rocker and lead were of the same temperature. Mr. Faraday illustrated the sustaining force of the lateral motion of the points of support by placing a rocker on a piece of lead, and the latter on a board. A pair of sugar-tongs were held tightly by the bend against the edge of the board, so that the line from the tongs towards the rocker was perpendicular to the axis of the latter. On making the limbs of the sugar-tongs vibrate in the manner of a tuning-fork, they communicated longitudinal vibrations of equal duration and number to the board, and through it to the lead and points supporting the rocker; which latter itself immediately acquired vibratory motion isochronous with the vibrations of the tongs, and by successive blows upon the lead, produced sound. Upon removing the rocker, and repeating the other parts of the experiment, no sound was produced.

Experiments with other metals were then made. A piece of curved silver plate being

heated and placed on an iron triblet, rocked and sang in the manner of the others: this is an effect which working silversmiths have long known. The superiority of lead, as the cold metal, was referred to its great expansive force by heat, combined with its deficient conducting power, which is not a fifth of that of copper, silver, or gold; so that the heat accumulates more at the point of contact.

On Monday the anniversary meeting took place, when officers for the ensuing season were elected.

COLLEGE OF PHYSICIANS.

SIR HENRY HALFORD, Bart. in the chair. Amongst the visitors, who were very numerous, we noticed the Bishop of Winchester, the Dean of Hereford, Dr. Maltby, Dr. D'Oyley, &c. &c. A paper by Dr. Francis Hawkins was first read, on the history and treatment of epilepsy; a subject which the author considered might be interesting not only to physicians, but also to men of learning, on account of the many curious superstitions connected with this complaint by the ancients, as well as on account of the light which its symptoms afford to the study of disorders of the brain, and of the wonderful laws of nervous sympathy. For a description of the disorder a passage was cited from Lucretius, which is not only possessed of high poetical merit, but contains as striking and accurate a portrait of epilepsy as can possibly be drawn. An account was then given of the opinions of the ancients upon the subject, as they may be gathered not only from the writings of Hippocrates and Aretæus, but also from passages in the works of Plautus, Theophrastus, and Pliny. It was observed as remarkable, that the Ælian law, which required amongst the Romans the dismissal of the *comitia*, in obedience to the augurs, on the occurrence of the disorder, hence called *morbus comitialis*, was first disregarded by Julius Cæsar, who was himself subject to epilepsy. The disorder was formerly attributed to the agency of evil spirits, according to the opinion entertained of some connexion existing between divine inspiration and frantic gestures;—a notion which the practice of impostors, in all ages, has tended to maintain; whilst on the other hand, the popular belief has facilitated the acts of imposition. Respecting the demoniacal possessions mentioned in the New Testament, the author contended at some length,—in opposition to the opinion of Mead, who maintained that they were instances only of epilepsy or madness,—that these cases were not all of the same nature, that some were instances of natural disease, but that others must be attributed to miraculous origin,—that the terms *δαίμωνιζομαι*, *δαίμονιοις ἔχον*, might, indeed, be sometimes used in a popular sense, according to the belief common among the Jews; but that in reference to other cases, however much they might resemble cases of epilepsy, the sacred text is too precise to admit of such an interpretation. In order to explain the physical condition of the brain and nervous system, on which the symptoms of epilepsy depend, Dr. Hawkins entered into some observations on the nature and peculiarities of the circulation within the head; and he thought that two opposite errors occasionally prevailed concerning the pathology of epilepsy; both leading to erroneous practice, the disorder being attributed by some persons to nervous irritation, to the exclusion of all consideration of the state of the vessels of the brain; by others being attributed always to inflammation, or congestion: the latter notion often leading to excessive and

injurious depletion; the former to the neglect of that moderate depletion, which experience has proved to be useful and necessary. A strong affinity was shewn to exist between various forms of nervous disorder, and some curious instances were related of the effects of sympathy in consequence—irritation of the nerves, or of passions of the mind, especially fear. In the cure of epilepsy, even in cases not dependent on primary disease of the brain, Dr. Hawkins still recommended that some measure should be adopted for the relief of the head itself, especially if the case should have been of long continuance; because the tendency of disturbance of any part of the nervous system is to produce disorder of the brain or its membranes. With the view, however, to prevent such disturbance, and to lessen the susceptibility of the nervous system, Dr. Hawkins stated, that there were two remedies which he had found more efficacious than any preparation of steel, or other species of mineral tonic; one being the oxide of zinc; the other, which he considered a still superior remedy, being the sulphate of copper, the excellence of which is further sanctioned by the high authority of the president of the college.

The registrar next read a paper of Dr. Macmichael's upon land scurvy. It contained, together with many medical observations, various curious particulars, which were derived from the voyages of some of our most celebrated navigators. The disease called scurvy, which used to be so terrible a scourge at sea, has now, as every body knows, been almost banished from our navy, by the improvements of modern times. Still, however, it does occasionally appear, even in the best-disciplined vessels, and where every precaution as to diet is taken to prevent its occurrence. The circumstances under which this happens, combined with the observations which Dr. Macmichael's practical experience has afforded him in the metropolis, throw a novel light upon the origin of this formidable disease, and would seem to prove, that, in enumerating its causes, we ought to regard certain states of the atmosphere to be quite as efficacious in its production, as impoverished diet, or the long-continued use of salt provisions, to which it has hitherto been solely attributed. It seems that in the summer of last year an uncommon number of cases of land scurvy (called, in the new-fangled phraseology of the present day, *purpura*) was admitted into the Middlesex Hospital. In endeavouring to account for this extraordinary phenomenon (for land scurvy is a rare disease), the Doctor thought, that the very unusual state of humidity of the atmosphere last summer might possibly not a little contribute to render those persons liable to this disease, whose constitutions were already broken down by low diet, or habits of intemperance; and this supposition of his he found to be completely verified and corroborated by the experience of several eminent navigators, who have given to the world the relations of their expeditions. Dr. Macmichael, in his paper, cited an extract from the English translation of La Perouse's voyage; by which it appeared, that, on his last unfortunate expedition, he, in a letter written by him from Botany Bay, congratulated himself upon his crew having entirely escaped the attacks of scurvy, and attributed this piece of good fortune to the measures he had adopted, by fumigations and braziers of burning coals, to counteract the effects of the pernicious humidity occasioned by fogs. When La Perouse commanded during the American war the French naval expedition in Hudson's

LONDON INSTITUTION.

Bay, his attention had been attracted to this circumstance; and he remarks, in his account of that affair, "J'avais fait la triste expérience dans ma campagne de la baie d'Hudson, que l'humidité froide était peut-être le principe le plus actif du scorbut." The experience of Captain Parry, in his voyage of discovery to the North Pole, goes quite to the same point; and, still more recently, the observations of Capt. Philip King, whose return from his survey of the southern extremity of South America we recently noticed in the *Lit. Gaz.*, strongly confirm this idea. These various testimonies, together with his own remarks and those of Dr. Heberden, were ingeniously brought by the author to illustrate his view of the subject. In the more medical part of the paper we agree with the Doctor, in thinking that he succeeded in proving that Sydenham not only described the disease as well, but treated it also in the same manner as modern physicians. Dr. Macmichael concluded his paper, by regretting that the works of Sydenham (a mine from which the most valuable hints may be taken) were not at present more consulted; and stated, as we think with great truth, that the scoury will be found, upon investigation, to be not a solitary instance of new names given to old diseases, and methods of cure vaunted as novel improvements in practice, which are nothing but the unacknowledged revival of old modes of treatment, that have fallen into comparative oblivion. We consider this paper to be a valuable addition to our stock of information, and to have afforded a favourable specimen of the manner in which a step may be made in the philosophy of medicine.

LINNEAN SOCIETY.

A. B. LAMBERT, Esq., V.P., in the chair. The supplement to the descriptive catalogue of New Holland birds in the collection of the Society, and published in the fifteenth volume of the Transactions, compiled by Mr. Vigors and Dr. Horsfield, was read: the paper was illustrated by specimens of the birds; amongst them was a new species of sea eagle, and several of the *psittacide* tribe. A catalogue of the rarer plants growing in the neighbourhood of Tring, Hertfordshire, by Richard Chambers, Esq., was likewise read: the paper was accompanied by a drawing of the true *orchis militaris*, one of the rarest of the English *orchideae*. Several fellows were elected; and the chairman announced that the anniversary meeting would take place on the 24th instant.

HORTICULTURAL SOCIETY.

At the anniversary meeting held on Monday, Mr. Knight, the President, in the chair, the auditor's report was read. It appeared that the Society's debt, which amounted on the 1st of May, 1830, to £16,437, had been reduced, by a system of economy, to £13,895 at the 1st of April last. The admission of *ladies as fellows* of the Society had been agreed upon. At the usual meeting on Tuesday, a communication on the means of prolonging the duration of valuable varieties of fruit, by the President, was read. Amongst a fine collection of flowers exhibited, there was a very beautiful specimen of the *calceolaria corymbosa*; it was nearly three feet high, and had been reared by manure water: some apples of 1829 were also on the table. A numerous assemblage of ladies attended; and there is little doubt that these meetings, during the summer months, will be exceedingly popular. The affairs of the Society, to quote from the gardener's calendar, are "in a very promising condition."

MR. BRITTON'S fifth lecture was given at this Institution on Monday evening, and embraced some accounts, with numerous illustrations, of Christian Architecture of the Middle Ages. In tracing this original, picturesque, and greatly diversified class of buildings through Italy, from the time of Constantine the Great, the first Roman Emperor who embraced Christianity, into the provinces of France, Spain, Germany, Normandy, and England, the lecturer condensed a mass of information within the compass of a short lecture: but it was evident that he was oppressed with the multiplicity of subjects, and was therefore necessitated rather to hint at than describe many of them. With a series of about sixty drawings he pointed out the characteristic features of the round churches and baptisteries of Rome, Jerusalem, Constantinople, Pisa, England—the lofty and highly enriched towers of Germany—the spires of that country, Normandy, and England; with various fine crosses, chapter-houses, &c. Some beautiful models were also exhibited. After animadverting on the many inappropriate and inconsistent names that have been given by different authors, from the time of Sir Henry Wotton to the present, intended to designate the ecclesiastical buildings of the Middle Ages, the lecturer enforced his opinion that the term *Christian Architecture* was the most appropriate, historical, and unexceptionable. The concluding drawing was a large elevation of the famed eastern window of York Cathedral, which was executed in three years by John Thornton, glazier, of Coventry, and for which he was paid fifty-five pounds! whereas a window of similar size, and with inferior materials, would cost at least five thousand pounds at the present day.

Dr. Crotch gave his seventh lecture on Music at the same Institution on Tuesday, and dwelt principally on the sacred Oratorio of the Messiah, by Handel.

At the Soirée on Wednesday night, a large company assembled in the commodious library room, and afterwards attended an interesting lecture, by Dr. Clarke, on Volcanoes.

RUSSELL INSTITUTION.

MR. T. PHILLIPS recommenced his lectures on Vocal Music and Singing at this establishment, on Monday evening, to a large and applauding audience.

IMPROVED PARCHMENT.

AMONG the valuable improvements of the present time, and a forcible example of the application of useful knowledge to a useful purpose, we are this week called upon to notice a new mode of preparing parchment, so that it can be written on without employing pounce, and adapted for books, deeds, petitions, &c. &c., in a manner far preferable to any thing of the kind hitherto manufactured. It seems that in 1823 a select committee of the House of Commons was appointed, "to inquire into the present method of engrossing bills, and whether any alterations in the mode and kind of writing can be made, with advantage to the public service." This committee reported on the perishable nature of the public records, which it ascribed to the quality of the inks, and other causes. Mr. Terry (of the firm of Walkden, Derby, and Terry, ink manufacturers, who supplied the government offices) had his attention thus called to the important subject; and if we may judge by the result, he not only prosecuted his inquiries with great ability and

skill, but has succeeded in producing an article of immense present and future consequence. By a chemical process he has, as is testified on the high authorities of Messrs. Hatchett, Brande, and Faraday, prepared a parchment of the most facile and durable kind—like common paper, as far as ease in writing upon it is concerned; and in durability, with the power of freshly retaining what has been written, likely to surpass the most carefully preserved documents of past ages. Mr. Terry having freely explained his process to the eminent chemists we have named, they report to the lords commissioners of the treasury as follows:—

"1. That the texture of Mr. Terry's parchment is much superior to that which is at present in general use.

"2. That being deprived of grease, the facility of writing upon it (even on both sides) is much increased, and the great inconvenience caused by grease in common parchment is obviated.

"3. That the surface being perfect, so as not, like common parchment, to require pounce to be applied, is a very great improvement, as the pounce used for parchment and vellum, being composed of pumice-stone, chalk, or whitenings, and white lead, has a great tendency (by the two latter especially) to act upon the ink so as in the course of time to be likely to diminish the legibility of the writing, approaching in some cases to obliteration.

"4. That Mr. Terry's parchment not only receives with facility, but more permanently retains the ink than common parchment; for we have practically ascertained, by comparative experiments, that although writing upon common parchment could most commonly be destroyed by violent friction after being moistened with water, such was not the case with the parchment prepared by Mr. Terry, the durability of which (namely, the parchment) we also conceive is probably increased by his process, and,

"5. From the nature of that process we think that the durability of the ink (if of good quality) is likely to be insured."

We have ourselves examined specimens of the parchment sent to us, and we consider it to be our public duty to state, that we entirely coincide with the foregoing opinions. The improvement need only to be known to recommend it to general use; and general use can be no bad thing just now, when Reform petitions and addresses are so prevalent throughout the country! We can assure their subscribers, that they may sign as many of these sheets as they please, with entire satisfaction to themselves, and on a medium which is well adapted to send down their names to late posterity. But, in truth, long after these ebullitions shall have become matter of history, we are persuaded that this parchment will be duly appreciated as a very scientific and admirable improvement. Of the party immediately interested in it we know nothing; and we are induced to speak of it as we do, simply because we deem it to be of much public utility, and are always happy to help ingenious and clever men forward to their due reward.

LITERARY AND LEARNED.

ROYAL SOCIETY.

H. R. H. the Duke of Sussex in the chair. Three papers were read: the first of which was entitled, "On the effects of hot water on the batrachia," by Dr. M. Hall; the second was an account of a new method of propelling vessels, by Mr. W. Hale; communicated by Richard Penn, Esq.; and the third, "Additional thoughts on the use of the ganglions in furnishing electricity for the production of animal secretions," by Sir Everard Home, Bart. F.R.S. Dr. Hall presented his work, entitled, "Researches principally relative to the morbid and curative Effects of Loss of Blood." Several other works were presented to the Society.

SOCIETY OF ANTIQUARIES.

MR. HALLAM in the chair. Mr. Hardwick exhibited a Roman altar, found about 15 feet below the surface, in digging for the foundations

of the new Goldsmiths' Hall, in Foster Lane. It is a curious and elegant specimen, having on the front a very graceful figure, with a bow in the left hand, and the dexter drawing an arrow from the sheath over the right shoulder, with a greyhound at the side. It was doubted whether this figure represented Diana or Apollo,—we think the latter, notwithstanding that the attendant greyhound was by some considered as indicating Diana. On the back is a carving, much mutilated both by age and the tools of the excavators, but it appears to be a lyre. The ornaments on the side are branches of laurel. Mr. Ellis communicated a report (addressed to Lord Burleigh, and found among his papers) of fees and salaries to the chief baron, and other officers of the Court of Exchequer, noting the amounts in the reigns of Henry VIII. Mary, and Elizabeth. The secretary read a portion of the Rev. J. Skinner's letters relative to the site of Camelodunum. The chairman announced that the council had appointed a committee to superintend the publication of the Anglo-Saxon remains lately adopted by the Society.

ROYAL SOCIETY OF LITERATURE.*

APRIL 6. Lord Bexley in the chair.—The paper read was entitled "illustrations of the constitution of our ancient parliaments before the time of Edward I.," by the Rev. T. D. Foebroke. The author's object in this memoir is to controvert the following opinions, advanced by Selden and other writers after him:—that, from the Conquest to the latter end of King John's reign, all who held lands of the king had a right to be summoned to parliament; and this right being then confined to the royal tenants, all peers of parliament sat by tenure and writ of summons, and that the subsequent division of the royal tenants into greater and less barons, eventually produced the lower house of parliament. In the only paragraph of Magna Charta relative to our parliaments, the author discovers five distinct recognitions upon this subject, each of which, taken singly, shows that Selden was led by a previous hypothesis to form erroneous conclusions from a misconstruction of the whole passage. The first of these recognitions, viz. that of a common council of the whole realm, or full parliament, he confirms by references to a record of Ina, King of Wessex, and to the Saxon Chronicle: the second, viz. that burghesses were included in a full parliament, for the purpose of granting aids, by a passage from the annals of Wigorn: the third, viz. of the tenants *in capite* for the assessment of scutages by writs of summons, issued by John, Henry II., and Edward II., for a general assemblage or parliament, and military muster, to be held simultaneously at the same place: the fourth, viz. of the summonses being addressed to the *barones majores* singly, from Eadmer: the fifth recognition of Magna Charta regards summonses being addressed generally, through the sheriffs and bailiffs, to all other tenants *in capite*. From the premises thus laid down by the writer, he concludes—1. That no peer claimed a right to be summoned to parliament, except it was held for the assessment of scutages. 2. That the lords attended the court from custom at the festivals of Christmas, Easter, and Whitsuntide, and that then parliamentary business was transacted. 3. That they were summoned upon emergencies. 4. That the inferior tenants *in capite* had a right to be summoned *en masse*, whenever a scutage

was to be levied; and that when so summoned, they elected delegates from their own body to represent them in parliament—whence our knights of the shire. 5. That citizens and burghesses had a right to return members from their own body, when aids were to be granted. 6. That a convocation of the clergy accompanied such parliaments of king, lords, and commons. From these deductions it follows, that whatever modifications may have subsequently ensued, the ancient constitution of parliament was, in substantial, much the same as it now is—with this exception, that parliamentary business was transacted at the royal festival meetings, without apparently any convention of the commons' house, although that was indispensable when taxes were to be imposed, or a full parliament was requisite, on account of the importance of the business.

Several presents of books were laid upon the table.

April 20. The President in the chair.—The paper read was the official report of Yousouf Agah Effendi, ambassador extraordinary from the Sublime Porte, on delivering the imperial credentials at the court of St. James's, in January 1796; translated into English by M. Joseph von Hammer, of Vienna, honorary member of the Society. In this document the ambassador gives his government a very minute and characteristic account of the ceremonies attending his reception by the sovereign of England, the presents of which he was the bearer, the speeches delivered upon the occasion, &c. The report was accompanied by a letter (likewise read) from the translator, containing a notice of the series of Turkish imperial historiographers. This curious piece of oriental diplomacy, though not of great historical interest, has, at least, a local one for London, and a recent one, as the circumstances it details took place only thirty-six years ago: the translation was also further interesting as the work of a learned foreigner.

Among the presents of books announced, was a collection of pamphlets, &c. from the Rev. H. J. Todd, to whom the Society's library is largely indebted.

PINE ARTS.

EXHIBITION OF THE ROYAL ACADEMY.

NUMEROUS as are the attractions of the Exhibition at Somerset House, we are persuaded that, at the present moment, none will be more powerful than the Portraits of our venerated Sovereign and his amiable Consort, by that veteran artist Sir William Beechey, the vigour of whose pencil seems unimpaired by time. Whether with respect to fidelity of resemblance, to unaffected simplicity in design, or to clearness and brilliance of colouring, they will be contemplated with the highest interest and satisfaction.

No. 168. *The Angel releasing Peter from Prison*. W. Hilton, R.A.—We are rejoiced to see Mr. Hilton coming out so splendidly this year. This is one of his finest works. The composition is learned and excellent, the variety of character admirable, and the effect, particularly with reference to the sleeping guards, strikingly forcible. It is a picture which does the highest honour to the English school.

No. 79. *The Maid of Judith waiting outside the Tent of Holofernes, till her Mistress had consummated the Deed that delivered her Country from its Invaders*. W. Etty, R.A.—Another noble production. Nothing can exceed the intensity of interest expressed in the countenance of the principal figure; and the general

tone of colour, as well as the management of the light, is absolutely sublime.

No. 56. *The Progress of Civilisation; the ancient Britons instructed by the Romans in the Mechanical Arts*. H. P. Briggs, A.—Full of grandeur and contrast. The character of the Druid, in particular, is very finely marked. There are two youthful heads, seen in reflected light, which are perfectly enchanting. Some portions of the colouring, however, are rather crude; and a little more union in the general effect, so as to combine the various parts into a harmonious whole, would be advantageous.

No. 64. *Sir Calpeine rescuing Serena*. W. Hilton, R.A.—Charming! The beauty and spirit of this performance have never been surpassed. The colouring is exquisite: we scarcely recollect any thing in the flesh of Titian's females more completely mellow and harmonious than that of the almost lifeless form of the intended victim. Nor was energetic action ever more happily depicted than in her gallant deliverer.

No. 113. *The Dinner at Mr. Page's house, supposed to take place in the first act of the "Merry Wives of Windsor"*. C. R. Leslie, R.A.—There is an exhaustless fund of entertainment in this delightful picture; and a variety of character exhibited in Falstaff and his satellites, as well as in the other guests of Page, attired in all the quaint costume of former times, which must rivet the attention of every spectator. Were we to say in which of the *dramatis personæ* we think Mr. Leslie has been the most successful, we should name Slender, the inanity of whose countenance is irresistibly ludicrous, without the slightest caricature. But they are all admirable. The colouring and the effect recall in our minds mingled remembrances of Tintoret and P. Da Hooge. A hypercritical would perhaps observe that the shadows are rather black, and that there is a little want of keeping.

No. 178. *Vision of Medea*. J. M. W. Turner, R.A.—Colour! colour! colour! Still there is something so enchanting in the prismatic effect which Mr. Turner has produced, that we soon lose sight of the extravagance, in contemplating the magical result of his combinations. We are bound to add, that if he could have imparted beauty of form and feature to his figures, with a little repose for the eye, this work would in other respects have been as admirable as it is extraordinary.

No. 152. *Lear, attended by Cordelia and the Physician*. G. S. Newton, A.—Nothing can be more touchingly tender than the inquiring look of Cordelia, nothing more affecting than the stricken Lear; the fire of his glance quenched in weakness, and the image of approaching death visible in every feature. Rich and harmonious colouring we always expect from Mr. Newton; and his excellence in that respect is here strikingly manifested.

No. 1. *Margaret at Church, tormented by the Evil One*; No. 33. *Faust preparing to waltz with the young Witch at the Festival of the Wizards and Witches in the Harz Mountains*. R. Westall, R.A.—A great deal of talent, both in composition and in character, is displayed in these performances; but we think it would have been shewn more advantageously on a much smaller scale.

No. 307. *View of Trent, in the Tyrol*. A. W. Callcott, R.A.—Mr. Callcott, we are happy to say, has his full number of works (eight) in the present exhibition; and there is not one among them on which the eye does not rest with tranquil delight. Of this constellation of beauty, however, the most bril-

* We have to refer back a little to bring up the arrears of our reports of this excellent institution.

liant star, in our opinion, is his "View of Trent." The silvery hue which pervades it is fascinating; and without any apparent effort, or strong contrast, its truth is such, that the spectator fancies he can actually walk into the scene.

No. 112. *Portrait of John Woolmore, Esq., Deputy Master of the Trinity House.* Sir M. A. Shee, P.R.A.—An admirable whole length; firmly and finely painted.

No. 172. *Portrait of Lieut-General the Hon. Sir George Murray, G.C.B.* H. W. Pickersgill, R.A.—The same may be said of this, which is one of Mr. Pickersgill's most successful works.

No. 106. *Portrait of Lady Janet Walrand.* T. Phillips, R.A.—An elegant portrait. The drapery is perhaps redundant; but it is exquisitely toned, and managed with Mr. Phillips's usual skill.

[To be continued.]

SOCIETY OF PAINTERS IN WATER-COLOURS.

[Second Notice.]

No. 177. *Odds and Ends.* J. F. Lewis.—If the artist does not "find tongues in trees, books in the running brooks, and sermons in stones," he can still find "good in every thing," as this pleasing composition sufficiently proves.

No. 181. *Jenny Deans imploring Queen Caroline to save her Sister's Life.* Miss L. Sharpe.—The fair artist has been eminently successful both in the choice and in the execution of her subject, especially in the dignified character of the duke, and in the humble yet graceful posture of the supplicant. The queen, however, has, we think, scarcely enough of the proud bearing with which the graphic writer of the "Heart of Mid Lothian" has invested her.

No. 201. *Interior of a Cathedral (Composition).* F. Mackenzie.—No better place could have been contrived for the display of so magical an effect of light.

No. 253. *Study of an Old Man.* W. Hunt.—The rugged rather than the polished is the favourite subject of this very able artist's pencil; and character rather than sentiment distinguishes his works; with the exception of No. 86, *Prayer*, which is full of intense pathos. If we might be allowed a passing hint, we would say that Mr. Hunt's flesh is somewhat too red in its hues; and that he is too much enamoured of a new green, which the colourmen have lately invented, to be quite natural in some of his fruit subjects.

No. 254. *Anghiera Castle, Lago Maggiore.* H. Gastineau.—A fine combination of grandeur, beauty, and repose.

No. 265. *Fruit and Flowers.* Miss Byrne.—Great skill and delicacy of execution, superadded to great ease and grace of arrangement. The labour of thought in the latter is judiciously concealed by seeming accident.

No. 264. *Rubens' House, Antwerp.* S. Prout.—The style of the building is in perfect accordance with the style of the compositions of the extraordinary man to whom it belonged,—grand, rather than elegant. The tone of colouring, as well as in No. 28, *Part of the Zwinger Palace, Dresden*, is more chastened than in the generality of Mr. Prout's works; in contemplating which we have often wondered how even an artist's eye could detect such variety of tint in bare walls.

No. 266. *Pont de la Belle Croix, Nantes.* F. Nash.—Forms such as this view presents would be interesting in any circumstances; but under the magical effect of light with which

Mr. Nash has invested them they become enchanting. Yet there is no sacrifice, no exaggeration. What is in shadow is still to a certain extent luminous. The building opposed to the sun's place in the picture is as clear, though not so bright, as the water under the bridge.

No. 267. *The Admonition, from Lines by the Ettrick Shepherd.* F. Tayler.—We do not happen to remember the lines, but the character of the picture sufficiently marks their import; while the execution does credit to the hand of the artist.

No. 270. *Asses.* R. Hills.—We have seen many admirable representations of these most picturesque, most persecuted, and most patient animals, but none more true to nature than the group under our notice. The composition is excellent, and is in perfect accordance with the simplicity of the subject.

No. 279. *Rebecca at her Evening Devotions in the Preceptory of Templestowe.* Miss L. Sharpe.—Rich in colouring, and powerful in chiaroscuro.

No. 288. *A Scene from Twelfth Night, a Sketch.* T. M. Wright.—One of Mr. Wright's best compositions; and we have no doubt that on a larger scale it would have appeared to greater advantage.

No. 308. *The Impenitent.* G. Cattermole.—The expression in the hero of this performance is admirable; if villainous features can in any case be a fit subject for admiration.

[To be continued.]

SUFFOLK STREET EXHIBITION.

[Concluding Notice.]

AMONG the miniatures, the beautiful productions of Mrs. J. Robinson are, as usual, prominent. There are also many attractive works in the same class of art by Miss Simpson, Mr. H. Collen, Miss Derby, Mr. J. Hargraves, Mr. W. and Mr. C. R. Bone, &c. To these may be added some clever copies, by Mr. C. R. Bone, Mr. F. Read, and Miss L. Adams; and two spirited little compositions in silver, by Mr. B. Betts and Mr. J. Cramphorn.

Of the engravings, there are but few which have not already been noticed in the *Literary Gazette*. We were much pleased with No. 820, *Proof, nearly finished, of Alpine Mastiffs extricating an overwhelmed Traveller from the Snow, after Edward Landseer, R.A.* John Landseer, A.R.A.

The Sculpture department exhibits great merit, in busts, groups, and basso-relievos. In the first, Mr. S. Joseph has distinguished himself. His productions comprehend a variety of characters, eminent either in station or in talents, and executed in a style in which individual resemblance is admirably united with the highest qualities of sculpture. Ten of these busts, including one of his late Majesty, executed by his command, are in marble.

No. 891. *Mother and Child.* E. H. Bailly, R.A.—This interesting group combines all that is beautiful in nature with all that is excellent in art. No artist owes less to foreign aid, or more to his own genius, than Mr. Bailly.

No. 911. *Bacchus and Satyr.* P. M'Dowell.—A beautiful and well-proportioned figure, admirably contrasted by the fallen Satyr. Subjects like this are seen to great advantage in gardens or plantations; and we should wonder that they are not frequently so placed, did we not recollect the disposition of our semi-barbarous countrymen and countrywomen, of all classes, to finger and mutilate every thing within their reach.

Among the other principal attractions of the

Sculpture Room, are No. 885, *Musidora, a Statue in Marble*, C. Rossi, R.A.; No. 895, *The Deserted Mother*, J. Heffernan; No. 897, *Hope*, T. Denman; No. 912, *Foliage*, G. Reeve; No. 915, *Foliage*, R. W. Sievier, some *Small Models from Characters in the Waverley Novels*, E. Cotterill; &c. &c. &c.

BURNS'S JOLLY BEGGARS.

AN exhibition has just been opened, in the Quadrant, Regent Street, of eight figures, the size of life, sculptured in stone by Mr. Green-shields, a self-taught Scottish artist, in illustration of Burns's well-known Jolly Beggars. They shew a very accurate conception of character, and singular skill in embodying that conception in a tangible form. The central group, consisting of the "sturdy caird" and the "pigmy scrapper," is full of energy and action. The remaining figures, however, suffer from the injudicious choice of subject. The miserable squalidness, and moral depravity, which, lightly touched upon by the poet, do not affect the mind with any unpleasant feeling, become disgusting when actually and permanently presented to the eye in all their loathsome reality. The more close resemblance to the truth, the more disagreeable is the contemplation of it. It is mortifying to see powers such as Mr. Green-shields evidently possesses thus misapplied. We do not advise him to attempt the dignified or the exalted. On the contrary, we recommend to him to adhere to the study and representation of familiar and even humble life. But familiar and humble life will furnish him with a thousand admirable characters and scenes, the most faithful imitation of which will be unaccompanied by the slightest offence to good taste. The exhibition is, nevertheless, well deserving of a visit.

PRICES OF PICTURES.

THE following has been sent to us in corroboration of what was stated in last Saturday's *Literary Gazette*, that money judiciously laid out in pictures is a safe investment: these are the prices of Mr. Cholmondeley's pictures, at the sale at Mr. Squibb's, on the day on which our remarks appeared.

Lot 20. Family piece of three figures, by Titian; sold for 200l.; purchased at Mr. Stanley's room for 104l.

Lot 28. Interior of a Stable, by Philip Wou-vernans; sold for 241l. 10s.; purchased at Sir G. Page Turner's sale for 114 guineas.

Lot 44. Landscape, with cross trees, by F. Mola; sold for 102 guineas; purchased for 40 guineas.

Of the following, there was only one, the Tribute Money, which did not sell for more than their original prices:—The Hobbins, 505 guineas; the Tribute Money, by Rubens, 252 guineas; the St. Agnes of Sir J. Reynolds, 126 guineas; the Gainsborough, 106 guineas; and the Vanderveelde, 118 guineas; and indeed the same may be said of nearly all the pictures of importance in the sale.

MUSIC.

SOCIETA ARMONICA.

THE fifth of these pleasing and popular concerts was well attended on Monday last. The instrumental department acquitted themselves with their wonted efficiency: the symphony from Beethoven was given in a style of de-

* Mr. Denman has just completed a statue of Robert Burns, in marble, the size of life, from a half-size model of the late Mr. Flaxman.

lightful precision. The beauties of such pieces are, however, mysteries, and when prolonged, roll somewhat heavily upon the drum of the less artificial ear. A Mrs. Kate Williams, from Italy, made her maiden-curtsey in this country. Whether from the becoming diffidence of a *débutante*, we know not, but her voice was unequal, and its power occasionally approached to harshness, and was either painfully forcible, or, in the other extreme, feeble and ineffective. Weber's overture (Jubilee) was warmly encored; nor do we mean to detract from its merits, when we say this was obviously, if not solely, from its containing "God save the King." Made. Stockhausen sang some Swiss airs (the Harvest Home) with the most grateful melody and richness of tone. She well deserved the encore of the evening.

DRAMA.

DRURY LANE.

HAVING, in our review of books, noticed the play of *Alfred*, we have here only to speak of its continued and great scenic popularity. The theatre is nightly filled to witness the representation, and every point which conveys a loyal or patriotic allusion is hailed with shouts of applause. Macready's *Alfred* is indeed a delightful treat; and Miss Phillips in *Ina* is not less deserving of the most favourable notice. Though circumstances somewhat retarded the true appreciation of this accomplished actress for a while (as they also prevailed for too long a time against the mastery art of Macready), the public has now learnt to do justice to both; and on every new occasion to receive its recompense in stimulated efforts and consequent excellence. Mr. Cooper has the only other prominent part, that of *Guthrum*, and he performs it very ably.

COVENT-GARDEN.

THE comedy of the *Esquisses*, by Don Telesforo de Trueta, was produced here on Saturday, and repeated on Monday and Thursday, with increased effect and success. Before we say a word upon the play itself, we cannot help noticing the state of the house on the first night* of the performance, when it was comparatively empty, except for free admissions and orders: we do not believe there was 100*l.* in money. Now it is curious to observe the critics of the press almost unanimously exclaiming against translations and adaptations, lamenting the decline of the drama, and calling out for original compositions,—when we thus see that an original comedy, and under extraordinary auspices too, written by a foreigner, and strongly cast, had not attractions for even a tolerable audience. We must infer from this that there are other causes than those alleged, which contribute to the low estate of our dramatic literature; and that as one swallow does not make a summer, so will not original writing suffice to sun and warm the gloomy regions of theatrical property. If the town really objected to the means more commonly employed to amuse it, why does it not patronise original writing when it is offered? On the contrary, in this instance, as well as on the appearance of Mr. Peake's *Chancery Suit*, the house was miserably thin.

The *Esquisses* is a lively and vivid picture of English manners among the fashionable and butterfly classes of society. In many parts it resembles caricature; but no caricature can go beyond the realities which are hourly exhibited

by persons of the description alluded to. The dandy lord, the dandy gambler, the dandy officer, the dandy servant, are all, if not true to the goddess Nature, true to the spe-god Folly; and Mr. Trueta has sketched them with an entertaining pencil. The rustic squire initiated into the school of *esquissism* is, of course, more a creature of imagination; but it is cleverly conceived, and pre-eminently ridiculous. The respectable merchant, who, moving to the west end, permits his wife to make herself conspicuous in the race of heartless dissipation, and the wife herself, and daughter, are well-drawn characters; and well contrasted by the more citizen-like manners and habits of a rational man, satisfied with and reflecting credit upon his station. These are the principal objects of the author's delineation; and, as his comedy is rather a display of life than an attempt to excite interest by striking events and situation, we have the less to regret that its plot is extremely simple. The country squire, taught a lesson of prudence, by being plundered in London; the mercantile *parvenus*, mortified and laughed at by those superior beings who condescend to feed upon their luxuries, and intrigue with their womenkind; the escape from dishonour of a heroine, who is in good time discovered to be the sister of one of her pursuers, and her marriage to a deserving French gentleman,—thus aiming to remove weak and indiscriminate national prejudices against foreigners,—are the ingredients wrought up into the pleasant shape of a very amusing play. One of its most obvious merits is the dramatic skill with which the scenes are arranged; and another, the dramatic neatness and spirit of the dialogue. In the latter respect there is nothing forced; the conversations run easily on; and the playful or satirical hits which enliven them are such as might either raise a laugh in the drawing-room, or extort a bravo on the stage. The following transcript from the play-bill will show how efficiently Mr. Trueta's conceptions were "bodied forth:"

Lord Castleton, Mr. C. Kemble; Count Valmore, Mr. G. Bennett; Lord Bolcourt (Peer Exquisite), Mr. Parry; The Hon. Frank Cecil (Military Exquisite), Mr. Abbott; Melton (Sporting Exquisite), Mr. Wrench; Gosling (Country Exquisite), Mr. Keeley; Sir Benjamin Bonus, Mr. Bartley; Mr. Stockland, Mr. Egerton; Timothy Oldstyle, Mr. Blanchard; Strus (Valet Exquisite), Mr. Power; Mrs. Stockland, Mrs. Gibbs; Lilian Ewondale, Miss E. Tree; Harriet, Miss Nelson; Kitty, Mrs. Keeley.

It is almost, if not altogether, invidious to particularise any of the performers, each having done as much as the part assigned to him or her allowed. Keeley was very droll; Abbott perfection to the last "bore;" Parry a capital supper-hunter; Wrench a superior Jeremy Diddler; and Power the prince of valet impertinences. In the board of trade, Bartley and Egerton were most responsible men; and for nobles, in these reforming times, C. Kemble a fair oligarch, and Bennett a worthy count. Blanchard, in *Timothy*, was what Blanchard always is, pithy and characteristic. Miss E. Tree excellent, and especially in her principal scene with C. Kemble; Mrs. Gibbs quite at home; and Mrs. Keeley the best of *soubrettes*. We have much pleasure in printing the prologue, which may be esteemed a literary curiosity, as that species of composition is no longer *esquisitely* in fashion; and it is the first attempt of L. E. L.*

"Hard is his fate, who on a foreign strand
Has but the memory of his native land;

* Since the first night, the first six lines have been omitted: the prologue begins with the fifth couplet, which is followed by the fourth. We must say, we do not reckon this an improvement.

His childhood and his manhood far apart,—
Two separate lives that from each other start;
Who on the ruins of his earlier time
Must raise new ties of friendship, home, and clime.
Such is his fate,—he who would fain to night
Win in another land a household right.
Our author claims more sympathy than fame,
And asks a home, where poets ask a name.
'Tis the first time that ever stranger sought
To utter English speech or English thought;
And 'tis a bold attempt for foreign hands
To sketch these fashions of our English land;
Still our old saw encourages his aim,—
'Tis the bye-stander who best knows the game.
Yet, while you judge of this his first essay,
Remember his own land is far away;
And now that, merchant-like, he spreads his store,
He courts your justice, but your mercy more.
Now by the fears that must have been your own,
Now by the hopes which each of you have known,
Think, while the fear or hope most keen appears,
What are the author's hopes, the author's fears:
Think of the lonely hours that must have been
Devote to body forth the crowded scene;
The gay reply, given with anxious care,—
The mirth in which the maker had no share:
Think of the scheming nights, the busy days,
And judge how dear the hope that asks your praise.
Ladies, our author's from that Spanish shore
Where beauty and romance reign'd queens of yore;
And he were no true Spaniard right to ask
Your favour more than all. 'Tis a light task
To smile success, and yet that smile secures
The praise it sweetens: may he hope for yours?
Then let his cause in your fair hands remain,—
You cannot let the stranger plead in vain."

On Tuesday, Miss F. Kemble performed *Lady Teasle*, for the first time, and acquitted herself well. It was for Bartley's benefit; and, what with his own deserts and the amazing attraction of Braham, who sang several songs, &c., and was enthusiastically encored in them all, we rejoice to see that it was a bumper.

FRENCH PLAYS.

MADAME ALBERT has terminated her engagement, much to our regret. She is an admirable comic actress; and those who have only seen her in such morbid melodramas as *Valentine, ou la Chute des Feuilles, Isaura*, &c. can have no conception of the spirit, the grace, and finish of her performances in true comedy or bustling farce. Madame Albert selected *Madame du Barri*, and *Le Procès du Fandango*, for her closing efforts; the evening being also appropriated to the benefit of Mons. Pellissié. Her personation of the piquante mistress of Louis XV. has excited as much admiration here as in Paris. Her triumphs over Richelieu, in the last scene, is the perfection of the art, and the finale was drowned in the enthusiastic applause of the spectators. In *Le Procès* she danced a fandango with Mons. Le Febvre, of the King's Theatre, in a style that might have broken the heart of Brocard, and even tantalised Taglioni. No wonder it set the court, the counsel, the clerks, and the clients in motion! We danced home ourselves with our brains in a whirl, and dreamed all night of Andalusians, cork-trees, sequidillas, and starlight. At the end of *Madame du Barri*, a wreath was flung from the upper boxes, and presented by M. Laporte to the lady, who received this very French, but well-merited compliment with equal modesty and elegance. We were pleased to see so full a house. Brunet remains; and Leontine Fay comes to console us for the departure of Madame Albert.

VARIETIES.

Horticulture.—It is stated, that in spite of all former failures and drenchings, the managers of the Horticultural Society are determined to try the chance of another fine day from our fickle climate, at Chiswick, in the course of June. We never thought much of this annual injury to the grounds, ducking of the ladies, and squabbling about the provi-

* On Monday the house was much better attended, and the piece went off with great éclat.

sions; but as it appears the institution is getting into a prosperous course, we may presume that there are good reasons for resorting to this, among other measures, in the hope of benefiting the funds.

The Literary Fund.—As we stated last week, is fixed for Wednesday, when the Lord Chancellor will certainly preside. Of this announcement the beneficial effects have already been felt, not only in the demand for tickets, but in the promised attendance of many noble persons and gentlemen of eminence in literature; a number of the greatest poets and authors of the age will rally round the chair, and several foreigners of distinction are also expected. The friends of the Institution, consequently, look forward with satisfaction to a brilliant and productive day.

Cloth Pictures.—In a preceding *Gazette* we mentioned the very singular exhibition, in Soho Square, of pictures copied from excellent originals, and worked by a lady in shreds of various-coloured cloth. We have again visited this very novel spectacle, and been again much gratified, as well as astonished, by the extraordinary character of these productions. It is almost impossible to believe (nor could we, without proof positive) that they are composed of such *matériel*. Flowers, game, animals, landscapes of the first order, portraits, &c. are represented with all the truth of nature, and all the effect of art. Indeed, they cannot be distinguished from richly coloured and admirable paintings. They are well worth the attention of the public. If his Majesty were to sit for his portrait to this artist, he would be literally the monarch described by Hamlet—"a king of shreds and patches."

Anniversaries.—We observe that the Artists' Benevolent Fund anniversary takes place today: the Duke of Wellington is announced for the chair; but the recent death of the duchess will probably prevent his grace from doing that which is so much to be desired by the friends and supporters of the charity. The list of stewards, however, contains some noble and distinguished names; and we have no doubt but the cause of benevolence will be safe in their charge.

The Fine Arts.—On returning thanks for the toast of his Majesty's Ministers at the Royal Academy fête, last Saturday, the Lord Chancellor alluded to some plan for diffusing an acquaintance with the fine arts more generally among the lower orders of the people. We know not what it is; but of this we are sure, that no better means can be taken to humanise their hearts and increase their gratifications.

No. I. of Illustrations for Scrap-books, from the *Olio*, has just reached us. The eight woodcuts are extremely clever; and when disposed of in this manner, separately in a neat little monthly tome, their effect is very good.

No. I. of a New Sporting Magazine has also been received. At present, we can only say that we admire the likeness of Mr. Warde, as an equestrian, in the frontispiece, and the beautiful vignette of Dead Deer from E. Landseer in the vignette.

The Political Press.—Besides the great number of pamphlets, to the publication of which the present momentous crisis has led, the party of the late ministers are disseminating, with prodigious activity, a series of penny tracts, (but also in thousands of instances delivered gratuitously), written by clever men, and well calculated to advance their views. Among the authors, Sir C. Wetherall, Mr. Croker, Mr. Theodore Hook, and

others, are mentioned; and we have no fewer than eight of these productions now lying before us—in which argument, ridicule, threats, &c. &c. are all employed against the measure of Reform brought forward by Lord John Russell.

Edward L. Bulwer.—We rejoice to see the author of *Pellam*, *Devereux*, &c. &c. among the members returned to parliament. From such eminent qualifications as he possesses, much may be expected in the senate, which is about to be occupied with affairs of such vital importance. He sits for St. Ives; and as our literary friends are curious to be well informed about their favourite authors, we may add that Henry, the member for Coventry, is an elder brother, and the writer of a volume on Greece.

Ciliary or Vascular Motions in Molluscos Animals.—Mr. Cheek has observed the ciliary motions, or currents, taking place along surfaces which are beset with innumerable vibratile cilia in constant motion in the sand worm (*Arenicola piscatorum*) in connexion with those internal organs supposed by Sir E. Home to be livers. The same motions have, we are pleased to see, been observed in the terminal extremities of the coxa of the sea mouse (*Halithoa aculeata*), though very faint in degree.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XIX. May 7.]

Paris and London, a Satirical Novel, by the Author of the *Castilian*, the *Exquisites*, &c., is immediately forthcoming.—In the press, M. Bernays' *Familiar German Exercises*—The Route of Hannibal from the Rhone to the Alps, by Henry Lawes Long, Esq.

LIST OF NEW BOOKS.

Wright's Slavery at the Cape of Good Hope, 8vo. 4s. bds.—Murray on the Diamond, 18mo. 5s. bds.—Fitz-Raymond; or, the Rambler on the Rhine, 8vo. 7s. 6d. bds.—Sir H. Moncrieff's Sermons, Vol. III. 8vo. 10s. 6d. bds.—Standard Novels, No. III. (the Spy), 12mo. 6s. bds.—Roscoe's Novelist's Library, No. I. (De Poe's Robinson Crusoe, Vol. I.) 12mo. 5s. bds.—Family Library, Dramatic Series, Vol. IV. (*Æschylus*) 18mo. 5s. bds.—Life of the Rev. E. Erskine, 12mo. 7s. 6d. bds.—Best's Sermons on the Amusements of the Stage, 12mo. 5s. 6d. bds.—Lochley's New Picture of London, 18mo. plain, 4s. 1s. coloured, 4s. 6d. bds.—Tate's Foreign Exchanges, 8vo. 6s. cloth.—Tyso's Inquiry after Prophetic Truth, 8vo. 7s. 6d. bds.—The Life of Sir Thomas Lawrence, with Three Portraits, 2 vols. 8vo. 12s. 12s. bds.—Hurwitz's Hebrew Etymology and Syntax, 8vo. 12s. cloth; Grammar, 8vo. 17s. cloth.

TO CORRESPONDENTS.

There is almost a total stagnation just now in the publishing world: nothing stirring, but politics and monthly volumes.

J. R. received.

Erratum.—In our last Number, p. 283, col. 1, the second and third lines from the top have accidentally changed places.

ADVERTISEMENTS,

Connected with Literature and the Arts.

ILLUSTRATIONS OF THE BIBLE.—Mr.

MARTIN begs to announce that the First Part of the above Work is now published.

Price, unlettered Proofs, Four Guineas; lettered ditto, Two Guineas; Prints, One Guinea.

20, Abbeys Terrace, New Road, May 6th, 1831.

Just published,

BUSTS IN BRONZE OF HIS MAJESTY

WILLIAM the Fourth, and the LORD CHANCELLOR BROUGHAM, at 11s. each.

These Busts are of dimensions and of character to form an appropriate ornament of great interest, for every chivalrous place in the Kingdom. The acknowledged excellence of the likenesses and the intrinsic beauty of the Busts, as works of art, give them a place in every cabinet. The absolutely indestructible nature of the material, with the graceful appearance, and the powerful embodying effect of an actual model in bronze, leaves the most elaborate print far behind, as a memorial of important and valued personages.

Sold by the Author, Samuel Parker, 18, Argyl Place, and St. Cornhill; Jennings and Co. Chesapeake; and by all Booksellers.

This day is published,

A PRINT, from a Picture by Wm. Collins, R.A., of Children Feeding Rabbits. Engraved on Copper by J. Linnell.

Published by Francis Collins, 52, Great Marlborough Street; to be had of Messrs. Colnaghi, Son, and Co.; Moon, 147y, and Graves; Metcalf and Graves; and all other Printers.

Prints, 12s.; Proofs, 12s. 6d.

The Fisherman's Departure will be published in November.

MUSIC.

NEW NATIONAL SONG, "For Glorious Freedom," sung by Mr. Braham, with enthusiastic applause, at the Public and Private Concerts. Inscribed (by permission) to the Marchioness of Tavistock. The Words by T. H. Stirling, Esq. The Music by Charles Walthers. Price 2s. Mori and Laven, 23, New Bond Street; and to be had of the principal Music-sellers in Town and Country.

MUSIC IN AZOR and ZEMIRA.

Harmonicon Edition, price 3s. The whole of the Music suitable for Private Performance, in Spahr's Opera of Azor and Zemira, including the Author's Pieces introduced from the Faust and Jesonda, arranged and adapted for the Piano-forte, is this day published, in a Supplementary Number of the popular Musical Journal, the Harmonicon.

Published by Longman and Co. London; and sold by all Booksellers and Music-sellers.
* * * Orders should be given, specially, for the Harmonicon Edition, price 3s.

BOOKS PUBLISHED THIS DAY.

A new edition, post 8vo. 3s. 6d.

THE VERACITY OF THE GOSPEL and ACTS. Argued from undesigned Coincidences to be found in them, when compared in their several Parts.

By the Rev. J. J. BLUNT,
Fellow of St. John's College, Cambridge.

Also, by the same Author,

The Veracity of the Five Books of Moses.

In small 8vo. 5s. * * * Mr. Blunt has already signalled himself by his work on the Acts of the Apostles, as an individual intimately conversant with the most minute particulars of holy writers, and a very successful disciple of Dr. Paley, in the management of that species of Christian evidence, which arises from the discovery of undesigned coincidences of repeated words. This volume can be said to increase his reputation. It is both a pleasing and instructive work, and is creditable to the talents, learning, and piety of the respected author. — *Evangelical Magazine*, June 1830.

"We think Mr. Blunt's clever and very ingenious web of argument will be read with pleasure, as it certainly must with profit." — *Monthly Review*.

John Murray, Albemarle Street.

THE POETICAL WORKS OF THE RIGHT

Hon. LORD BYRON, complete (with the exception of Don Juan), in 6 vols. 18mo. with Portrait and highly finished Engravings, only 57s. Vol. V. and VI. which are now for the first time published, contain many Poems never included in any previous Collection of the Works, and some that were suppressed; besides several printed for the first time; rendering this the first and only complete edition ever published.

John Murray, Albemarle Street.

WAVERLEY NOVELS. New Edition.

Part. XXIV. of this Work, which commences the First, was published on the 23d of May, price 5s. Vol. V. of the New Issue, which begins the Antiquary, was published at the same time.

* * * This New Issue enables Subscribers to commence with Waverley, and have the Work from the beginning, in monthly deliveries, and without paying at once for all the Volumes of the first Issue which have already appeared.

Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

Who have also just published,

1. **Destiny; or, the Chief's Daughter.** By the Author of "Marriage," and the "Inheritance." In 3 vols. 11s. 6d.

2. **Captain Basil Hall's Naval Life and Early**

Voyages. In small vols. 15s. * * * Captain Basil Hall, under the title of "Fragments of Voyages and Travels," has published a kind of autobiographical miscellany, the perusal of which has afforded us several days of great enjoyment. — *Spectator*.

8vo. 6s.

THE JOURNAL OF THE ROYAL INSTITUTE OF GREAT BRITAIN. No. III.

Contents.—Professor Whewell on the Employment of Notation in Chemistry.—On the Shamrock of Ireland, by Mr. Bichenov.—On the Earliest Epoch of Egyptian Chronology.—Remarkable Instance of Anomalous Structure in the Trunk of an Exogenous Tree, by John Lindley, Esq. F.R.S. &c.—Dr. Moll on Telescopes, &c.—Mr. Hennie on the Contrivances of some Animals to secure Warmth.—On the Aurora Borealis, by Dr. Moll, by the Hon. G. Harcourt, and by S. H. Christie, Esq. M.A. &c.—Mr. Hensell on Eleasmin.—Contributions to the Physiology of Vision, No. II.—On the Riddle-marks and Tracks of certain Animals in the Forest Marble, by G. F. Scrope, Esq. F.R.S. &c.—Proceedings of the Royal Institution of Great Britain.—Proceedings of the Academy of Sciences in Paris.—Analysis of Books, and Selections from the Transactions of Scientific Societies.—Miscellaneous Intelligence; 1. Mechanical Science; 2. Chemical Science; 3. Natural History, &c. &c.

London: John Murray, Albemarle Street.

THE HOLY LAND.—Dedicated, by express permission, to the King. In 2 vols. 8vo. with numerous splendid Engravings, 30s. boards. **TRAVELS IN THE HOLY LAND,** and various other Countries, including the Track of the Apostle Paul.

By WILLIAM RAE WILSON, Esq. F.A.S. Author of "Travels in Poland, Russia, and Finland," and also in "Norway, Sweden, and Denmark."

This is a most useful work for ministers of religion, in which are Letters to the Author from Foreign Sovereigns on the Protestant Faith; with a minute description of the Convent of La Trappe, which he visited, and in which so many Englishmen of distinction have assumed the character of a monk.
Printed for Longman, Rees, Orme, Brown, and Green.

Encyclopædia Britannica.

THE ENCYCLOPEDIA BRITANNICA.

Seventh edition, greatly enlarged and improved, to be completed in Twenty Volumes Quarto.

The present half-volume contains the following important articles, which have been entirely re-written for this edition: Comparative Anatomy, Angling, Animal Kingdom, Animalcules, Antiquities, Apparitions, Archæology, Architecture, &c.—These articles which have not been entirely superseded by new ones, are carefully revised and corrected, and in every respect adapted to the present advanced state of science and literature.

The Encyclopædia Britannica not only maintains the reputation of being the most useful and comprehensive book of reference, when complete; but each part of the new edition, as it issues from the press, will be found individually valuable as a periodical publication of instructive and entertaining treatises, by the most distinguished authors of the present day.

The very marked improvement in the literary contents, the beauty and accuracy of the typography and embellishments, as well as the undeviating punctuality observed in the publication, have met with the unqualified approbation of the Subscribers. The public press has also afforded numerous and gratifying testimonials in favour of the work, both in reviews of particular articles, and in observations on its general excellence as a Dictionary of Universal Knowledge.

The Third Volume being now finished at press, the publishers can calculate, that from the additional matter contained in the enlarged page, they will be enabled to compress the work within the limits proposed in their original prospectus.

The next volume will contain the first of a Series of Maps, engraved on a scale of such magnitude as to give the work all the advantages of a most complete Atlas; while the comprehensive nature of the geographical department supplies the place of a General Gazetteer.

Printed for Adam Black, Edinburgh; Simpkin and Marshall; Whittaker, Treacher, and Co.; Hamilton, Adams, and Co.; and Jennings and Chaplin, London; and John Cunningham, Dublin.

DEBRETTS' PEERAGE OF THE UNITED

Kingdom. A new and improved edition was published in March last with a Portrait of His present Majesty, engraved by Dean, and the Arms of the Peers. In 3 vols. 12mo. 11s. 8s. cloth boards.

* * * To the present edition are added the Blazons of the Arms. Printed for Rivingtons; Egerton; Clarks; Longman and Co.; Cadell; J. Richardson; J. M. Richardson; Baldwin and Cradock; Booth; Booker; Bagster; Hatchesards; Hamilton and Co.; Farbury and Co.; Scholey; Pickering; Lloyd; Hodgson; Templeman; and Houlston.

Of whom may be had, uniformly printed, in 2 vols.

Debrett's Baronetage, corrected to the present time. 11s. 8s.

8, New Burlington Street.

Messrs. Colburn and Bentley have just published the

following New Works:—

Bourrienne's Napoleon.—French Edition.

The whole of them perfectly clean, and in the best possible condition, having only been circulated among a very select reading society.

Apply to R. Balcock, 17, Park Walk, Little Chelsea.

FRASER'S MAGAZINE for TOWN and

COUNTRY. Price 2s. 6d.

The continued success of the "Magazine for Town and Country," has enabled the Publisher to obtain the co-operation of many individuals of distinguished talents. He confidently appeals to the contents of his several Numbers for the truth of this assertion. He hopes that by increased exertions he will merit yet more extensively the patronage of the public. The "Magazine for Town and Country" is known for its uncompromising spirit, its fair criticisms, and the high tone of its political, philosophical, and religious papers. Added to these attractions, it first commenced "A Gallery of Living Literary Characters," which other contemporaries have most meekly copied without acknowledgment.

James Fraser, 215, Regent Street, London; John Anderson, jun. Edinburgh; and Grant and Co. Dublin.

The English Constitution.

Published by John Harris, Corner of St. Paul's Churchyard.

For Young People.

PARLOUR COMMENTARIES on the

CONSTITUTION and LAWS OF ENGLAND; a familiar Explanation of the Nature of Government, and the Necessity of Legal Authority; with some Account of the Proceedings in Parliament and Courts of Justice. With Engravings of the Houses of Lords and Commons, the Old Bailey Court, the First Parliament assembled in Westminster Hall, in the Reign of Henry III. &c.

By JEFFERYS TAYLOR, Author of the "Forest," &c.

Price 5s. half-bound, 12mo.

"A gentleman returning home one evening, and entering the room in which his family were assembled, found the young folks playing at what they termed 'Judge and Jury.' The mode of proceeding exhibited but a faint resemblance to that adopted in more serious affairs; yet, as the subject was an important one, he thought some information relating to the Constitution and Laws of England, suggested by the evening's entertainment, would be appropriate, if it could be conveyed intelligibly to his children."

Companion to the Waverley Novels.

Beautifully printed and embellished, and neatly bound,

price 6s. each Number.

STANDARD NOVELS, No. III.

published May 2, contains the whole of the Spy, by Cooper, corrected and revised by the Author, with his New Introduction and Notes, written expressly for this publication. This additional matter will explain the origin of the tale, and of some of the principal incidents, with an account of the actual individuals who are designated as the leading characters.

No. I. comprises the whole of the Pilot, by Cooper, price 6s.

No. II. contains Godwin's celebrated Story of Caleb Williams,

complete, price 6s.

No. IV. will contain the whole of Miss Jane Porter's Romance

of Thaddeus of Warsaw.

Henry Colburn and Richard Bentley, New Burlington Street.

Neatly bound in cloth, with an elegant Frontispiece, price 3s. 6d.
THE SAILOR'S BRIDE; a Tale of Home.

By the Author of the "Months of the Year," &c. &c.
"A little book, which, though not in verse, is of a poetical cast. The 'Sailor's Bride' is a tale of much elegance, and considerable pathos. The incidents are those which daily meet us in this world of care; and we thank the author for affording us an hour or two of saddened pleasure—that melancholy satisfaction a bruised spirit loves to repose upon as a congenial relief from more agitating sorrow."—*Spectator*.
Published by Charles Tilt, 26, Fleet Street.

Dr. Dymock's School Atlas.
In 1 vol. beautifully printed, price 7s. boards, or 7s. 6d. bound; a few Copies in Turkey Morocco, 10s. 6d. a new edition of

THE QUARTERLY JOURNAL OF AGRICULTURE, and of the Prize Essays and Transactions of the Highland Society of Scotland.

Contents.—I. On Meteorological Observations. By Mr. J. Adie, Edinburgh.—II. On the Salmon Fishery.—III. Essays on the Origin and Natural History of Domestic Animals. By James Wilson, Esq. 6. On the Hog.—IV. On the Winning Machine.—V. On Pruning Forest-Trees. By Mr. Gavin Cree, Nurseryman, Bigger.—VI. Thoughts on Drainage.—VII. On Population.—VIII. On the Mechanism of the Limbs of the Horse. By Mr. Dick.—IX. On the Turnip-Silcer.—X. America: A Golden Bird of America, and Ornithological Biography.—XI. Financial Reform; the Budget.—XII. Miscellaneous Notices.—XIII. Quarterly Agricultural Report; Note, Barilla and Kelp.—XIV. Tables of Prices of Grain, &c. &c.—XV. Foreign Corn Markets.

I. Preliminary Notice.—II. Essay on the Disease in Cattle known by the Names of Red-water, Black-water, and Moor-ill.—III. Essay on Draining and Levelling Clay Lands. By Mr. J. Carmichael.—IV. Description of an American Hay-Rake.—V. Remarks on Breeds of Swine.—VI. Communication respecting the Indian Law, as adapted to Fencing. By J. Robinson, Esq.—VII. Note on the Hopetoun Out.
Printed for W. Blackwood, Edinburgh; and T. Cadell, Strand, London.

Dr. Lardner's Cabinet Cyclopaedia.
Price 6s. Vol. II. of the
HISTORY OF ENGLAND.
By the Right Hon. Sir J. MACINTOSH.
Being Vol. XVIII. of "Dr. Lardner's Cabinet Cyclopaedia."
Published April 1st.
Hydrostatics and Pneumatics. By Dr. Lardner. 1 vol.
On 1st June will be published,
A Treatise on Optics. By Dr. Brewster.
A List of the Volumes published and in preparation, may be found in the Volume last issued.
Printed for Longman and Co. and John Taylor.

Small 8vo. 6s. cloth, (with a Portrait of Bishop Hensley,) the
SUNDAY LIBRARY, Vol. III.
containing Sermons by Bishops Horsley, Van Mildert, and Gray; Drs. Parr and D'Oyley; and Professor White. With Introductory Remarks, &c.
By the Rev. T. F. DIBDIN, D.D.
Vol. I. containing 18 Sermons, (with a Portrait of the Archbp. of Canterbury) and Vol. II. containing 35 Sermons, (with a Portrait of Bishop Forbes), &c. each
Vol. IV. on the 1st of July, with a Portrait.
Printed for Longman, Rees, Orme, Brown, and Green.

A new edition (being the Tenth), 18mo. 3s. half-bound, of
STORIES from the HISTORY OF ENGLAND.

Lately published, 18mo. price 3s. half-bound,
2. Progressive Geography for Children. By the Author of "Stories from the History of England."
"A very useful little work, and well adapted to the purpose for which it is intended."—*Brighton Gazette*.
"It is written in a plain, clear style, and the information contained in it appears likely to implant a sound knowledge of the rudiments of geography in the juvenile mind—then rendering natural and easy the progress to the higher parts of the science. It is a clever and really useful little book."—*Plymouth Herald*.
"The plan, the simple and demonstrative manner in which it is followed up, the little maps which a child might understand," and the promiscuous index of names, whereby a cross-examination may be made on the acquirement of the names in their proper order, form a work likely to prove useful in communicating the rudiments of geography to children long before it has been usual to give them any instruction on the subject."
—*Tyne Mercury*.
John Murray, Albemarle Street.

1 vol. 8vo. 12s. to correspond with D'Oyley's Life of Seneff.
THE CORRESPONDENCE OF ISAAC BASIRE, D.D. Archbishop of Northumberland, and Præbendary of Durham, in the Reigns of Charles I. and II. With a Memoir of his Life.
By W. N. DARNELL, B.D. Rector of Stanhope.
John Murray, Albemarle Street.

Reform.—No. LXXXIX. of
THE QUARTERLY REVIEW.
It contains Articles—I. On the Reform Question.—II. On the West-India Question.—III. On Mr. Malins and Mr. Sedley's View of Population and Emigration.—IV. Captain Beechey's recent Voyage round the World.—V. On Sanscrit Poetry, and the Hindu Drama.—VI. Captain Basil Hall's Life and Professional Adventures, just published.—VII. Bunsen's Account of Bosphore, Babar, and the French Republic, &c.
* A few Copies of the extra number published in February, containing the Article on Reform, may still be purchased.

BOOKS IN THE PRESS.

Under the Superintendence of the Society for the Diffusion of Useful Knowledge.
Library of Entertaining Knowledge.
Early in May will be published, with a Plan, Engravings on Steel, and Woodcuts, the First Volume of
PARIS, and its HISTORICAL SCENES.
The object of this book is to describe the more remarkable edifices of various kinds which have been the theatre of the great events of which that city has been the theatre. Paris has, unquestionably, many other features of commanding interest—its arts, its luxuries, its municipal arrangements. But these are incessantly varying in their appearance. Its historical scenes are permanent and indelible. They are to be traced, not in monuments and inscriptions, but in the multifarious narratives of chronicles and memoirs, in the obscure records of the middle ages, and in the pamphlet of yesterday. The *Reminiscences of the League*, and the *Three Days of 1850*, are equally within the range of this subject.—*Extract from Preface*.
London: Charles Knight, Pall Mall East.

LONDON: Published every Saturday, by W. A. SCRIPPS, at the LITERARY GAZETTE OFFICE, 7, Wellington Street, Waterloo Bridge, Strand, and 11, South London Street, Oxford Street; sold also by J. Chappell, 11, Regent Street; E. Marlborough, Ave Maria Lane, Ludgate Hill; A. Black, Edinburgh; Smith and Son, D. Robertson, and Atholhouse and Co. Glasgow; and J. Cumming, Dublin.—Agents for America, O. Rice, 15, No. 15, New York.
J. MOYSE, Took's Court, Chancery Lane.

THE LONDON LITERARY GAZETTE;

Journal of Belles Lettres, Arts, Sciences, &c.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire its immediate transmission, by post, we recommend the LITERARY GAZETTE printed on stamped paper, price One Shilling.

No. 747.

SATURDAY, MAY 14, 1831.

PRICE 8d.

REVIEW OF NEW BOOKS.

The Life and Correspondence of Sir Thomas Lawrence. By D. E. Williams, Esq. 2 vols. 8vo. London, 1831. Colburn and Bentley.

THESE two huge volumes are curious specimens of the art of book-making. First, Mr. Campbell closes his doors on the world, and sends lithographed letters to his friends, not to break in upon a solitude devoted to that important work, the *Life of Sir Thomas Lawrence*. After a time, the poet devolves his mantle on other shoulders, and a Mr. Williams is to enact our modern Elisha. Two large octavos then come forth, with about materials enough to have made a small one. Mr. Williams has as happy a knack as ever Dido had with her ox's hide, of making a little go a great way; and certainly takes as many words to express an idea as could well be pressed into such meagre service: still the hide, though cut into as small thongs as possible, is not sufficient to cover some thousand and eighty pages; it has, therefore, to be eked out by any thongs of sheep or asses' skins that came to hand. Sir Thomas Lawrence has the not uncommon destiny of occupying the smallest space in his own house; the first volume is three parts filled with digressions; page after page is occupied by quotations from periodical criticisms long since forgotten, and not worth renewing, save as matter of general reference: then there is a trial about one of Bartolozzi's engravings—an account of Fonthill, already familiar to every newspaper reader; long lists of various sales, useful enough in their way, and which might have made a few pages of appendix; a list of the persons who attended Mr. Opie's funeral; an account of the Charlemont family, to be found in every peerage,—also of the Ankerstein,—in short, two-thirds of the first volume are occupied with matter quite extraneous to that in hand. The third portion, which is given to Lawrence himself, is particularly ill written, verbose, unconnected, and crowded with trifling details; and all the anecdotes as old as the general round of the newspapers could make them. The work is dedicated to Sir Robert Peel, in a style of coarse eulogium worthy of the days of Dryden, when a patron, for ten pounds, had every virtue under heaven. It is not till we arrive at the second volume that we find aught of either novelty or interest: here, however, is “metal more attractive,” for it comprises a selection from Sir Thomas's correspondence, and his letters contain all that warmth of feeling, that originality, which are the never-fading characteristics of a first-rate mind. The following remark, which ushers them in, strikes us as peculiarly absurd:—

“Mr. Lawrence, with his incessant occupation, might be well excused for a want of personality in his private correspondence; nor can a similar want in a man of Mr. Pitt's business be so severely treated as to be termed a vicious indolence.”

“Vicious indolence,” forsooth! and what

has Mr. Pitt's example to do with it? The author seems to think it quite a hardship and injustice that Lord Londonderry has not placed in his hands what letters he may possess of our great painter's, who was known to have corresponded with him. Now, we really must say, private letters are not public property; and this dragging to light of every careless expression, every feeling confided, makes the friends of most distinguished characters, now-a-days, little better than resurrection-men. The system of publication of letters, as soon as the hand that wrote them is cold in the grave, is enough to destroy all the confidence of private friendship. We have seen, however, few letters better able to bear the light than those now before us. Will not our readers join in the praise we give such passages as the following? Pleasure ought to make us grateful.

“You must forgive me, my dear friend, that, in the worrying moments of my short stay at Calais, I omitted to write to you as I promised and intended. My journey from thence to Paris was sufficiently rapid, and, as Lord Stewart fully expected me, I found on my arrival a most hearty welcome, and have experienced the kindest conduct from him ever since. Had I delayed my journey a day longer, I should have lost the view of some of the finest works of this gallery, the noblest assemblage of the efforts of human genius that was ever presented to the world. It very much surpassed my expectations, and particularly in its most celebrated pictures. The Transfiguration is still the very first. A few days will see the whole taken away; and much as we ought to reprobate the injustice by which the greater part of them was obtained, it is impossible to witness their departure without regret,—at least I know not how to check this feeling. No one can see France and Paris without bowing to the greatness and extent of this man's conceptions. I use a phrase that is forced upon me. I speak of him as present, and every where he is; and it is as impossible that he can ever be separated from the past greatness of his country, as for human efforts to blot out the sun. Her present state of just humiliation is extreme, and it does move one's compassion for poor Louis, who is utterly innocent of the crimes that have produced it, that, with the feelings of a Frenchman, and with all his goodness, he is doomed to present himself to his countrymen, on a throne ‘so shorn of its beams,’ and possibly for years, ‘in dim eclipse.’ That so much greatness of intellect, so vast a reach of thought (for the plans of improvement projected by Buonaparte are still superior to those effected,) should have been mixed with such insensibility to virtue, is, in my mind, one of the most painful mysteries of Divine wisdom that can be contemplated. Clemency, benevolence, magnanimity, are virtues that seem, of necessity, to belong to the being who could have projected works of so much usefulness, beauty, and magnificence; and he had none of

these! He only was not, in its accurate and worst sense,—cruel—wholly indifferent to human suffering, but not delighting in inflicting it as such.”—*Letter from Paris, May 1814, to Miss Crofts.*

“I wish for habitual kindness—yes, because I feel it—and money concerns have no change in my feelings. This is sensibility.—(To the ‘comfort working effects of money,’ it is.)—But reflect how little I have been accustomed to consider them for myself. I have neither been extravagant nor profligate in the use of it; neither gaming, horses, curricie, expensive entertainments, nor secret sources of ruin from vulgar licentiousness, have swept it from me. I am, in every thing, but the effects of utter carelessness about money, the same being I was at Bath. The same delight in pure and simple pleasures—the same disdain of low enjoyments—the same relish for whatever is grand, however above me—the same admiration of what is beautiful in character—the same enthusiasm for what is exquisite in the productions, or generous in the passions, of the mind. I have met with duplicity, which I never practised, (for this is far removed from inconstancy of purpose,) and it has not changed my confidence in human nature, or my firm belief, that the good of it infinitely overbalances the bad. In moments of irritation I may have held other language; but it has been the errata of my heart; and this is the perfect book which I could offer, were my being now to end.” This beautiful painting of himself is in a letter to Miss Lee, when pressed upon by, and despondent in consequence of, pecuniary embarrassments.

“If it be proof of a just claim to the character of a great painter, that he is master of his art, that proof is denied to me, for I am perpetually mastered by it; and am as much the slave of the picture I am painting, as if it had living personal existence, and chained me to it. How often in the progress of a picture, have I said, ‘Well, I'll do no more’—and after laying down my palate and pencils, and washing my hands, whilst wiping them dry I have seen the ‘little more,’ that has made me instantly take them up again. It is pleasant, that, though all is difficulty, (though governed by whatever general principles,) each picture has its own laws, and in that copy of nature, partakes of its infinite variety. Still, there is no vague uncertainty about it; the truth exists, and it is our business to find it out. A really fine critic should, on looking at a picture, be able to assign a cause and motive for every form and hue that compose it, since nothing in it is matter of accident, but with the ignorant and presumptuous. There is a sort of calculated foreseen accident, that is often happy. I select a brush, a pencil of loose form, whose touch may be irregular, and is therefore chosen by me, for the particular quality of the object; but this is intention, not chance, or chance selected by it. I have a peculiar pleasure and pride in the pictures I send to remote countries,

which are unacquainted with the higher works and principles of art. They might with security be deceived, and slighted by me. The judgment, the difficulty, (if I may say it,) the science of the picture, will be lost upon them; but after they have, perhaps, for years liked and admired it as a resemblance, and been satisfied that it is a fair specimen of my talent, some great artist or true connoisseur may come among them, and then they will learn, that in every part, it is one of my most finished productions; that even for the monarch of my own country, I could not have laboured with more skill and vigilance, than I have done for strangers, whom I shall never see, and from whom neither praise might be expected, nor censure feared."—*Letter to Mrs. Wolff, after painting the portrait of Mirza Abul Hassan Khan.*

"His (Lord Byron's) vivid (and though dark) grand energy of thought awakens the imagination, and makes us bend to the genius, before we scrutinise the man; but when he forces us to do the latter, the former becomes an object of apprehension and disgust; and, accordingly, Lavater's system never asserted its truth more forcibly than in Lord Byron's countenance, in which you see all the character: its keen and rapid genius, its pale intelligence, its profligacy and its bitterness—its original symmetry distorted by the passions, his laugh of mingled merriment and scorn—the forehead clear and open, the brow boldly prominent, the eyes bright and dissimilar, the nose finely cut, and the nostril acutely formed—the mouth well formed, but wide, and contemptuous even in its smile, falling singularly at the corners, and its vindictive and disdainful expression heightened by the massive firmness of the chin, which springs at once from the centre of the full under-lip—the hair dark and curling, but irregular in its growth: all this presents to you the poet and the man, and the general effect is aided by a thin spare form, and, as you may have heard, by a deformity of limb."—*To Mrs. Wolff.*

"I am now returned from Claremont, my visit to which was agreeable to me in every respect; both in what regarded myself, my reception, and the complete success of my professional labours, and in the satisfaction of seeing the perfect harmony in which this young couple now live, and of observing the good qualities which promise to make it lasting. The princess is, as you know, wanting in elegance of deportment, but has nothing of the hoyden, or of that boisterous hilarity which has been ascribed to her: her manner is exceedingly frank and simple, but not rudely abrupt nor coarse; and I have, in this little residence of nine days, witnessed undeniable evidence of an honest, just, English nature, that reminded me, from its immediate decision between the right and wrong of a subject, and the downrightness of the feeling that governed it, of the good king, her grandfather. If she does nothing gracefully, she does every thing kindly. She already possesses a great deal of that knowledge of the past history of this country, that ought to form a part of her peculiar education. It is exceedingly gratifying to see that she both loves and respects Prince Leopold, whose conduct, indeed, and character, seem justly to deserve those feelings. From the report of the gentlemen of his household, he is considerate, benevolent, and just, and of very amiable manners. My own observation leads me to think, that, in his behaviour to her, he is affectionate and attentive, rational and discreet; and, in the exercise of that judgment which is some-

times brought in opposition to some little thoughtlessness, he is so cheerful and slyly humorous, that it is evident (at least it appears to me so) that she is already more in dread of his opinion than of his displeasure. Their mode of life is very regular: they breakfast together alone about eleven: at half-past twelve she came in to sit to me, accompanied by Prince Leopold, who stayed great part of the time: about three, she would leave the painting-room to take her airing round the grounds in a low phaeton with her ponies, the prince always walking by her side: at five, she would come in and sit to me till seven; at six, or before it, he would go out with his gun to shoot either hares or rabbits, and return about seven or half-past: soon after which, we went to dinner, the prince and princess appearing in the drawing-room just as it was served up. Soon after the dessert appeared, the prince and princess retired to the drawing-room, whence we soon heard the pianoforte accompanying their voices. At his own time, Col. Addenbrooke, the chamberlain, proposed our going in, always, as I thought, to disturb them. After coffee, the card-table was brought, and they sat down to whist, the young couple being always partners, the others changing. You know my superiority at whist, and the unfairness of my sitting down with unskilful players; I therefore did not obey command, and from ignorance of the delicacy of my motives, am recommended to study Hoyle before my second visit there next week, which indeed must be a very short one. The prince and princess retire at eleven o'clock."—*Letter written while painting the Princess Charlotte.*

"Rome I must leave, comparatively unseen; Rome, which only Lord Byron has feeling and capacity to describe. 'The Niobe of nations' it is indeed—the eternal city to the sons of time; for with that it must exist, linked as it is to every feeling, sentiment, impression, and power, of the human heart and mind. Paris and the Louvre, Rome and the Vatican!—the dissoluteness, the puppet-show decorations, and dissonance (Rome's purer share in it excepted), of a common fair, to the public devotion of a people, in gratitude displaying its magnificence in its highest temple. Bonaparte forces himself upon you in the Vatican, and you involuntarily exclaim, 'How could he see this?'—and then you remember that he never saw it; and that one addition, therefore, of crime and disgrace, is spared him in the having seen it, and still retained his hard and low ambition. You have seen his countenance; but could you have seen it at the moment that Rome and the Vatican met his eye, how dark would have been its expression, as that daring and arrogant spirit had retired within itself, baffled and defeated; for unless he could have fixed his seat of empire here, his toils had been nothing: and in the hands of this old man had still existed an empire over the soul, that even to himself had shamed his tyranny. I have already been often at St. Peter's and the Vatican, and for many hours each time. The latter I determined to see alone. Hereafter we shall have many a talk on the comparative merits of the two great men. Yesterday, I dined at half-past one, that I might remain till night in the Sistine Chapel and the Vatican, or rather in the chambers of Raphael, for, as you know, the former is part of the immense building. It often happens that first impressions are the truest—we change, and change, and then return to them again. I try to bring my mind in all the humility of truth, when estimating to myself the powers of

Michael Angelo and Raphael, and again and again the former 'bears down upon it,' to borrow a strong expression, 'with the compacted force of lightning.' The diffusion of truth and elegance, and often grandeur, cannot support itself against the compression of the sublime. There is something in that lofty abstraction—in those deities of intellect that people the Sistine Chapel, that converts the noblest personages of Raphael's drama into the audience of Michael Angelo, before whom you know that, equally with yourself, they would stand silent and awe-struck. Raphael never produced figures equal to the Adam and Eve of Michael Angelo. The latter is miserably given in Gavin Hamilton's print—all its fine proportions lost. Though it is Milton's Eve, it is more the mother of mankind; and yet nothing is coarse or masculine, but all is elegant, as lines of the finest flower. You seem to forsake humanity in surrendering Raphael; but God gave the command to increase and multiply before the fall, and Michael Angelo's is the race that would then have been. But you must read Mr. Fuseli, his only critic. In both the Sistine Chapel and the rooms of Raphael, all, in too many parts in them, is ruin and decay; at least it appears so to me, who was not sufficiently prepared for the ravages of neglect and time. I am exceedingly grieved to hear this account of the dangerous state of Mr. Owen's health, and beg you to present my kind compliments and remembrance to him. To write to him would, I fear, be thought obtrusive, and caused by his declining health. I say rather that he is in my remembrance, as one of those few of congenial minds with whom I could hold glad intercourse on these scenes around me, and whom I hope speedily to meet in his recovered strength. We must have many and many a struggle together yet. I am sure he would paint an admirable picture of the Duchess of —. Ask him if she is not one of the most singular specimens of the cold and amiable that he has known."

"I become more and more charmed with Rome (rather a lady's phrase) as the period approaches when I must leave it. But there is a charm—a spell of bewitching influence about it, that no other place of residence could have, were but our friends participating in our enjoyment. Its past greatness, the magnificent edifices of its more recent power, its treasures in art, and the climate, the sweet pure hues of atmosphere that seem to wrap every thing in their own harmony, have influence on the feelings that makes even the Colosseum, with all its sublimity of ruin, an object of admiration, unmixed at the moment with one chilling or depressing thought; so sweetly are its hues, its strongest light or deepest shadow, still in unison with the heaven that gazes on it. (Don't think me too fanciful, Miss Emily—the thought is not mine, but Young's:—

'While o'er his head the stars in silence glide,
And seem all gazing on their future guest.')

Have you ever seen Rome from the top of the Villa Pamphili, in the evening sun of a fine day? You see grouped together, in small compass, three objects of great interest and beauty—Monte Mario, St. Peter's, and, in farthest distance, Soracte rears itself between them. Then, on the other side, you have all that the Alban hills command, with Tivoli, and its mountainous scenery, uniting the fine and various lines of horizon till they are stopped by the masses of the Vatican. I have this evening driven there alone (having determined to be to myself this whole day), and felt the exceeding beauty of the scene, with that undefined

loneliness of delight which amounts almost to pain, formed, as it is, of many causes—thoughts of the past, of youth, and friends, and absence,—which I think, when alone, the close of evening in the country always brings before us. I passed my morning for some hours in the Sistine chapel and the Vatican; and having the finest light, I sent up and procured an order to admit me to go round the top of the chapel in the narrow gallery, which possibly you may remember, over the cornice. I thus saw the noble work with closer inspection, and therefore more advantage. With all your love of Raphael, my dear ladies, you must and shall believe in the superiority of that greater being, of whom in grateful, virtuous sincerity your painter himself said, ‘I bless God that I live in the time of Michael Angelo.’ Admired and popular as he was, it was fine, yet only just, in him to say so; and from frequent comparison of their noble works, I am the more convinced of the entire veracity of Sir Joshua Reynolds’s decision in favour of Michael Angelo. I am not used, I hope, to be presumptuous in my opinions about art; but, in my own mind, I think I know that Sir Joshua Reynolds could not have had another opinion on the subject. There are many able and judicious opponents to it, but I believe they would cease to be so on examination of the work itself, instead of viewing it in sterile and false copies, or exaggerated imitation. Amongst the imitators of Michael Angelo I never include Mr. Fuseli, who, in all qualities of fine composition, is entirely original. Michael Angelo’s line is often (I should say usually) severely pure. Michael Angelo is often, and in the highest degree, elegant in his forms and proportions—his Eve reaching at the apple is an example of it, and, in dignified beauty, has never been equalled by Raphael; whilst the awful and appropriate simplicity of his tone, and that breadth of light and shadow, so very finely described by Mr. Fuseli (I mean in his whole account of this noble work—a masterpiece of elevated criticism), produce altogether an impression on the reason, as well as the imagination, against which all the variety, and beauty, and sometimes grandeur, of Raphael, contend in vain. It is Hector against Achilles: you love him, but see that he must yield.”—*Written during his visit to the Continent, in 1819.*

How true is the following remark!—

“Your knowledge of mankind, of human nature, will tell you how much of prosperity is to be veiled, if we would have any but our heart’s friends sympathise in it: since it is a severer test than adversity, in which something of secret pride and self-love is generally an accompaniment to service. But heartily to rejoice with a friend in that state in which he needs not our assistance, and to whom fortune may seem for the moment too partial in her kindness, is friendship beyond the reach of doubt.”

Again:—“I write for your own private eye, and that of my dear sister only; since no mistake can be greater than that of expecting to produce participation of pleasure, by the communication of prosperous and flattering details. It is not always pleasant to the self-love of the hearers; and in genuine feeling, there are few friends to our adverse, to one in our good fortune.”

We have now only to express our regret that so interesting a task should have fallen into such incompetent hands. Mr. Williams has the sort of literary talent; his ideas are vague and trite; his style inelegant, diffuse, and yet ambitious. Simple and common phraseology is one of a writer’s first merits. Now

we doubt whether such epithets as follow will not send half his readers to the dictionary:—“Anhelation,” “asperous,” “crassid.” A collection of Sir Thomas Lawrence’s letters, with a brief and well-written sketch of his life prefixed, would have made a most delightful volume. We still recommend such a work to the attention of the publishers. As for what is called Sir Thomas’s private life, nothing can be more unauthentic or confused: we do not imagine Mr. Williams even knew (or most slightly) the man whose biography he has attempted. We are personally acquainted with several important parts of his history which the author either has not investigated so as to arrive at the truth, or has willfully glossed over and misrepresented. Upon these, and an unmannerly as well as unjustifiable statement relative to Mrs. Wolff (vol. iii. p. 47), we shall probably have to offer a few remarks hereafter.

The work, to employ the usual phrase, is handsomely got up, and illustrated with three fine portraits of Lawrence, at different periods of his life.

Sketches of Spain and Morocco. By Sir Arthur de Capell Brooke, Bart. M.A. F.R.S., &c., author of “Travels to the North Cape of Europe,” “A Winter in Lapland,” &c. 2 vols. 8vo. London, 1831. Colburn and Bentley.

SIR ARTHUR BROOKE has, in these pages, gone over a good deal of ground where little of novelty could be expected; he has also traversed parts of Africa, respecting the present state of which little is known. His work is pleasingly and unaffectedly, though not elegantly written; and it is precisely one of those entertaining books of travel which are well calculated to suit the general reader, without presenting any strong claims to perpetuity beyond the usual limits of the genus of “Sketches.”

Let us, for the present at least, pass over the voyage to Lisbon, Lisbon itself, its tertulias and operas—the journey to Seville—Seville, bull-fights, and description of Andalusian costumes—Cadiz—even the making of Sherry—Gibraltar—Tangier—Moorish and Jewish festivals—drop at once into Tetuan, and introduce our readers to its ruler.

“Muley Abderahman Ben Hisham, the present sultan—or, as he is styled by Europeans, emperor of Morocco, although his title in Moorish is sultan—had not as yet visited his sea-ports and extended dominions on the coast, since his accession to the throne of Morocco in 1822, having since that period been fully occupied in consolidating his power in the interior parts of his empire, and crushing his rebellious subjects. The succession to the crown not being fixed in Morocco, the demise of the reigning sultan generally entails upon this unfortunate country a constant scene of bloodshed and contention; and although Muley Abderahman had been enabled to seat himself in comparative quiet upon the throne, yet the rebellions of his subjects, particularly of the Atlas tribes, have fully engaged his attention since that period. His character is bigoted, indolent, and luxurious; possessing few good qualities, and yet not remarkable, as is generally the case, for any very extreme tyranny and cruelty; on which account he is considered, and very naturally so in this country, as a good monarch. Plunder and extortion are so common in Morocco, that they become virtues in comparison with the usual atrocities committed; and of these privileges the present sultan, according to reports, has availed himself pretty largely, in order to replenish his

coffers, and give him the means of consolidating his power. On what a precarious foundation the authority of a despot rests, and how slight are the ties between a tyrant and his slaves, will be seen from the continual state of unquiet in which this country always is, and the constant necessity there exists for the sultan to be moving about to keep his rebellious people quiet. When he leaves Morocco for Fez or Mequinez, the southern provinces are sure to rise in rebellion; and whenever he quits the latter capitals, his departure is generally followed by a revolt in the northern parts of his dominions.”

This gentleman’s usual mode of replenishing his treasury is exemplified by the following instance, “in the case of Amaar, the bashaw of El Garb, whose command extended almost from Mequinez to Tetuan, an extent of district equal to a small kingdom. Some of the mountain tribes having complained against him to the sultan, were informed by the latter that he should be removed provided they would pay 100,000 dollars. This they agreed to do; upon which the bashaw sent word to the sultan, begging that he would on no account agree with them—for that he would give 300,000 to remain; which was consented to. In the mean time, however, the tribes having rebelled, defeated the troops sent against them; upon which the sultan not only stripped the poor bashaw of every thing he possessed, but imprisoned him, and ordered a certain number of strokes of the bastinado to be inflicted upon him night and morning.”

“The away, nevertheless, (continues the author) of the last two or three sultans of Morocco has been mildness itself, in comparison with the horrible enormities and most atrocious acts of cruelty that characterised the reign of Muley Ishmael and his successors; when human beings were slaughtered in sport, and the monarch delighted in being his own executioner, carrying always a gun or a lance for that purpose. In these reigns, the miserable subjects were tortured in the most unheard-of manner; and sawing in two, putting out the eyes, crucifying, burying alive, or being burnt, were usual punishments for the most trifling, or no offence at all. In those golden days—and for aught I know it may still be practised—it was a frequent custom for an individual to buy another of the sultan, if he fancied he was rich, and that he could make any thing by this humane speculation. The way in which it was managed was thus:—The person wishing to make the purchase went before the bashaw or governor of the district, and bargained with him for such or such a person; and when at last they had agreed between themselves as to the price, each party trying to cheat the other in enhancing the probability of gain or loss by the transaction, the money was paid, and a receipt given, which entitled the buyer to the body of the individual bought, whoever he might be, and who was accordingly delivered into his hands. The latter part I cannot better explain than by inserting part of a letter on this horrible system, written by an English merchant who resided at Tetuan in the reign of Muley Ishmael, and which I find inserted in a curious account of a journey to Mequinez in 1721, written during Commodore Stewart’s embassy to that city. ‘Yesterday Mr. Noble and I were passing by the prison, where we saw a man hanged by the heels, with irons upon his legs, pincers upon his nose, his flesh cut with scissors, and two men perpetually drubbing him and demanding money. When

the fellow was not able to speak, they renewed their blows; and this was a bought man, that they gave 500 ducats for, and expected by these tortures to force out of him 500 ducats more. His tortures were so severe, that Noble, when he saw him, cried out, 'O Lord, the blessed fruits of arbitrary government!' Because you had not seen such a thing, I judged this description might not be unacceptable.' Of Muley Ishmael it is related in the same account, that being on an expedition, and coming to a river which his army could not pass, he ordered all his prisoners to be killed, and interwoven with rushes, to form a bridge. It may easily be imagined, during these times, when Christian slavery was in full force, in what way the unfortunate wretches were treated who fell into his clutches, when so little regard was paid to the lives of his own subjects. No person appeared before him without trembling and uncertainty of going out of his presence alive. When he had killed a favourite through caprice or passion, he would sometimes forget what he had done, and make inquiry for the murdered person: and on being told he was dead, he would ask who killed him; to which his attendants would reply, trembling, that they did not know, but supposed it was God's doing. When he chanced, in his haste, to kill any one in mistake for another, as was frequently the case, he would civilly beg his pardon, saying he did not intend to have killed the poor man: and whenever he beat a person soundly, and put him in chains, he was considered in the high road to preferment, as he would generally call on him a few days afterwards, and finding him in prison, would affect to be surprised, and calling him 'his dear friend,' would inquire how he came in that unfortunate plight; and sending him a suit of his own clothes, would place him in some high and lucrative post, which having entered upon in a penniless state, it could be calculated with the greater certainty how much he would be worth at the expiration of a certain time, when he was sure of being again stripped of every thing by his royal patron. During his reign he raised his kingdom to an unprecedented pitch of military renown; and his name struck such terror that he reigned in peace and quietness. It is true that his son, Muley Mahomet, rebelled against his authority, but he was quickly subdued, and his hand and foot being cut off, he died from loss of blood; and Muley Zidan, another of his sons, being then appointed heir to the throne, was soon afterwards strangled by his wives on account of his cruelty. The aged tyrant, Muley Ishmael—for he was past ninety when he died—maintained 2,000 women besides the limited number of lawful wives that his religion allowed. It may well be imagined that his happiness did not increase in proportion to the number of his ribs, and that so large a family did not contribute to increase his domestic comfort: on the contrary, what with their intrigues, jealousies, quarrelling, and endless complaints of each other, they teased and enraged the old man so much, that he would sometimes order his black eunuchs to weed his establishment, as he would term it, and who would accordingly sometimes take off thirty in a day of the most troublesome, by a very expeditious and easy contrivance called geefing. This consisted in twisting a small cord round the neck of the offenders; and in this way going from one to another, the rest were kept by these means quiet for a time. It may be supposed that his issue from so many wives during so long a life was pretty numerous,

having 700 sons able to mount on horseback: of the number of his daughters history does not inform us, for the Moors never reckon women, but it doubtless equalled at the least that of the former. It is to Muley Ishmael that the darkness of complexion of many of the present race of Moors owes its origin; for this politic prince, well knowing how little his own subjects could be relied upon, brought from Guinea considerable numbers of its black population, which he formed into a regular permanent force, exclusively attached to his person, their descendants having ever since constituted the regular body-guard of the sultans of Morocco. The old tyrant's care of their breed is quaintly described, as follows, by the author of 'Stewart's Embassy':—'He is so fond of their breed, that he takes care to mix them himself, by ordering great numbers of people before him, whom he marries without any more ceremony than pointing to the man and woman, and saying, 'Hadi, yi houd hadi,' i. e. 'That, take that,' upon which the loving pair march off as firmly noosed as if they had been married by a pope. He always yokes his best-complexioned subjects to a black helpmate, and the fair lady must take up with a negro. Thus he takes care to lay the foundation of his tawny nurseries, into which they are admitted very young; and being nursed in blood from their infancy, become the executioners and ministers of his wrath, whose terrible commands they put in execution with as much zeal and fury as if they had received them immediately from Heaven; and when quite young are so ready to murder and destroy, that the alkaidas themselves, his officers, tremble at the very sight of them. Their manner is, as soon as the word comes out of his mouth, to seize on the wretch ordered for execution, like so many lions, and by the fury of their looks make a scene very much resembling the picture of so many devils tormenting the damned.' Muley Ishmael died, strange to say, a natural death, and was succeeded by his son, Muley Hamet, with the drunken atrocities of which monster I will not disgust the reader, but close here the account of the barbarian crew."

No wonder that we should afterwards be told—"Tetuan is by no means an agreeable place for a Christian to remain in: at Tangier, from the residence of the European consuls, the Moors have somewhat relaxed from their general insolent bigotry and brutish conduct, and are more polished in their behaviour. It is, however, different at Tetuan, from no Christian having resided there since the year 1770, when the European consuls who had previously lived there were obliged, by an order of the sultan Sidi Mahomed, to leave the town; in consequence, it is said—for there are different versions of the story—of a Moorish woman having been shot by one of them; which so enraged the sultan, that the whole body of Christians was expelled, and he made a vow at the same time that no Christian should ever after reside within its walls."

Since Sir Arthur Brooke left, however, "in consequence of the urgent remonstrance of the English government, a vice-consul was allowed to establish himself there, after great opposition on the part of the inhabitants; and Mr. Price now resides there quite alone, the only Christian who has been allowed to stay for more than half a century."

Of one class of the Jews in the Atlas chain the account is interesting, and we regret we cannot find room for it.

On his way from Tangier to Larache, Sir A.

Brooke describes a very ancient pillar, called L'Uted, which, with the stones surrounding it, bears a striking resemblance to our Celtic remains at Stonehenge, Abury, and elsewhere in Britain. He says:

"That the remains at L'Uted are of the highest antiquity, there can be no doubt; indeed, the very traditions themselves which are current upon the spot, and were eagerly related to me, are strongly in favour of it, singular as they may be in their nature. One of them is, that Pharaoh, king of Egypt, made use of the principal stone or pillar as a peg, and picketed his horse with it on alighting at L'Uted; and another, that at the period of the general deluge, 'when the fountains of the great deep were broken up, and after that the waters began to abate from the surface of the earth,' Noah sent forth a dove from the ark, which first alighted on the pillar of L'Uted."

"It was not (he continues) a little amusing to hear the observations of the Arabs, who crowded into the tent, respecting the object of my coming; which they had no doubt was to discover the treasure concealed within the mound, but which they said it was quite useless for a Christian to search after, since so many talibs and learned men of their own people had failed in their attempts to find it. My simple guest told me the stone grew, and that there certainly was a door near it, but which no one had yet been able to find: he added, what perhaps was not without foundation, that the mound was hollow, and that a stick which had been thrust in in one particular part had penetrated several feet without touching the bottom." The pillar is 16 feet high.

Before leaving Morocco, our countryman offers some remarks on the people, from which we select the following:—

"In person, the Moor is tall and straight, of a commanding figure, and possessing great muscularity of form, with dark eyes, white teeth, a beard like jet, and handsome features, full of a grave expression. His general cast of countenance is Roman; and his lofty dignity of manner is such, that when you see him enveloped in the folds of his snow-white hayk, which falls gracefully over his left shoulder, you might almost imagine a senator of ancient Rome stood before you. How different in other respects are the two characters!"

"If the character of the Moor be examined, it will be found to consist of a compound of every thing that is worthless and contemptible, and the few good qualities he possesses are quite lost in the dark shade thrown around them. Utterly destitute of faith, his vows and promises are made at the same time with such a resemblance of sincerity as rarely to fail of deceiving his victim: truth is an utter stranger to his lips, and falsehood so familiar with him, that dependence can rarely be placed on any thing that he says. Like the catholics, who are accused of upholding the doctrine that no faith should be observed towards heretics, the Moor glories in keeping none with Christians: these tenets are to be attributed to the influence which the bigoted character of his religion has upon him from his earliest years. In his disposition he is cruel, merciless, overbearing, and tyrannical; and benevolence and humanity are strangers to his breast. Proud, arrogant, and haughty, as his general demeanour is, particularly to his inferiors, he is fawning and cringing to those above him, and the veriest slave imaginable, when in contact with those whose power he has reason to be afraid of. Suspicious, perhaps as much from the general uncertainty

of life and property in Morocco, as from his own natural disposition, there is no tie of faith or friendship which is not capable of being dissolved when any thing is likely to be obtained; to accomplish which, he will descend to the lowest flattery, and the most servile acts of cunning wheedling. Liberality and generosity are unknown to him, or if he display these qualities, it is done from a certainty that he shall be well repaid for the exercise of them. It would have filled many of these pages had I related the numerous and almost incredible acts of meanness, even in the most paltry matters, which characterise all classes, but more particularly the higher, without even excepting the sultan himself.

"If the Moor possess few of the virtues of civilised nations, and despicable and worthless as his general character unquestionably is, still he is at least free from many vices which luxury and refinement entail as curses upon the former; and it must be confessed, that the horrible enormities and outrages, the singular pitch of refinement to which vice is carried, and the monstrous shapes it appears in, in our own country, the details of which are so studiously daily blazed abroad, to the destruction of morals, the increase of crime, and the utter subversion of female delicacy and purity, are as rare in Morocco as in other parts where civilisation has made equally slow advances. If the Moor be sensual in his enjoyments, at least propriety and decency are never outraged in the gross manner they are in Christian countries; and he is so scrupulous on this point, that it is considered a rule of decorum that he should never speak of his wives, or other females of his household establishment; and you might almost doubt the existence of the sex, from its being so little seen or heard of. This arises from a sense of delicacy, which one is surprised to meet with in this country. The sex are here on a very different footing from what they are among Christian nations: with the latter their possession of a soul is not a matter of doubt, and their mental and personal qualities excite equal respect and admiration; while the Mahometan woman is regarded simply as an object of sensual pleasure, a mere animal, created for his own enjoyment alone, the bare mention of whom he considers, and not without reason, would be a breach of delicacy."

We shall probably return to Spain, as we owe some arrears to the clever work on that country by the American, Lieut. Slidell; and it may suit us to blend some of his and of Sir A. Brooke's observations together.

The Pledge; or, Castilian Honour. A Tragic Drama, in Five Acts. By James Kenney, Esq., author of many Plays, &c. London, 1831. C. Chapple.

HAVING said what we thought of this translation of *Hernani* on its performance at Drury Lane, our only concern with its publication is to notice the extraordinary statement of the preface.

"The difficulties (says Mr. Kenney) I have had in producing this play on the stage, have been so much a subject of public animadversion, that here to pass them over in silence, would seem, improperly, to disown them:—I say improperly, for reasons which I shall afterwards explain; first briefly stating my cue. After the warmest reception of the play, on due perusal by the gentleman officially appointed by the manager as the umpire of its merits, and a consequent promise to perform it immediately; after having been, in the month of October, read in the

green room, and the parts distributed, the representation was delayed during a period of six months, in the course of which time I was amused with promises repeatedly broken; discourteously avoided by the manager when I sought to remonstrate; and when, by dint of perseverance, I succeeded in doing so, my wrongs were constantly laid to the charge of others, whom I cannot publicly implicate on such doubtful testimony. At all events, the manager alone is responsible to me, to protect and see justice done to a production which he has deliberately accepted, which he might thereby prevent, and in fact did prevent, my taking to another theatre; whence an offer, as he knew, had come to me, to purchase my play outright, provided I had considered myself free to entertain it. The manager, who tells me he is, in such a case, guided and influenced by opinions at variance with his own, or with those he has thought proper to adopt as better than his own, especially when there is good reason to question the impartiality of those opinions, offers me a poor excuse for his injustice in such a declaration of his helplessness and misgovernment. I repeatedly, and most ingenuously, both by letter and otherwise, offered to withdraw my play, in case the first impression of the manager (from whatever cause) had undergone such a change as to induce this continued postponement, or to affect its getting up in a fair and handsome manner, without which his evil anticipations would be an imminent danger of fulfilling themselves. He replied, he had no wish to part with it, and that he would take care it should receive every justice. Yet this, it appears, he could say only from fear of making a mistake, which he might discover in its success at a rival theatre; for, of his liberality and attention to the preparation of the play, when it was got up, the following instances are curious and worth recording. Any reader who may happen to proceed to my fifth act, either through the four first, or by a shorter cut, will there find the description of a scene, some of the exuberant magnificence of which may certainly, without much injury to the action, be retrenched. But he will observe that it is a night scene—that night is its essential feature—that it indicates moonlight—that it is the dispersing of a masquerade—that the dialogue at almost every line alludes to its being night, to the rising moon, to a serenade, happy dreams, falling dews, &c.; what then will be his surprise—and, if he be a dramatist, his horror—to hear that only at four o'clock on the day previous to our first representation, I discovered, by accident, that the scene which was to stand for this, was a common-place villa, producing an effect of noon-day sunshine. Every body else having left the theatre, I remonstrated with the carpenter, who told me that it was to no purpose; that the scenes which had been originally prepared for me had been painted over and used up for other purposes, according to orders; that they had also been ordered to do nothing new for me; that they had made the best shift they could; and that their old stock could positively supply nothing nearer to my intentions. By means, however, of the exertions of Mr. Wallack and Mr. Wilmot the prompter, this extraordinary negligence was repaired, and a satisfactory scene substituted. In the fifth act will also be found allusions, numerous, emphatic, and important, to a black domino:—of that act, this black domino is the theme and argument. Black it must be, 'black as Erebus.' At three o'clock on the day of representation, Mr. Macready requested my presence in the wardrobe for my opinion as

to some parts of his dress. I attended him, and, the points in question being settled, my eye fell upon an isolated domino. It was blue; it does not, therefore, thought I, concern me. An after-thought, however, occurred, on recollection of the sun-shine scene. It was as well to inquire. I did so. It was for Mr. Macready in the fifth act. 'For Mr. Macready!' said I; 'there is some mistake in your orders: that is to be a black domino.' 'It is no mistake,' said Mr. Palmer, the keeper of the wardrobe; 'but there is no such thing in the stock.' 'What then?' I rejoined—'as it is absolutely indispensable—and, were it not so, as it is too late to alter my dialogue, could you not hire one?' 'We have strict orders,' added Mr. Palmer, 'to go to no expense for this play.' 'Then,' said I, 'I will spare your half-crown, and send in one from the first masquerade warehouse.' Mr. Palmer concluded by saying, that rather than I should be so troubled, he would take that responsibility upon himself: he did so, and at the hazard, it appears, of the manager's displeasure, the black domino was at length provided. The reader will judge of the derision which these two extraordinary anomalies, had I not accidentally discovered and prevented them, must have brought upon my fifth act—and make his own conclusion. The risk Mr. Palmer took upon himself in the case of the domino, is not the only favour I owe to that gentleman, he having supplied from his own private property the armour worn by my stanch friend Cooper, as the king, who in vain tried to obtain for his majesty, in the earlier scenes, even a decent diaphanous. The term of my perplexities, however, had now arrived, and a critical trial of my patience it proved. Excited prejudice staring me in front, and impatient zeal for a worthier poet trampling hard upon me in the rear, with the laurel prepared for him, and the condemned night-cap for me, I was at length jostled into the presence of my judges, whose verdict soon added another to the many proofs I had received of their unfailing justice and generosity. This verdict was confirmed universally by the press; and even such journals as had been betrayed, I know not how, into sneers at my importunity and presumption in forcing it upon the theatre, made me, in their reports, more than amends for their error; of which this statement will, I trust, altogether convince them. I am also bound to thank all the actors for their loyal and brilliant exertions on the day of trial, which banished from my mind every feeling but that of charity for the past, and better hopes for the future. If the present statement seems a deviation from this state of feeling, it is that my wrongs have not terminated here: still I have not made it in anger—my feelings at this moment are wholly free from intemperance. These appeals are far from being to my taste, as my reader I think will admit, when I tell him that my opera of 'Masaniello' has been recently printed with an introduction, in which I have suppressed the extraordinary fact (although I now think proper also to publish it), of my never having received, after more than a hundred representations, one shilling of remuneration for it from the theatre: that on the failure of Mr. Price, the committee refused to admit my claim, or to make me the most moderate compensation on behalf of the theatre, though they had been many weeks in possession of the treasury; though during the whole of that season they continued to act the opera for the advantage, and indeed as a principal support of the theatre, and afterwards

handed it over to the present lessees, as the lawful property of the theatre; and all this they did, like Prince Prettyman, 'because they dare.'—It was law, 'crown's quest law,' theatrical law, or, as they thought, law of some sort. The equity of the case was another matter: that I was to seek in a court, whither the loss of three hundred pounds was not likely to drive a poor man out of his senses. It was their *duty* to take every advantage for the good of the theatre, forgetting that they had obtained for Mr. Price, in spite of this paramount duty, the restitution of eighteen hundred pounds of his rent. For what?—Surely not because Mr. Price's claim, under the circumstances, was a fairer one than mine. I repeat it, I state these facts at present as well as those which precede, not in anger, but deliberately I state them, in an honest spirit of self-defence, and in the common cause of my brother dramatists. I state them, because I have found in this theatre an obtuse, an intractable, and an unblushing insensibility to the claims of authors in every way, which is only aggravated by forbearance. I state them, because we have become so signally and so peculiarly the victims of the changed condition of the London theatres, that, at a time when the spirit of reform and justice is abroad, it may seem good to the enlightened and influential portion of the patrons of the drama, that some effort should be made in our behalf, either in the way of legislative protection, or relieving the regular drama from a monopoly so open to abuse. It is for these reasons, that I begin to feel that grievances of this nature, increasing as they are, should no longer be indolently lost sight of, or dissipated as mine have hitherto been, by a good night's sleep, or a walk in the Regent's Park."

What comment can be made on this statement? Can it be true, that a man of Mr. Kenney's talents has ever been reduced to the dreadful situation glanced at in its conclusion; while yet his "*Masaniello*" was enriching the theatre, and his "*Castilian Honour*" was a prosperous drama? Why, the matter is not simply a disgrace to any theatrical proprietors and managers, it is a disgrace to our age and country. But so it is in too vast a majority of cases. Literary labourers are but the aphides to the ants of business, who pinch, and stroke, and draw their life-blood from them, to sustain their wants, and enhance their well-hoarded stores. The winter comes, and finds the former on their bare and withered leaf—the latter in their snug retreat, well provided, well protected, and reckless of what may be the sufferings of the world without. These are the so-miscalled *Mecænaes* of literature—as the fishmonger who skins the eels is the *Mecænas* of fish—the butcher who cuts the lamb's throat and fells the bullock, the *Mecænas* of cattle! Nor, speaking in a commercial sense, do we see that this is to be complained of. The bookseller and publisher, like other persons in trade, has to look to his own interests; and the only thing that contrasts him unfavourably to the mind with any other tradesman, is, that he happens to have to do generally with cultivated men and finer feelings, and that the article he deals in is of so high a nature, that one is taught to expect some of either influence should be imparted to him. This is the fair view of the point. It is absurd to ask persons who embark in traffic for profit, to act the liberal patrons and generous *Mecænaes*—it is still a greater folly, though sanctioned by a famous name, to apply such a title as the latter to ordinary men of

business, because their business lies in selling books.

Dr. Lardner's Cabinet Library, Vol. IV.—Annual Retrospect of Public Affairs for 1831, Vol. II. London, 1831. Longman and Co.

WITH an appropriate and well-executed vignette of the flight of Constantine from Warsaw, by H. Corbould, engraved by E. Finden, this volume will be very generally recommended by the ability of its author. He has given a view of the Belgic revolution, of our own domestic politics and the great changes that have taken place, and of the movements in Spain, Portugal, Switzerland, and Poland, which is not only marked by impartiality and clearness, but distinguished for intelligence and comprehensiveness. Such a production, however, does not require from us any minute analysis; indeed, such a process would but ill illustrate its character; and we think we shall perform our critical duty more satisfactorily towards both the writer and the public, by quoting a few of the passages which can be readily detached, as specimens of the talent displayed in the whole volume. The following quotation from Count Hogendorp is worthy of selection, for the intrinsic value of its information on the question at issue between Holland and Belgium:—

"The Belgians, (says the Count) who pretend to all kinds of liberty, condemned trade to slavery. They never ceased to spur on the government to introduce a prohibitory system, by which they have brought about the ruin of Holland. The Dutch see every day their prosperity decline; and can calculate the day when, under the present system, their ruin will be complete. Holland has risen to the highest prosperity, without assistance from nature and in spite of nature, by her institutions in favour of free trade. Belgium, enriched with all the favours of nature, thinks that she can only thrive by restrictions." Thus, remarks our English author, "the united government, in order to protect the agriculture, the mines, and the manufactures of Belgium, was obliged to adopt a policy ruinous and revolting to the provinces of the north. But this was not all that the trading Dutchman had to endure from a connexion with Belgium. He found new competitors in his commerce, shipping, and colonies, as well as impolitic restrictions on his business, and galling limitations of his markets. He met his Belgic rival, set up with his capital, every where, at home and abroad, in places where he formerly enjoyed an exclusive traffic. He saw Antwerp, with a prosperity which was almost a creation of the union, rising on the decline of Amsterdam, and foreign merchants leaving Holland to settle on the banks of the Scheldt. If the material interests of Holland were thus, in the opinion of the trading portion of the community, sacrificed to a calamitous union with Belgium, the feelings, pride, and patriotism of the Dutch were no less wounded by the irritating and insulting treatment of their national character, language, and institutions, by their southern rivals. Always restless, turbulent, and dissatisfied, vain of his country, bigoted in his religion, and violent in his opinions, the Belgian was a most hateful political associate of the phlegmatic, sober, and loyal Dutchman."

An episode, in which the "*Holy Alliance*" is canvassed, strikes us as being both historically just and politically profound.

"This celebrated league was the natural result of the position in which the allied sovereigns were placed, and the peculiar feelings

with which they were animated, at the termination of the war of 1814 and 1815. They had all seen the most striking vicissitudes of fortune; they had all been conquered in their turn; they had all experienced the insolence of the victor; they had all seen their states more or less dismembered; they had all trembled on tottering thrones, and lowered their crowned heads under the *furca caudina* of military despotism. The tide of conquest had now changed, and floated them on its waves to the capital of their conqueror. A universal shout of deliverance and hope was raised from one end of Europe to the other. The great disturber, who was conceived to be the embodied spirit of Jacobinism,—the explosive matter of revolution,—had been banished to a rock in the midst of the sea; his magic wand was broken, and his assistants dispersed. The people every where expressed confidence in their restored rulers, and anticipated an era of prosperity and freedom. Without much previous piety, the sovereigns who rode out this storm, and profited by the infatuation of their great enemy, might easily ascribe their success to a supernatural interference in their favour. In seeing their hopes more than fulfilled, and their desires more than gratified, it was natural for them to wish to perpetuate so agreeable a state of things, in which the feelings of their people appeared to sympathise with their own; and to give it permanence by some solemn act, which should at once testify their gratitude for past blessings, and their resolution, by the observance of Christian philanthropy, to deserve future support,—in short, some system of social religion, from which projects of conquest or ambition should be proscribed—some pious engagement, in which the maintenance of peace, and the administration of international justice, should be stipulated for, as necessary to the family of nations as well as to individual states—some deed, in fine, in which sovereigns should declare themselves responsible agents, and nations moral existences. Out of these vague dreams of satisfied ambition, and mystic notions of political obligation, sprung the holy alliance; their majesties of Russia, Austria, and Prussia, exclaiming like the disciples in sacred history, 'It is good for us to be here, in this scene of Christian triumph; let us make ourselves permanent tabernacles on the foundation of legitimacy and moral order.' The superstitious character of the Emperor Alexander, who thought that he was converted by the burning of Moscow and the preaching of a German mystic, gave its form to the proceeding; which, probably, had nothing in its first conception either hypocritical, ambitious, or selfish. The people had not, at its publication, shewn signs of discontent, or begun to doubt the fulfilment of those promises which had been made them in the hour of need. The league, therefore, might not originally contemplate the institution of a European police, or the necessity of the great powers watching the internal condition of every state. Had Buonaparte not returned from Elba, it might have been soon forgotten amid the quarrels which the division of the spoils of Poland and other countries was about to engender among the pious plunderers: but this event gave a new warning of the dangers of disunion and a new incitement to the extension of the conservative alliance. Hence have sprung the various congresses of Aix-la-Chapelle, Laybach, Troppau, and Verona, in which the original members of the alliance met in person with their ministers, to settle the destiny of the world on their own prin-

ciples of legitimacy and order. These principles were, first, that no state should be allowed to change its institutions, or to remodel its form of government, unless the impulse of reform was given by the ruling power itself; or, in the language of the declaration of Troppau, 'proceeded from those whom God had intrusted with authority:' and, secondly, that the holy alliance, either by a joint expedition or by a separate armament, was called upon to interfere to put down changes springing from any other source, the result of military revolt or popular insurrection. On these principles Austria was employed as the instrument for overthrowing the constitution of Naples and suppressing the revolution of Piedmont, in 1821; and France received a commission for invading Spain and abolishing the government of the Cortes, in 1823. On the same principles, had the danger of a general conflagration been less menacing from attempted interference, the government, which was established behind the barricades of Paris last autumn, would have been outlawed, and the authority of Nassau would have been restored in Belgium. Already the immense military force of Russia had begun to move westward; and tribes of Cossacs, Calmucs, and Tartars, were preparing for an expedition to the Rhine, when the Polish insurrection was thrown across their line of march. On these principles, the ordinances of Charles X. would have been substituted for the new charter of France, and Louis Philip must have ceded his place to Henry V. As the object of this happily extinct alliance was to overpower insurrectionary movements by arms, without any reference to the danger of vicinage or the vindication of their own rights, so all the means of police and prevention were thought allowable in the previous stages of the threatened disorder. Thus we have seen political reports made to the Emperor Alexander on the state of Germany, and Russian agents paid to watch over the universities and secret societies of the south of Europe. Thus we know that the periodical press of Geneva has been controlled by orders from St. Petersburg; and that a professor of law at Lausanne was sent away from that town, because he was too democratic for an absolute monarch in explaining the principles of the republic in which he resided. If this system had not been opposed by the spirit of the age, or annihilated by a great convulsion, the picture which Gibbon so powerfully draws of the stagnation of political improvement, and the impossibility of escape for political innovators or offenders, which rendered the universal authority of the Roman empire a frightful calamity, would have been realised in Europe by the coalition of despots, which for the last fifteen years have threatened it with their interference. The grand design of Henry IV. of France, which was only a grand romance in politics, may have served in some measure as a model to this alliance."

We now proceed to extract some observations nearer home, and which equally bear the stamp of the writer's mind.

"The meeting of parliament in England is always an object of some interest; but the meeting of a new parliament, in a new reign, in a new and extraordinary state of Europe, with new projects to be proposed, and new characters to exhibit, could not fail to excite extraordinary interest and curiosity. Public opinion, it is true, in this country, is not guided by the legislature (to which it is as often opposed as consenting); but the assemblage, from

all parts of the nation, of a body of men who make the course of political events their study, who come to the house invested with that local consequence which their wealth or rank gives them in their own districts, who are conceived to be good advisers in public affairs, because they have a great stake in the public prosperity, and who, whatever be their wisdom or inexperience, possess at least the faculty of embodying their joint opinions in authoritative acts, is generally sufficient to give a decided direction to the minds of the upper and ruling classes of society. Whatever meets with the general concurrence of such an assembly, or receives the sanction of its majority, is considered as adjudicated by a tribunal, against which there is no effectual appeal. Their speeches save the indolent the trouble of examination, the diffident the perplexity of doubt, and the selfish the dangerous error of taking the wrong side; while their opinions hold up to all a flag or banner round which political parties may rally, or against which the weakest, by withdrawing their forces from a desultory warfare, may direct their combined attack. The opinions or sentiments of an individual, which would scarcely be listened to with patience in private company, which would attract no attention in a club or tavern, become of consequence when supported or echoed by a multitude, whose votes can give them validity. In the very concentration of opinion, independently of its justice, there is a power which almost changes its nature into conviction; as the rays of a wintry sun, which when scattered are scarcely felt, may be made, by passing through a burning-glass, to consume a diamond. It does not matter so much what figure goes before; if there is any figure at all, the number of ciphers afterwards tell.

"The state of political parties at the opening of the new parliament, it is difficult to describe or to classify. The settlement of the Catholic question by the ministry, with the assistance of the Whigs, and against the views and remonstrances of a great portion of the Tories, who had usually supported them, had broken to pieces the former cast of parties, and no definite arrangement of the scattered fragments had yet been formed. The latter could not be immediately brought back to the government and rallied round it, as on any slight or temporary estrangement. The pride of some had been too deeply wounded by the desertion of their leaders—by the betrayal of their confidence—and the preservation of the secret of the intended change, till the minister brought the enemy into the camp. The habitual associations of others had been too rudely torn asunder by striking the flag of intolerance, which had so long waved over their heads in parliamentary majorities and party festivities. And, perhaps, the better feelings and more solemn convictions of a large body of them had been alarmed at dangerous concessions—which they ascribed to fear; or at an apparent surrender of principles—which they attributed to interested apostasy. It was therefore known that this party would still maintain that hostility to the ministers which had been produced by their former differences. Some of them had approached nearer the popular cause, and others had actually declared themselves reformers, in consequence of their treatment by the administration, and the adoption of measures by parliament which they deemed so pernicious. In finding an additional argument for reform in the conduct of the house of commons on this occasion, they agreed with a great body of the public; for it cannot be denied, that if the

measure had been less unequivocally good, or had been less illustrated by repeated discussion, the bold stratagems and profound secrecy, so inconsistent with the open course of a representative government, which had been employed, and the rapid change of a minority into a majority at the dictation of a minister, would have rendered it one of the most dangerous and discreditable projects ever carried through the legislature, and consequently have furnished the strongest arguments for a change in the representation. On the other hand, the party who had supported the government in passing the Catholic bill had subsequently been treated with too much coldness and suspicion by the ministers to remain their firm allies. The Whigs had allowed them to go on by sufferance; they had expected a call to aid them, but had been disappointed; they hoped during the life-time of the late king for some attempt at amalgamation, but without much confidence that it would succeed, owing to the prejudices which his majesty was known to entertain against their leaders. The new reign, under which these prejudices did not exist, presented another opportunity of effecting a coalition of parties; but still no desire of sharing office with their rivals was manifested by the noble duke at the head of the administration and his colleagues. Seeing, then, that his grace meant to remain in power, and to rule alone under the new sovereign as under the last, without any change of system or any mixture of party, they began to declare loudly their dissatisfaction. Indications of more active hostility were displayed in the pamphlets and other publications of the Whigs, from the hustings during the elections, at public meetings, at festive celebrations, and on all occasions where politics or party discussions could be introduced.

"The debate (on the king's speech) which ensued in both houses was extremely interesting and animated, displaying on the part of the opposition an earnest application of important principles at a most momentous crisis,—an uncompromising hostility to the administration of the Duke of Wellington,—and no very equivocal hopes of being able to overturn it. Mr. Brougham in particular, whose recent return for Yorkshire was both the triumph of his overwhelming popularity, and a great accession to his parliamentary consideration, assailed the policy of the speech, and the composition of the cabinet, with the tiger-spring of his excited energy. He had thrown down the gauntlet to the ministers on the hustings at York; he had preached a Whig crusade against them at public meetings and political dinners during the recess; he had displayed his desperate hostility in vigorous manifestos through that portion of the press which he could command; and he now appeared in the House of Commons to lead on the war, with the great seal in his view, and followed by a trusty band of reformers, resolved to storm official power, or to conquer constitutional changes.

"The formation of the ministry, expeditious as it was, was said to have been embarrassed and delayed by the conduct of the chief opposition leader in the House of Commons, who had overturned the previous cabinet. Desirous of place, but equally desirous of the reputation of despising it; devoured with the flames of ambition, but covering his ambition with the veil of self-denial; resolved to have the highest prize in his profession or none, and yet allowing it to be supposed that he would decline it if offered; formidable to his friends by his reputed indiscretion, and more formidable to his

enemies by the activity of his talents; almost equally dangerous to be obliged or to be neglected; indulging in the wanton caprice of a power which he knew was now necessary to any ministerial arrangement, and yet shrinking from a declaration of his own claims to preferment, he rendered doubtful for some days the success of Lord Grey's ministerial negotiations. His friends admitted his importance to the extent of doing nothing without his concurrence, because his opposition might be dangerous to the stability of their structure; but they could not at first consent to place him on its highest pinnacle, because he would present too broad a mark for their enemies to fire at. In pretending to weigh the representation of Yorkshire against the great seal, he only resolved to retain the former because he was not pressed to take the latter; and employed the menace of a reform in the House of Commons, to stimulate the premier to call him out of it. His irresistible energy in exposing the last ministry, in parliament, at public meetings, and through the press, had, combined with events, been one of the chief causes of their overthrow; and it was concluded that no other ministry could withstand his opposition. The alleged defects of his character, as regarded judgment, steadiness, or profound knowledge of his profession, were properly appreciated by every body: but the energy and capacity of his mind were traced in such a wide range of action;—he had done so much in diffusing education, encouraging science, pressing legal reform, and defending the rights and liberties of his fellow-citizens;—his name was so often seen in connexion with literature, politics, forensic and parliamentary eloquence;—he was so universally feared or admired for the withering power of his sarcasm, and the overwhelming force of his declamation;—and by all these means he had acquired so great a popularity, that no set of ministers, coming in on popular principles, could dispense with his aid, or encounter his hostility. As soon as he was offered and had accepted the seals, the cabinet was formed. In three hours after Lord Grey and his colleagues had had their nominations formally sanctioned by his majesty, his lordship made a speech in the House of Peers, in which he declared that the principles of his government should be economy and retrenchment at home; non-intervention with the internal affairs of other states; and a reform in the Commons' House of Parliament. The announcement of principles so opposite to those hitherto acted upon, produced the happiest effect on the temper of the nation. Satisfaction and confidence every where succeeded to suspicion, discontent, and alarm. All parties seem disposed to give the new cabinet credit for their good intentions, and waited with impatience—but without distrust—for the development of their plans. They easily obtained the necessary time to mature them; and after a short session, in which little business of importance was transacted except the passing of the regency bill, on account of the necessary absence of some of the ministers, for the interval between the time of their accession to office and their re-election, parliament adjourned from the 23d of December to the 3d of January."

We could easily multiply examples; but these will surely be sufficient to shew that the subjects are fairly and ably treated, and the work well deserving of popularity.

Standard Novels; No. III. The Spy. By J. F. Cooper, author of "the Pilot." London, 1831. Colburn and Bentley.

THIS tale, certainly one of the very best of

Cooper's works, has a new preface by its author, in which he states that none of the various suppositions which have referred the character of Harvey Birch to different individuals, are correct. We give his own account.

"Mr. — had occasion to employ an agent whose services differed but little from those of a common spy. This man, as will easily be understood, belonged to a condition in life which rendered him the least reluctant to appear in so equivocal a character. He was poor, ignorant, so far as the usual instruction was concerned, but cool, shrewd, and fearless by nature. It was his office to learn in what part of the country the agents of the crown were making their secret efforts to embody men—to repair to the place, enlist, appear zealous in the cause he affected to serve, and otherwise to get possession of as many of the secrets of the enemy as possible. These he of course communicated to his employers, who took all the means in their power to counteract the plans of the English, and frequently with great success. It will readily be conceived that a service like this was attended with great personal hazard. In addition to the danger of discovery, there was the daily risk of falling into the hands of the Americans themselves, who invariably visited sins of this nature more severely on the natives of the country than on the Europeans who fell into their hands. In fact, the agent of Mr. — was several times arrested by the local authorities, and in one instance he was actually condemned by his exasperated countrymen to the gallows. Speedy and private orders to his gaoler alone saved him from an ignominious death. He was permitted to escape; and this seeming, and indeed actual, peril was of great aid in supporting his assumed character among the English. By the Americans, in his little sphere, he was denounced as a bold and inveterate Tory. In this manner he continued to serve his country in secret during the early years of the struggle, hourly environed by danger, and the constant subject of unmerited opprobrium. In the year

Mr. — was named to a high and honourable employment at a European court. Before vacating his seat in congress, he reported to that body an outline of the circumstances related, suppressing the name of his agent, from policy, and demanding an appropriation in behalf of a man who had been of so much use at so great personal risk. A suitable sum was voted, and its delivery was confided to the chairman of the secret committee. Mr. — took the necessary means to summon his agent to a personal interview. They met in a wood at midnight. Here Mr. — complimented his companion on his fidelity and adroitness, explained the necessity of their communications being closed, and finally tendered the money. The other drew back, and declined receiving it. 'The country has need of all its means,' he said; 'and as for myself, I can work, or gain a livelihood in various ways.' Persuasion was useless, for patriotism was uppermost in the heart of this remarkable individual; and Mr. — departed, bearing with him the gold he had brought, and a deep respect for the man who had so long hazarded his life, unrequited, for the cause they served in common. The writer is under an impression that, at a later day, the agent of Mr. — consented to receive a remuneration for what he had done; but it was not until his country was entirely in a condition to bestow it." Mr. Cooper is himself ignorant of the Spy's real name.

The frontispiece, and, better still, the very

original and clever vignette, do credit to the rising, we should say from the academic prizes he has carried off, the eminent, talents of Mr. M'Clise. The printing is careless.

Family Library. Dramatic Series, IV.
Æschylus. Murray.

MUCH information relative to Athenian theatricals is contained in the introductory pages of this volume. The rise and progress of the Greek drama, the nature of the performances and theatre, are judiciously gathered, principally from the "Theatre of the Greeks," and thrown into the popular form which so interesting a subject alone required to secure its general perusal. The lofty old tragedian is made to put his best buskin forward, in so much of Potter's version as is calculated to convey a correct notion of his style, and carry along the fable of the play uninterrupted. The powerful designs of Flaxman adorn the work, and give a strong idea of the stately bearing of the characters, and bring the dramatic groups vividly before the eye. The English reader may here gain a fair notion of the Greek drama, at the trifling trouble of reading a duodecimo, and be delighted at the same time with these exquisitely imagined designs.

The London Catalogue of Books, with their Sizes, Prices, and Publishers; containing the Books published in London, and those altered in Size or Price, from 1810 to Feb. 1831. 8vo. pp. 336. R. Bent.

A REPERTORY most diligently and accurately compiled; and consequently of great value to the traders in and buyers of books. It is not only a guide for the present day, but the foundation for a standard in times to come. It is also a literary curiosity, as preserving the names of a thousand publications, of which the moiety may already be classed among scarce works, and for which any future search will be utterly fruitless. Here they live in catalogue life,—in 1931 only let some collector of trash look for them!!

A BIT OF A CLEARANCE.

To write separate notices of every little work sent to us is impossible; and publications of teachers, &c. &c. are especially so numerous, that they are rather the advertisements of rival schools than literary candidates for review. But as we wish our pages to form as complete a record as may be of every class of literature, we shall run over (to be continued occasionally) a parcel of the slighter volumes which lie upon our table, and do not seem to demand more than a just character.

Archbishop Secker's Lectures on the Catechism; arranged in Questions and Answers, for the Use of Schools and Families. 2d edition. 12mo. pp. 246. Longman and Co.

THIS publication enhances the value of Secker's Lectures—always prized by those engaged in the education of youth. The long sentences of the original are judiciously subdivided; and the questions prefixed to the divisions are judicious, and well calculated to impress the mind. Previous to confirmation, no book can be more useful to the catechumen about to appear before the bishop.

The Welsh Interpreter, &c. By Thomas Roberts, Llwynrhudol. Pp. 147. London, S. Leigh.

FOR a work from Llwynrh—et cetera, this is a very intelligible and pronounceable Interpreter. In truth, it is a nice little vocabulary of

the Welsh tongue; and for all tourists who may (and who would not?) prefer a trip through Wales, in the first instance, at any rate, to a continental excursion, it will be found an excellent instructor. With it in hand, even a Cockney might be able to direct a driver, say the civil thing to a milk or chambermaid; and (we are not sure) hold colloquy with the goats, who represent Pan and the satyrs in this picturesque and classic portion of Britain. To a person thus instructed, *Dim Saesneg* (I don't understand English), will be no bar; he may call for *Cig moch ac wyal* (eggs and bacon), and have 'em; in short, he may travel in beautiful and interesting Wales, and make himself understood where his English would be Hebrew to the Celtic race around him. A middle column, with the pronunciation, must be very useful; though, for our lives, we would as soon try the original aggregates of consonants as their vowelled translations.

Leigh's Guide to Wales and Monmouthshire. 12mo. pp. 356. London, S. Leigh.

LIKE all Mr. Leigh's publications, neat and excellent of its kind. We know no pleasure we could more envy than a tour through Wales: and to any one who is disposed to enjoy that delightful treat, we recommend this volume.

Outlines of the Ancient History of Medicine, &c. By D. M. Moir, Surgeon. 12mo. pp. 278. Edinburgh, Blackwood; London, Cadell.

QUÆRE, whether the title should not be "the History of Ancient Medicine?" for such this is, from the fictions of mythology to the close of the Arabian school, about the middle of the 13th century. It is a fair digest of the subject: a work fifty times more useful, and another fifty times more entertaining, might be written on the same topic—the latter, however, descending far lower in the tide of time. Who cares, now o' days, for the fooleries of old (we beg pardon, of ancient) doctors? We have enew in our own day to amuse us. Yet it is a lesson to trace in these venerable gentry, not merely the germs, but the actual practice, of the most renowned modern discoveries and improvements! For this alone we would warmly recommend Mr. Moir's book.

French Poetry for Children. By L. T. Ventouillac. 18mo. pp. 96. London, S. Law. A very pretty selection of French poetry for children; by a gentleman whose higher works on education and French literature have deserved and obtained our praise.

The Story of Geneva, from Ariosto. London. Pp. 65.

THE episode well enough rendered in indifferent Spenserian.

ARTS AND SCIENCES.

ROYAL INSTITUTION.

AT the last evening assembly, Mr. Lindley, the professor of botany in the London University, delivered some observations on the "Pitcher plant," which he illustrated by several splendid drawings of the plant itself. After noticing the opinions of Linnaeus and Sir James Edward Smith, both of which distinguished men appeared to be unacquainted with the properties and real uses of this curious botanical production, Mr. Lindley confessed that the researches of later botanists left these important points as much undiscovered as ever. The supposition that the pitcher plant was

intended as a receptacle for water in times of great drought,—an opinion, by the by, entertained by botanists of great experience,—Mr. Lindley seemed to think could not be well founded, inasmuch as the plant chiefly luxuriated in the marshes of the Indian archipelago, of China, and parts of the East Indies. The liquid contained in the pitcher plant, when opened, was acid, and became more and more so as the process of evaporation proceeded: the basis was composed of minute crystals of the oxide of soda. — On the library-table were specimens of the tools employed by Mr. Marsh in perforating glass: their practical use was also illustrated. They consist of pieces of three-edged handsaw files: these, being of cast steel for the most part, retain an exceedingly fine point when ground. All that is required in the perforation, is to impinge the pointed steel repeatedly against the glass, over the spot intended to be perforated, using the utmost caution in the process. In the first instance the perforation never exceeds the diameter of a pin's head, but may gradually be increased at pleasure, upon every description of glass.

The Institution has elected Mr. Ritchie professor of experimental and natural philosophy: since the death of Dr. Thomas Young, no gentleman has been appointed to this situation, if we except Professor Millington to mechanics. That in Mr. Ritchie will be found an able and persevering successor to Dr. Young, the council of the Institution, we believe, are fully convinced. Mr. Brande has been re-appointed to chemistry.

GEOLOGICAL SOCIETY.

R. I. MURCHISON, Esq. president, in the chair. — The reading of a paper, entitled "Notes on the secondary formations of Germany as compared with those of England," by the president, was commenced. Donations were received.

ZOOLOGICAL SOCIETY:—ANNIVERSARY MEETING.

LORD STANLEY in the chair. — The details of the management and progress of this popular Institution during the past season have been noticed so fully in our monthly reports, that a brief *précis* of the annual report of the council, which was read at this meeting, is all that is necessary on the present occasion. The most important and gratifying event connected with the general interests of the Society during the past year, was the intimation, on the part of his Majesty, of his pleasure to become the patron of the Society. The report noticed the resignation of the Marquess of Lansdowne, who had been president of the Society for the last five years, and the resolution of the council to propose him at the next general meeting as an honorary member. It also spoke of the advantages likely to accrue to the Society and to science in general, from the appointment of a committee of science and correspondence. Passing over a few details respecting the settlement of the by-laws, it noticed the appointment of Mr. Decimus Burton as architect of the establishment, at a fixed salary of 150*l.* a-year. The donations to the menagerie since the last anniversary were stated as too numerous to be detailed in the report: particular mention, however, was made of his Majesty's splendid present; likewise of three black alpacas by her Majesty; of a beautiful Persian lynx, by H. R. H. the Duke of Sussex; and some others. The donations to the museum were also numerous, and of much importance.

The utility of the Society's farm, as a relief to the animals which had suffered from the unhealthiness of the gardens, had been evinced by the restoration to health of several which were removed to Kingston in a sickly state. At this establishment a large collection of species and varieties of gallinaceous birds was formed; the breeding of these had commenced, and might be expected to afford information on points of utility, of curiosity, and of science: and results confidently expected as to the comparative quality of various birds for the table. Experiments were also in course to ascertain what kinds are best suited to the office of nurses in rearing more tender birds; while the inuring of foreign species to our poultry-yards was also on trial. Finally, it appeared that, though the Society's receipts in 1827 amounted to only 4,079*l.*, in 1830 they were 15,806*l.*, and that the balance in favour of the Society upon the actual receipts and payments in the past year was 767*l.* 6*s.* 10*d.* The number of visitors to the gardens last year was 224,745; to the museum 14,323. The total increase of *fellows*, including *ladies*, (hail-fellows well met?) within the last year, was 232: the present number is 1,814. After a few unimportant remarks, the report was unanimously adopted. Lord Stanley was elected president, and a council for the ensuing season was appointed. We ought to have stated that the meeting was held in the theatre of the Royal Institution.

LITERARY AND LEARNED.

ROYAL SOCIETY.

HIS R. H. the Duke of Sussex in the chair. — A paper was read, entitled on "Nodal lines of sonorous bodies," by Michael Faraday, Esq. Captain Manby was elected a fellow. M. Leopold von Buch presented his work, illustrative of remarkable petrifications. Sir James South has invited such of the fellows of the Society as are interested in the subject to view the dome of his Observatory for his splendid equatorial, any day between twelve and five. Some amendments and alterations in the Society's rules are contemplated to be made: the last meeting of the council, which was summoned on this subject, was very fully attended, and sat four hours, during the whole of which period H. R. H. presided. Two important motions stand for discussion; the one, that the number of black balls to exclude on the ballot of candidates for election be diminished; the other, that it is the opinion of the committee that it will be expedient to obtain a new charter, which shall limit the Society to a definite number of fellows.

SOCIETY OF ANTIQUARIES.

HUDSON GURNEY, Esq. in the chair. A. Fountain, Esq. exhibited a female bust, in brass, from the collection of his ancestor, Sir Andrew Fountain: it was unaccompanied by any description, but appeared to be of the time of Edward VI. or Mary, and was well executed. Mr. Ellis, by permission of the Bishop of Llandaff, laid before the Society three letters, addressed to Sir Wm. Morice, accompanied by some observations illustrative of the history and politics of the commonwealth and the reign of Charles II. Cromwell, it appears, on some occasion, addressed the house, begging not to be understood as *dictating* the measures he wished to bring forward, but rather as *advising*, as their humble servant, and strenuous well-wisher to the state; but subsequently, in the council, he assumed a very different tone,

and dictated a resolution, in pursuance of which, officers were the next day placed at the doors of the house, and all members who would not sign a declaration consonant with his views were not permitted to enter; and one of the letters produced contained some curious arguments (a little jesuitical) to prove that, under the circumstances, there could be no sin in signing the declaration required, and afterwards, in the house, opposing the proposed measure. Another of the letters from the Duke of Courland was principally curious from his offering Sir Wm. Morice a bribe of 6000 florins for his good offices with King Charles II.

The chairman announced a resolution of the council, that the names of all members more than two years in arrear of their annual subscription would be suspended in the meeting-room, at the resumed meetings in November, after the recess.

KING'S COLLEGE.

THE second annual general court of the governors, &c., was held on the 29th ult.; the Archbishop of Canterbury in the chair. A report was read, which stated that his majesty had graciously declared himself the patron of the institution. Such progress had been made in the buildings of the College, during the last year, as to satisfy every expectation of the council; and, unless some unforeseen impediment should occur, the college would be opened, in both departments, in the month of October next. The want of funds had prevented the completion of the front towards the river, which must be done by the summer of 1834, for the accomplishment of which a renewed effort was required by the friends of the institution. The office of principal, upon whom, in a great measure, would devolve the religious instruction of the students, had not been filled up; but the following appointments, most, if not all of them already mentioned in the *Literary Gazette*, had been made.

In the School.—Head Master, Rev. J. R. Major, A.M.; Second Master, Rev. Joseph Edwards, B.A.
Classical Literature, J. Austin, Esq.; Mathematics, Rev. T. G. Hall, M.A.; Natural and Experimental Philosophy, Rev. H. Mosely, M.A.; Natural History, James Rennet, Esq. A.M.; Political Economy, W. N. Senior, Esq.; Jurisprudence, John J. Park, Esq.; Principles and Practice of Commerce, Joseph Lowe, Esq.; Geology, Charles Lyell, Esq.; Botany, G. J. Bennett, Esq.; Chemistry, J. F. Daniell, Esq. F.R.S.; Surgery, J. H. Greene, Esq. F.R.S.; Anatomy, Herbert Mayo, Esq. F.R.S.; Theory of Physics, B. Hawkins, Esq. M.D.; Practice of Physic, F. Hawkins, Esq. M.D.; Midwifery, R. Ferguson, Esq. M.D.

The following scale of payments for students has been fixed: in the college—students admitted for general education, to comprise religion and morals, classical literature, mathematics, logic, history, and English literature, when nominated by proprietors, 21*l.* per annum; when not so nominated, 26*l.* 5*s.* per annum. The fees for lectures not comprised in this course, not yet determined. In the school—the course of education will include religion, morals, Greek, Latin, and French, arithmetic and elementary mathematics, history, geography, English composition, &c.; and the terms, for a pupil nominated by a proprietor, 15*l.* 15*s.* per annum; for a pupil not so nominated, 18*l.* 18*s.*

In providing collections, apparatus, and books, for the use of the lecture-rooms, the council were proceeding with every regard to economy consistent with what was necessary to illustrate the lectures; and the total sum contributed by donation had amounted to 54,965*l.* 7*s.* 6*d.*, of which 52,647*l.* 5*s.* 3*d.* had been received. The whole number of shares of 100*l.* taken had been 753; and the whole instalments paid on

559 shares. Fifty-one shareholders had expressed their intention of not paying any further instalments; and the representatives of five deceased had also refused. The council regretted that so many persons should have declined fulfilling those engagements, on the strength of which they had entered into contracts to a large amount for the erection of the college; but still hoped they would reconsider the determination. The general court unanimously adopted the report.

THE LITERARY FUND.

THE Literary Fund had, as we hoped, a brilliant anniversary on Wednesday; the Lord Chancellor in the chair, and around him, as well as in various parts of the hall, a number of distinguished individuals, among whom were the Duke of Somerset (the president of the Fund), the Earl of Portmore, the Earl of Selkirk, Lord Mahon, the Right Hon. R. Grant, H. Bulwer the member for Coventry, the Attorney General, Sir M. A. Shee, Sir W. Beechey, Sir J. Wyatville, Sir John Swinburne, Sir John Malcolm, Sir W. Clayton, Chandos Leigh, Esq., Henry Ellis, Esq. Of poets, Sotheby, J. Montgomery, Milman, Croly, Allan Cunningham, &c.; other popular writers and artists; and most of the principal publishers and booksellers of the metropolis.

On the removal of the cloth, "the King" was drank with enthusiastic applause, and, in this meeting at least, with disinterested and unmercenary loyalty; for, we regret to say, his Majesty has been obliged to abridge the royal allowance made during the quarter of a century by his munificent predecessor.

After the other usual loyal toasts, the Lord Chancellor, in proposing "prosperity to the Literary Fund," addressed the company in an admirable speech, in which he delineated the independence of the true literary character, so essential to its existence, and yet so often injurious to its worldly interests. He spoke of publishers and booksellers, with all courtesy and esteem, not as the patrons of literature (which they had been called by Dr. Johnson), but as the ministers of its only patron, the public; and professing himself to be a zealous, though humble follower of literary pursuits, warmly recommended this benevolent Fund to the support it so pre-eminently deserved. This address was frequently interrupted, and its close hailed, by tumultuous plaudits.

Mr. Croly, one of the registrars, as the organ of the Society on this occasion, also advocated the cause of the charity in an eloquent appeal.

Other toasts, suited to the festival, were most effectively introduced by the chairman, and called up the Duke of Somerset, Mr. Sotheby, Sir M. Shee, Mr. Grant, the Attorney General, Lord Selkirk, Lord Mahon, Mr. Milman, Sir John Malcolm, Dr. A. T. Thomson, and others, whose several appropriate addresses were loudly applauded.

The health of Sir B. Hobbouse (one of the best friends of the Institution, and long chairman of the committee) was not forgotten; but there was no one present to acknowledge the tribute.

About eleven o'clock the Lord Chancellor retired, and Lord Portmore took the chair, to prolong the enjoyments of the evening for another pleasant hour. The subscription* was

* It ought to be observed, that the same delicacy which marks the proceedings of this Society in administering relief to the distressed, is copied at their public anniversary. There are no solicitations for subscriptions—the whole is left to the feelings of the meeting; and several weeks sometimes elapse before the full amount can be ascertained, as the secretary is daily receiving donations

good—the musical department, under Hawes and Broadhurst, delightfully managed—the dinner and wines a credit to Mr. Cuff. We have never seen a public entertainment more entirely gratifying and satisfactory in every respect.

ROYAL ASIATIC SOCIETY.

SIR GEORGE STAUNTON, Bart. in the chair.—There were presented to the Society a collection of valuable Siamese and other MSS., procured by Mr. Fullarton, governor of Penang; a drawing and description of the tomb of Alyattes, the father of Croesus, near Sardis, by Dr. Hall; an engraving of the delivery of the ratified treaty of 1790 to Madhu Rao Peshwa, by the English ambassador, presented by Mr. Huttman. Sir Alex. Johnston, Mr. Baber, and other members of the Society, also made some valuable donations connected with oriental literature and art. The paper read was entitled, "A sketch of the constitution of the Kandyan kingdom," communicated by Sir Alex. Johnston. The portion read comprised an account of the power and authority of the king, and also of the *adikars*, or noblemen of the highest rank, and the extent of their jurisdiction: to which succeeded a description of the elephant department, including an account of the method of catching and taming wild elephants. It was announced, that the anniversary meeting of the Society would be held on the 7th of June. The Abbé Dubois, formerly missionary in the Mysore, was introduced and admitted a foreign member.

MONTGOMERY'S LECTURES.

THE poetical genius of the author of the *Pelican Island*, the *World before the Flood*, &c., is too universally admitted for any critic now to do more than throw the mite of his praise towards the monument already erected by public gratitude. A life devoted to the study of one art, surely entitles a poet to have opinions thereon; and Mr. Montgomery's lectures are equally valuable for the feeling they evince, and the judgment they display. That on Tuesday last (the third of a series of six, delivering at the Royal Institution) abounded in nice discrimination and beautiful expression. We were particularly struck with one very fine and novel image—the lecturer was speaking of the difference between merely acquired knowledge and that inherent gift so well called inspiration. "The poet," he said, "goeth forth, even as Isaac, to meditate in the field at eventide,—and Rebekah lifted up her eyes, and when she saw Isaac, she lighted off the camel; and she took a veil and covered herself." Even thus," said Mr. Montgomery, "does beauty come upon the solitude of the poet—hidden at first as with a veil; but assured that she shall be both sought and won." The sacred writings furnished him with another admirable illustration. "Poetry lies not so much in the object itself as in its associations. One weapon, hallowed by some ennobling memory, stirs the heart more than all the artillery in the Tower. The sword, while by the side of Goliath, was but an instrument of bloodshed; but religion lent its blessing to the blade when, in the

which could not be given in the room. Yet, between 300*l.* and 400*l.* was, we believe, subscribed on this occasion, including 25*l.* from Lord Brougham; 75*l.*, the price of a MS. by Mr. James, the author of *Richelieu*, &c., presented to the charity through Mr. Jordan, and purchased by Messrs. Colburn and Bentley at the auction; and 40*l.* for a legacy of 50*l.* of Mr. Bulmer, the printer, a subscriber to the Fund from its origin, and a supporter who very rarely missed an anniversary till his death. Good examples, these!—Ed. L. G.

hands of David, it had smitten off the head of the giant, and executed the righteous judgment of God." The passage of the children of Israel through the Red Sea, both as told in the simple historical narrative, and enlarged upon in the choral hymn of triumph, had its splendid and energetic beauty pointed out, in a manner that shewed how well it was understood by the commentator. We most cordially recommend these lectures to our readers: if in hearing them, their taste is not heightened and refined, their attention more awakened to the beautiful, and poetry to them a thing of livelier interest, and yet of more daily occurrence—the fault will be with themselves, not with Mr. Montgomery.*

FINE ARTS.

EXHIBITION OF THE ROYAL ACADEMY.

(Second Notice.)

No. 162. *Caligula's Palace and Bridge*. J. M. W. Turner, R.A.; No. 169. *Salisbury Cathedral, from the Meadows*. J. Constable, R.A.—Fire and water. If Mr. Turner and Mr. Constable were professors of geology, instead of painting, the first would certainly be a Plutonist, the second a Neptunist. Exaggerated, however, as both these works are,—the one all heat, the other all humidity,—who will deny that they both exhibit, each in its way, some of the highest qualities of art? None but the envious or ignorant.

No. 7. *Subject from the Merchant of Venice*. G. S. Newton, A.—Rather defective in drawing, especially the countenance of Portia; but, nevertheless, an exceedingly clever and pleasing picture.

No. 18. *Hunt the Slipper*. A. E. Chalon, R.A.—The amusement (so happily described in the *Fear of Wakefield*) is scarcely consistent with the character and costume of the party engaged in it. It looks as if the gay story-tellers of Boccaccio, having arrived at the end of their narratives, had suddenly burst into a game of romps. The colouring is brilliant, but there is a sad want of keeping in this picture.

No. 38. *A First-rate going down the Channel; the Land's End and Longship's Lighthouse in the distance*. W. Daniell, R.A.—The quotation from the *Corsair* is the best comment on this fine work.

"She walks the waters like a thing of life,
And seems to dare the elements to strife;
Who would not brave the battle-fire, the wreck,
To move the monarch of her peopled deck?"

No. 63. *A Storm*. C. Stanfield.—We are happy to say, that in the announcement in our last Number but one, of the intended opening of the Exhibition, we were in error in stating that Mr. Stanfield had been prevented by illness from sending any of his works. We find that he has three, besides the beautifully executed performance, the title of which is at the head of the present notice.

No. 78. *An Italian Family—Costume of Cavi, near Palestrina*. C. L. Eastlake, R.A.—Simple in design, and clear and transparent in colouring.

No. 84. *Scene near Hastings*. Rev. T. J. Spadkin, H.—Who would not wish to be transported for a time from the din and clamour of "the busy haunts of men," to enjoy the luxury of strolling in such a scene as this?

No. 85. *King James the Second, the Countess of Dorchester, and Kitty Chervil—vide Walter*

Colyton. S. Drummond, A.—Full of expression and spirit.

No. 86. *Interior of a Highlander's House*. E. Landseer, R.A. elect.—The picturesque character and masterly execution of the old man and his dogs are excellent; but the magic of the performance is the effect of the cool quiet light in the furthest part of the interior.

No. 92. *Circus*. H. Howard, R.A.—Mr. Howard could hardly have chosen a subject better suited to his classic pencil. Beauty of form, and varied and appropriate scenery, have combined to produce one of his most pleasing compositions.

No. 98. *A Sailing Match*. W. Mulready, R.A.—Mr. Mulready has depicted the only kind of sailing-match which to us, land-lubbers, has ever been interesting; and in so doing he has recalled to our minds some of the earliest delights of infancy. The contrast between the eager children who, reckless of danger, are leaning to their utmost stretch over the brook, and the boy of higher rank, who is not even permitted to pass along a wooden bridge without the aid of his vigilant attendant, is a fine touch of nature.

No. 99. *Pan and the Nymphs*. H. P. Bone.—A truly Arcadian scene; admirably composed, spiritedly executed, and brilliantly coloured.

No. 134. *Esmeralda witnessing the honour conferred on Mordecai*. G. Jones, R.A.—It is reasonable to imagine that such a scene actually occurred. At any rate, the supposition has afforded this able artist an opportunity of shewing his powers in historical composition, as well as in the qualities of chiaroscuro and colouring.

No. 146. *Poachers Deer-stalking*. E. Landseer, R.A. elect.—It must have required a close and frequent observation of the manners and habits of these marauders, to characterise them so forcibly. The caution of the whole party, the ingenious device of concealing the face of the foremost (by means of a branch) from the quick eye of the deer, the eagerness of the dog, who it is evident will burst from all restraint the moment he hears a shot fired, are all finely represented.

No. 138. *The Morning Bath*. W. Collins, R.A.—One of Mr. Collins's best fruits of this year's growth. The subject is a coast scene. A female in the foreground has just lifted a dripping urchin from a watery—plunge, not grave,—for the spectator may almost hear the cries of the suffering wight. The attitude of another half-dressed child, on the beach, is admirably expressive of chilliness.

No. 144. *Nymph angling*. W. Etty, R.A.—Oh! sly, satirical Mr. Etty! Mark the moral that lurks under this apparently simple title. It is contained in the basket by the side of the fair damsel. They are *gold and silver* fish which she is hooking! Never was there a more deliciously painted picture.

No. 147. *Little Red Riding-Hood*. E. Landseer, R.A. elect.—Probably, like "Cottage Industry" in the British Gallery, a portrait in masquerade. We shudder at the idea of consigning so beautiful a little innocent to the jaws of the devouring wolf. The picture, in all its simplicity, is one we should most like to make our own from the Exhibition.

No. 155. *Medicine*. T. S. Good.—If a libel on "the human face divine" were punishable by law, Mr. Good ought to be indicted tomorrow morning. Such distortions of the countenance may shew the artist's skill, but they bear no evidence of his taste.

(To be continued.)

SOCIETY OF PAINTERS IN WATER-COLOURS.

[Concluding Notice.]

No. 319. *A Windmill*. P. de Wint.—From the time of Rembrandt (the son of a miller) to the present day, windmills have been favourite studies of painters. The subject has been done ample justice to by this able artist, who, whether the composition partake of the sublime, as in No. 41. *Nant y Bellan, Wynnstay, Denbighshire*, or of the simple, as in No. 421, *A Fishing House, with Cattle*, acquits himself with equal credit.

No. 327. — Miss L. Sharpe.—!!!
No. 336. *Vintagers returning Home—Scene at Gensano*. P. Williams.—A beautiful drawing, both in character and in finish.

No. 354. *Fox and Duck*. J. F. Lewis.—An exquisite performance. It would afford a capital subject for a fable, the moral of which should be, "not to go out of one's own element." No. 300. *The Sleeping Hound, &c.*, by the same artist, is also admirable; and in No. 381. *Exterior of a Venetian Curiosity-Shop*, likewise by Mr. Lewis, a gorgeous accumulation of splendid materials is displayed with great skill and judgment.

No. 382. *Abon Hassem in the Palace of the Khalif of Bagdad—a Sketch*. J. Stephanoff.—Few artists have exhibited in subjects of this kind a richer vein of invention than Mr. Stephanoff. In this performance he appears to have given full scope to his powers; and the absence of finish is scarcely felt.

Among many other highly attractive works in this exhibition which our space will not permit us to particularise, are No. 29, *A Scene in the Highlands*, S. Austin; No. 275, *Dressing a Fly, at Stonebyers Falls, on the Clyde*, W. Nesfield; No. 407, *View in Haddon Hall, Derbyshire*, and No. 413, —, G. Cattermole; No. 417, *Morning Ablution*, A. Chisholme; &c. There is abundance of fruit and flowers, evidently of the richest flavour, and the most delicious fragrance, from the well-known stores of Mr. Hunt, Mrs. Fielding, and the Misses Byrne and Scott.

It is but just to add, that in our notice we have merely selected a few ears from a very ample and healthy sheaf of corn.

NEW PUBLICATIONS.

Views in the Burman Empire. Drawn on the spot by Captain J. Kershaw, 13th Light Infantry. Engraved by William Daniell, R.A. Smith, Elder, and Co.

Of the various picturesque works connected with India which have lately come under our notice, this is undoubtedly the most splendid and interesting. It has been got up at great expense; and the ten plates of which it consists furnish an excellent illustration of the beauty of the natural scenery, and of the magnificent and gorgeous character of the sacred edifices erected by superstition, in that part of the Burman empire which was traversed by the British invading army in their advance from Rangoon towards the capital. Captain Kershaw has been fortunate in having had his drawings transferred to copper by an artist so skilful in the management of aquatinta, and so thoroughly familiar with oriental subjects, as Mr. Daniell. The publication is accompanied by a brief description of the different views.

A New Series of Original Illustrations to all Editions of the Waverley Novels. Part III. Moon, Boys, and Graves.
THIS Part contains twelve Illustrations of *Ivanhoe*, the *Monastery*, the *Abbot*, and *Ke-*

* We have to regret that we accidentally missed the first two of these lectures: Mr. M. is also, we observe repeating his last year's course of four lectures at the London Institution.—Ed. L. G.

nilworth. The principal gems are Newton's "Abbot Boniface," engraved by E. Finden; Wilkie's "Henry Warden and the Sub-Prior," engraved by Fox; Chalon's "Mary Stuart," engraved by Heath; and Leslie's "Earl and Countess of Leicester," engraved by Goodyear.

Panoramic View round the Regent's Park.

From Drawings taken on the spot by R. Morris, author of "Essays on Landscape Gardening." Ackermann.

A FAITHFUL and pleasing representation of the diversified objects which meet the eye during a walk, ride, or drive, in that most agreeable of modern creations. It is a publication exceedingly well suited to the drawing-room table; especially in the country.

England and Wales. From Drawings by J. M. W. Turner, Esq. R.A. No. XII. Moon, Boys, and Graves.

THE plates of "Windsor Castle" and "Eaton [Eton] College" are splendid specimens of Mr. Turner's genius.

The Family Cabinet Atlas; constructed upon an original plan, and engraved on steel by Mr. Thomas Starling. Bull.

As far as we have had the means of examining this beautiful little publication, it appears to us that the object which the proprietors had in view, namely, "to supply with distinctness and accuracy the greatest quantity of geographical information in the smallest possible compass," has been completely accomplished.

His Majesty's most gracious Speech. Tilt. THE Speech delivered by his Majesty on proroguing parliament, April 22, 1831, printed in gold, with rich and appropriate embellishments.

Landscape Illustrations of the Waverley Novels. Part XIII. Tilt.

ANOTHER number of this beautiful publication. Nothing can be more charming than the "Links of Eyemonth," by Copley Fielding, from a sketch by J. Skene; and "Warwick from the Kenilworth Road," by J. Constable, R.A.; both engraved by E. Finden.

SCULPTURE.

WE have been highly gratified by a view of an exhibition of sculpture about to be opened to the public in Bond Street. The several groups of which it consists are the production of Mr. Peter Hollins, an artist who has risen to eminence at Birmingham, and now (with perfect safety) advances his claim to the approbation of London. A colossal group of the Murder of the Innocents (consisting of three figures, the murderer, the mother, and the child,) is a strong effort in composition; but we cannot say the subject is agreeable to us. The outstretched arm of the mother is, in our opinion, too straight; all the rest is true to nature in distress and horror. Conrad and Medora is very beautiful; but here again (for we are nothing if not critical) we absolutely command Mr. Hollins to take the ear-drops from Medora's ears: they greatly injure the simplicity and expression of the head. The third group, of Aurora waking Zephyrus, is a most lovely design, and exquisitely executed. Alone, it is enough to make the fame of a sculptor. There are several very fine busts: one of Macready, as Virgilinus, is full of spirit, and a striking likeness.

* Since writing this, we happened to offer the same suggestion, *visu roci*, and the artist condescended to adopt it; manifestly, as we think, to the improvement of the fair Medora.

MR. LOUGH THE SCULPTOR.

WE hear that this most promising artist is engaged on a new work. It represents Mazeppa bound to the wild horse. We have not yet seen it; but are told that both the animal and human figures are finely and powerfully developed.

LODGE'S PORTRAITS.

MESSRS. HARDING and LEPARD have again opened their Gallery of Illustrious Portraits to view, by cards of admission, sent to the patrons and friends of the fine arts. We believe some fifty thousand persons visited this exhibition last year—a proof of the interest attached to the subject, and, we rejoice to say, of the popularity of the splendid work on which these gentlemen have been so long and so creditably engaged. The additions since made are of a nature, we think, to render the view yet more attractive. Already we have five distinct editions of the same publication in progress at the same time: if Messrs. H. and L. go on improving in this way, we are like enough to see ten. Among the new and admirably executed portraits, whence the engravings are to be made, we observe the celebrated Bolingbroke, the architectural Lord Burlington, Godolphin, Bute, Walpole, and other political gladiators of a former age. And there is also a fleet of admirals—Howe, Duncan, Jarvis, Nelson, Hood, Bridport, &c. &c., after noble pictures in the possession of their descendants or friends:—while Lord Heathfield, Abercrombie, and other distinguished warriors, from similar sources, illustrate the other service. The whole is a treat of no common order.

The First Sign in Egypt: from the Seventh Chapter of Exodus.

AMONG the pictorial efforts of our rising artists, our attention has been invited to an elaborate painting on the above sacred subject, by Mr. Scrymgeour, which, unfortunately enough for him, reached London from Scotland too late to prefer its claim for admission into the R. A. exhibition. Mr. Scrymgeour's name will be recognised by our readers as that of the painter of the portrait of General David Stuart, the much-esteemed Laird of Garth: he has now attempted a far bolder flight, and produced a work of very considerable talent in the highest walk of art. It represents Pharaoh on his throne, witnessing the discomfiture of the Egyptian priests, when "Aaron's serpent swallowed up the rest;" and is composed and coloured with great ability. As it is to be engraved, we cheerfully give it this notice, to compensate in some measure for the artist's disappointment at Somerset House. At the same time, we must guard him against anachronisms in his architecture: these may readily be altered, as they are not of importance to the picture.

Mr. Scrymgeour has also, we may say invented, a new kind of portrait painting, with a specimen of which we were much pleased. It is on copper, in oils, and about the size of a shilling; yet an excellent likeness, and possessing truth and force. As the materials are of a lasting quality, we can imagine nothing better suited to those dear recollections which are made to live on clasps, brooches, bracelets, and other female ornaments.

ARTISTS' BENEVOLENT FUND.

THE anniversary last Saturday was numerously attended: Lord Wharncliffe in the chair, supported by the Duke of Somerset, Sir M. A. Shee, Mr. Phillips, and other Academicians

and gentlemen on his right; and by the Earl of Jermyn, Sir John Swinburne, Mr. Wilkie, and other friends of the Fund, on the left. On drinking the health of the King, the chairman stated, that his Majesty had been graciously pleased to continue the royal annual donation of 100 guineas to this association; from which a very favourable augury of its future welfare might be drawn. The toast was hailed with enthusiasm, and the applause long continued. It is indeed by patronising Institutions which have for their object to promote the literature, arts, and sciences of the country, by providing for the relief of their less fortunate cultivators in the hour of distress, that kings most truly entitle themselves to the love of their subjects and the gratitude of posterity. Were we privy counsellors, this is a truism which we would very humbly, yet very sedulously, endeavour to impress on the mind of royalty. Political glories may, and are likely to fade away; but the fame founded on this basis is imperishable.*

On proposing the standing toast, "Prosperity to the Artists' Benevolent Fund," Lord Wharncliffe addressed some very feeling and judicious observations to the company. He alluded to the delight he experienced in turning from the turmoils of public affairs to the contemplation of master-pieces of art; to the calm and consolatory enjoyment of these, when worn and wearied by the excitement of politics, to which in his station of life he could not be a stranger. He took occasion to advise the chief ornaments of our native arts who heard him, and from many of whose productions he had reaped a similar delight, to continue in their noble course, and strive not to imitate but to emulate their mighty predecessors: to the younger portion of his auditory he recommended industry and perseverance, and, above all, MODESTY, as the only sure way to become distinguished in their profession. [This recommendation, though trite to some of these aspirants, is worthy of their earnest attention. Overweening self-conceit, the want of modesty, is the besetting sin and bane of too many of our young artists. To hear them talk of their superiors and their pictures, is often offensive as it is presumptuous, and ignorant as it is contemptible. Geniuses in their teens; pert, uninformed, (for it is almost a general evil, that they do not read to acquire knowledge, and are in this respect far below continental artists), and noisy, they might well take heed of what the chairman told them, instead of disturbing, as an ill-behaved specimen of the class did, almost every part of the proceedings of the evening, by a clattering of glasses, and other annoyances, which neither gentle hint nor frequent call to order could induce them to discontinue. Students guilty of bad manners, they may believe us, are not the most likely to become eminent painters.]

Sir M. A. Shee, on his health and prosperity to the Royal Academy being drank, acknowledged the compliment with peculiar grace and happiness of diction. Among other points, he poetically and pathetically dwelt upon the claims of those to sympathy, whose fancy was so prone to beguile them into the apparently delicious region where so many flowers abounded, but where the fruits were so few.

Broadhurst, Taylor, Bellamy, and their companions, sang some excellent glees and songs:

* How remarkable it was, in the parliament of a nation boasting of its enlightened character, that on the discussion of the civil list, not a syllable was uttered respecting the best of its destinations, as the means of enabling the sovereign to be bountiful and munificent to the children of genius!

the subscription was considerable: and after Lord Wharnclyff vacated the chair, it was taken by Mr. B. B. Cabell, a warm and liberal friend to the Fund, who kept up the social festivity till the whole closed in the most satisfactory manner.*

ORIGINAL POETRY.

DEAF AS A POST.

'Tis in vain that Braham sings,
All in vain doth Oury play;
Vain are all the witty things
Witty people love to say;
Every pun on me is lost—
I'm as deaf as any post.

Vain to me is beauty's sigh;
How can I a lover prove?
Tell me, ladies, how can I
"Listen to the voice of love?"
Love is in a trumpet lost—
I'm as deaf as any post.

'Tis in vain that Irving preaches,
Though I am the pulpit near;
Vain to me all brilliant speeches—
Quite as vain the cries of "hear;"
Eloquence on me is lost—
I'm as deaf as any post.

Dire explosions, fraught with wonder,
Other ears are wont to flee;
Lion's roar and cannon's thunder
Are a distant hum to me;
Every sound on me is lost—
I'm as deaf as any post.

F. G.

MUSIC.

PHILHARMONIC SOCIETY.

THE programme of the sixth Philharmonic concert on Monday exhibited a selection superior to any of the preceding. Two such symphonies as Mozart's in E flat and Beethoven's in C minor, are worth two concerts of the ordinary kind, and never ought the annual series to be concluded without them. They were both sufficiently well executed not to disappoint the great expectations of the audience. The two principal vocalists, Lablache and Rubini, had both selected airs from an immortal composer's immortal work; the former "Madamina," and the latter "Il mio tesoro," from Mozart's Don Giovanni. If Signor Rubini were less lavish of ornamental additions, particularly shakes, even the most fastidious critic would find it difficult to pick out a fault in his style. In a composition of such length as the quintetto of Mozart, the repetition of each strain of the different movements had better be avoided, now that a composition is more easily understood; otherwise, nothing but praise can be given to Messrs. Spagnoletti, Griesbach, Moralt, Daniels, and Lindley, who played it.

* In this notice we have spoken freely of a matter which (on this occasion) the impetuosity of youth and the influence of wine might largely excuse; but it is well meant, and we trust will not be altogether lost on our juvenile artists. Let Lord Wharnclyff's word, "modesty," be their motto and remembrancer, and they will find their advantage in it at public meetings, at exhibitions, in private society, and in the pursuits of their studies. For ourselves, or rather for the *Literary Gazette*, we have to say, that the encouragement of the Fine Arts and the interests of their professors have always been a marked and cherished object. Our criticisms have ever been favourable: we have pointed out beauties, in the ordinary language of praise, where it would have been no difficult thing to be very smart on blemishes—for it is wonderfully easy to find fault: and throughout the whole of our now somewhat lengthened and not unfruitful course, we have endeavoured to raise our native school on its just merits, and never for an instant suffered any paltry triumph of wit or malice to interfere between us and that great consideration.

Miss Riviere, from the Academy of Music, made a very successful *début* in Cimarosa's scena, "Deh! parlata." Her style and voice are good, though the latter is somewhat weak in the lower notes. Mr. Böhm, from the King of Bavaria's chapel, played a fantasia of his own on the flute, with a perfect command over the instrument. His tone is uniform and full, but not equal to Nicholson's. After the *terzetto*, "Quel sembianza," from *L'Inganno fortunato*, by Miss Riviere, Lablache, and Rubini, this excellent concert concluded with Weber's overture to *Der Freischütz*. There are many better overtures than Spohr's to *Jessonda*, which concluded the first act; but Spohr is, with the directors, the order of the day.

MRS. ANDERSON'S CONCERT.

WE have seldom witnessed on a similar occasion so distinguished an assemblage of rank and fashion as graced this lady's concert on Friday week. The musical attractions were of a high order. A new concerto in A flat, the masterly composition of Hummel, was brilliantly executed on the piano by Mrs. Anderson. Mori added fresh claims to being considered as yet the god of the bow in this country. Nicholson lent the wonders of his magic flute; while among the vocalists, Madame Stockhausen's charming *morceaux* of Swiss natural melody, Rubini's exquisitely finished Italian singing, and De Bégis' admirable buffa extravagances, left the audience nothing to desire. Mr. Parry, jun. was alarmed at the importance of "Napoleon's midnight review," or his powers are unequal to do it justice. What a thing it would be for Braham! The greatest possible praise is due to the orchestra, led by Spagnoletti, for their execution of this really fine piece of music. Mr. Ball's translation is unworthy of the original; and we recollect having seen a very superior version in print.

MR. C. POTTER'S CONCERT,

ON Tuesday at the King's Theatre, was fully attended; and the performances, besides the display of other high musical talents, both vocal and instrumental, afforded that gentleman a favourable opportunity for exhibiting his great skill and effect upon the piano-forte.

SINGULAR MUSICAL PERFORMANCE.

WE have rarely witnessed a more curious exhibition of musical ingenuity than the variety of sounds produced by an uncommon performer named Werner. With only the assistance of a zither, or German guitar, he contrives to produce the effect of a whole band of music, and mingles together the bassoon, flute, trumpet, &c. The fulness and volume of sound given to the trumpet, contrasted with the softness of the flute, played in thirds, is truly extraordinary. The next part of the performance shewed a wonderful faculty of imitation: a whole farm-yard are supposed to be roused by the music; and the barking of dogs, the noise of cats, cocks, hens, &c. were blended in a *mélange* which truly might have been mistaken for real life. Mr. Werner has been blind from his birth: his performances have attracted much attention on the continent; and we hope his ingenious exhibition will meet due patronage from English friends.

DRAMA.

KING'S THEATRE.

ON Thursday, Madame Pasta made her first appearance, after an absence of three years, in the character of *Medea*, in Meyer's beautiful

opera of that name. She was greeted with the very flattering applause of the most numerous and fashionable audience which has graced the theatre this season. She sustained the character with her usual excellence, possessing the same volume, flexibility, and sweetness of voice, for which she was always so eminently distinguished. Her tragic acting was also, as usual, particularly fine: in the scene with the children she delineated the feelings of despair and of motherly affection with a force and truth, which we have not witnessed in any female performer since Mrs. Siddons retired from the stage. Signor Rubini, who, we believe, has been lately singing with Mad. Pasta at Milan, performed the character of *Egeus*. The duets between them were given with great effect, and were much and deservedly applauded. Lablache, as *Cruonides*, sang well. Curioni was *Gasone*, and Miss Fanny Ayton *Cressa*; so that the whole opera was admirably supported. Faliani was extremely interesting as *Irene*.

VARIETIES.

Fossil Belemnite.—It has hitherto been a matter of much speculation among geologists, whether the curious fossil, so abundant in some limestones, and known by the name of *belemnite*, ever contained an animal, or if it was the spine of a sea-urchin, or not at all of animal origin. It appears that a French naturalist has satisfactorily solved this question, having found in the department of Tarn all the parts of the molluscous animal in company with the fossil.

Public Edifices.—It is well said by Sir Martin Archer Shee, in a note to his *Rhymes on Art*, that "there is an economy that impoverishes, and an expense that enriches." This principle seems to be acted upon by the French government at the present moment. With a view of employing the labourers in Paris, the minister of commerce and public works has authorised the immediate application of the sums annexed to the following buildings:

Chambre des Députés	915,000 francs.
Eglise de la Madeleine	230,000
Arc de l'Étoile	375,000
Bibliothèque du Roi	138,000
Ecole des Beaux Arts	75,000

Education of the People.—In no fewer than a hundred and nine cities and towns in France, institutions have already been, or are about to be, established, at the public expense, for the instruction, by able professors, of a portion of the industrious classes of the people, in the geometrical and mechanical knowledge applicable to the useful arts. The number of pupils is estimated at between four and five thousand. Such efforts are worthy of a great nation.

Newspaper Reports.—The beautiful imaginings of newspaper intelligence, that sort of intelligence which the wise world takes so good-naturedly for gospel, and descants and reasons upon so judiciously, is finely exemplified in *Le Globe*, Paris journal, of the 28th April. Its account of the troubles reported to have broken out in London after the royal dissolution of Parliament, is news indeed, viz. that "the house of M. Peel and the hotel of the Duc de Wellington had been destroyed; and (clenching it by particulars!) the fine statue of Napoleon, by Canova, which the Duke of Wellington had placed in the *peristyle* of his abode, had been promenaded through the streets of London!"

The Camelpard.—We are sorry to see it stated, in the *Morning Chronicle*, that the camelpard, of which we gave an account in a

late Number, died on its passage off the Cape of Good Hope.

Production and Consumption.—A recent No. of *Le Globe* contains the following comparison of the inhabitants, productions, and consumption of France and Great Britain, including Ireland.

Subjects of Comparison.	France.	Great Britain.
Inhabitants	32,000,000	23,000,000
Acres (hectares) in cultivation	47,000,000	20,000,000
Gross produce of agriculture, in francs	4,678,708,000	5,480,425,000
Net produce of ditto	1,344,703,000	3,681,150,000
Produce exported	149,050,000	75,725,000
Produce consumed	4,529,658,000	5,344,700,000
Individual landowners	19,000,000	8,892,000
Family ditto	3,804,000	1,778,000
An acre produces, on the average, in francs	117	270
A labourer produces, on the average	346	608
Manufacturing individuals	6,352,000	11,396,858
Produce of manufactures	1,886,000,000	3,568,000,000
Every individual, therefore, produces on the average ..	286	613
Manufactured produce exported	960,000,000	810,000,000
Ditto consumed	1,560,102,000	2,757,500,000
An inhabitant consumes, on the average, in manufactured produce	48	125
In agricultural produce	141	242

Translators and Translations.—We observe, from the German catalogues, that Mr. Planché's *Descent of the Danube* has been translated into the language of that country. It is curious enough, that this author, who is so often charged by our contemporaries with writing nothing original, and being merely a translator from foreign tongues, should thus have had a prose volume added to the stores of German literature; his excellent drama of *Oberon*, so often mistaken for a translation, having previously received a similar honour.

Professors and Masters of the French Language.—We have seen a very able and judicious circular, addressed to the professors and masters of the French language in this country, urging them to form a society for various purposes; the principal of which are—the strength and respectability resulting from union; the exclusion of incompetent persons from the occupation of teaching; the sanction, by a diploma, of those who are properly qualified; and the gradual formation of a fund for the assistance of masters who have become aged and infirm, without having had it in their power to make an adequate provision for their own support. These are all excellent objects; and it will give us great pleasure to witness their accomplishment.

Organic Remains of Mont St. Pierre.—M. Van Hees announces, that the chalky land of Mont St. Pierre, near Maestricht, so famous for its bones of sea tortoises, mosasaures, &c. contains not only remains of seals and cetaceous animals, but also bones of terrestrial mammals. Some were discovered in July 1829, at a depth of 80 feet. The author and M. Von Breda, professor at Ghent, caused the excavations to be carried on, and collected teeth of ruminantia (horse, sheep, goats), pachydermata (pig), and carnivora (dogs). Mr. Van Hees supposes that this ossiferous deposit is more recent than the chalk, but more ancient than the diluvium which covers the summit of the mountain. To explain the occurrence of bones in a cretaceous rock, identical with the principal mass of the mountain, he thinks that we may have recourse to the supposition that there has been a cleft, afterwards filled with a chalky detritus, which has become hardened. As M. Morren has just found in the upper marine deposit of Brussels many bones, and as Dr. Fitton places the rock of Maestricht between the chalk and this last deposit, this hypothesis,

without proof, is entirely useless, and there only remains to ascertain whether we must consider it as an upper chalk formation, or a tertiary limestone, and of what weight the presence of fossils such as the belemnites may have in such considerations. The details which we are anxiously expecting regarding the tertiary formations of the Alps, that occur between the chalk and limestone, will also probably throw light on this question.

Observations on the Influence of Cold on newborn Children.—Dr. Trevisan has been making researches in Italy, principally at Castle Franco, analogous to those of Messrs. Villermé and Milne Edwards in France. The conclusions at which he arrives are:—In Italy, of one hundred infants born in December, January, and February, sixty-six die in the first month, fifteen more in the course of the year, and nineteen survive; of one hundred born in spring, forty-eight survive the first year; of one hundred born in summer, eighty-three survive the first year; of one hundred born in autumn, fifty-eight survive the same period. He attributes this mortality of infants solely to the practice of exposing them to the cold air a few days after their birth, for the purpose of having them baptised at the church. Dr. Trevisan, as well as MM. Milne Edwards and Villermé, calls the attention of the ecclesiastical authority to measures suited to put a stop to such disasters, without violating the precepts or practices of religion.

The Polish Language.—The Polish language is so difficult of pronunciation that some of the words are impracticable even to natives. Several of our newspapers have pretended to give the true pronunciation of the name of the celebrated General Skrzynecki for example, but erroneously; for it is spoken as if spelt Skshnecki: the two first letters, like *sk* in skate, gliding softly into the *sh*.

Volcanoes in Central Asia.—The discovery of volcanoes, hitherto considered to be always in proximity to the ocean, in the central plains of Asia, is among the most interesting features of the late journey of De Humboldt. This celebrated traveller is about to present an account of these to the Academy of Paris, and we shall notice the results at a future opportunity.

Medical Botany.—The Medico-Botanical Society of London has offered a gold and a silver medal for the best essays on the questions, "What is the vegetable substance which could be employed with success in the cure of hydrophobia?" and "On the medicinal qualities and uses of any indigenous plant, which is not yet sufficiently known, or on new uses and applications of any other indigenous plants."

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XX. May 14.]

Killarney Legends, arranged as a Guide to the Lakes; edited by T. Crofton Croker, Esq.; with six illustrative engravings from drawings by Alfred Nicholson, Esq.—*The Life and Times of England's Patriot King, William the Fourth*; Part I., with two engravings.—A new weekly theological publication, to be called the *Anti-Infidel*, is announced.—The second volume of the *Life of Thomas Ken*, deprived Bishop of Bath and Wells; including the period of fanatical Puritanism, from 1640 to the death of Cromwell; by the Rev. W. L. Bowles, is nearly ready.—*Ivan Velesheo, or Life in Russia*, a novel; by Thaddeus Bulgarin: a translation.

LIST OF NEW BOOKS.

Panorama of Constantinople and its Environs, royal 4to., plain, 12. cloth; coloured, 12. 14s. cloth.—*Journal of Voyages and Travels* by Tyerman and Bennet, compiled by J. Montgomery, 2 vols. 8vo. 11. 16s. cloth.—Rev. J. Slade's *Sermons*, 12mo. 6s. 6ds.—Familiar Introduction to the Christian Religion, in a Series of Letters by a Senior, 12mo. 7s. 6d.—*The Young Christian's Sunday Evening*, 12mo. 4s. 6ds.—*The Atonement and Sacrament*

of the Lord's Supper considered, 12mo. 3s. 6d. bds.—*Memoirs of Isaac Judson*, by the Rev. Bourne Hall Dwyer, 12mo. 2s. 11s. 6d.—*Roxobel*, by Mrs. Sherwood, 2 vols. 12mo. 11. 7s. cloth.—*Lee's Analysis of Sockers Lectures*, post 8vo. 4s. 6ds.—*D'Emden's Garden of French Nouns*, square 12mo. 9d. sewed.—*Map of the Basin of the Tay*, from a Survey by James Knox, 11. 1s. in case; *Topography of the Basin of the Tay* (being a companion to the Map), 12mo. 3s. 6ds.—*Haverhill*; or, *Memoirs of an Officer in the Army of Wolfe*, by James Athearn Jones, Esq., 3 vols. post 8vo. 11. 11s. 6d. bds.—*Alexander on the Canon of Scripture*, 12mo. 6s. 6d. bds.—*Moir's Ancient History of Medicine*, fcp. 6s. 6ds.—*Bickersteth's Chief Concerns of Man*, 12mo. 5s. 6ds.—*The Horse*, from the Library of Useful Knowledge, 8vo. 6s. 6d. bds.—*Family Cabinet Atlas*, complete, 12mo., plain, 11. 10s. cloth; coloured, 22. 2s. cloth.

METEOROLOGICAL JOURNAL, 1831.

May.	Thermometer.	Barometer.
Thursday .. 5	From 31. to 53.	29.52 to 29.48
Friday .. 6	30. — 50.	29.64 — 29.79
Saturday .. 7	20. — 53.	29.92 — 29.59
Sunday .. 8	34. — 53.	30.06 — 30.22
Monday .. 9	27. — 58.	30.74 — 30.19
Tuesday .. 10	30. — 55.	30.15 — 30.11
Wednesday 11	28. — 60.	30.11 — 30.13

Prevailing wind, N.E.

Except the 5th, generally clear; frequent showers during the 5th.

Rain fallen, 3 of an inch.

Aurora Borealis.—On the evening of Sunday the 8th, a generally diffused light illumined our hemisphere; only one coruscation appeared, which darted up about due north, to a distance of 20° from the horizon, and moved thence about 30° westward of the north, when it suddenly disappeared.

Edmonton.

CHARLES H. ADAMS.

Latitude .. 51° 37' 32" N.
Longitude .. 0 3 51 W. of Greenwich.

* Certainly not in the whole range of our Meteorological Journal, which was commenced in the year 1774, and perhaps never before, has the face of nature been so suddenly and so seriously changed as on the night of the 6th or morning of the 7th inst. During the past, and the first six days of the present, month, every tree, plant, and shrub, reminded us of reviving nature and parturient spring; or, as the poet beautifully expresses it:

"Bathed in soft dew, and fann'd by western winds,
Each field its bosom to the gale unbids;
The blade dares boldly rise new suns beneath,
The tender vine puts forth her flexible wreath,
And, freed from southern blast and northern shower,
Spreads, without fear, each bud, and leaf, and flower."

Yet, how different was the appearance of vegetation on the 7th of May, 1831! Every tree and shrub has, more or less, felt the extreme severity of the weather. The leaf of the vine, the walnut, and the oak, is shrivelled and black: the appearance is, indeed, precisely as if burnt, and upon being pressed crumbles to dust. The gooseberries, currants, and cherries, appear as if boiled; and being shaken, the fruit falls from the tree. The extent of the damage done to other fruits of the earth, time alone can show.

Subjoined is the minimum of the thermometer during the month of May, for the last forty years:—

Year.	Min.	Year.	Min.
1780	46	1811	49

TO CORRESPONDENTS.

We know nothing, of our own knowledge, of Captain Norton's rifle-shell, and can consequently insert no eulogium upon it: the *Literary Gazette* is not the "given point" where an explosion in its praise is sure to take place. Besides, the invention, whatever it is, has been long and repeatedly brought before the public.

To Z. Z.—we think Macfarlane's Travels are those alluded to.

¶ Owing to the pressure of more temporary matter, we have to postpone the Bishop of Salisbury's Address at the Anniversary Meeting of the Royal Society of Literature.—Continuation of Review of State Papers.—A biographical sketch of Mr. Hamper, the antiquary, deceased—and several Reports of scientific Societies, &c. &c.

ADVERTISEMENTS,

Connected with Literature and the Arts.

BRITISH INSTITUTION, Pall Mall.

The Gallery for the Exhibition and Sale of the Works of British Artists is Open Daily, from Ten in the Morning till Five in the Evening.

Admission, 1s.—Catalogue, 1s.

WILLIAM BARNARD, Keeper.

MUSIC.

Popular Journal of Music.

Published 1st of May, price 3s. the Fifth Number for 1831, of

THE HARMONICON.

Contents.—Musical Literature.

Memoirs of Italian Soprano—English School of Music—On Ecclesiastical Chorus—On the Italian Theatre—Autobiography of an Amateur Singer—Metropolitan Concerts—Diary of a Dilettante—Review of New Music—Ancient and Philharmonic Concerts—Foreign Musical Reports—The Drama; Italian Opera—Zemara ed Asor, at Covent Garden, &c. &c.

Music.

Overture to "Helen" (Mehul)—Ballad, (Mrs. C. B. Wilson)—Canzonet, (M.S.) by Lady-Song, (M.S.) J. Thomson, Esq.—March,—"L'Orleanaise" (Carmy)—The Social Galeppe, (Strasus)—Martial Movement from "L'Ultimo Giorno di Pompei" (Pacini).

Also, in a Supplementary Number, price 2s.

The whole of the Music suitable for Private Performance, in Poph's Opera of Asor and Zemira, including the Author's Pieces introduced from the Faust and Joscunda, arranged and adapted for the Piano-Forte.

Longman, Rees, Orme, Brown, and Green.

New Music.

FORGET ME NOT, a Ballad, the Words

from the "Poetical Sketch Book," by permission of the Author, T. K. Hervey, Esq. The Music by J. G. Patrick. Published by Goulding and D'Almaine, 20, Soho Square; and sold by all Music-sellers in Town and Country.

Price 2s.

"A sweet and plaintive air, in the key of D, in every way adapted to the words, which are some of Mr. Hervey's happiest, and selected from his 'Poetical Sketch Book.' It seems quite the fashion to get up songs with a profusion of typographical ornaments, of which this is a beautiful specimen."—*Royal Lady's Magazine*.

"The name of this composer is new to us, but we hope soon to meet with it again, as, in the present instance, we have the elegant and pathetic words of Mr. T. K. Hervey set with the taste and feeling they so well merit, which is the highest compliment we can pay to Mr. Patrick. It is a charming ballad."—*United Kingdom*.

BOOKS PUBLISHED THIS DAY.

A new edition, post 8vo. 5s. 6d.

THE VERACITY OF THE GOSPEL

and ACTS. Argued from undesign'd Coincidences to be found in them, when compared with their several Parts.

By the Rev. J. J. BLUNT.

Fellow of St. John's College, Cambridge.

Also, by the same Author,

The Veracity of the Five Books of Moses.

In small 8vo. 5s. 6d.

"Mr. Blunt has already signalled himself by his work on the Acts of the Apostles, as an individual intimately conversant with the most minute particulars of holy writers, and a very successful disciple of Dr. Paley, in the management of this species of Christian evidence, which arises from the discovery of undesign'd coincidence of revealed truth. This volume cannot fail to increase his reputation. It is both a pleasing and instructive work, and is creditable to the talents, learning, and piety of the respected author."—*Evangelical Magazine*, June 1830.

"We think Mr. Blunt's clever and very ingenious web of argument will be read with pleasure, as it certainly must with profit."—*Monthly Review*.

John Murray, Albemarle Street.

THE POETICAL WORKS OF the Right

Hon. LORD BYRON, complete (with the exception of Don Juan), in 6 vols. 18mo. with Portrait and highly finished Engravings, only 57s. Vol. V. and VI. which are now for the first time published, contain many Poems never included in any previous Collection of the Works, and some that were suppressed; besides several printed for the first time; rendering this the first and only complete edition ever published.

John Murray, Albemarle Street.

8vo. 6s.

THE JOURNAL OF THE ROYAL INSTITUTION OF GREAT BRITAIN. No. III.

Contents.—Professor Whewell on the Employment of Notation in Chemistry.—On the Shamrock of Ireland, by Mr. Bicheno.—On the Earliest Epoch of Egyptian Chronology.—Remarkable Instance of Anomalous Structure in the Trunk of an Exogenous Tree, by John Landley, Esq. F.R.S. &c.—Dr. Moll on Telescopes, &c.—Mr. Rennie on the Contrivance of some Animals to secure Warmth.—On the Aurora Borealis, by Dr. Moll, by the Hon. C. Harris, and by S. H. Christie, Esq. M.A. &c.—Mr. Hennell on Elsterium.—Contributions to the Physiology of Vision, No. II.—On the Ripples-marks and Tracks of certain Animals in the Forest Marble, by G. F. Brown, Esq. F.R.S. &c.—Proceedings of the Royal Institution of Great Britain.—Proceedings of the Academy of Sciences in Paris.—Analysis of Books, and Selections from the Transactions of Scientific Societies.—Miscellaneous Intelligence; 1. Mechanical Science; 2. Chemical Science; 3. Natural History, &c. &c.

London: John Murray, Albemarle Street.

Post 8vo. with an original Portrait of Charles I.

ESSAYS and ORATIONS, read and delivered

at the Royal College of Physicians. To which is added, an Account of the opening of the Tomb of King Charles I.

By Sir HENRY HALLFORD, Bart. M.D. G.C.H.

President of the College.

John Murray, Albemarle Street.

1 vol. 8vo. 12s. to correspond with D'Oyley's Life of Sancho.

THE CORRESPONDENCE OF ISAAC

BASIRE, D.D. Archbishop of Northumberland, and Prelate of Durham, in the Reigns of Charles I. and II. With a Memoir of his Life.

In 1 vol. 18mo. price 6s. the 2d edition, much improved;

COLLOQUIA de REBUS PRÆCIPUIS

CHEMIE, PHARMACEUTICIS, ATQUE BOTANICIS, QUESTIONIBUS et RESPONSIS, ad usum ingenue

Juventutis accommodatis.

Auctore ACHILAE ROBERTSON, M.D.

Edinburgi: Venusit apud Macalachlan et Stewart.

Londoni: Apud Baldwin et Cradock.

In 1 large vol. 8vo. price 18s. illustrated with numerous Engravings.

A PRACTICAL TREATISE ON RAIL-

ROADS, and Interior Communication in general. Containing an Account of the Performances of the different Locomotive Engines, at and subsequent to the Liverpool Contest; upwards of Two Hundred and Sixty Experiments; with Tables of the Comparative Value of Canals and Rail-Roads; and the Power of the present Locomotive Engines.

By NICHOLAS WOOD,

Colliery Viewer, Member of the Institution of Civil Engineers, &c.

"In this the able author has brought up his treatise to the date of the latest improvements in this nationally important plan. We consider the volume to be one of great general interest."—*Literary Gazette*.

"We must in justice refer the reader to the work itself, strongly assuring him, that whether he be a man of science or one totally unacquainted with its technical difficulties, he will here receive instruction and pleasure in a degree which we have seldom seen united before."—*Monthly Review*.

London: Hurst, Chance, and Co.; and Constable and Co. Edinburgh.

Published by Longman, Rees, Orme, Brown, and Green.

In a Series of Plates, with Letterpress, 3l. 7s.; mounted in a Case, 2l. 17s.; and on a Roller, 3l. 8s.

A NUMISMATIC ATLAS OF GRECIAN

HISTORY, comprising a Series of 300 Coins, arranged in the Form of an Historical Chart, designed and executed on Stone, by BENJAMIN RICHARD GREEN.

Also,

A Lecture on the Study of Ancient Coins,

as connected with History, illustrated with Plates. Price 2s. 6d.

"The plan adopted for the arrangement of the medals in the Atlas, is, we think, excellent."—*Athenæum*.

"Nothing of the kind has hitherto appeared in this country, and Mr. Green's work has, therefore, the merit of novelty as well as of accuracy and information."—*Weekly Dispatch*.

Price 2s.

THE PLEDGE; or, Castilian Honour. A

Tragic Drama, in Five Acts, with an illuminated Proface.

By JAMES KENNEY, Esq.

"The Character of Zantho, by Miss Phillips, seems full of grace and dignity. The play altogether has many noble and novel attractions; it is in no instance feeble or common-place, but in all graceful, vigorous, and condensed. The success of it has realised the expectations which had been excited."—*New Monthly Magazine*, May 1, 1831.

C. Chapple, the King's appointed Bookseller, Royal Library,

Pall Mall.

In 1 vol. 18mo. price 4s. 6d. neatly done up in cloth,

REASONS for the HOPE that is in US;

a Series of Essays on the Evidences of Natural and Revealed Religion, the Immortality of the Soul, and other important Subjects. Adapted to the Understanding of Young Persons; and having annexed thereto ancient Scripture Readings, and Classification of Texts on Important Subjects.

By ROBERT AINSLIE, W.S.

Author of "A Father's Gift to his Children."

"This work is a popular exposition of the evidences of religion. Its design is excellent, its spirit is amiable, its subject is important, its execution is successful."—*Edinburgh Literary Journal*.

Printed for Hurst, Chance, and Co.; and J. Nisbet, London; and Henry Constable, Edinburgh.

THE DRAMATIC ANNUAL.

"Mr. Reynolds must be now almost the father of the drama, and yet, to judge by the tone of the volume before us, we should say he is the youngest fellow connected with the stage."—*Tatler*.

"Amongst other excellently drawn scenes in this lively and entertaining work, we have to notice the following between the manager and author."—*Age*.

"A young beginner may soon learn his trade under the tuition of so able a master."—*Sunday Times*.

"It possesses a superior vein and one which is worth its price twice told. We allude to the numerous designs from the pencil of W. H. Brooks."—*Literary Gazette*.

"We have mentioned the great fund of humour by which this work is characterised. Exclusive, however, of that ingredient, there is in it much more valuable than the fun."—*Morning Post*.

"We shall, from time to time, draw on its pages for our light columns. There is a pretty story worked up, and many of the passages are affecting."—*Courier*.

Printed for Longman, Rees, Orme, Brown, and Green.

12s. the 3d edition of

A PRACTICAL ESSAY upon CON-

TRACTION of the LOWER EXTREMITY, illustrating, by

Cases, the Connection of that Disease with Affection of the

Womb and of the Bladder, Protrusion of the Rectum, Fistula, &c.

To which is now added, Observations on Filles, and the Hemorrhoidal Excrement.

By FREDERICK SALMON, F.R.C.S.

Senior Surgeon to the General Dispensary.

Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

On Health and Longevity.

In 12mo. 3d edition, enlarged, price 5s. boards.

SURE METHODS OF IMPROVING HEALTH AND PROLONGING LIFE, by regulating the Diet and Regimen. Embracing all the most approved principles of Health and Longevity, and exhibiting the remarkable Power of proper Food, Wine, Air, Exercise, &c. in the Cure of obdurate Chronic Diseases, as well as in promoting Health and Long Life. To which are added, an Account of the Art and excellent Effects of Training for the Billiard and Nervous, &c. Illustrated by Cases.

By T. J. GRAHAM, M.D.

Author of the "Modern Domestic Medicine."
"We are disposed to think it the most useful and rational work of the kind we have met with. It contains many hints novel to us, and is altogether an admirable code of health."—*Atlas*, Sept. 1827.

"The tendency of this volume to advance the important objects which it proposes is unquestionable; and we warmly recommend it. It is intelligent, practical, and highly interesting."—*New Literary Gazette*, Sept. 1827.

"That men of all habits will derive information from it, calculated to increase their comfort and extend their days, is firmly our conviction."—*Edinburgh Observer*, Jan. 1823.

London: Published by Simpkin and Marshall, Stationers' Court; sold by all Booksellers.

In foolscap 8vo. price 6s.

OUTLINES OF THE ANCIENT HISTORY OF MEDICINE, being a View of the Progress of the Healing Art among the Egyptians, Greeks, Romans, and Arabians.

By D. M. MOIR, Surgeon.

In 12mo. price 3s. 6d. boards.

THE ATONEMENT AND SACRAMENT OF THE LORD'S SUPPER considered with Reference to certain Popular Objections.

Printed for C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

3d edition, price 6d.

A PRACTICAL VIEW OF THE QUESTION OF PARLIAMENTARY REFORM.

By THOMAS GEORGE FOMMEREAU.

London: Printed for Longman, Rees, Orme, Brown, and Green, Paternoster Row.

Price 1s.

CHRISTIAN SENTIMENTS suggested by the PRESENT CRISIS; or, Civil Liberty founded upon Self-Restraint. A Sermon, preached at St. Barnabas Chapel, Kensington, May 1, 1831.

Printed for C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall; and J. Hatchard and Son, Piccadilly.

DR. MILLIGAN'S valuable Edition OF CELSUS; to which is added, a complete Delphin Index.

In 1 thick vol. 8vo. price 15s. the 2d edition, improved, of A. Cornelli Celsi Medicinæ, &c. Libri VIII. ex recensione Leonardi Targae. Quibus accedunt Annotationes Criticæ, Medicæ, Physicæ, Tabulæ Characterum, Ponderum, Mensurarum, atque Indices Matericæ Medicæ, Celsianæ Rerumque. Prefixa de Celsi Viti Dissertatione. Concinnavit, Indice jam Delphiniano auxit.

EDUARDUS MILLIGAN, M.D. S.A.S.S.

Coll. Reg. Med. Ed. Soc. &c.

Editio secunda, auctior et castigatior.

Printed for Macchalan and Stewart, Edinburgh; and Baldwin and Cradock, London.

Judging from the degree of approbation with which the former edition of Dr. Milligan's Celsus was received by the Royal Colleges of Surgeons, and the Honourable the Company of Apothecaries, it is hoped the Delphin Index, and other matter added to this edition, will in no inconsiderable degree enhance its value among those who regulate the course of medical education.

Price 6s. boards.

THE PASTOR'S FAMILY; or, the Sister Preceptress.

By the Authors of the "Son and the Ward." London: Printed for Harvey and Darton, Gracechurch Street; and N. Hailes, Piccadilly.

3d edition, 3s. 6d.

THE DIALECT OF CRAVEN, in the West Riding of the County of York, with a copious Glossary, illustrated by Authorities from Ancient English and Scottish Writers, and exemplified by Two familiar Dialogues.

London: William Crofts, No. 19, Chancery Lane.

BOOKS IN THE PRESS.

In a few days will be published,

MEMORIALS OF THE STUART DYNASTY, including the Constitutional and Ecclesiastical History of England, from the Decease of Elizabeth to the Abdication of James II.

By ROBERT VAUGHAN.

Author of the "Life and Opinions of Wycliffe."

In composing the above work, the writer has given a careful attention to the most authentic sources of information; and his endeavour has been to separate the story of our liberties and religion, under the Stuart princes, from the partial colouring frequently bestowed upon it, and to place it within a space that may be inviting to the general reader.

Holdsworth and Ball, 18, St. Paul's Churchyard.

Montagu's Ornithological Dictionary.

On the 24th of May will be published, in 1 very thick vol. 8vo. with numerous illustrative Woodcuts,

No. 748.

SATURDAY, MAY 21, 1831.

PRICE 8d.

REVIEW OF NEW BOOKS.

The Correspondence of Isaac Basire, D.D., Archdeacon of Northumberland and Prebendary of Durham, in the Reigns of Charles I. and Charles II.; with a Memoir of his Life. By W. N. Darnell, B.D., Rector of Stanhope. London, 1831. Murray.

THE *Literary Gazette* has invariably hailed the publication of authentic correspondence, as by far the most genuine means of illustrating the manners and feelings of any distant period. Letters not intended for the world had no inducement to misrepresent facts of a general character; and, in our opinion, these, where the writers were of rank sufficiently elevated to have access to the best information, are the true correctives of history. In the case before us there is, indeed, little of this kind of intelligence; yet the life of Dr. Basire offers in itself a curious picture of the English church at an era of its deepest humiliation, and of the monarchy in its hour of eclipse—necessarily including glimpses of the state of the country during that memorable time.

The selection of papers and letters has been made from the valuable library of the Dean and Chapter of Durham; and the Memoir is written with the *esprit* of a divine, who appears worthy of the rich rectory of Stanhope, so much spoken of within the last few months, and hardly less deserving of note from having been a living enjoyed by Dr. Basire. Of this learned man his biographer says:—

“He is a good specimen of the class of men which that church (of England) was enabled to produce, after she had escaped from the corruptions of Popery, and before her spirit was broken by the encroachments of sectarianism. Pious, learned, active, and judicious, he lost no opportunities of turning his talent to account. Resigned to all the dispensations of Providence, his misfortunes never seem to have depressed the energies of his mind; but he was, as one of his friends said of him,

‘Adversis rerum immersabilis undis.’

In the quaint language of Walker, in his book on the Sufferings of the Clergy, he was ‘sequestered, purse-servanted, plundered, and forced to fly; having been thrice shut up in the sieges of Carlisle and Oxford, and in a confinement in Stockton Castle.’ . . . It is a striking feature in his life, that in the most remote parts of Europe, whither he had retired as an exile and a fugitive, his friendship was sought, and his advice followed, by learned and good men; and, in some instances, by persons of the most exalted rank. The life of Dr. Basire may be divided into three portions; the first, from his birth to his expatriation, upon the surrender of the city of Oxford to the parliament; the second includes fifteen years of exile; the remaining part consists of about the same period of time, from the restoration, and his own return to England, to his decease.”

Basire was born at Rouen in 1607, the son of a Protestant of the lowest order of French

noblesse. He studied at Rotterdam and Leyden; and having come to England, was, in 1629, admitted into holy orders by Morton, Bishop of Coventry and Lichfield, to whom he was immediately after appointed chaplain. He was naturalised, and no doubt accompanied his patron on his translation to Durham in 1632. At this early age the few letters remaining shew that he was highly esteemed for piety and learning by his friends, among whom we find Vossius and other persons of repute. In 1635 Basire married Miss Fanny Corbett, “of a good family in Shropshire,” to whom his love-letters (if they may be so called) are of the most religious and edifying description. They might have served as models for those of Dr. Doddridge—only they are as cold in the way of mortality as the doctor’s are warm. He earnestly invokes her to pray; and says (*ex. gr.*)

“Goe on, sweet soule, and depend still upon God; and he shall sooner or later promote thee, if not by mee, (for alas, what am I that I should promise ought? my breath is in my nostrills,) yet by some other means.”

“I beseech God to cause his face to shine upon thee, to sanctify us one for another, to prosper our intentions, to pardon us all the vanities incident about it, to give us grace to goe on in his most holy feare, that if it be his holy will and for his glory, it may, in his good time, succeed, to our mutuall comfort, and the edification of both our families, meane while to indue us both with much patience and true mortification.”

Again:

“Cause your letters to be superscribed by our common friend; not so much for concealment as for safety; least the sight of a woman’s hand should tempt some curious knave to deflower them ere they come to my hands. Let your love be pure without passion, for this will weare away with age and time; when love, true, cordiall, and Christian love, will out last, will out live, even death it selfe. Remember your tye, for so I do mine: no creature can undoe it, if you can obtaine his consent in whose power you are. Touching competency of fortune, the lesse our expectation is, the greater our joy will be if it succeed. I will be careful to serve God, and to use the means that may worke my preferment. To conclude, love, thou art sure of an honest, a faithfull, and a well-meaning man, who desires neither thee nor any thing in the world, but for the glory of his Maker. Farewell!”

These are sufficient specimens of a pious courtship two hundred years ago. Well, Basire married and throve,—had children and church preferments, till, in December 1641, he was appointed chaplain to the king. Previous to this epoch, however, we must make a few brief extracts from the correspondence. The following occurs in a letter from Nathaniel Ward, vicar of Staindrop, to Basire.

“Pray tell me (he says) in your next, whether it is allowable to take an oath in a sense different from that in which it is imposed. If it be not allowable, I would far rather submit

to torture than be bound with that terrible chain. . . . For heaven’s sake, and by the sacred bonds of friendship, I implore you to state your opinion to me distinctly upon this point, as soon as possible. Tell me, moreover, what you intend to do in the matter. I cannot help quoting the exclamation of Polycarp, which you used to be afraid to commit to paper—

‘Deus bone, in que nos reservasti tempora!’

This, from a high churchman and royalist, seems to prove that Hudibras’s sophistry upon oath-taking was no caricature:

“He that imposes an oath makes it,
Not he that for convenience takes it:
How, therefore, can a man be said
To break an oath he never made?”

Yet these were good and worthy men.

“There was,” says the author, Mr. Darnell, “something eminently social, as well as practical, in the religion of this period; or, at least, in the religion of the men with whom this Memoir will make us acquainted. Friends strengthened each other in spirit, and drew their own union closer by urging their mutual wants to the throne of grace. It had not yet become a matter of form only for Christians to request each others’ prayers—the intermediate step towards that oblivion of the duty of intercession, which seems to prevail so generally.”

When the troubles arrived at a crisis, Basire took refuge in France, leaving his wife and family in indigence behind him, for church property had become the prey of the revolution. In June, 1747, he writes to his spouse:—“Here I am (not in Rouen, but as neere it as Yarus is to Little Eaglescliffe): my chamber lyes me in 7 or 8 shillings a moneth: yea I have a whole little summer-house to my selfe alone: only once or twice a day a little boy waits on mee for necessaries: my little house is within a garden, the most pleasant place that ever I lived in, if I had but your owne sweet selfe in it with mee. B. J.”

“Rouen, this 4th of June, 1647.”

After fencing with poverty and distress a considerable while, Basire got several pupils, sons of eminent men, with whom he travelled to Sicily, Malta, and Italy. It is curious enough, that among these boys we discover the ancestors of the present prime minister, Earl Grey, and of Lord Durham, his relative and associate. The fortunes of the house of Lambton do not appear to have been very flourish-

* The objects of investigations in these days may also be inferred from the following passage in the letter of another clergyman. “Give me leave to request one favour more at your hands, and that is, to let me know, by 2 lines, whether in your travels you ever met with Lot’s wife’s pillar, whether you tasted of it and found it saltish, and what shape it bears at this day. Josephus reports that he saw it, but describes it not. The occasion of my query is this:—Dr. Tonstall, p. 32 of his small piece ag. Scarb. Sp., fancies that shee was turned into marine salt, which cannot bee; it would have speedily melted with the moisture of the air, and so could not minister an occasion of remembrance to future ages, to take heed of the like disobedience and curiosity. I rather judge it to be a pillar of mineral salt, which dissolves not with moisture, such as Pliny tells of (lib. 31, Nat. Hist. c. 7), which may serve for building as well as stone. I am ready to send up my Answers to the presse, only shall wait your resolve to my query.”

ing in those days; for the worthy tutor writes to his wife:—"I have desired my Lady Lambton to pay you at one or two payments yearly 20*l.*, which I shall lay out here for her son, whilst he is abroad with mee." (Paris, March 1648).—"As for Mr. Lambton, I never had yet a farthing's stipend from him, and betwixt you and mee, a bill of 50*l.*, which should have come in August last, is yet uncome; so that ever since October last I have supplied him with all necessaries, so far am I from being a gainer by him (but keepe this to your selfe). However I write now to my lady to pay you ten pounds more (towards the bearing of your charges for Peter), and I shall not fail to make it good to her son. If you be forced to borrow of some good body somewhat above it, I shall doe my endeavour to discharge it, as soon as I hear from you." (Rome, March 1649).—"Betwixt you and mee, my Lady Lambton is very slow in her supplys to her son, for whom I have laid out of borrowed money, and a little of mine owne above 50*l.* unrepaid. If she would have him home, she should send a sufficient bill both to clear him, and to beare the charges of his returne; I have some moneths agoe ordered her to repay you ten pounds of what I have laid out for her son; I bad him write to the same purpose." (Padua, June 1649.)

Of Lord Grey's progenitor the notice in the same letter is curious:—"I heare Mr. Edward Gray of Howick is, God be thanked, turned Protestant. You may remember when I was last at Newcastle, what I writ to him, and now I heare there is a Scottish man in my cure at Howick. It may be the same whom I gave commission to supply the place. If so, you may perhaps, by Mr. Gray's meanes, procure some part in allowance out of it. I purpose to moove him about it this next weeke."

Dr. Basire's pupils having left him by degrees, he travelled for three or four years. Messina, Zante, Smyrna, Aleppo, Antioch, and Jerusalem, saw him; and the last-named places particularly, as well as various parts of Syria, in the character of a Protestant missionary, teaching and enforcing the gospel wherever he went. At last, he was invited to Transylvania by Prince Raccoci,* the last independent prince of that province, with whom he remained, as the teacher of his son, till his overthrow and the fall of his house, before the infidels in 1660. Previous to this event, the letters between him and Mrs. Basire in England are, though not very frequent, not a little interesting. The lady's orthography has amused us, from its resemblance to the style of several ladies of our acquaintance, who to this day, in spite of the march of intellect, continue to write and spell precisely like the worthy Mistress Basire, temp. Charles I. and II. If these belong to any school, therefore, we should have a right to class them with the old school. We shall extract a few sentences from Mrs. B.'s correspondence.

"Our dotter Mary is at hom with me; she is (I praise God) a relogos child, and serveable to me. Mr. Hums hath tout her to rit. My lady had a gret love and care of her. I found her all her close, and paid Mr. Broune for teching her on the verginalls. I shall have a care of all the rest, as much as in me laie. I ret to my frend Busby,† according to your

desire, about Isacke, but neuer had ansar from him. I very much desire, if it ples God to settel you at Rome, that he may come to you. I do thinke he will be a gret comfort to you, and loves rising early to go to coul. When I tel him I haue had a letter from you, he axes if you haue send for him. They are all very well, praised be God, and present thire duty to you, and John is lerning fast to red a chapte in the Bibel agens Easter, that he may haue breches, and then he would faine see his father, as I should be if it ples God to send vs a good oppertunity. I shall rit to Monsieur Roussell. I have not hard of Peter a long time. I haue send you a bill of all the monny I haue resuee from you this five yeers and almost a half, to a farthing; and I haue set doune what I haue paid out and laid out, in my hous and on my self and oure chedren.

"My Dearest,—I prais God for your wellfare, but I found it something heuie for me to beare your being so far from me, and being a hole year but tow dais afore I hard from you, wich is your letter 22 of July I haue, and your in May to me and your frends, with your tokens, are mesearied as all mine to you are. Now I rit to you tow for won, and send them according to your tow dyrexons. I sent you a not of the barell of oyle, and of all the parshalls of coreans you sent me from Zant; but the oyle and the last corans ware not of the best, wich made them thy gaue not so much as you thought. I haue all my unkel's letters to show what they all cam to, and haue them all rit doune; and all the monnis I hau had from you, and the twenty pounds you sent me twelue moneths agoe, when you went for Gerusilern.

"I shall not fail to pray for your nobel frend Mr. Daniell Penington, but yet enue him that he should enjoy that happines I want. But so that you are wall and content I hall holy submit to God, tel he see it for me to injoy what I want. I thanke you very kindly for all your gret and constan loue to me, thoue so far of and so long as all mos seuen yeers. I do ashoore you mine is the sam to you. For Isaac, I haue ret to my frend Busbe, but haue had no ansar. I heaue let him know by Mr. Carter that you haue ret to him but hit mis caried, and I ret to her to send me his ansar, and I shall let you know, and the tim I haue them all with me, I shall, God willing, bring them vp as well as I can. Our doter Mary is very seruiseable to me when I ham not wall. I haue ben very sore trobeled with the stone in the kidney, and a weknes in the bake. For the ston I haue got som qewre, but for my bake I thinke it will be hard to get it qewored. I prais God I ham very wall, and I cro fat. Your delite heare is very wall. Oure 4 cheldren heare present thire duty to you. John very much desirs to see his father, for he sais he is gon so far as he thinke he knas not the way bak, or els he wants a hors. I pray God send vs all a happy meeting."

This *cro-ing fat* with two such complaints is no fudge; for the good lady repeats in another letter, long after:

"The paine of my back and the stone do very much in crec, and yet I kip fat. I want whit wain to take my pouthers in, heare is non to be got tht is god. I do hartily prais God for your prosping in your *cauling*, and thy that torn many to ritousnes thy shall shine as stars. Wee do extremly want you and your brethren here, for there are very many that is fallen from the faith."

Having given so much to the wife's letters, we cannot (nor is it requisite) allow space for

the husband's letters from Transylvania. A schedule of the goods he left there is, however, rather a characteristic document, and we insert it.

"1. A painted chest full of cloathing. 2. A lesser painted chest, containing four silver cups parcel-gilt, together with six silver spoons. 3. One other chest of wood, full of manuscripts and mathematical instruments. 4. A large leathern Turkish basket (commonly called a *sapet*) full of books. 5. A vessel containing furniture belonging to the bed. The bed is of down, and of a large size; the pillow long, and also of down; curtains and tester of green silk; a silk counterpane; an embroidered counterpane stuffed with cotton (the value of the bed alone 150 crowns or imperials); a few pairs of sheets. 6. New towels, napkins, &c. 7. A rich Turkish carpet, quite new. 8. A green and a parti-coloured carpet. 9. Six embroidered bands. 10. Several boxes of orichalc. 11. Black silk stockings. 12. A red nightcap. 13. A small medicine chest of wood, containing drugs. 14. Manuscripts. The chief are as follows:—Theological lectures on Wollibus—Hebrew lectures on Psalm xxxiv. and Proverbs i.—All the lectures on metaphysics read by me at Alba Julia.—Two separate treatises on the beautiful and on order—Problem: Whether a husband may beat his wife. *(Natura)*—Several academical orations—Funeral orations the pious memory of the celebrated M. Keresturi, court-preacher, and of M. Professor Bisterfeld, my predecessor—Various itineraries, particularly one relating to the East, in different languages, bound in green (an Arabic MS. bound in quarto)—A disputation in MS. held in the university of Alba, between Dr. Isaac Basire and N. Kraykowsky, a Polish doctor and Jesuit, anno 1654—A MS. vol. in 8vo. containing a collection of various Hungarian synods—A new doctor's silk gown, à l'Anglaise, with rich silk trimming; which gown, with the cassock and apron, cost me 130 imperials or crowns. And many other such like things, which in my confusion do not occur to me. Other articles, which I cannot immediately recollect, may easily be known, either by the form of the garment, by the marking, or by some other indication."

Charles II. was not forgetful of Basire's loyalty and sufferings in the cause of his father. In 1661, on his return to England, "he was re-appointed to his stall at Durham, his rectory at Eggleston, and the archdeaconry of Northumberland; and Cosins, then become Bishop of Durham, prevailed upon the intruder at Stanhope, 'Andrew Lamant, a Scottish man,' to resign the rectory, and to take Longnewton in exchange."

Evlyn, by the by, in his Diary, mentions his preaching in Westminster Abbey, 10th July, 1661, and calls him "that great traveller, or rather French apostle, who had been planting the church of England in divers parts of the Levant and Asia. He shewed that the church of England was for purity of doctrine, substance, decency, and beauty, the most perfect under heaven; that England was the very land of Goshen." And, Oct. 29, 1662, the same author says, "I went to court this evening, and had much discourse with Dr. Basiers, one of his majesty's chaplains, who shewed me the syngraphs and original subscriptions of divers eastern patriarchs and Asian churches to our confession."

In spite of his example, his son Peter apostatised to the church of Rome, much to the mortification of his father. After this, the volume is a good deal occupied with local clerical matters and law-suits, of no interest to the public now. We shall, therefore, bring our review to a close, with a short extract or two of antiquarian curiosity. The expenses of Basire's sons Peter and Charles, as students at Cologne in 1666, are thus rendered to the doctor.

"In our dyet	6	13	11	1
In tuition	1	0	0	
For my bed and sheetes, which I hyre a quarter	0	11	0	
For mending and turning my (only) suite, for bookes, Toba, and private expenses, wherein may be mentioned (yet which I would omit, but that you delight in punctuality), some shillings given at the receipt of the Sacrament, dayes of fasting, and publick collections. I say in all, in these private expenses	2	4	6

* We should like to see a modern essay on this point of domestic policy.—Ed.

* "Nothing (says Basire in a letter to this prince) reflects more honour upon the family of Raccoci than this, that your illustrious grandfather, Sigismund, of glorious memory, with a few other pious Hungarian chiefs, printed at their own expense, at Vitul, in the year 1590, the first edition of the Bible entire, in the Hungarian language."

† The famous Dr. Busby; and a staunch friend of Dr. Basire.

"We might table out for 4l. a qre., but Mr. Peck thought to have lessened expenses by keeping house: what to do, he resolves not till he see Mr. Grove. . . . The want of a bed and 2 paire of sheetes, puts me to the charge of 11sh. a qre. Besides this quarterly expenses, all the members of colledges are put to charges in detriments, though absent. The Lord remove from us the occasion of our abode here! expecting which, I remaine, reverend sir, your dutifull son,
PETER BASIRE.

"Colne, 8ber, 13, —66.

"Be pleased to present my h. service to the Reverend Mr. Wrench. May you not be offended that I name Tobacchow here, for lease I take than I did by halfe, each day, stinting myselfe, but I pay a dearer rate for it. I beseech you, vouchsafe (if safe) to send me my trunk, for I want a trunk, and would buy none."

At last, at the ripe age of three score and ten, Dr. Basire departed this life, October 12, 1676, having lost his wife in the July preceding. His tomb still remains in the Abbey Yard of Durham, near the north door; and his arms are emblazoned on the east window of Stanhope church. His own family failed in the second generation, for he had but one grandchild, who died in infancy. The Basires, eminent engravers, though from Normandy, were not related to him. We conclude with his testimony in favour of the church of which he was a worthy member, as it is solemnly given in his last will, and upon the eve of his death.

"And I doe further protest, that haueing taken a serious survey of most Christian churches, both easterne and westerne, I haue not found a paralell of the church of England, both for soundnes of apostolicall doctrine and catholicque decipline."

Hygerhill; or, Memoirs of an Officer in the Army of Wolfe. By James Athearn Jones. 3 vols. London, 1831. T. and W. Boone.

MR. JONES is rather a man of information than one with talent for fictitious narrative. He has evidently literary tastes, and has acquired a great mass of varied knowledge, which he has put forth in the shape of a novel, without once considering his own fitness for the task. The story is unconnected and improbable to the last degree, but many of the scenes are sketched with much truth and spirit. We like the first volume much; its pictures of American lower life seem to vouch for their own truth. It strikes us that our author would write a better work of travels than a novel.

American trees.—"It is a curious fact, and one not to be accounted for on natural principles, nor with propriety to be attributed to the 'prevalence of winds strongly impregnated with salt,' that the first settlers—the pilgrims, as they are called, of the northern states of America, found both hill and dale, to the very brink of the ocean, clothed with a stately growth of trees, many species of which are not now to be found within thirty miles of the spots where then they constituted the bulk of the forest. The naked hills and continuous arable levels which now present themselves at every point of the coast, and where the larch, the ash, and many other species of trees, cannot now be made to grow, were then covered with dense and luxuriant forests, of which the above-named trees formed a principal part. In the low grounds, upon the southern shore of New England, they frequently dig up the stumps of red cedar and other trees, which will no more grow in that particular spot now than the

manchineel or palm. If we were permitted to give to inanimate objects the feelings and passions of human beings, we might imagine these venerable tenants of the soil to determine on death rather than witness the occupation of their home by strangers."

American dwelling of one of the first settlers.—

"This miserably poor and crazy cabin was, in height, but a single story of seven feet. Originally it consisted of two apartments on the ground floor,—a front room and a kitchen. To this building various additions had been made, from time to time, as the occurrence of some fortunate circumstance supplied my father with the means to make them. About the time of my brother James's birth, a French brig ran on the rocks below his cabin, and his share of the booty (my readers are, probably, aware that it is accounted no sin to plunder a wrecked vessel—a 'godsend') enabled him to add a porch. Soon after, a dead whale, with a harpoon, marked 'Hezekiah Coffin, Nantucket,' sticking in it, came on shore, and my father was the lucky finder; the blubber enabled him to add a large dormitory, in the form of a projection, called, in America, a 'salt-box;' the architectural designation is, I believe, a 'lean-to.' This latter apartment, rough as unplanned deal could well be, unplastered, and lighted only by two windows of twenty-four by sixteen inches, was occupied by my sisters, as their sleeping-room. The garret, or attic, was appropriated to various and discordant uses. It served as a store-room for the implements of our business—the seines, nets, hooks, &c., as well as the usual lumber of our family, and it was, also, the bedchamber of myself and my brothers. Our winter's provision of dried fish was piled up in one corner, and in another stood the barrel of pork, which occasionally furnished a garnish to our dinner of bass, or perch, or other 'pan-fish,' as they call those kinds which are deemed most palatable when cooked by frying them. My father and mother slept in the 'room,' as the principal or front apartment in a New England dwelling-house is, by way of excellence, called, and a low bedstead, made to shove under, and be hidden by the larger—I believe they call it a trundle-bed—was my little brother's place of repose for the night. The ordering of the interior of the cabin in other respects was of a piece with its exterior apparelling, and that was of the roughest kind. A rude wainscoting of unplanned deal board lined the whole of the interior of the house proper. When I inform my readers that the chimney, when a north-wind blew, did not 'carry smoke' well, the colour of this wainscot may be imagined. Into this rough and smoke-dried ceiling, at various points, nails, hooks, and wooden pins, were driven, upon which were suspended fish-lines, coils of rope, guns, powder-horns, the great-coats and jackets of the male members of the family, hats, boots, and other articles too numerous to mention. Shelves were fixed over the fireplace, and upon these were ostentatiously displayed my dear mother's wealth of crockery and glass. The remnant of a dozen gaudy cups and saucers, which had been presented to her by the master of a stranded vessel some years before—a milk-white punch-bowl and toddy jug, which had belonged to my maternal grandfather, Captain Banks, and, it was whispered, had thrice occasioned the stranding, and, eventually, the complete 'swamping,' of the Loving Couple—a pair of old-fashioned trellis-work fruit-baskets—a splendid China coffee-pot, without nose or handle, but used by my sisters to keep their necklaces and ear-rings in

—together with the remains of at least twenty dilapidated sets of pottery and glass, wasted by the operation of time and 'battered fingers,' till, in the language of the trade, these were but 'show patterns' left,—adorned, in the opinion of my mother and her gossips, those precious shelves. There was another shelf in the middle of the room, formed by fastening the ends of a board to the cross-beams which supported the ceiling. This shelf was the repository of the cheese, ham, and various other important matters connected with household economy."

October.—"Then, for the pleasures of October: list to the troop of disorderly urchins on the alert for the walnut and chestnut forest, or bending beneath their rich prize, a basket of half-ripe grapes, the while shouting most obstreperously. See the happy shooter, cap in hand, his dog at his heels, creeping upon the unsuspecting wild duck, or, happier still, returning with two or three brace, sometimes a dozen, which he has 'killed flying' (the great boast of an American duck-shooter), unutterably proud of the feat, and happier than a courtier to whom majesty has nodded. October is, in America, emphatically the 'sportsman's month,' and thence its approach is hailed with a lively joy by all who love duck-shooting,—in other words, nine in ten of those who dwell on the margin of the Atlantic ocean. For the space of four or five hundred leagues, the coast is dotted with small lakes or ponds, of greater or less extent; and these, in October and during the whole of autumn, till the rigours of winter shut them up, are the resorts of immense flocks of wild-fowl. They are pursued with a singleness of purpose, which leads to so much poverty and wretchedness, that the best argument ever brought forward to prove the expediency and benefit of the English game-laws, is the evil consequences of an unrestrained exercise, in America, of the liberty they abridge in England."

A Huskings.—"Another amusement of the lower classes is found in what are called 'huskings.' The occasion is this: when the *maize*, or Indian corn, becomes ripe and fit to be gathered, notice is given that, 'on such or such a night, Mr. Johnson or Mr. Smith will have a husking.' Mr. J. or Mr. S. go to work and gather in their corn, which is deposited on a clean piece of sward, unhusked, i. e. unstripped of its leaves, in rows of greater or lesser length, nicely rowed up. Upon the stated night, at about seven or eight o'clock, crowds of young men and boys begin to assemble from far and near, coming sometimes fifteen miles to take part in the frolic. They labour in stripping the husks from the ears of corn till the whole is finished, which may be eleven or twelve o'clock at night. As the labour is not of a nature to compel them to be silent, and as rum is circulated profusely, you may be sure that a noisier crowd is seldom seen out of the halls of Momus. Songs, generally profane and indelicate, shouts, Indian war-whoops, sounds in imitation of the barking of dogs and crowing of cocks, interspersed with the rough 'yo heave ho's' of the sea—every thing that can make discord except 'drums, trumpets, blunderbusses, guns, and thunder,' is to be heard by a listener upon one of those occasions. If there is a poor negro present, he is sure to have the 'devil and all played upon his black carcass.' Poor old Cesar! How have I seen thee pelted with 'rotten ears,' which came from so many different places at once, that it was utterly impossible to charge the offence upon any particular person, or to say, as Na-

than said to David, 'Thou art the man.' I can almost fancy now, when forty years have passed, that I hear the sound, 'Now for the nigger!' 'Hit the white of his eye, Bill!' 'Aim for his teeth, John Grey!' 'Fire high, Bluster!' and the poor creature's complaining outcries. 'Dere! side a head, massa Lynn!' 'O dear, hit de nigger on he's tummock!' 'B'lieve dey killa me!' &c. &c. But Caesar was always paid, and overpaid, before the company separated. He was feasted till he could feast no longer. His own language was, 'Swear I nebbet eat so much afore.' Money, too, was showered in profusion upon him. Every one who fancied he had hit him gave him a penny: and, as all were anxious to be thought to excel in this kind of shuttlecock, Caesar usually went home the largest proprietor of copper in the parish. When the corn was all husked, dancing, drinking, and feasting, (the bait which had been held out to collect the company together) began, and continued, without intermission, till daylight. I should have mentioned, that many of the rustic beaux brought their girls upon pillions behind them, so that there was the admixture and proportion of the sexes requisite to a well-ordered dance. A custom which usually created a little commotion deserves to be mentioned: whoever, in husking, found ears of red corn, or who could get others to give them to him, was entitled to claim from the girls a kiss for each and every one he held. The penalty was always demanded, and, as ladies are the last to abrogate good old customs, it was always paid, unwillingly they said, but, nevertheless, they paid it."

Curious Action at Law.—"One case which attracted considerable attention, and created a deal of talk was this:—A sailor, by name Jack Saunders,—I like to be particular, the doing so stamps an air of credibility upon your narrative, for it passes the capability of human impudence to invent such a thing as a name;—Jack hired a horse to go from our village to Pinfold, across Wapping's Creek. Saunders had been drinking a little too much; and, while crossing the creek, which had been swollen by recent rains, the horse, which was a very restive one, threw him, and he was drowned. The horse was arrested, and tried for murder, but was acquitted, from want of testimony that he did the act from malice prepense! It was maintained,—out of doors, however,—I never heard what the judge's opinion was, that an indictment for homicide could have been sustained."

American Shopkeeper.—"In giving the early history of Timothy Dexter, I shall describe nine in ten of the lesser shopkeepers in America. He was a friendless boy, and made his way to the high dignity of a shopkeeper solely by prudence, economy, and dexterity in traffic, aided, perhaps, a little, by cunning and overreaching. Born of parents, the lowest of the low, vulgar, ignorant, and depraved, he had, at a very early age, shaken off the clogs imposed by his parentage and poverty, and stood forth conspicuous for a talent which bade fair to give him riches. In the language of the country, he was known to be a 'right smart lad,' 'a keen chap,' 'a raal shaver,' all expressions declaring the popular opinion of his thrift and sagacity. His commercial career may be dated from his ninth birthday. The nature, quantity, and value of the transaction which developed his trading tact, is characteristic, and deserves to be recorded. His first speculation was in bones!—beef-bones; the quantity, half a Winchester bushel. A year before this memorable era in the fortunes of Mr. Dexter, a button-mould maker, travelling

through the village in quest of the raw material of his trade, employed the boy Timothy to collect it, promising to give him half-a-crown per Winchester bushel, for all he should collect. The boy instantly set about the task, and unweariedly employed himself, until he had, as he supposed, acquired the property in half-a-crown. But he was doomed to have his hopes prostrated; his employer disappeared, leaving the bones in the hands of their unremunerated collector. It was not in the nature of the prudent boy to throw aught away, and it was quite as foreign to it to give any thing away, which might, by any the remotest possibility, become valuable, and he deposited the bones in one of the dark nooks of his father's garret, where they remained undisturbed for many months. It so happened, in some moment of boyish intercourse, that an act of more than usual kindness in an associate melted his heart, and, to shew his sense of the favour, he gave him his bones! Repentance, sincere and fervent, soon followed. The occurrence of which I am about to speak was minuted down by him as a warning against the indulgence of grateful feelings in after-years, and was the cause, it was said, why it was the last generous action he was ever known to perform. The button-maker returned, and renewed his offer. His prodigality, and the loss he had sustained by his thoughtless gratitude, cut him to the heart. After deliberating a few minutes, he went to the donee, and demanded back the bones. They were returned, and Tim hastened with them to the button-maker, and received his half-crown. This was the capital with which my brother-in-law commenced business, and this was the occurrence which gave him, in after life, the nickname, or epithet, of 'Tim Bones.' I should mention that he had another, 'Sorril,' given him by the boys, on account of his red hair. It was that by which he was always known, until the affair of the button-maker occurred. Indeed, it is to be doubted whether he knew he had any other; for when he was asked by his catechist, 'what was his name?' he answered, 'Sorril,' and upon being asked who gave it him? he answered, 'the boys in the parish.'

He laid out the two shillings and sixpence received for bones in the 'tongues and sounds' of cod-fish, collected here and there fresh, and, therefore, cheap. These, when cured, he 'swapped' for a keg of rum, which, with the aid of a cool and sweet rivulet, near at hand, he turned into a fine penny. He went on plodding and speculating, at once the admiration and the laughing-stock of the village."

We omit the very elderly joke of the warming pans, and proceed with Mr. Dexter's career.

"He went on accumulating stock and increasing in means, till soon his shop exhibited something better than a beggarly account of empty boxes. Withal, he began to use the conventional and trades-cant language of his craft; learned better than to call thirteen pence 'one and one pence,' as it was said he did when he first opened his shop; and talked, with a glib tongue, of 'losing bargains,' 'remarkably cheap,' 'bought at a sacrifice,' 'sold at a loss,' and other matters, which, if fibbing be punished in another world, will go very near to fill the naughty place with haberdashers, grocers, mercers, milliners, and all that sort of thing. He was very punctual in his payments, and, I believe, as nearly honest as a trader can be. That is, his weights and measures were within ten per cent of the legal standard; he sold his sugar with a trifling alloy of sand, and put very little water into his liquors, unless he bought them much stronger than they ought to be, for

the good of the public and the interests of morality, when his visits to the rivulet were more frequent. Upon the whole, he was called, and I think with reason, an honest trader. A more industrious man than he never lived. Every morning, an hour before the lark was abroad, he opened the doors of his shop, and swept it out, took down the shutters of his window, dusted the goods, washed the counter, rinsed the drinking-cups, and was prepared to accommodate the boatmen and early stirrers with the rum, biscuits, and other things required to their fitting out for the day's labour. Those were times when early rising, and incessant watchfulness, unceasing industry, and frugality in expense, brought a man to wealth. His principal capital, then, was industry and punctuality; his bank was the good report of men; and his endorers economy and good management."

We shall conclude, as a story ought to finish, with an offer of marriage.

"As soon as silence could be restored, my father demanded of my sister what answer should be made Mr. Dexter. The business was soon settled by her modest acknowledgment that she didn't know, but she *guessed* that, if they thought it for the best, she would venture to—to marry him. 'But do you like him?' asked my father. 'Why s-o-m-e,' said Jenny; 'and I guess I shall like him more the more I know of him.'"

There is a very beautiful Indian story in the second volume. Mr. Jones is, we believe, the author of that wild and, in parts, highly poetical work, the *Tales of an Indian Camp*, in which are some most imaginative legends.

Life of Sir Thomas Lawrence.

[Second Notice.]

BEFORE we proceed to our promised continuation of this review, it behoves us to offer some remarks upon the extraordinary attacks to which we have been exposed in consequence of our preceding notice. With this matter we should not think it worth while to trouble our readers, were it simply individual or personal; but as it will tend to throw light on the system of puffing and abuse, so actively employed to promote the sale of indifferent books, and weaken the force of honest criticism, we will venture to tell a plain story about this *Life of Lawrence*, and the remarks connected with it which have appeared in several journals."

With regard to the character we gave the work, we leave it to the public to decide whether it is the true one or not. We see no cause to retract an iota of our judgment, though we have some reason to wish we had been less severe upon the faults of the author. Yet certainly, upon the face of his book, he alone was to be held accountable for its blemishes and faults; for its manufactory of trivial details

* *The Age and the Courier*, per nobile fratrum, have been the principal instruments through which the review of the *Literary Gazette* has been assailed in this instance: the former in one of those many paragraphs which are obviously sent in and paid for as advertisements, though not marked as such; and the latter in a form which has yet more cunningly the appearance of a spontaneous literary notice. The former discovers that we are coarse; the latter, that our Journal is much indebted to the extracts which we make from new publications. We believe it would puzzle the writer in the *Age* to point out three examples of coarseness which had escaped our vigilance in fourteen volumes of the *Gazette*; and as for our exemplifying new books by quotations, we really do not know how we could well manage without. But when did the *Courier*, which has always so liberally praised our plan and exertions, find out this and defect? It should ever be remembered, that the *Literary Gazette* admits nothing for payment, except its regular advertisements; and that newspapers of every other kind make as regular a traffic of paragraphs as of advertisements.

and words to fill up nearly a whole volume; and for the errors and misstatements as to facts that we detected on almost all the leading points of which it treated.

But, then, neither we nor the public could be aware of the mode in which such jobs are performed, and of the many excuses which may be set up for the actual doers of them. We consider it a great pity that a clever person, like Mr. Williams, should have lent his name to countenance one of these jobs; and we hope what has been said will be a lesson to him, and to all other literary men of reputation and ability, not to suffer themselves to be betrayed into a participation in such concerns. Leave them to the tricks of the trade, and the poor hacks who are employed (in reluctant beggary) on the journey-work of modern book-making.

We will believe what is stated to us, that the materials obtained for the *Life of Lawrence* were originally so scanty, that without the aid of most ingenious dilution it was impossible to contemplate the production of even one tolerably priced volume. And therefore Mr. Williams was called upon to spin out his narrative, so as to render it justly objectionable to our censure.

We also believe, that when farther and more eligible matter was obtained, it came in such a questionable shape, that no editor could be answerable for its accuracy. For example, Sir T. Lawrence's letters might not be the originals, but copies furnished by Mr. Keightley, his attorney, friend, and executor. Without impeaching Mr. Keightley in the slightest degree—for we are assured he is a very respectable individual—we have no hesitation in saying that we put no such faith in the correctness of documents so filtered, as we would in the *litera scripta* of Lawrence himself.* The omission, or alteration, or even accidental mis-transcription of a few words, would make all the difference in the world.

But this is not enough to vitiate the "*Life and Correspondence*"?!! We also believe, that the very letters, after they were printed, —and we here particularly refer to those which related to, or passed between, Sir Thomas and Mrs. Wolff,—were submitted to a highly respected lady, whom we have the pleasure to know well and esteem much, and who, out of regard to the memory of the parties, very kindly struck her pen through every passage which could suggest an idea of their affectionate intimacy being aught beyond platonic. This is a subject upon which we regret being obliged to speak; but, impugned as we are by paid-for paragraphs, as malicious as they are false, we are compelled so far to abate the feelings which must actuate every gentleman in such affairs, and ask Mrs. Dr. Hughes if this be true or not?

We care not to inquire into the nature of the attachment between the fine-minded Lawrence and the beautiful and accomplished lady alluded to. Let hypocrites and bigots resort to lies and fabrications, in order to represent it as it may suit them: we cannot even respect their motives; and hapless would it be for humanity if that which they attempt to conceal should be deemed so deep a damnation as to claim no sympathy on earth, no tear of pity from recording angels to blot it out for ever.

We have now given the public a little insight into the fashion of concocting books of this kind. Our knowledge was acquired after our

* It is a fact, we are assured, that one letter, purporting to have been written by Lawrence, was absolutely rejected as a forgery, which would implicate such contradictions as must injure him.—*Ed. L. G.*

last *Gazette* appeared; but does it not shew that our appreciation was just, though formed simply upon the work itself? Does it not shew that we were only not severe enough, because we were unacquainted with these disgraceful circumstances? Nor do we mean to insist that such conduct is unparalleled: on the contrary, there is hardly a recent work of biography which is not liable to the same charge of being stultified by suppressions and misrepresentations.

But we do insist upon one thing,—that we have merely discharged our public duty, without respect to persons,—we who are sedulously accused of being subservient, forsooth! to particular publishers, and are every now and then, by a turn of the wheel, reviled for unjust severity towards their publications. So it is to hold on a steady and impartial course—a course certainly not very intelligible to the corrupt, nor very palatable to the envious, nor very agreeable to the interested; but, nevertheless, a very gratifying, and, thanks to the public approbation of it, not a very unprofitable course to the Editor and a principal proprietor, of this Journal.*

A few farther selections from the work which has forced us to this episode may now relieve the reader. From a continental letter we copy Lawrence's account of Metternich.

"His daughter, though never in England, speaks English remarkably well, and is to him, in intellect and nature, and in their mutual affection, what Portia was to Cicero. I do not compare a modern statesman to that father of Roman eloquence, (sanctified by all honours of history and time,) except in height of political importance, and in the certain existence of this sweet, domestic feeling. That you may know part of the link that binds me to him, besides his kindness, and the circumstances of fortune, see him with me at Tivoli, before the lower tremendous cascade, which is out of view of the town, though, if you look up, you just catch the Sibyl's temple. We were standing alone and silent before it, just so far distant as not to be stunned by the noise—'And here,' he said, 'it flows on—always majestic, always great; not caring whether it has audience or not; with no feelings of rivalry for power! Here is no envy, no exertion for an effect. Content with its own grandeur, no vanity, no *amour propre* are here.' If you were to tell this to our diplomacy or politicians, of the dexterous, ambitious, politic Metternich—of him who endured that audience of a day with Bonaparte at Dresden, and is reproached by Lord Grey with having so entirely deceived him—of Prince Metternich in society—the gay, the quizzing Metternich—they would never believe, or would sagely ridicule the tale: but it is this Metternich that I love, who, when dressed for the ambassador's party, his equipage and attendants waiting, at half-past ten at night, on my sole call, at my suggestion, could change his dress, take me to his daughter's room, where she was at her little supper, at her husband's bedside, who was ill with slight fever, persuade his 'Marie' to put on her bon-

* We are ashamed to occupy attention with our own affairs, and usually pass over in silent contempt the innumerable attacks of which we are the object. How perfectly independent we are, the present ebullition of abuse will demonstrate: but next week, month, and year, as the week, month, and year before, we shall be just as much as ever described as under the control of any bookseller it may please the slanderous to suppose. To all such interested falsehoods we would answer at once, that were we guided by no more honourable principles, our property in the *Literary Gazette* is far above the influence of any (or of every) house in London.

net and cloak, and come with us to see the Colosseum by the moonlight that was then shining in purest lustre, where we staid till, on our stopping at the French ambassador's, he found it was twelve o'clock. He had then to make a slight change of dress; but I had none with me, and declined entering, and was therefore getting out of the carriage to return in my own, which had followed me with Edward. Prince Metternich, however, would not permit it, but desired me to remain with his daughter, and conduct her home, which I then did. One short anecdote of her, and I conclude this too long letter. On my one day expressing surprise at her preferring the Netherlands to any country she had seen, she said, 'It is so cultivated—the peasantry are so happy. I know it has not rocks and waterfalls, but God made the country for man; and where he is not happy, ah! it is in vain that you tell me of rocks and waterfalls.' This was said in a steady, even tone of voice, without raising her eyes from her work, as an inward and unheard sentiment."

The accounts of the Princess Charlotte are so interesting, that we need offer no excuse for adding them here.

"She once said, 'I am a great coward, but I bluster it out like the best of them till the danger's over.' I was told by one of the members of the council awaiting her delivery, that Dr. Baillie came in, and said in answer to some inquiries, 'She's doing very well: she'll not die of fear: she puts a good Brunswick face upon the matter.' She had a surprisingly quick ear, which I was pleasantly warned of: whilst playing whist, which being played for shillings, was not the most silent game I ever witnessed, she would suddenly reply to something that the baron or I would be talking of, in the lowest tone, at the end of the room, whilst her companions at the table were ignorant of the cause of her observations. I have increased respect for the Bishop of Salisbury, because he appeared to have fully performed his duty in her education. She had, as I have said, great knowledge of the history of this country, and in the businesses of life, and a readiness in anecdotes of political parties in former reigns. How often I see her now entering the room, (constantly on his arm,) with slow but firm step, always erect,—and the small but elegant proportion of her head to her figure, of course more striking from her situation. Her features, as you see, were beautifully cut; her clear blue eyes, so open, so like the fearless purity of truth, that the most experienced parasite must have turned from it when he dared to lie. I was stunned by her death: it was an event in the great drama of life. The return from Elba! Waterloo! St. Helena! Princess Charlotte dead!—I did not grieve, I have not grieved half enough for her: yet I never think of her, speak of her, write of her, without tears, and have often, when alone, addressed her in her bliss, as though she now saw me, heard me: and it is because I respect her for her singleness of worth, and am grateful for her past and meditated kindness. Her manner of addressing Prince Leopold was always as affectionate as it was simple; 'My love;' and his always, 'Charlotte.' I told you that when we went in from dinner they were generally sitting at the piano-forte, often on the same chair. I never heard her play, but the music they had been playing was always of the finest kind. I was at Claremont, on a call of inquiry, the Saturday before her death. Her last command to me was, that I should bring down the picture to give to Prince Leopold upon his birth-

day, the 16th of the next month. The etching was given me in a grateful moment, a sad one, too, (for he was in tears,) by Colnaghi. He was her printseller, and she had made a large collection—all Sir Joshua's, Vandyke's, &c. He used to attend her when Miss Knight was with her, and saw her execute the thing, the first impression of which she gave to him. I eagerly caught at his saying, 'I was more worthy of it,' and more than half asked him for it.

"The prince was looking exceedingly pale; but he received me with calm firmness, and that low subdued voice, that you know to be the effort at composure. He spoke at once about the picture and of its value to him more than to all the world besides. From the beginning to the close of the interview, he was greatly affected. He checked his first burst of affection, by adverting to the public loss, and that of the royal family. 'Two generations gone!—gone in a moment! I have felt for myself, but I have felt for the Prince Regent. My Charlotte is gone from this country—it has lost her. She was a good, she was an admirable woman. None could know my Charlotte as I did know her! It was my happiness, my duty to know her character, but it was my delight.' During a short pause I spoke of the impression it had made on me. 'Yes, she had a clear, fine understanding, and very quick—she was candid, she was open, and not suspecting, but she saw characters at the glance—she read them so true. You saw her; you saw something of us—you saw us for some days—you saw our year! Oh! what happiness—and it was solid—it could not change, for we knew each other—except when I went out to shoot, we were together always, and we could be together—we did not tire.' I tried to check this current of recollection, that was evidently overpowering him (as it was me) by a remark on a part of the picture, and then on its likeness to the youth of the old king. 'Ah! and my child was like her, for one so young, (as if it had really lived in childhood). For one so young it was surprisingly like—the nose, it was higher than children's are—the mouth, so like hers; so cut, (trying to describe its mouth on his own). My grief did not think of it, but if I could have had a drawing of it! She was always thinking of others, not of herself—no one so little selfish—always looking out for comfort for others. She had been for hours, for many hours, in great pain—she was in that situation where selfishness must act if it exists—when good people will be selfish, because pain makes them so—and my Charlotte was not—any grief could not make her so! She thought our child was alive; I knew it was not, and I could not support her mistake. I left the room, for a short time: in my absence they took courage, and informed her. When she recovered from it, she said, 'Call in Prince Leopold—there is none can comfort him but me!' My Charlotte! my dear Charlotte!' And now, looking at the picture, he said, 'Those beautiful hands, that at the last, when she was talking to others were always looking out for mine!' I need not tell you my part in this interview; he appeared to rely on my sharing his thoughts. Towards the close of our interview, I asked him, 'If the princess at the last felt her danger?' He said, 'No; my Charlotte thought herself very ill, but not in danger. And she was so well but an hour and a half after the delivery!—And she said I should not leave her again—and I should sleep in that room—and she should have in the sofa-bed—and she should have it where she liked—she

herself would have it fixed. She was strong, and had so much courage, yet once she seemed to fear. You remember she was affected when you told her that you could not paint my picture just at that time; but she was much more affected when we were alone—and I told her I should sit when we went to Marlborough House after her confinement. 'Then,' she said, 'if you are to sit when you go to town, and after my confinement—then I may never see that picture.' My Charlotte felt she never should."

The delightful letters of Lawrence are, as we have stated, quite sufficient to buoy up the publication on the tide of popularity. With regard to the other parts:—labourers poorly remunerated cannot be expected to produce aught but crude and hurried works: and it may be farther observed, that whoever once embarks in a publisher's job (a most harassing and ill-required occupation), is too often obliged to comply with any terms, and shape the business any way, or lose the opportunity altogether. How injurious this book-making and literary jobbing is to the general cause of literature, must be obvious to every reader, even to those to whom it is mere matter of distant complaint.

Family Library, XXII. Lives of Scottish Worthies. Vol. I. By Patrick Fraser Tytler, Esq. F.R.S. and F.S.A. J. Murray.

WE are indebted to the pen of one of the ablest historians of the age for this well-conceived and well-executed volume. To say that it is worthy of being placed side by side with the best of its own series, or of any other of this class of publication, is only to do it bare justice; and it requires no more. The Worthies are Alexander III., Michael Scott, Sir William Wallace, and Robert Bruce—glorious names, and connected with epochs of the most stirring and interesting description.

The condition of Scotland during the reign of Alexander, including the famous invasion of Haco, king of Norway, affords Mr. Tytler a fine opportunity for displaying his ample historical research. The narrative is delightful; and the Norse Chronicle and Chronicle of Melros are made quite familiar to us in a most agreeable garb. Many points of curious and important antiquity are also popularly illustrated. The following suggestion touching the discovery of America will, however, probably stagger most of its readers.

"In Scotland, Thorstein, the daughter of Oleif and Audur, in conjunction with Sigurd, earl of Orkney, got possession of Caithness; and this heroine, having established her grandchildren in the Orkneys and Ferroses, was one of the many leaders of colonies from the Sudreyar, or South Isles, to Iceland, where it is remarkable that the new inhabitants had dedicated the first church built in that island to St. Columba; and from this remote island, there is strong reason to believe, that the first discovery of America was made by Biorn, son of Heriolf, about the year 1000, almost five hundred years before the voyage of the more celebrated Columbus."

We select an old legend from Fordun, and the remarks of Mr. Tytler, as a fair specimen of the work.

"It happened upon a time," says he, "that Ralph, abbot of Kinloss, was on a journey, along with some brother abbots of the Cistercian order, who were summoned to attend a general chapter. Their cook travelled along

with them; and one day observing the abbot to be much tired and worn out, having zeal, but not according to knowledge, (I use the expressions of the historian,) 'he mixed a quantity of flesh with the fish-stews which he was preparing for his superiors, and by the cunning of his art, so cooked it up, that it became exquisitely savoury, but yet seemed only to be fish fried in butter. The abbots ate largely, but asked no questions for conscience sake; and then, as was their wont after meals, retired to bed. Deep sleep fell upon all except the Abbot of Kinloss, who, as he lay awake, gazing on a high window in his dormitory, saw, to his horror, a black Ethiop, of a grim and terrible aspect, enter through the casement into the chamber, comporting himself as if he felt an excellent odour. This horrid guest then walked slowly up to each bed, and drawing the curtains, gazed in with a smile of triumph upon the sleeping brethren. At last, coming to the cook's bed, he could not conceal his joy, but embracing the sleeping and unconscious delinquent, kissed him with much affection. He next looked fiercely at the abbot, who sat upright in his bed, staring with dismay on such proceedings, and then dissolving into a cloud of smoke, he vanished from his eyes. In the morning, the pious Ralph sent for the traitor of the kitchen, and recounted to him the horrid vision of the night; upon which the cook fell down at the feet of his superior, confessed the fraud he had practised upon the fish-stew, and promised, for the future, to conduct his culinary mystery with more attention to the spiritual than to the carnal wants of his brethren.' How graphically ludicrous is this story, if it did not bring along with it a melancholy reflection upon that thick and hopeless moral twilight which must have overcast the mind of a people, when the clergy did not hesitate to recount, and the multitude to believe, such absurd fables! Fatal as was such a condition of mind to the cause of religion and good morals, it formed, on the other hand, the very soil in which the spirit of romantic fiction, and the belief of supernatural agencies, both of mortals and of spirits, were calculated to flourish and produce their seductive fruits. The mythology of the Norsemen, a people whose imagination and high poetical temperament seem to have been as wild and excursive as their lives, was, as we have seen already, for many centuries prevalent in the Western Islands; and whether we look to this element, to the superstitions and religious creed of the original Celtic population, or to the tribes of new deities and foreign-bred ghosts and demons who flocked in along with the Saxon and Norman adventurers, it is evident, that a belief in magic and astrology—a conviction that the caves, and woods, and rivers, were peopled by powerful and invisible spirits—and a persuasion that it was given to some favoured or fated mortals to foresee events, and even to control and direct the supernatural agents whom they compelled to be their ministers—exerted deep and general influence amongst a people in whom the blood of these various races was indubitably mingled. Of all this there are many proofs to be found in the pages of our ancient chronicles. We find it, for example, the general belief of the country, that immediately previous to the battle of Largs, Saint Margaret, the wife of Malcolm Canmore, appeared to a brave knight, Sir John Wemyss, as he lay sick in bed; in one hand the beautiful inhabitant of heaven led a knight resplendent in arms, having his helmet surmounted with a golden coronet, whilst there

followed her three glorious-looking warriors in shining steel, and of courageous aspect. 'This,' said she, addressing the recumbent baron, 'is my revered lord and husband, and these are my sons, once kings of this realm, with whom I hasten to the field at Largs, where we shall triumph over our invaders.' On another occasion, during the reign of this monarch, an antique and beautiful cross was dug up near the town of Peebles, and hard by was found an urn, with the bones and ashes of a human body, which the learned antiquaries of the thirteenth century pronounced to belong to some Scottish martyr, who had died under the Maximinian persecution in Britain. To this place the populace instantly flocked in great multitudes, to present their offerings; and the miracles which were wrought by this ancient relic were so extraordinary and so frequent, that the king, by the advice of the Bishop of Glasgow, thought proper to erect a church upon the spot. But perhaps the most striking corroboration of the love of romantic fiction, and the prevalence of superstitious belief, under the reign of this monarch, is to be found in the story of that extraordinary personage, Thomas of Hericildoun, commonly known by the name of Thomas the Rhymer. It was then matter of undoubting popular belief, that this reputed prophet had been carried away by the Queen of Fairyland; that he had remained with his enamoured and beautiful spouse for many years, and at last returned, in a mysterious manner, upon earth, and to his native country of Scotland, where he exhibited his supernatural powers, by predicting the sudden death of the king, and delighted his countrymen by the composition of the romantic poem of Sir Tristrem, which still remains to us, a rude, but interesting, specimen of the poetical literature of the age."

As the histories of Wallace and Bruce are more familiar to the public, we shall conclude our illustration with a few passages relating to Michael Scott.

"Few names," says the author, "in Scottish annals are surrounded with so deep an air of mystery and romance as that of the Wizard Michael Scott; and it may perhaps be regarded as rather an ungrateful task to strip this distinguished magician of his robes of 'gramerie,' and to restore him to those sober regions which belong to authentic history, and are peopled with more common-rate philosophers. But after the severer hand of biography has removed from the canvass much of the richer colours in which the credulity of the vulgar, and the imagination of the last and greatest of the minstrels, have invested him, it is some consolation to find, that there will be left the picture of no ordinary man. Michael Scott, or, as he is sometimes denominated, Michael Mathematicus, was born in Scotland some time previous to the year 1214, about the commencement of the reign of Alexander II. According to the tradition of the neighbourhood, which is confirmed by an ancient printed copy of his work on Physiognomy, the place of his birth was Balwerie, the ancient seat of his family, in the county of Fife. From his earliest youth he is said to have devoted himself to the cultivation of the sciences. In his native country, however, he could receive nothing but the bare rudiments of education, as Scotland did not possess at this period any public seminaries for the education of youth. The casual lessons of some learned monk, and perhaps an introduction to the limited library of his convent, composed all the advantages which the future astronomer and physician could enjoy at home; and for higher

and more regular instruction, it was necessary to seek the universities of the sister country, and the schools of France and Italy." He accordingly studied at Oxford, Paris (where it seems probable he was a fellow-student with Roger Bacon), and Padua; "and such appears to have been the impression there created by his talents, that his essays on the science of judicial astrology were no longer, as in France, confined within the walls of a university. His fame became noised abroad, and he began to publish to the world those predictions of future events which were remembered in later times with awe and reverence in Italy. Villani, a historian who wrote long after the reputed prophet was gathered to his fathers, records a prediction of Michael Scott's, which he declares had been rigidly fulfilled; and Dante has given him, in his character of a magician, a conspicuous place in his Inferno."

Michael next visited Spain, "then partly in the possession of the Arabians, and which, under these Mahometan conquerors, was unquestionably the most enlightened portion of Europe."

"After a residence of many years in Germany, Michael passed over into England, on his return to his native country, preceded, as we may easily conceive, by those rumours of his power as a magician, which were eagerly listened to by the superstitious credulity of a dark and ignorant age. The English throne was then filled by Edward I., who was employed at this time in those able schemes for the subjugation of Scotland, which he attempted to carry into execution at an immense expense of blood and treasure, and in violation of the rights of nations, and of his own honour. It was one part of his policy, if we may believe an English antiquary, to endeavour to lower the character of the Scottish people, by compelling all the most learned scholars of this nation to reside at the universities of England. 'This year,' says Antony Wood, 'the king compelled all such Scotchmen as were of singular knowledge in learning or literature, to be resident in Oxford, doubting lest the Scotch nobility, increasing in politic prudence by their instructions, should seek to throw off the yoke of bondage.' The celebrated John Duns Scotus was one of those scholars who suffered under this persecution, being led chained and a captive into England, along with eleven other ecclesiastical prisoners. Michael Scott fortunately arrived a considerable time before this rigorous edict was carried into effect, and his destiny was more tolerable. Edward, who had always a strong disposition to believe in alchymy and the occult sciences, received him with kindness, retained him for some time at his court, and afterwards permitted him to pass into his native country."

Michael was one of the ambassadors to Eric, king of Norway, to negotiate for the bringing over of Margaret, the Maiden of Norway; and "this is the last occasion in which we can trace the name of Michael Scott. He appears to have died soon after his return, after having attained an extreme age, fortunate in this, that he did not live to witness the complicated miseries of his native country. In the brief but interesting accounts of this singular man, which we meet with in the ancient chronicles of Italy, it is mentioned that he was the inventor of a new species of casque or steel basnet, denominated a cervilerium, which he commonly wore under the furred or velvet cap, used by the learned of those times. The origin of this invention is curious. In those dark periods, when the belief of magic was univer-

sal, not only amongst the lower ranks, but with the learned and educated classes of the community, it was reported that the Wizard, having cast his own horoscope, had discovered that his death was to be occasioned by a stone falling upon his bare skull. With that anxiety which clings to life, he endeavoured to defeat the demon whom he served; and by repeated incantations constructed this magic casque, which he vainly deemed invulnerable. But his fate, according to the tradition of Italy, was not to be avoided. In passing a cathedral, when the bell was ringing for vespers, Michael entered to pay his devotions; and forgetful of his cervilerium, which was fixed inside his cap, uncovered as he reverentially knelt upon the stone floor. The moment of his fate was arrived. The rope of the belfry had loosened one of the carved corbels which ornamented the interior of the roof beneath which the magician knelt; before he could remove, the sharp and heavy mass descended on his forehead; and whilst it confirmed the infallibility of his prescience, in an instant deprived him of life. Michael, however, according to the account of Benvenuto da Imola, had strength enough to lift up the stone and ascertain its weight, after which he declared it was of the exact size he expected; and that nothing was left him but to die, which he did accordingly, after very properly making his will. It is needless to remark that this fable is confuted by the return of Michael to his native country; but it appears to have been the origin of a tradition still current amongst the peasantry of Scotland, and which ascribes a miraculous power to the bonnet of the Wizard. It is curious to find the tale of the invulnerable cervilerium of the Italians, travelling on the breath of credulity and superstition into the 'far north countrie' of which the magician was a native, and only changed by tradition from the blue steel worked and welded by magic art, into the blue bonnet which was waited on by Scottish demons, who were heard wailing in mid air when it was waved by its dreaded master.

"In our endeavours to estimate the talents of a sage of the thirteenth century, we must beware of looking at his attainments through the medium of our own times. He must be compared with men of his own age; his powers must be determined by the state of science in the countries where he lived, and wrote, and became celebrated. Appealing to such a criterion, the Scottish wizard is entitled to no ordinary rank amongst those who were then esteemed the philosophers and scholars of Europe. He was certainly the first who gave Aristotle in a Latin translation to the learned world of the West. He was eminent as a mathematician and an astronomer—learned in the languages of modern Europe—deeply skilled in Arabic, and in the sciences of the east; he had risen to high celebrity as a physician—and his knowledge of courts and kings had recommended him to be employed in a diplomatic capacity by his own government. Nor has he been cheated of his fame. If we look to older authors, he lives in the pages of Roger Bacon, of Picus Mirandula, of Cornelius Agrippa. If we ask for his historical immortality, he is commemorated by Lesly and Buchanan,—if for his poetic honours, has not Dante snatched him from oblivion, and the last of the minstrels embalmed him in the imperishable substance of his first and most romantic poem?—nay, if he seeks for more popular and wider honour, even here he may not complain, whilst his miracles and incantations are yet recorded beside the

cottage fire by many a grey-headed crone, and his fearful name still banishes the roses from the cheeks of the little audience that surround her. Fortunate, too, he was in this circumstance, that, after his various travel and long residence abroad, he returned to enjoy in his native country the reputation which he had acquired; that he lived to a great age, and died full of years and of honour, before he had witnessed the dark and complicated calamities which were so soon to overwhelm the kingdom. His books, we are informed by Dempster, after his death, were carefully concealed from the public view; and he adds, that the common people of Scotland, even in his time, believed that these forbidden volumes, containing the spells of the magician, were protected by the invisible demons who had once been the servants of their illustrious and potent master."

Three engraved seals, a barrow, and two beautiful landscapes, adorn this excellent volume; which we most heartily recommend to the public.

Atherton; a Tale of the Last Century. By the Author of "Rank and Talent." 3 vols. 8vo. London, 1830. Simpkin and Marshall.

THESE volumes open spiritedly, and evince considerable talent: still, as a novel, we doubt whether *Atherton* is calculated for general popularity. There is no dramatic effect, and the narrative is too lengthened and too improbable. The author is more successful in sketching than in sustaining his characters; they are lively portraits, but not put into action. Witness the ensuing sketch of a loyal and respectable shopkeeper some fifty years ago.

"Mr. Bryant himself was a neat, quiet, orderly sort of a man, regular as clock-work, and steady as time, the very pink of punctuality, and the essence of exactness. He had been in business nearly forty years, in the same shop, conducted precisely in the same style as in the days of his predecessors; he lacked not store of clothes or change of wigs; but his clothes, and wigs, and three-cornered hats, were so like each other, that they seemed, as it were, part of himself. His wig was brown—so were his coat and waistcoat, which were nearly of equal length. He wore short black breeches with paste buckles, speckled worsted hose, and very large shoes, with very large silver buckles. He was most intensely and entirely a citizen. He loved the city with an undivided attachment. He loved the sound of its bells, and the noise of its carts and coaches; he loved the colour of its mud and the canopy of its smoke; he loved its November fogs, and enjoyed the music of its street musicians and its itinerant merchants; he loved all its institutions, civil and religious; he thought there was wisdom in them, if there was wisdom in nothing else; he loved the church and he loved the steeple, and the parson who did the duty, and the parson who did not do the duty; and he loved the clerk, and the sexton, and the parish beadle, with his broad gold-laced hat, and cane of striking authority; and he loved the watchmen and their drowsy drawl of, 'past umph a' clock;' he loved the charity schools, and admired beyond all the sculpture of Phidias, or the marble miracles of the Parthenon, the two full-length statues, about three feet each in length and two feet six inches each in breadth, representing a charity boy and a charity girl, standing over the door of the parish school; he loved the city companies, their halls, their balls, though he never danced at them; their dinners—for he never missed them; and, above all

other companies, he loved the stationers', and its handsome barge, and its glorious monopoly of almanacs; he loved the Lord Mayor and the Mansion House,—it was not quite so black then as it is now,—and he loved the great lumbering state coach and the little gingerbread sheriffs' coaches, and loved the aldermen, and deputies, and common-councilmen, and liverymen. Out of London he knew nothing: he believed that the Thames ran into the sea, because he had read at school that all rivers run into the sea; but what the sea was, he did not know, and did not care; he believed that there were regions beyond Highgate, and that the earth was habitable farther westward than Hyde Park corner; but he had never explored those remote districts. What was Hammersmith to him, or he to Hammersmith? He knew of nothing, thought of nothing, and could conceive of nothing, more honourable, more dignified, or more desirable, than a good business properly attended to. He was proud of the close and personal attention that he paid to his shop—somewhat censoriously proud; he might be called a mercantile prude, or shop-keeping pedant; and, when a near neighbour who had a country house at Kentish Town, to which he went down every Saturday, and from which he returned every Monday or Tuesday, came, by a variety of unavoidable or unavowed misfortunes, to make his appearance in the Gazette, with a 'Whereas' prefixed to his name, Mr. Bryant rather uncandidly chuckled, and said—"I don't wonder at it. I thought it would end in that. That comes from leaving things to boys."

We again repeat, that we think our writer is clever and acute; but he wants that golden secret of fictitious narrative—interest.

Tales of a Physician: Second Series. By W. H. Harrison. pp. 261. London, 1831. Jennings and Chaplin.

WRITTEN with much amiable feeling and cultivated taste, these tales will be an agreeable present to our young friends. "The Old Maid" is our favourite; the incident on which the *dénouement* turns is a very novel one, and the character itself is sweetly sketched. The volume is certainly superior to its predecessor; though we cannot readily detach from its narrative any fair specimen fit to represent the whole.

Enthusiasm, and other Poems. By Susanna Strickland (now Mrs. Moodie). pp. 214. London, 1831. Smith, Elder, and Co.

WITHOUT anything very original or striking, this little volume contains much graceful writing, and breathes throughout a strain of pious thoughtfulness and kindly feeling.

Aldine Poets, Vol. XII.; the Poetical Works of the late James Beattie. London, 1831. Pickering.

THIS volume does as much credit to its publisher for external elegance as its predecessors. Beattie's Minstrel, it is true, is his only poetical work worthy of a standard place in our literature; but, perhaps, in a series like this, it might be excused, that, in order to complete all, more than half the volume should be filled with absolute trash. How bad must those poems have been which even the author deemed unworthy of publication! yet here are included what he himself rejected. Neither can we say much in favour of the somewhat lengthy life affixed.

Mémoires de Bourrienne, Ministre d'Etat sur [sous?] Napoléon, &c. &c. 5 tom. Paris et Londres. Chez Colburn et Bentley. 1831.

AFTER all the editions we have had of Bourrienne's celebrated Memoirs, the present seems to have been needed, and takes the foremost rank. In the first place, it is remarkably cheap; in the second place, it is ornamented with no fewer than seventeen fine plates, which are not to be found elsewhere; and, in the third place, it is enriched with valuable notes from contemporary authorities, and some of them eye-witnesses of the facts they assert or describe. Possessed of these great advantages, we can unreservedly recommend this publication.

The Deliverance of Switzerland; a dramatic Poem. By H. C. Deakin. 2d edition.

Portraits of the Dead. By H. C. Deakin. 2d edition. London, 1831. Smith, Elder, and Co.

THE words "second edition" to each of these works save criticism; so we shall only wish the fortunate author continued success.

Journal of Voyages and Travels by the Rev. D. Tyerman and George Bennett, Esq., deputed from the London Missionary Society to visit the various Stations in the South Sea Islands, China, India, &c. &c., between 1821 and 1829. Compiled from the original documents by James Montgomery. 2 vols. 8vo. Westley and Davis.

OF this delightful work we can only give note of warning. The materials are most interesting, and Mr. Montgomery has made a use of them quite worthy of his high reputation. The arrangement is excellent, and the style so good, that we could hardly believe it to have been built upon hasty notes and crude journals. These volumes are a treasure of a great circulation.

A Critical Exposure of the Ignorance and Malpractice of certain Medical Practitioners, &c. &c. By John St. John Long, Esq. 8vo. pp. 405. London, C. Chapple.

AS ministers are reforming and mending the constitution politic, so is Mr. Long reforming and mending the constitutions of his patients; for we hear that Harley Street is now more crowded than ever. We have not had time to examine this volume attentively; but it seems to be a striking production, attacking the faculty, asserting the author's own cures with numerous attestations adduced, expounding his opinions on the medical art, and explaining his practice. A warm ally, too, has started up for him from the very bosom of the College of Physicians: a strong letter written by Dr. Ramadge supports him, and arraigns his opponents. There will certainly be a battle of gallipots.

ARTS AND SCIENCES.

ROYAL INSTITUTION.

MR. BROCKEDON on the passage of the Alps by Hannibal. This is a subject of so comprehensive a nature, and which involves so many disputes, classical and geographical, that Mr. B., rapid as was his delivery, found it a task of some difficulty, within the usual time allotted to these evening meetings, to press into his narrative a sufficiency of incident which should please as well as inform his auditors. He began by stating, that he would avoid, as much as possible, the disputes to which we have alluded, and confine himself simply to consider the practicability of the routes conjectured by different

authors. He observed, that from his actual knowledge of nearly forty passes of the great chain, by which he had traversed it about sixty times, and which included not only those by which various authors had conceived that Hannibal passed, but all by which it was possible he could have passed,—his conviction was, that the passage of the Carthaginians was made over the Little St. Bernard. The texts of Polybius and Livy were irreconcilable on many points; the passage advocated by the latter, viz. the Mont Genève, is so obviously at variance with the geographical character of the route, that it cannot for a moment be entertained by any one who really knows the country through which that writer would lead the Carthaginians. Again, Polybius, probably from his having written in Greek, has not preserved to us the names of places, so as to enable us to follow the route of Hannibal; but then he has so described the march, the places where particular events occurred, and the times and distances which intervened, that we can trace him with almost moral certainty. Mr. Brockedon read copious extracts from this author, from which it appeared, that the chief facts to be established were, distances,—a plain from the river to the Alps,—a place for the attack of the Allobroges,—their city near the scene of action,—a defile for the second attack,—a roche blanche,—a summit of sufficient extent for an encampment,—a view of the plains of Italy,—precipices on the descent,—a spot agreeing with the scene where the road had been destroyed,—and the distance thence to the foot of the Alps. The lecturer then brought the different theorists to these tests, and by the aid of his charts, very clearly pointed out their inconsistencies; and proceeded at some length, and with great spirit, to notice the overcharged and incorrect narrations of Letourne, Fortia d'Urban, Folard, Whittaker, and others. Whittaker's story he characterised as a most extraordinary rigmarole. In one part he states the given distance between two certain points to be sixteen miles: to this Mr. Brockedon jocosely observed, that he himself walked the distance in an hour and a quarter! Upon the whole, it was a subject of regret that so much important and interesting matter should have been crowded so much, and in some parts only glanced at, in order that Mr. B. might keep his observations within the hour allowed.

On the library-table were many specimens of Burmese musical instruments.

On Thursday R. Willis, Esq. delivered his second lecture on the nature and physical properties of sound and vibrating substances. This lecture was chiefly directed to the explanation of those pulsations or undulations which are produced in the dissemination of sound through the atmosphere and through liquids; and the lecturer illustrated his theory by some very beautiful experiments, with an apparatus fitted with a transparent screen placed over a shallow trough of water, having a plate glass bottom, and a light set beneath, and thus throwing the shadows on the screen of the undulations produced upon the surface of the water by striking it with a flat substance. The variety of configurations, when the surface of the water was successively confined by barriers, in the several figures of the parabola, ellipse, a circle, or within straight lines, produced a very beautiful effect. When two sets of these wavy lines meet, the lecturer terms them lines of interference; and the well-known convergence of sound which, produced at one end of an ellipse, converges to a similar point

of the opposite end, producing the effect called echo, was beautifully illustrated by the wavy shadows of the rippling water on the screen. As a proof that sound travels to a far greater distance in water than in air, the lecturer stated that M. Cogniad de la Tour made experiments during a perfect calm and at night, in the sea, near Marseilles, when sound was distinguishable to the extraordinary distance of nine miles. Some very ingenious experiments were also made by transmitting air through apertures in plates during rotation, proving that the greater the velocity, the higher the pitch or tone produced. The lecturer concluded by explaining the acoustic principles on which the celebrated machine called the "invisible girl" (shewn some years back) was constructed—that of a ball in the centre, with four radiating trumpet-mouth pipes to convey the sound to the auditor.

ROYAL ASTRONOMICAL SOCIETY.

FR. BAILY, Esq. in the chair. There were read, a letter from Mr. Dawes on the triple star at ζ Cancrī; also the remainder of Mr. Baily's paper on La Caille's catalogue of three hundred and ninety-eight principal stars; likewise a paper by Mr. Herschel, on the micro-metrical measures of three hundred and sixty-four double stars at Slough, with a seven feet equatorial. Several fellows were elected.

LITERARY AND LEARNED.

ROYAL SOCIETY.

J. W. LUBBOCK, Esq. V.P. in the chair.—There were read, a communication, by Davies Gilbert, Esq., "on suspension bridges;" "researches on physical astronomy," by the chairman; "on the standard yard constructed for the Royal Society," by Captain H. Kater; and "on the blood," by Mr. Thackrah; communicated by Sir Astley Cooper.

SOCIETY OF ANTIQUARIES.

H. GURNEY, Esq. in the chair. J. A. Repton, Esq. communicated a very curious and interesting paper on the history of hats, accompanied by eight sheets of drawings of hats and caps, in an infinity of shapes and fashions, from the time of Richard II. up to 1784. He observed, the name hat was derived from a Saxon word meaning a covering for the head, in which general sense it had been used by early authors, and applied to helmets of steel. Hats and caps were anciently made of felt, woollen, silk, straw, and various other materials, and were as diversified in their colours. In the time of Elizabeth the common people generally wore woollen caps; and some acts were passed in her reign to encourage the manufacture of them. The broad brims were introduced by the cardinals to their scarlet hats, and followed by the clergy. The inconvenience of the broad brim all round caused the turning of one side up; then two sides were turned up; and at last turning up three sides introduced the cocked hat. The high-crowned hat was first worn in the time of Elizabeth, and declined in the reign of Charles II. Mr. Repton then noticed the ornaments of hats, such as feathers, brooches, and bands. Henry VIII. is described on his entry into Calais as wearing feathers from India, four feet long; and men wore feathers in their hats as late as the reign of Queen Anne. Yew is mentioned as placed in the hat to denote mourning for a deceased relative or friend.* The paper con-

* In the West of England, in dressing the houses with holly and other evergreens at Christmas, we have observed the picture of a deceased relative adorned with the yew alone.

tained numerous curious and amusing quotations on the subject from a great variety of authors. On account of the Whitsun week, the meetings of the Society were adjourned to the 2d of June.

ROYAL SOCIETY OF LITERATURE.

[We have much pleasure in being enabled this week to give, entire, the address of the venerable and very learned President of this Society at its anniversary meeting. It not only affords a clear exposition of the Institution, but touches on other points of much interest to literature.]

THE twelve months which have passed since our last anniversary meeting have been distinguished by events of great interest to the Society—subjects both of congratulation and condolence. The attention which the council have long directed towards the acquisition of a house for the Society, has at length been crowned with success; and the building which has been erected through their persevering efforts, from the subscriptions entered into for that purpose, has been completed in a manner, both as to its situation and execution, which promises to be conducive to the enlargement and usefulness of the Society.

With this prosperous event it is my painful office to contrast the loss which the Society has sustained by the death of its most munificent founder and patron; and I should ill discharge the personal debt which I owe to his majesty's memory, if I did not endeavour, however imperfectly, to give some account of the origin of this royal institution, as well as his majesty's other great services to literature. The government of this country had long been subject to the reproach of neglecting the general interests of learning; and never had a prince succeeded to the throne since the days of Elizabeth so initiated in the best principles of classical and general knowledge, and so endowed with congenial taste and talent, as his late majesty; and therefore so well prepared to do away the national reproach. This impression gave rise to the suggestion of a plan for the advancement of learning by royal patronage, in a circle of private friends,—a suggestion, therefore, apparently very far removed from the probability of reaching the royal ear. But the plan thus casually suggested was communicated, by one of the persons present, to a confidential servant of the king, and by him to his majesty himself. An audience at Carlton House was almost the immediate consequence. The attention with which the king examined the principle of the proposed institution, and the readiness with which he finally adopted its provisions for the advancement of learning and the reward of literary merit—the warmth with which he entered into the general interests of literature—the condescension with which he communicated many interesting particulars of his earliest studies, and the affection with which he spoke of two of his preceptors—will never be forgotten by him who was honoured with the communication. The results of this interview, and of the king's determination, are long since before the public—first, as confirmed by the royal sign manual, and afterwards as incorporated by charter.

His majesty's adoption of an institution for the honour and advancement of learning, was the result of his own attachment to literature, in which, however, his characteristic benevolence had a prominent share. For in the disposal of his annual bounty to it, his wish was that its allotments might fall where it was merited, and at the same time where it was wanted. How beneficially this bounty was awarded, will long and gratefully be remem-

bered by those who were most benefited by it; and the more beneficially it was enjoyed, if discontinued, the more severely may the want of it be felt—felt, as the poet says of time that is past—

“We take no note of time but from its loss.”

The king's attention to the interests of literature was not a capricious or casual feeling, excited by temporary incidents, but the bias of a mind cultivated with principles of taste and learning, derived from lessons of classical antiquity, and directed by two of the most learned preceptors that ever regulated the youthful studies of a future sovereign. Very eminent proofs of his classical knowledge, especially of the greatest poet of antiquity, are known to be in the recollection of those who were nearest his person, and in the most confidential intercourse with him.

His majesty's earliest patronage of literature was shewn before the close of the last century (in 1796), by his donation of two gold medals for the best English compositions in verse and prose, and two silver medals, for elocution, to the scholars of Winchester College—a benefaction most kindly renewed by his present majesty. The Literary Fund was also an early object of the king's generous concern for the relief of indigent literary merit. To this Fund his majesty contributed five thousand pounds, in fifty half-yearly payments of one hundred pounds. To this useful institution, also, his present majesty is a most bountiful contributor. The king's benefaction of a thousand pounds toward the building of St. David's College, for the education of young men intended for holy orders, natives of the principality, and unequal to the expenses of an university education—was a most effectual as well as beneficent service to the cause of religion and learning, which contributed largely, both by its magnitude and its influence, to the final success of the undertaking—a service afterwards greatly augmented by his majesty's subsequent endowment of the college with three operative benefices, and three sinecure rectories; the sinecures being appropriated to the maintenance of catechists during the year immediately preceding their ordination, and to the increase of the college library.

His majesty's attention to the literature of his country was excited in 1823, by a discovery which was made that year in the State Paper Office, of a Latin work, *De Doctrinâ Christianâ ex sacris duntaxat litteris petita*, under the name of Milton. The interest felt in this discovery was universal; and his majesty, with his accustomed liberality, ordered it to be printed and published. It was accordingly published, in a manner worthy of the great name to which it was ascribed, and of the talents employed in editing, translating, and illustrating it. The publication of such a work, and the ascription of it to our great Christian poet, could not be a subject of indifference to the Royal Society of Literature: it was therefore not forgotten in the discourses which were addressed to the Society at two successive anniversaries. To the reasons which, on those occasions, I alleged for doubting the authenticity of the work, I confidently adhere, on account of its utter inconsistency with the religious principles maintained by Milton through life in his published works, from his Ode on the Nativity, in his 21st year, to his Treatise on True Religion, in his 65th; and its discordance with his opinion of popery, and with his style and habits of composition—inconsistencies aggravated by the discrepancy between the writer's public version of the New

Testament, and the public version of this country—a work impracticable to Milton, from his blindness, his domestic difficulties, his want of adequate literary assistance for the prosecution of a work encumbered with most numerous and minute references; and, above all, from the multitude of literary labours in which he was engaged, of a totally different character from the Latin treatise, during the last twenty years of his life—the period to which the Latin treatise is assigned.

In 1823 his majesty communicated to Lord Liverpool his magnificent design of advancing the literature of his country, by giving to the British nation that very valuable and extensive library which had been formed during a long series of years by his revered and excellent father. Parliament gratefully accepted the proposal, and provided for this princely benefaction, a Repository worthy at once of the national character and of the munificent sovereign who bestowed it.

One of the earliest and most interesting proofs of his majesty's taste and love of ancient learning, and at the same time most congenial with the first of the chartered objects of this Society, was the literary mission to the court of Naples, for the development of the Herculean MSS., towards which so little had been done during the course of nearly fifty years which had passed since the discovery of the library—a mission which did honour to the country from which it emanated, and will ever illustrate the memory of the prince who projected and supported it. From the development of the first MS., in 1752, to 1800, not more than seventeen MSS. had been unrolled, and only one published; so difficult, tedious, and expensive was the process. Under these various difficulties, the work was suspended, when the Prince of Wales proposed to the Neapolitan government to defray the expense of unrolling, deciphering, and transcribing the MSS. In the course of four years, two hundred copies were unrolled, transcribed, and facsimiled by Neapolitan artists, under the inspection of an English superintendent; when the work was again suspended at the re-occupation of Naples by the French. Eighty-four of the fac-similes were transmitted to England in 1808, and in 1810 were consigned by the Prince Regent to the University of Oxford. Of these fac-similes seven treatises have been published at the University Press, from lithographic engravings, in a manner worthy both of the munificent benefactor and of the University. Of these published treatises, five are by Philodemus, on moral subjects as well as on rhetoric and poetry. Of the others, one is by Demetrius, on poetry; and the other, by an anonymous writer, on anger. His majesty had the satisfaction of seeing the object of his literary mission thus far executed, by the publication of these splendid volumes from the Clarendon press in 1824-25, the merits of which publication cannot be better expressed than in the language of a foreign critique:—“*Qua in re cum ipsius Academiæ Oxoniensis munificentiam admiramus, quæ (ut solet a sordida parvonia remotissima esse) in his etiam voluminibus exprimentis splendidissimo cultu rei dignitati consuluit, tum artificis laudamus diligentiam plane admirabilem, quæ factum est, ut plenissime de his vetustis reliquiis judicare possumus.*”

The injuries which these treatises have suffered in unrolling them have unavoidably been very great, by the laceration and distraction of

words and sentences; yet with all their difficulties they present enough that is legible and intelligible to interest a learned reader by the citation of such names as Alcæus, Sappho, Sophron, Epicharmus, Empedocles, Chrysippus, Metrodorus, and the like, and by fragments of poets whose works are now lost; and by the light which their peculiarities of diction and manuscript throw on many points of philology and palæography. The impatient expectation so long and earnestly expressed by many learned men for the production of these curious relics of antiquity, thus splendidly delivered to the public, could not fail to be gratified by the continuation of a work so honourable to the Clarendon press and to the memory of George the Fourth.

The discovery of a library that had been buried for two thousand years, is too rare an occurrence to encourage the search for such hidden treasures with much hope of success, even in a land of volcanoes. But Greek writings of much greater antiquity than any contained in the library of the Pisos, have been discovered in the works of comparatively modern writers, and in MSS. comparatively modern. Of these, one of the most remarkable is a copy of the Lacedæmonian decrees against Timotheus for corrupting and effeminating the ancient music by his additional strings to the lyre. This decree, written in the ancient Spartan dialect, was passed about four hundred years before the Christian era, but is not found in any Greek writer, nor is extant in any Latin writer before the sixth century. The Hymn to Ceres is also a remarkable instance of a work of very remote antiquity, authenticated by unquestionable evidence of the second century, and yet now found only in a single MS., and that not older than the fourteenth century, preserved in the Imperial Library at Moscow.

The preservation of a Greek decree, by a Latin writer of the sixth century—one thousand years posterior to the decree—and the discovery of the Hymn to Ceres, in a MS. of the fourteenth century, the only MS. copy of it known to be extant—bear a near resemblance to the history of a celebrated passage of Scripture, which is preserved in the Latin version, and in the writings of the Latin fathers of the first six centuries, but is found in no Greek MS. now extant older than the thirteenth, fourteenth, or fifteenth centuries. The *editio princeps* of the New Testament contains the passage; and all principles editions being printed from MSS. are entitled to all the credit and weight of MS. authority. The conductors of that edition affirm, in their preface, that in preparing their text they had the use of Vatican MSS. But the passage not having been found in any of the Vatican MSS. which had been collated since the publication of the Complutensian edition, its existence in any Vatican MS. has been for many years constantly denied—the supposition of the existence of such a MS. treated with ridicule and contempt—and the Complutensian editors, consequently, charged with fabrication, forgery, and falsehood. This reproach has at length been done away, by the recent discovery of the Codex Otobonianus, 298, in that library, which contains the passage; and it is an important consequence of this discovery, that it authenticates *ad litteram* the text of the *princeps editio*.

It has been often asked by the opponents of the passage, What is become of the Complutensian MSS.? If no MS. had ever been found to identify their text, the loss of the MSS. ought not to have brought into question the credit of

a princeps editio, or the fidelity of its editors. A contemporary and correspondent of Dr. Bentley says in a letter to him, that "no man who knows the character of the early editors can doubt the credit of the MSS. they printed from," and that "the early editions of the New Testament ought to have more weight than, perhaps, all the MSS. now extant put together."

MSS. known to have been extant in the sixteenth century have long been lost. The MS. to which Stunica so often appealed, is unknown; the MS. from which Erasmus printed the text of his third edition, has never been discovered (the Dublin MS. differing too much in its readings to be the same); two of Stephens's MSS. have never been found; the MS. from which Rhenanus published the princeps editio of Velleius cannot be found; and no other MS. of that history is known to be extant in any library. The only remaining copy (as far as is known) of Cicero's treatise *De Gloria*, is said to have perished in a fire at Canterbury, since the origin of printing—a loss which exemplifies the importance of the first chartered object of our Society, and brings home to our minds the debt of honour and gratitude we owe to the memory of a sovereign, whose zeal, taste, and munificence, were exerted in promoting the preservation of the remains of ancient learning.

To the principal subject of this day's condole, I have to add the loss which the Society has sustained by the death of one of the Royal Associates, the Rev. Edward Davies, chancellor of the collegiate church of Brecon, and rector of Bishopstone; an occasional contributor of interesting papers to the Society—namely, *Considerations on the Book of Job*, *Remarks on the Chronicle of Brut Tyssilio*, and a translation of *Gorsha Cynvelyn*; author of a treatise entitled *Immanuel*, of a Dissertation on the Poems of *Ossian*, and a valuable volume of *Sermons on church union*; but more generally known to the public by his *Celtic Researches*, and his *Mythology of the Druids*, a curious and interesting work, in which he has given an account of the written monuments of the early Britons, and, by the aid of the ancient British language, has traced through the remains of the ancient Druidical poetry, from the sixth to the twelfth century (for till that time he has shewn that the fictions of their bards continued to bear the stamp of Druidism)—the progress, revolution, and suppression of that superstition which once pervaded the greater part of the north and west of Europe.

FINE ARTS.

EXHIBITION OF THE ROYAL ACADEMY.

[Third Notice.]

No. 148. *Portrait of Pascoe Grenfell, Esq., Governor of the Royal Exchange Assurance.* Sir M. A. Shee, P.R.A.—An admirable resemblance. The accessories are judiciously managed; and the whole is skillfully and carefully painted.

No. 156. *A Boy breaking the frozen Turnips for the Cattle.* R. Westall, R.A.—When Mr. Westall passes from the imaginative to the real, as in the present instance, he succeeds so well, that we wish he would do so more frequently.

No. 171. *Portrait of Edward Lytton Bulwer, Esq., author of Pelham, Devereux, Paul Clifford, &c.* H. W. Pickersgill, R.A.—It is always gratifying to the public to become acquainted with the features of those by whose genius or talents they have been improved or

delighted; and portraits of such individuals assume somewhat of the dignity of history. There is no recent writer who has obtained a greater or a juster celebrity than Mr. Bulwer; and to the visitors to Somerset House who have not the pleasure of being personally known to that gentleman, this fine performance will shew that his intelligent countenance is a true index of his highly cultivated mind.

No. 187. *The Cherak Pooja, a Hindoo Ceremony at Calcutta.* J. Atkinson.—It is only when we witness scenes like this, that we are rendered fully sensible of the blessing of living in a country in which fanaticism and superstition no longer expose their victims either to compulsory or to self-inflicted torture.

No. 190. *The Forts of Merani and Jellali, at Muscat, in the Persian Gulf.* W. Daniell, R.A.—As a celebrated civil engineer (Mr. Brindley) once said that the use of rivers was to supply canals with water, so there may be military engineers who are of opinion that such curious irregularities of nature as this highly picturesque view exhibits, were intended merely as positions for batteries. Mr. Daniell's pencil seems to be indefatigable; and to whatever it touches it imparts interest and value.

No. 197. *The Corn-field.* W. F. Witherington, A.—Represented in the full maturity of harvest, and with all the warmth and splendour of a summer sky, Mr. Witherington's "Corn-field" is a most cheerful and delightful scene. He has also given great interest and expression to the figures by which it is animated.

No. 204. *The Water-mill.* C. R. Stanley.—There is but one complaint to make with reference to this picture, and that applies not to the painter, but to the situation in which it is placed. It is one of the most choice and picturesque subjects imaginable, and in tone and execution may vie with the celebrated "Water-mill" of the no less celebrated Waterloo.

No. 211. *Prospero and Miranda.* H. P. Bone.—An excellent composition; the character of the father impressive and commanding, that of the daughter patient and attentive.

No. 218. *A Portrait.* J. Partridge.—Mr. Partridge has here shewn how, by investing it with some of the best qualities of art, a simple portrait may be rendered as interesting as a work of fancy.

No. 226. *Lady Macbeth in the Chamber of Duncan.* R. T. Bone.—Treated in a manner which powerfully affects the imagination; while the technical skill displayed in the deep and rich chiaroscuro, and in the masterly handling and impasting of the colour, must be felt by all who are capable of appreciating it.

No. 233. *Landscape, with Birch Trees and Figures.* F. R. Lee.—In the truth and nature of this admirable example of Mr. Lee's talents, we see no symptom of any change in his style. He does not seem to think, like some of his contemporaries, that he has "exhausted worlds," and that he must set to work and "imagine new"!

No. 238. *A Scene from Tristram Shandy.* C. R. Leslie, R.A.—Exquisite! The picture has but one fault, at least in our eye, namely, that the figures are rather too large for the space they occupy. As for the expression, we question if any thing in painting ever surpassed it. Could Sterne have beheld such an illustration of the scene he has so slyly and humorously described, he would have hurled his wig up into the air with delight. Uncle Toby is a portrait of Bannister: and such an eye as the widow's!

No. 241. *An Alligator attacking a Bullock; Scene in Ceylon.* W. Daniell, R.A.—At once

a proof of the versatility of Mr. Daniell's talents, and of the terrific power of this emperor of reptiles. We were never before so fully impressed with the desperate character of the pledge which Peter Pindar puts into the mouth of Sir Joseph Banks:

"By G—, I'll eat an alligator!"

No. 248. *Portrait of Howqua, senior Hong Merchant at Canton, China.* G. Chinnery.—Tell it not in Macao, publish it not in Pekin, that the portrait of so important and well-known a personage has come so far to be thrust into an obscure corner of the exhibition! Even its merits as a work of art entitled it to a place among the best of its size and class.

No. 258. *A Domestic Affliction.* W. E. West.—Of such subjects it is the misfortune, that the more ably they are executed, the more painful is the contemplation of them.

No. 274. *Destruction of the Argyll Rooms, on the night of the 5th of February, 1830.* J. J. Chalon, A.—The fury of the "devouring element," as the newspapers call it, was never more awfully and faithfully depicted.

No. 288. *Admiral Van Tromp's Barge at the entrance of the Texel; 1645.* J. M. W. Turner, R.A.—Mr. Turner at home.

No. 298. *Watteau Study by Fresnoy's rules.* J. M. W. Turner, R.A.—Mr. Turner not at home.

No. 313. *English Nobility receiving the Communion of the Catholic Church in a private Chapel, in the early part of the Sixteenth Century.* S. A. Hart.—This, if we mistake not, is the third splendid and imposing religious spectacles which we have seen from Mr. Hart's pencil; and although, therefore, the gloss of novelty is a little gone off, we, nevertheless, think it the finest of the three. The remark, however, principally applies to the composition; for in all this skilful artist's works, the character and the expression of the figures are of the highest order; and there are a breadth of effect, and a richness of colouring, produced by the clear transparency of his deep shadows, and the brilliant solidity of his powerful lights, equal to what can be found in some of Rembrandt's most esteemed productions.

No. 321. *The Bride.* E. T. Parris.—Grace and refinement are the characteristics of this beautiful work. The total absence of affectation in the principal figure gives an additional charm to one of the loveliest forms that the pencil ever created. The drapery, the jewels, the background, and all the other subordinate parts of the picture, are executed with a masterly hand.

[To be continued.]

NEW PUBLICATIONS.

Miss Fanny Kemble. C. F. Taylor pinxt.; T. Woolnoth sculpt. Harding.

A PLEASING little portrait, in Miss Kemble's natural character—that of a gentlewoman.

A Panorama of Constantinople and its Environs, from Scutari. Drawn from sketches by J. Pitman, Esq. and engraved by Mr. Clark. Leigh.

LIKE Mr. Leigh's other publications of a similar nature, this panorama gives a very extensive and distinct notion of the place which it is intended to represent. It is accompanied by a satisfactory and amusing explanatory pamphlet.

FRENCH EXHIBITION.

THE Exhibition at the Museum at Paris opened on the same day as the Exhibition at Somerset House. It contains above three thousand pictures. A Parisian journal says of

it: "Like its predecessors, it is, what the age has made it, a great market, in which all the riches of technical execution in painting are exposed; but from which the sentiment, and in some sort the thinking of the art, are fled. Pagan and Christian subjects, sacred and profane images, are huddled together without distinction; and exhibit beautiful and elegant forms, which, however, do not touch the soul."

ORIGINAL POETRY.

A DREAM.*

As o'er that statue's lips methought
With chisel in my hand I wrought,
Sweetening each expressive line,
Till the whole became divine—
Like to her, who, far away,
Dwelleth in exhaustless day—
Still, the sentiment, the soul,
I heightened, and informed the whole,
Till, O my God! it moved, and grew
A thing of life! Her image too—
No! not her image, but her soul,
Her very essence, there had stole,
And in the marble dwelt like light!—
It was too much—my ravished sight
Could bear no more; to hide my face
Upon her breast, in wild embrace,
My arms I threw—they clasp the air!
And yet her form seems dwelling there!—
Another effort! 'Twas in vain;
A sudden madness seized my brain—
I grasped the death-tube—fired—her head
Drooped on her neck—I marked the lead
Had pierced her brow; then forth a flame
Of quick consuming power there came,
And burned intensely, till its flashes
Were quenched, that form reduced to ashes!
—All that remained was a handful of dust;
The fitful winds, as they came with a gust,
Sweet that too, and strewed it on high,
Where I raised my face; but oh! the sky
Shut back my gaze, and heaven looked down
With a dark'ning brow—a with'ring frown!

L. M.

EPILOGUE TO ALFRED.

To have been spoken by Mr. Harley, in the character of a Helman.

Written by R. Bernal, Esq. M.P.

Enters ringing his Bell.

O yes! O yes! O yes! Lost, stolen, or strayed,
An epilogue, bran new, and lately made,
With humour, wit, and novelty replete,
And free from all old jests and stale conceit;
Whoe'er this prize to Drury Lane shall bring,
Shall be rewarded—so, God save the King.

[Puts down his bell.

A play without an epilogue. Alas!
That such a dire mishap should come to pass;
Why, 'twill be deemed revolt against the cause
Of Thespian politics and Thespian laws;
A wild Reform, impell'd by cruel fate,
A revolution in the drama's state.

Our author will be with'dr from the frown
Of each dramatic Tory through the town.
Moreover, now, what effort can succeed
Without the puffing of a friend in need?
When e'en the prudish Muses will coquet
With Rowland's Kalydor and Warren's jet.
But I forgot—the swelling blast of Fame
Precedes, not lags behind, each favour'd name;
And, like some whis'ker'd Bobadil's cigar,
Expels the puff that meets you from afar.

We've had our Prologue—surely that's enough
For all the purposes of lawful puff.
Ladies and gents, I hope you have been amus'd,
And that our author cannot be accus'd
Of mixing with his five-act serious story
Of merry England's ancient wars and glory,
A larger portion of narcotic juice
Than is allowed for tragic author's use.
Whatever their talents, toil, or anxious haste,
'Tis hard to suit each critic's varying taste.

* Shakespeare says the poet, lunatic, and lover, are of imagination all compact. We publish the following effusion by Mr. Macdonald, the celebrated artist, to show that the sculptor may be joined to the bard. It is a transcript of an actual dream.—Ed. L. G.

For one, I little think of Saxon thanes,
Of pirate sea-kings, and of cut-throat Danes,
Who sack'd and burn'd; by turns, this town of Lud,
Then full of glory, and as full of mud:
Let others boast the charms of ancient days,
'Tis very well in parliaments and plays.
Oh, days of innocence! when monks alone,
Caged in their cloister'd tenements of stone,
Assum'd the privilege to read and write,
Whilst happy laymen only learn'd to fight;
When one might chance to go to bed
Without an ear or nose, perhaps or head;
Oh, liberal times! when kings were doom'd to bake
For their own breakfast their own oatmeal cake:
Ye mighty race of Picts, Goths, Danes, and Huns,
Who knew not muffins, rolls, or Sally-luns!
Whom salted sea-cows, porpoises, and seals,
And muddy ale, supplied with sav'ry meals;
Whose boons, neglecting worldly pomp and riches,
Depriv'd the idle luxury of breeches:
Thanks to our stars! we moderns gain some boons—
If ye had clowns, we have our pantaloons.
We belmen, now, are happy men of letters,
Who scrawl and spout as well as half our betters.
Now roasted sirloins, smoking on the board,
Delight the priest, the warrior, and the lord:
We now may freely sup, and soundly sleep,
And on our shoulders our own craniums keep.
If Alfred were a skillful politician,
A learned, bold, and daring state physician,
Who purg'd this realm of humours rank and loose,
And check'd the current of each mad abuse,
May Heav'n be prais'd! I do not proudly own
A patriot monarch now on Britain's throne?
Whose wise and generous policy imparts
A sense of love and duty to all hearts,
Whose unpretending life and sway command
Affection and obedience through the land.
Long may the crown o'er William's honoured head
A mild, yet steady, wholesome splendour shed!
But, stop! I must not trespass on your time,
Or spin out longer this too tedious rhyme:
At Christmas only can I dare rehearse
My loyal carols in my doggerel verse:

[Prompter's bell rings.

And, hark! I hear the prompter's rival bell—

[Actor, taking up his bell, bowing to the audience, proceeds.

Sweet belles and beaux, kind patrons, fare ye well!

MUSIC.

PAGANINI.

THE near approach of the appearance of this extraordinary performer before the London public, may render the following extracts from a description of him in *Le Globe* interesting to our readers:—

"Paganini and his violin enter. A universal clapping welcomes his appearance on the stage. He advances several paces with embarrassment, and bows; and the applause recommences. He proceeds with a gait still more and more awkward, and is again applauded. He bows repeatedly, and endeavours to throw into his countenance a smile of acknowledgment, which is soon, however, replaced by an icy coldness of expression.

"He stops, and in a position in which he seems, if possible, still more constrained than during his walk and his salutations, he seizes his violin, places it between his chin and his breast, and casts on it a proud look, at once piercing and sweet. He stands thus for several seconds, leaving the public time to observe and examine his strange originality; to gaze with curiosity at his lank body, his long arms and fingers, his chestnut-coloured hair flowing over his shoulders, the illness and suffering imprinted on his whole person, his sunken mouth, his long hawk-nose, his pale and hollow cheeks, his large, fine, and open forehead, which Dr. Gall would love to contemplate, and under that forehead eyes, hidden as if in shade, but every instant darting forth lightning.

"Suddenly, his looks descend from his violin to the orchestra. He gives the signal, and, abruptly raising his right hand in the air, lets his bow fall upon his violin. You expect that all the strings are about to be broken. Nothing of the sort. You are surprised by the lightest, the most delicate, the finest of sounds. For several instants he continues to play with your

anticipations, and to provoke you. All the caprices which occur to him are employed to rouse you from the indifference which he supposes you to feel. He runs, he leaps from tones to tones, from octaves to octaves, passes with incredible swiftness and precision the widest distances; ascends and descends natural and chromatic gamuts; produces every where harmonic chords; draws forth the most extraordinary sounds of which the violin is capable; makes it speak, sing, complain; now there is a murmuring of waves, now a breeze of wind, now a chirping of birds;—in short, an incoherent *charivari*.

"This great artist has, however, other resources than such fantasies for the captivation of the public. To this musical phantasmagoria presently succeeds a broad, grand, and harmonious simplicity. Pure, sweet, brilliant, tuneful chords flow from his bow; sounds which seem to proceed from the heart, and which plunge you into a state of delicious feeling. Then comes a vague sighing of melancholy and self-abandonment. While you are sympathising with the touching and melodious performer, a sudden access of violent grief, a sort of shuddering and rage, appears to seize him; and cries which penetrate the depths of the soul alarm and freeze you, and make you tremble for the unfortunate being whom you see and hear!"

Such is a Parisian picture of this extraordinary performer, respecting whom we observe a great discord has been produced in the newspapers, which is likely at least to postpone the period of his appearing before an English audience. We will not enter into the dispute, whether the doubling of the Opera prices was extravagant or justifiable (prices having been doubled in every place where he has played); but in justice to Mr. Laporte, we wish to bear testimony to his constant and liberal efforts to please the public in the very difficult situation he occupies. If the intended charge on this occasion was too high, nobody needed to pay it unless they liked,—the offence would have brought its own punishment. And really we do not know a trader who happens to import a rare or superior article of commerce, and who, out of pure generosity, chooses to sell it at the cost of a less valuable or attractive commodity. Altogether, however, as the King's Theatre prices are considerable, we think it would have been wiser in M. Paganini to content himself with them.

LECTURE ON MUSIC.

ON Monday Mr. Phillips delivered another of his interesting lectures on our national or old English melody, and very properly selected for illustration the finest collection extant of national melodies—the Beggar's Opera. The low dialogue of this celebrated opera of Gay, being intended as a strong satire on the prevailing manners of the age, is scarcely tolerated by "ears polite" at the present day; but the beauty of the melodies, and their ingenious adaptation to the subject, affords a very high proof of musical science in Dr. Pepusch, the compiler. Mr. Phillips shewed that several misconceptions exist in the common mode of executing the music of this opera; and, with the assistance of two or three female pupils, gave great satisfaction and instruction to a numerous and select audience.

DRAMA.

DRURY LANE.

ONSLOW's opera, *Le Colporteur*, has been produced here in an English dress, by Mr. B.

Livius, already known to the dramatic world as the arranger of the Covent Garden version of *Der Freyschutz*, and (in conjunction with Cooke) of Auber's *Masaniello*. Mr. Onslow is a sound musician, and, though an amateur, has made himself a high reputation amongst professors throughout Europe; but neither his *Colporteur*, nor his *Alcalde de la Vega*, produced any effect in Paris. Their success was merely what the French call *d'estime*; and as the vehicles of his music had little to recommend them in a dramatic point of view, we should scarcely have thought either would have repaid the trouble of importation, particularly the *Colporteur*, the most feeble and commonplace of the two. The plot of the *Emissary*, as the English version is named, is the old story of a rightful heir being discovered by a mark on his arm, &c. &c. The adapters have, however, done their best with so threadbare a subject, and improved the third act considerably. Mr. Livius has also caused several musical additions to be made to the opera, and, to the credit of his judgment be it said, those additions are the most effective things in the piece. We may particularly instance a German melody, sung by Phillips, in the first act; a chorus of conspirators, selected by Mr. Livius, from Boieldieu; an air in the third act, of Mr. L.'s own composition; a chorus by Mr. Grattan Cooke; and a duo by Horn, admirably sung by that gentleman and Phillips. Of the original music of the opera, the most pleasing portion is found in the second act, where the peasants assemble to dance and inspect the pack of the supposed pedlar. The opera went off with considerable applause, and certainly without the slightest symptom of dissent, as far as the last scene, when an unfortunate hitch in the stage business, and a rather cold conclusion of a violent conflagration, raised a storm which prevented an audible announcement of its repetition. It has, however, been repeated since. Of the vocal strength at this theatre, in so far as the ladies are concerned, it is impossible to say much. With a musical manager, too, it is certainly far below the right standard. All we can notice, therefore, on the present occasion, is, that Miss Pearson was very finely dressed, and Miss Bruce, though in an equal part, but poorly indebted to the wardrobe. The latter, however, acquitted herself quite as well as a songstress, as if she had been equipped in a better fashion. We look with hope to the progress of this debutante. The scenery, by Mr. Stanfield, is most beautiful.

On Monday *Timour the Tartar*, with a whole troop of horses, was produced here. The large theatres, we are told, are going to the dogs,—it is a pity; but, somehow, neither spectacles nor the regular drama serve to cover their enormous expenses, in these times of political excitement.

COVENT GARDEN.

THE long-talked-of spectacle of *Napoleon* was produced here on Monday, and, as a spectacle, is entitled to all praise. The scenery and dresses are at the same time picturesque and correct, and the painters and tailors thereof are entitled to our warmest admiration. For the plot, or rather programme of this interminable drama, we must refer our readers to the bills and the books in circulation. Our columns would not contain a description of half the evolutions performed by those of Buonaparte. The nine volumes of Sir Walter Scott's *History of Napoleon* is the best pendant to Mr. Lacy's seven-act spectacle, which, in length, as well as splendour, beats any pair of spectacles we have

seen through for years past. We did see this through, for it was not so late by an hour as we anticipated; but well got up as it is, and great as was its reception, we suspect, if it is ever to pay its expenses by becoming really attractive, the sooner it is cut down to three acts and played as an afterpiece, the better. To that complexion, we feel convinced, it must come at last, and the improvement will be great in proportion to the pruning. The life of the emperor is as "tedious as a king." His death is painful without being dramatic. The grand tableaux are the only points of interest; and every line, every word, not absolutely necessary to their appearance, should be dismissed without mercy. There is another fault in *Napoleon*, one common to all productions of this sort, but which we think might be avoided: it is, the endeavour to represent the march of an army with the numbers of a sergeant's guard. The best attempt we ever saw was made at Astley's, in the *Battle of Waterloo*; but even then it was but a respectable failure. In *Napoleon*, the illusion is imperfect when we are called on to imagine the grand army passing the Mont St. Bernard, or the advance of the old guard at the Bridge of Montereau; but it is complete when the troops are stationary, as in the review at Schönbrunn, the line extending diagonally the whole length of the stage; or when the brave remnant of that attached guard are bivouacking in the court-yard of Fontainebleau. Our favourite portions of this extraordinary entertainment are consequently the 1st, 3d, and 5th parts; and we certainly think, that with the dream of Victoria, (a most exquisite piece of painting),—the scene in the Geranium Valley at St. Helena,—and, perhaps, the apotheosis, by way of finish, there would be enough of the business. The death-bed scene is indubitably *de trop*, and the glimpse of it in the vision renders it still more unnecessary. We should apologise to Mr. Warde for having neglected so long to speak of his performance of the hero. From his first step upon the stage to the "last scene of all that ends this strange eventful history," it was perfection! There were some cries of "no, no!" when the spectacle was given out for repetition, but the contents had it hollow, and sang "God save the King" after it, by way of a finish.

VARIETIES.

Audubon, the American Ornithologist.—This enthusiastic naturalist is gone again to the woods. He left Edinburgh last month, and, after visiting Paris, intends proceeding to New Orleans in August. It is his purpose to spend eighteen months or two years in exploring the western side of the valley of the Mississippi, up towards the Rocky Mountains. Should he survive, he intends returning to Edinburgh, and spending the rest of his days in arranging his collection, and publishing a continuation of his *Ornithological Biography*.

The Chanticleer has returned to Falmouth from the scientific expedition on which she was employed; and from the accounts she brings, there seems to be less reason to doubt that the death of Captain Foster was accidental: our first information, however, was received from head quarters.

Literary Fund.—In noticing the subscriptions to this Fund, we ought, as it is justly due to their liberality, to have stated that Messrs. Colburn and Bentley expressly gave 75*l.* for Mr. James' MS. in consequence of that gentleman's having devoted the price (whatever it might be) to this charity. It so happened that

the work itself was not in the line of their usual publications.

Chateaubriand.—This prolific and popular writer has just sold off all his effects in Paris, with the intention of quitting France, and going to reside at Turin.

Panthecon.—We have long been wondering at the erection of two prodigious buildings near the Sloane Street corner of Belgrave Square, and guessing in vain for what purposes they could be intended. At last, the other day, we got a glimpse of their intent and meaning by seeing the Greek compound *Panthecon* inscribed in capital letters upon their fronts. These, then, are to be repositories for all the arts and for manufactures, in shops, a bazaar, and a gallery. They are certainly on a very extensive scale, and thus deserve our notice as a novelty among the improvements of the times.

Elephant.—A noble male elephant, in perfect health and condition, has reached the Zoological Gardens, after a nine months' voyage from Madras, via China. He is appointed to have a paddock and a pond for his especial occupation.

Singular Death.—Accounts have been received of the death of Mr. James Haze, of Bristol. This gentleman was travelling in Egypt; and in attempting to ascend one of the pyramids without a guide, fell, and was killed.

Fossil Oxen of Russia.—Professor Fischer, of Moscow, has described two new species of fossil oxen, from Siberia. The *bos latifrons*, with a large forehead, horns straight at the base, palate much dilated; and the *bos canaliculatus*, having horns very close together, at their base, and separated by a straight deep channel.

Melotypy.—Under this title, M. Duguet, of Paris, has published an account of a new method of printing all kinds of music with movable characters.

Calculation.—The newspapers state, that of a party of English country members, amounting to about fifty, who were in last parliament, called themselves "the country gentlemen," and acted together, there will be in the next parliament, at the very utmost, not more than six or seven members; viz. Lord Chandos (1), Lord Mandeville (2), Lord G. Somerset (3), Lord Ingestrie (4), two of the Lowthers (6), and the Wynns;—by which it appears that the Wynns are only one.

Echo.—We are often amused by the epigrams and *bon-mots* of the *Sunday Times* newspaper. The annexed, in last Number, is very good:—"Paganini.—Our friend Sir Charles, who, by the by, never wears creaking shoes, consequently has no music in his sole, perpetrated the following, on learning the moderate charge to witness the performance of this modern Orpheus at the Opera House:—

What are they who pay three guineas
To hear a tune of Paganini's?
Echo.—Pack of ninnies!"

Sir George Radcliffe.—This gentleman "was born in Yorkshire, in the year 1587. Seven of his relations lost their lives in the war of the rebellion. He went to Ireland with the Earl of Strafford, upon his appointment to the lord-lieutenancy, and was involved in all his troubles. He is said to have been a man of extraordinary sagacity and knowledge of business, and so good an orator, that his longest speeches were accounted his best. When Sir Thomas Chaloner had discovered the existence of alum near Gainsborough, it was through Radcliffe's contrivance that foreign workmen were brought over from Rochelle in hogsheads, to excavate the ground,

and prepare the mineral. This alum mine was a source of considerable revenue to the crown. Hampden considered Sir George as 'one of the most dangerous men that adhered to the king.' He was impeached by the parliament, and condemned unheard. It was probably at this time that he retired into France. He died in 1665, 'leaving,' says David Lloyd, 'these remarks behind him'—that, 'with Tamerlane, he never bestowed a place upon a man that was over ambitious of it; that he feared more the committing than the discovering of an irregularity; that he gave away to charitable uses a tenth of what he got; and that he loved a grave better than a gaudy religion.'—*Life and Correspondence of Dr. Basire.*

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XXI. May 21.]

The Naval and Military Battles of England during the last Two Reigns, by D. E. Williams.—Sir E. Seaward's Narrative of his Shipwreck, and Discovery of certain Islands in the Caribbean Sea; with a detail of many extraordinary Events in his Life, from 1733 to 1749; edited by Miss Jane Porter.—The Life and Death of Lord Edward Fitzgerald, by Thomas Moore, Esq.—Journal of a Residence at the Courts of Germany; written during a personal attendance upon their present Majesties, in 1822, 1825, and 1826; by Dr. W. Beattie.—Select Works of the British Poets, from Chaucer to Johnson; by R. Southey.—A Guide to the Fruit and Kitchen Garden, by George Lindley; and edited by John Lindley.—A Manual of the Land and Fresh-water Shells of Great Britain; by W. Turton.

LIST OF NEW BOOKS.

Hamilton's History of Medicine, 2 vols. 8vo. 11. 4s. bds.—Grove's Missionary Journal, 12mo. 5s. bds.—Sabin's Judgment of the Quick, 12mo. 3s. bds.—Stratton's English and Jewish Tithe Systems compared, 12mo. 5s. bds.—A Caution to Bankers, Merchants, &c. 12mo. 3s. 6d. bds.—Spiller's Exercises on French Pronunciation, 12mo. 4s. 6d. bds.—Scott's Art of Preventing the Loss of Teeth, 8vo. 5s. 6d. bds.—Bell's System of Geography, Part IX., 8vo. 7s. 6d. bds.—Homonymes Français, by Albert and Smith, 12mo. 3s. bds.—Wynpessie on the Divinity of our Lord, with Introduction and Notes, by W. L. Alexander, 18mo. 3s. 6d. bds.—Cambridge Problems, 1821 to 1830, 8vo. 7s. bds.—Watson's Life of the Rev. J. Wednesday 18	41. — 69.	30.06 — 29.96

Wind variable, N.E. prevailing. Except on the afternoon of the 13th, clear. The continued cold nights have not yet allowed vegetation to recover its severe check.

A few drops of rain fell on the afternoon of the 13th.

Edmonton. CHARLES H. ADAMS.
Latitude..... 51° 37' 32" N.
Longitude... 0 3 51 W. of Greenwich.

We must acknowledge to C. D. our omission in not mentioning that the justly admired lines quoted in the last Meteorological Report, were from the pen of W. Sotheby, Esq., and will be found in the second book of his beautiful translation of Virgil's Georgics, v. 413—418. C. H. A.

TO CORRESPONDENTS.

*. To again the influx of new and more temporary matter induces us to defer our sequel Reviews of the State Papers and Travels in Spain.

We are sorry we cannot insert E. H.'s lines; but we are startled by the bold figure which speaks of "the mortal light of animated stillness!"

We cannot enter into Mr. Peter Jeffery's complaint: if he has been wrong respecting the approaches to London Bridge, surely a literary journal is not the place to discuss the quarrel.

Erratum.—In the list of the Professors at the King's College in our last, instead of G. J. Bonett, Professor of Botany, it should have been Gilbert T. Burnett.

ADVERTISEMENTS,

Connected with Literature and the Arts.

GALLERY of the BRITISH INSTITUTION, Pall Mall.

The present Exhibition will close on Wednesday next, the 25th instant, and will be re-opened early in June, with a Selection of the Works of the Old Masters.

Admission, 1s.—Catalogue, 1s.

WILLIAM BARNARD, Keeper.

SOCIETY of BRITISH ARTISTS' Gallery, Suffolk Street, Pall Mall East.

The Eighth Exhibition for the Sale of Works of Living British Artists, is now Open, from Ten till Seven.

Admission, 1s.—Catalogue, 1s.

J. WILSON, Secretary.

NATIONAL REPOSITORY.

Patron, the KING.

The Exhibition of New Inventions and Improvements in Arts and Manufactures, Gallery of the Royal Mines, Charing Cross, is now open daily.

Admission, 1s.

EXHIBITION of SCULPTURE.

Mr. Peter Hellins's Colossal Group of the "Murder of the Innocents," Groups of "Conrad and Medora," "Aurora and Zephyrus," with other Sculpture, is now exhibiting, at No. 17, Old Bond Street, on Monday, the 16th instant, and following Days.

Admission, 1s.—Season Ticket, 5s.

MICROCOSM, 24, Regent Street, Four Doors from Piccadilly.

The Solar Microscope is now open daily, from Eleven till Five, when the Sun shines.

Admission, 1s.

By this Microscope a Drop of Water, containing innumerable living Beings, occupies a Circle Nine Feet in Diameter. The Microcosm is open from Ten till Dusk, and consists of a grand Display of Microscopic Objects, Insects, and Animalcules in Water, &c.; the new Optical Deception discovered by Mr. Faraday, F.R.S. and Living Figures of Regent Street. The whole of the Apparatus constructed by F. Carpenter, Optician.

Splendid Work for the Drawing-Room Table.

Price 11. plain, or 11. 14s. beautifully coloured, folded in a neat Case.

A PANORAMA of CONSTANTINOPLE

and its ENVIRONS, from Scutari, drawn from Sketches by J. PITMAN, Esq., and engraved by Mr. C. R. R. The Panorama is accompanied by a Descriptive Pamphlet, containing an Account of the Public Buildings, and Sketches of the Manners and Customs of the Inhabitants.

Published by Samuel Leigh, 18, Strand.

A NAUTICAL View of LONDON and its ENVIRONS, arranged in a novel and interesting Style, exhibiting every Feature of the British Metropolis, disposed in the Form of a Rotunda, and viewed through the medium of Magnifying Glasses, produces an Appearance of Nature hitherto unattainable in other than large and extended Panoramic Views.

Price of the Print in Rotunda, with Magnifying Glasses and Portfolio, 11. 5s. The Print with Key, 14s.

MECHANICAL PERSPECTIVE.—The

Patent Perspective Tracing Instrument is now on Sale, at Cary's, 181, Strand; Holzapffel and Co's, 64, Charing Cross; and Jones, 108, Charing Cross. This Instrument (one form of which packs in a Pocket Case), will be found to act with as much facility and fidelity in Landscape, Architectural, and Figure Sketching from Nature, as the common Panograph copies Pictures; and it is also conveniently applicable to the latter purpose, particularly where large Pictures are required to be sketched on reduced scales. A larger form, capable of producing Sketches measuring two feet by two feet six inches, may be seen at the National Repository, Charing Cross, and also at the Patent for producing a Perspective View from a Ground Plan and Elevation.

BUSTS in BRONZE of HIS MAJESTY WILLIAM the FOURTH, and the LORD CHANCELLOR BROUGHAM, at 11. 1s. each.

These Busts are of dimensions and of character to form an appropriate ornament of great interest, for every chimney-piece in the Kingdom. The acknowledged excellence of the likenesses and the intrinsic beauty of the busts, as works of art, give them a place in every cabinet. The absolutely indestructible nature of the material, with the graceful appearance, and the powerful embodying effect of an actual model in bronze, leaves the most elaborate print far behind, as a memorial of important and valued personages.

Sold by the Author and Publisher, Samuel Parker, 15, Argyll Place, and 86, Cornhill; Jennings and Co. Cheapside; and by all Booksellers.

THE "COURIER," in speaking of the

Patent Perryman Pen, says,—"It is remarkable in how very short a period the use of the Perryman Pen has become little less than universal. We infer this from the large proportion of post-office letters, the paper-stamp of which expresses that the paper is made for the Perryman Pen; a large number of which letters, moreover, are written by persons of the highest class, as ladies of title, dukes, marquesses, earls, bishops, and members of parliament." The Perryman Pen and Perfected Letter Paper are sold, wholesale and retail, by James Perry, (the Patentee), 27, Red Lion Square, London; and, by only observing that each of these articles is in a sealed packet, having on it the Patentee's Signature, it may be had genuine, of all Booksellers, Stationers, Silver-smiths, Jewellers, Gun and Hardware-Men, Writing-Manufacturers, Perfumers, Druggists, &c. throughout the whole of the British Empire, and in every Place abroad. Each Packet of Pens contains Nine, price 3s. 6d. Each Packet of Perfected Letter-Paper (tinted blue) contains a Quire, price 11. 4d.

THOSE ADVOCATES of REFORM who

are desirous of possessing a lasting and elegant Memorial of their Friends of their Country, are informed that the beautifully engraved Print, entitled the "Champions of Constitutional Reform," containing tastefully embellished and striking Likenesses of the King, Earl Grey, Lord Brougham, Althorp (now first engraved), and John Russell, from Miniatures by Hayles and Widdell, is now ready for delivery. Price 2s. 6d. in India Proofs, 4s. 6d.

Published by Charles Tilt, 36, Fleet Street.

ILLUSTRATIONS of the BIBLE.—Mr.

MARTIN begs to announce that the First Part of the above Work is now published. Price, unlettered Proofs, Four Guineas; lettered ditto, Two Guineas; Prints, One Guinea.

30, Abbeys Terrace, New Road, May 6, 1831.

TO GENTLEMEN connected with the

PUBLIC PRESS.—The Proprietor of a highly respectable Provincial Newspaper, conducted upon moderate Terms, is desirous of engaging an Editor a Gentleman of Political Knowledge and Literary Attainments. References as to capability, or Specimens, will be required.

Address (post-paid) to A. B., at Mr. Barber's, Country Newspaper Office, 25, Fleet Street.

MUSIC.

THEY HAVE GIVEN THEE

ANOTHER. New Ballad, by G. LINLEY, Esq. 2s.

The Flag that braved a Thousand Years. A National Song, sung by H. Phillips, composed by S. Nisam, price 2s.

Gaily we dance. Cavatina, by J. A. Barnett. 5s.

My Fondlest, my Fairest, (Tyrolienne), by G. Linley, Esq. 2s.

The Page Troubadour. Sung by Miss Taylor, composed by Barnett. 2s.

The Tyrolean Hunter's Song, written and composed by T. Oliver. 2s.

Cramer, Addison, and Beale, 301, Regent Street.

BOOKS IN THE PRESS.

On the 24th of May will be published, in 3 vols. post 8vo.

A THERTON, a Tale of the last Century.

By the Author of "Rank and Talent." London: Published by W. Simpkin and R. Marshall, Stationers' Hall Court, Ludgate Street.

BOOKS PUBLISHED THIS DAY.

THE POETICAL WORKS of the Right

Hon. LORD BYRON, complete (with the exception of Don Juan), in 6 vols. 18mo. with Portrait and highly finished Engravings, only 57s. Vol. V. and VI. which are now for the first time published, contain many Poems never included in any previous Collection of the Works, and some that were suppressed; besides several printed for the first time; rendering this the first and only complete edition ever published.

John Murray, Albemarle Street.

ESSAYS and ORATIONS, read and delivered at the Royal College of Physicians. To which is added, an Account of the opening of the Tomb of King Charles I.

By Sir HENRY HALFORD, Bart. M.D. G.C.B. President of the College. John Murray, Albemarle Street.

WORTHIES. With numerous Plates, price 6s.

Just published, with Thirteen Engravings from the celebrated Designs of Flaxman, 6s.

Family Dramatists, No. IV.; being Popular English Specimens of Maculays.

John Murray, Albemarle Street.

ELEMENTS of the DIFFERENTIAL

CALCULUS, with its Applications to the General Theory of Curve Surfaces, and of Curves of Double Curvature, wherein are pointed out and corrected some important Errors that have hitherto remained unnoticed in the Writings of Lagrange, Lacroix, and other Analysts.

By J. R. YOUNG.

Author of "Elements of Analytical Geometry," &c.

Price 7s. in cloth.

Printed for J. Bouter, School Library, 78, St. Paul's Churchyard.

"MARY OGILVIE," and "GEORGE WISHART."

The Public are respectfully informed, that these Tales, which have lately excited so much interest, can only be had in the "Domestic Legacy," of which a second edition has just been published, in 3 vols. 18s. 6d.

William Kidd, 228, Regent Street.

FRAMLINGHAM; a Narrative of the

Castle. In Four Cantos.

By JAMES BIRD.

London: Printed for Baldwin and Cradock, Paternoster Row.

CAPTAIN BASIL HALL'S NAVAL LIFE AND EARLY VOYAGES. Three small vols. Yarnette Titles, 15s.

Captain Hall has been for some time past, on the whole, the most popular writer of travels in England; and we have no sort of doubt, that his present work will find even wider acceptance than the last and best of its predecessors. The field is wider—the interest more various, and the execution, we think, even more lively. The words on the title-page, "Chiefly for the Use of Young Persons, are, perhaps, meant to apologise for the minuteness with which things, though familiar to grown persons in the captain's profession, are occasionally explained; but judging from ourselves, it is exactly this minuteness that will give the book its chief value in the eyes of grown readers. The man who has read the fragments before he opens Lord Collingwood's Letters, together with a Life of Nelson, and a History of the Mediterranean, will find an essential advantage over him who has not, as the student of Bonaparte's campaigns owes to the possession of a good map."

—Quarterly Review, No. 80.

2. Captain Hall's Travels in North America, 3 vols. 11. 11s. 6d. And Etchings, 10s. 6d.

3. Destiny. By the Author of "Marriage," and the "Inheritance." 3 vols. 11. 11s. 6d.

"Destiny has many charms about it,—gracefulness of style,—scenes that affect even to tears,—variety of character well sustained,—knowledge of human nature, wit, and mirth; and withal, a practical morality, which reflects credit upon the author, and cannot fail to be profitable to the reader."—Monthly Review, May 1831.

"This novel alone will entitle the author to a high rank among the novelists of our day."—Edinburgh.

Printed for Robert Cadell, Edinburgh; and Whittaker and Co. London.

WRIGHT'S ALGEBRA. Parts I. and III. as published in the Private Tutor, being intended as a Supplement to Wood's Algebra.

Cambridge Classical Examination Papers, a Second Series, containing Papers on the Greek Testament, Hebrew Scholarship, and Fellowship and Scholarship Examinations. 8vo. 8s.

Cambridge: Published by W. P. Grant; and sold by Whittaker and Co.; and Simpkin and Co. London.

Of whom may be had,

1. Hints and Answers; being a Key to a Collection of Mathematical Examination Papers, as given at the several Colleges, Part I. containing Euclid, Arithmetic, and Algebra. 8vo. 7s. 6d. boards.

2. Boes Antiquitatum Græcarum Descriptio brevis, new edition, revised. 18mo. 6s. 6d.

3. Index to Æschylus, uniform with Beck's Index to Euripides. 8vo. 12s.

4. Index in Tragicis Græcorum. 2 vols. 8vo. 2s. 6s.

Price 8s. 6d. embellished with two highly finished Engravings by Webb and Scott, front Paintings by W. Barraud and E. Landseer, R.A. the First Number of

THE NEW SPORTING MAGAZINE.

Centrate.—Address to the Public.—John Ward, Esq.'s Account of Blue Kain.—Nim South's Tour.—The Old Warlock Coach.—The New Coach.—Journey by Mail to Hungerford.—Meeting the Craven Hounds for the first time.—Good Run from the Hounds.—The Fields.—Craven Hunting Stables.—Mr. Smith's Management.—The Kennel.—A Day in Marlborough Forest.—Immense Number of Foxes bred on the Marquis of Aylesbury's Property.—Former Masters of Craven Hounds.—Stratagem in the Hunt.—Mr. Smith an excellent one.—Anecdote of him, on taking the Field.—Country, &c.—Dead Red Deer.—Racing.—Newmarket Meetings.—Act of Parliament.—Wood's Canine Madness Bill, Lord Althorpe's Game Bill.—Wild Bear Hunting in Saxony, by the Baron H. Gablenz.—The Pleasures and Advantages of Archery, by Topophilus.—Fine Art.—Sporting Subjects in the British Institution, and Society of British Artists.—Anatomy, &c.—The Close of the Hunting Season in Sussex, by Dashwood.—Scarcity of Foxes in the East Sussex and Colonel Wyndham's Country.—Disturbance of Coverts by Harriers.—General Sport with Mr. Craven's—General Wyndham's Hounds, &c.—Chassan's Letter from Paris.—General Monthly Miscellany.—The Chase.—Observations on the present State, and Review of Sport during the past Season.—The Turf.—Races to come.—Races past.—Nestle Chase.—Amesbury Coarse Meeting.—Archery.—Cricket.—Pigeon Shooting.—Aquatics.—Fine Art.—Blindfold Clasp.—Latest Intelligence: Colonel Jolliffe's Memoir.—Sir John Gerardo's—York and Epson Races.—Bettings.—Hay and Corn Markets.—Racing Calendar.

Published by Baldwin and Cradock, Paternoster Row; and to be had of all Booksellers in the Kingdom.

History and Treatment of the Horse. Under the Superintendence of the Society for the Diffusion of Useful Knowledge.

In a handsome 8vo. vol. price 8s. 6d. bound in cloth and lettered, THE HORSE, with a Treatise on Draught, and a copious Index. Illustrated and embellished with more than 100 Engravings on Wood.

London. Printed for Baldwin and Cradock, Paternoster Row. This volume contains every thing relating to the Natural History and Economy of the Horse,—its general history, various breeds, external and internal structure, principles of veterinary medicine, general management, and the medicines used in veterinary practice, &c.

JOURNAL OF VOYAGES AND TRAVELS. By the Rev. DANIEL TYRERMAN and GEORGE BENNET, Esq.

Deposited from the London Missionary Society to visit their various Stations in the South Sea Islands, China, India, &c. between the Years 1801 and 1820. Compiled from original Documents. By JAMES MONTGOMERY. Author of the "World before the Flood," &c. &c. London: Frederick Westley and A. H. Davis, 10, Stationers' Court.

SELECTIONS FROM THE WORKS OF the learned and judicious RICHARD HOOKER.

1. Law and Obedience necessary to Order in Church and State. 2. The Church of England, her Liturgy, Rites, and Ceremonies. 3. Christian Faith and Duty.

By the Rev. HENRY CLISSOLD, M.A. Minister of Stockwell Chapel, Lambeth. Printed for C. J. G., and F. Hivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall. To be had of all Booksellers.

THE ETON GEOGRAPHY: a Compendium of Ancient and Modern Geography, compiled from the Original Authorities and the latest Information; with Illustrations of the most interesting points in history, poetry, and fable, plans of Athens, Rome, Syracuse, &c. &c.; and preceded by an Introduction to the Study of Astronomy. For the Use of Eton School; and inscribed, by permission, to the Rev. Dr. Keble, the Head Master.

By A. ARROWSMITH, Hydrographer to the King. 1 vol. 8vo. 16s. boards. Published for the Author, Soho Square, by E. Williams, Ston; at the Eton Warehouse, Red Lion Court, Fleet Street; Whittaker, Treacher, and Co. Ave Maria Lane; Parker, Oxford; Deighton, Cambridge; and Milliken, Dublin.

THE DRAMATIC ANNUAL.

"Mr. Keynolds must be now almost the father of the drama, and yet, to judge by the tone of the volume before us, we should say he is the youngest fellow connected with the stage."—Tatler.

"Amongst other excellently drawn scenes in this lively and entertaining work, we have to notice the following between the manager and author."—Age.

"A young beginner may soon learn his trade under the tuition of so able a master."—Sunday Times.

"It possesses a superior value, and one which is worth its price twice told. We attribute to the numerous designs from the pencil of W. H. Brooke."—Literary Gazette.

"We have mentioned the great fund of humour by which this work is characterised. Exclusive, however, of that ingredient, there is information still more valuable."—Morning Post.

"We shall, from time to time, draw on its pages for our light columns. There is a pretty story worked up, and many of its passages are affecting."—Courier.

Son héros, Henri V. vid, est bien l'original le plus amusant que jamais live nous ait offert. —*Journal de Londres*.

Printed for Longman, Rees, Orme, Brown, and Green.

Interacting Works, Just published, by Henry Colburn and Richard Bentley, New Burlington Street.

THE LIFE AND CORRESPONDENCE OF SIR THOMAS LAWRENCE. 2 vols. 8vo. with Three Portraits.

II. The Life and Correspondence of Sir Thomas

Muoro, late Governor of Madras, with Extracts from his Private Papers, by the Rev. G. E. Glegg, M.A. M.R.S. New and cheaper edition, with Additions, complete in 2 vols. 8vo. with fine Portrait, price 32s.

Dr. Hamilton's History of Medicine, Surgery, and Anatomy. In 2 vols. small 8vo.

Bourrienne's Napoleon.—French Edition. In 5 vols. post 8vo. with Seven Plates, price 21. 12s. 6d. being half the price of the Paris edition.

Mémoires de Napoléon Bonaparte, par M. de Bourrienne, Ministre d'État. With copious notes, now first added, from the dictation of Napoleon, from the Mémoires of the Duke of Rovigo, &c.

Bogle Corbet; or, the Emigrants. By the Author of "Lawrie Todd." &c. 2 vols.

Sir Arthur Brooke's Travels in Spain and Morocco. 2 vols. 8vo. with Plates.

Also, just ready,

Jacqueline of Holland. By the Author of the "Heiress of Bruges," "Highways and Byways," &c.

The Lives of the Actors, by John Galt, Esq. 3 vols. post 8vo.

New and Improved Editions of Conversations on Chemistry, &c. 11th edition, considerably enlarged, in 2 vols. 18mo. with Plates by Lowry, 14s. boards.

CONVERSATIONS ON CHEMISTRY, in which the Elements of that Science are familiarly explained and illustrated by Experiments. In this edition, a Conversation on the Steam Engine has been added.

Printed for Longman, Rees, Orme, Brown, and Green.

Of whom may be had, by the same Author, Conversations on Vegetable Physiology, comprehending the Elements of Botany, with their Application to Agriculture. 2 vols. 18mo. with Plates, 12s.

Conversations on Natural Philosophy. 6th edition, corrected, 10s. 6d. with 22 Engravings by Lowry.

Conversations on Political Economy. 6th edition, 9s.

In 8vo. with 7 beautiful Engravings, a 3d edition of

FOUR YEARS in the WEST INDIES, in 1826, 7, 8, and 9.

"This clever volume, which is written in a very lively style, contains much curious information on the state of our West India Colonies."—Sunday Times.

"A very useful and attractive publication, which will be read with much interest."—Court Journal.

William Kidd, 220, Regent Street.

THE NATIONAL PORTRAIT GALLERY OF ILLUSTRIOUS AND EMINENT PERSONS.

AGES, particularly of the Nineteenth Century, from Paintings by Sir Thomas Lawrence, Shee, Beechey, Copley, Owen, Phillips, Jackson, Hoppner, Lonsdale, Harlow, Rochard, &c. &c. &c. with Memoirs.

By W. JERDAN, Esq. F.S.A. &c. New Subscribers can commence with Part I. and have a Part per Month, or the whole at once; and the Patrons take this opportunity of assuring the Public, that though the sale of the Work has been unprecedented, they may rely upon receiving undoubtedly perfect impressions, the Portraits being engraved on Steel.

Contents of the Parts published, forming Vols. I. and II.

Part I.	1. Duke of Wellington	Part	12. Rt. Hon. George Canning
	Lord Byron		Duke of Gloucester, P.R.S.
	Marquess Camden		Viscount Whitworth
	Lord Amherst		Sir Thomas Munro
	Princess Charlotte		Earl of Verulam
	Dr. Wollaston		Bp. of Norwich (Bathurst)
	Lord Grenville		Thomas Young, M.D.
	Marchioness of Stafford		Bishop of Chichester (Carr)
	Earl St. Vincent		Earl Spencer
	Earl Fitzwilliam		Baron Lyndhurst
	Sir Joseph Banks		Earl of Fife
	Marquess of Hastings		Sir Thomas Le Breton
	Sir Humphry Davy		Sir Abraham Hume
	Sir Henry Torrens		Abp. of Cant. (Howley)
	Lord Grantham		Sir Thomas Picton
	Bishop Heber		Viscount Melville
	Duke of Beaufort		John Abercromby, Esq.
	Lord Nelson		Viscount Clifden
	Sir Charles Wm. Doyle		Viscount Gederich
	John J. Angerstein, Esq.		Professor Person
	Benj. West, Esq. P.R.A.		Hon. G. J. W. Agar Ellis
	Archdeacon Wrangham		Duke of Kent
	Rt. Hon. William Pitt		Earl of Harrowood
	His Majesty George III.		Archdeacon Nares
	Spencer Perceval		Earl of Carlisle
	Admiral Lord Keith		Sir J. Franklin, R.N.
	Rt. Hon. Ch. James Fox		Rt. Hon. W. Huskisson
	Viscount Bessford		Lord Ellenborough
	Rt. Hon. T. Grenville		Sir Edward Coddington
	Earl of Liverpool		Bp. of Peterboro' (Marsh)
	Lady Agar Ellis		Sir George Murray
	Dugald Stewart, Esq.		Lord Teulon
	F.S.A.		His Majesty George IV.
	Rt. Hon. R. B. Sheridan		John Heavside, Esq.
	Dr. Carey (Bp. of Exeter)		F.R.S.
	Marquess of Ormonde		Admiral Lord Duncan.

A Part is published on the 1st of every Month, containing three Portraits, and the corresponding Memoirs, Imperial 8vo. 3s.; ditto, Proof on India paper, 4s.; royal 4to. (the King's edition, and of which only a few Copies remain unsold), 7s. 6d. per Part. Vols. I. and II. half-bound in morocco, Prints, 2s. 6d. each Vol.; India Proof, 3s. 6d.; the King's edition, 5s. 6d.

For twelve months, Parts I. to 24 will continue to be sold as originally published, after which the price will be advanced.

* Part XXV. (published May 5) contains—His Royal Highness the Duke of Sussex—Right Hon. John Philipot Curran—and Marquess of Cornwallis.

London: Fisher, Son, and Jackson; Colnaghi; C. Tilt; and all Booksellers.

REMARKS on the LETTER of R. M. BEVERLEY, Esq. to the Archbishop of York, on the State of the Church of England.

By the Rev. JOHN HAMILTON GRAY, M.A. Of Magdalen College, Oxford; Curate of Bolsover. Published by Roberts, Chesterfield; Longman, Rees, Orme, Brown, and Green, London; and Tait, Edinburgh.

Montgomery's Poetical Works.

3d edition, fols. 8vo. price 8s. boards. THE PELICAN ISLAND, in 9 Cantos, and other Poems.

By J. MONTGOMERY.

Printed for Longman, Rees, Orme, Brown, and Green.

Of whom may be had, by the same Author,

The Wanderer of Switzerland, 10th edit. 6s.

The World before the Flood, 8th edit. 9s.

The West Indies, and other Poems, 7th edition, 6s.

Greenland, and other Poems. 4th edit. 8s. boards.

Songs of Zion, 3d edition, fcp. 8vo. 5s.

Companion to the Waverley Novels. Beautifully printed and embellished, and neatly bound, price 6s. each Number.

STANDARD NOVELS, No. III.

Containing the whole of the Spy, by Cooper, corrected and revised by the Author, with his Notes, and Notes written expressly for this publication. This additional matter explains the origin of the Tale and some of the principal incidents, and gives an Account of the actual individuals who are designated as the leading characters.

No. I. comprises the whole of the Pilot, by Cooper, price 6s.

No. II. contains Godwin's celebrated Story of Caleb Williams, complete, price 6s.

No. IV. will contain the whole of Miss Jane Porter's Romance of "Thaddeus of Warsaw."

Henry Colburn and Richard Bentley, New Burlington Street.

PICKERING'S AULDINE EDITION OF the BRITISH POETS, Vol. XII. containing the Poems of BEATTIE, with original Manuscripts, by the Rev. ALEXANDER DYCE, and a Portrait. Price 5s.

* This is the most complete collection of Beattie's Poems extant. It contains several Poems not to be found in any other edition.

Parts already published, Burns, 2 vols. 10s.—Thomson, 2 vols. 10s.—Collins, 2s.—Kirkc White, &c.—Cowper, 3 vols. 15s.—Burry and Wyatt, 3 vols. 10s.

Vols. XIII. XIV. and XV. will contain the Poems of Pope.

THE LONDON LITERARY GAZETTE;

Journal of Belles Lettres, Arts, Sciences, &c.

AND

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire its immediate transmission, by post, we recommend the LITERARY GAZETTE printed on stamped paper, price One Shilling.

No. 749.

SATURDAY, MAY 28, 1831.

PRICE 8d.

REVIEW OF NEW BOOKS.

Tyerman and Bennet's Missionary Travels.
2 vols. 8vo. Westley and Davis.

IN our last we briefly announced this publication, so ably edited by Mr. James Montgomery, and stated how interesting a contribution it was to the stores of knowledge which have been produced by missionary labours. We have now, therefore, little else to do than to make such extracts as will corroborate our very favourable opinion, and at once entertain and instruct our readers.

A preface vindicates the South Sea islands, where Christianity has been introduced, from the evil report of them which has been published by the Russian voyager Von Kotzebue; and, through the whole of these two volumes, the natives are represented as having been reclaimed from the most monstrous vices and crimes, by the diffusion of the Protestant religion. This will appear from many of our selections, and that from the prevalence of horrid idolatry and human depravity, civilisation and piety have overspread the islands. But we must first proceed on our way thither; and it will be found that our missionaries' crossing the line is described in a very different manner from the customary frolics of Neptune, Amphitrite, and their amphibious attendants.

"June 23. This day we passed the equator; when certain preposterous ceremonies, as usual, were observed on board, during which we did not escape a little sprinkling of salt water.

"June 24. (Lord's day.) Mr. Tyerman preached this morning upon deck, from Isaiah, xxxiv. 17: 'His hand hath divided it to them by line.' His object being to improve the event of yesterday, he made the following observations: 1. There is a *line of being*, which we all crossed when we were born; then we were endowed with a rational and intelligent nature; and then we entered upon our state of probation. 2. There is a *line of regeneration*, dividing the moral world into two hemispheres, in one of which dwell the righteous, and in the other the wicked. This line must be crossed by all, before they can become Christians indeed, and enjoy the privileges of the gospel. 3. There is a *line of death*, which we must each cross when we have finished our probationary course, and go before the tribunal of God to render an account of the deeds done in the body; but when, where, and how we shall cross this line, we know not. 4. There is a *line* which divides between heaven and hell: this none shall ever cross who have once taken up their abode in either of those regions. In application it was remarked, that if we would not lament having crossed the line of being, nor fear crossing the line of death, we should be concerned to cross the line of regeneration; that when we fall on earth, we may be received into everlasting habitations, on the right side of the line that divides between heaven and hell."

There is sometimes an amusing misapplica-

tion of the scriptural and pious language employed by writers of this class, which, while we respect their characters, raises a smile at their expense. Thus, a little farther on, we are told: "During the storm, a fiery meteor, apparently the size of a man's head, shot through the atmosphere, and fell into the sea near our ship. The light which it diffused was so sudden and intense that night became as noon-day. Had it struck our vessel, we might have all perished on the spot, and no record of our end been discovered till the day of judgment. We are in the hands of God; and on Him, whom all the elements obey, is our sole dependence."

What record of a shipwreck would be discovered at the day of judgment, it is not for us to guess; but our worthy friends are much addicted to the finding of special providences. Take, for instance, an account of another storm.

"The mate said that this first great flash heated his face, and he felt as if stunned for a moment or two, the sulphurous flame appearing to run down his jacket-sleeve. The second peal was accompanied by a crimson blaze, which was instantaneously followed by the tempest of hail, pouring like shot upon himself and his terrified comrades, who (to use his own expression) crowded about him like a flock of sheep, and could scarcely be prevailed to quit his side on the necessary duties of the ship. He observed, that the main-stay-sail had happily been taken in before the squall, or it must inevitably have been carried away, and perhaps involved the destruction of the vessel, with all on board. This he thought a very providential act, for he had only done it under an impression which urged him, as if he had heard a voice saying, 'Take it in—take it in;—take in the main-top-sail!'"

"Sailors (we are informed elsewhere) are proverbially superstitious. This escape (one previously related, but not worth quoting) of their comrade occasioned much conversation among the crew, and sundry stories were told, which, though awful enough at sea, may appear puerile on land. Two of these (for the sake of exemplifying the only fears that seamen feel, and the groundlessness of them,) we shall record. Our chief mate said, that on board of a ship where he had served, the mate on duty ordered some of the youths to reef the main-top-sail. When the first got up, he heard a strange voice saying, 'It blows hard.' The lad waited for no more; he was down in a trice, and telling his adventure. A second immediately ascended, laughing at the folly of his companion, but returned even more quickly, declaring that he was quite sure that a voice, not of this world, had cried in his ear, 'It blows hard.' Another went, and another, but each came back with the same tale. At length the mate, having sent up the whole watch, ran up the shrouds himself, and when he reached the haunted spot, heard the dreadful words distinctly uttered in his ears, 'It blows hard.' 'Ay, ay, old one; but, blow it ever so hard, we must ease the earings for all that,' replied

the mate undauntedly; and looking round, he spied a fine parrot perched on one of the clues, the thoughtless author of all the false alarms, which had probably escaped from some other vessel, but had not previously been discovered to have taken refuge on this. Another of our officers mentioned, that, on one of his voyages, he remembered a boy having been sent up to clear a rope which had got foul above the mizen-top. Presently, however, he came back, trembling, and almost tumbling to the bottom, declaring that he had seen 'Old Davy' aft the cross-trees; moreover, that the Evil One had a huge head and face, with prick-ears, and eyes as bright as fire. Two or three others were sent up in succession; to all of whom the apparition glared forth, and was identified by each to be 'Old Davy, sure enough.' The mate, in a rage, at length mounted himself; when resolutely, as in the former case, searching for the bugbear, he soon ascertained the innocent cause of so much terror to be a large horned owl, so lodged as to be out of sight to those who ascended on the other side of the vessel, but which, when any one approached the cross-trees, popped up his portentous visage to see what was coming. The mate brought him down in triumph, and 'Old Davy,' the owl, became a very peaceable ship-mate among the crew, who were no longer scared by his horns and eyes; for sailors turn their backs on nothing when they know what it is. Had the birds, in these two instances, departed as secretly as they came, of course they would have been deemed supernatural visitants to the respective ships by all who had heard the one or seen the other."

So much for supernatural alarms, to which we will here add a curious story of natural causes.

"According to our captain, who has had much experience in the favourite fishery of these seas, the whales are considerably under the influence of the moon, as to the course which they take, and their appearance above water; the full and change of that luminary being the periods at which they may be sought with most probability of success. Indeed, lunar influence seems to occasion phenomena of a very curious nature. It is confidently affirmed that it is not unusual for men on board a ship, while lying in the moonlight, with their faces exposed to the beams, to have their muscles spasmodically distorted, and their mouths drawn awry—affections from which some have never recovered; others have been so injured in their sight as to lose it for several months. Fish, when taken from the sea-water, and hung up in the light of the moon during a night, have acquired such deleterious qualities, that when eaten the next day the infected food has produced violent sickness and excruciating pains. We have conversed with people who have been themselves disordered after having partaken of such fish. It is hazardous to touch on this subject; we repeat what we have heard from those who ought to be believed, and who would not affirm that of which they themselves were not persuaded. The statements are left to be

confirmed or disproved by others who have better opportunity than we had of ascertaining their foundation in fact."

Safely arrived at Tahiti, we have very interesting details respecting that and adjacent isles; among the rest, our countryman visited Huahine, to the leeward, and here it is related as a proof of the benefits introduced by Christianity—

"A man called upon us to offer a small present. In conversation with him we were struck with the humility, kindness, and devotional spirit, which he manifested. On inquiry, afterwards, it appeared that this very person had been one of the most savage and remorseless of his species so long as he remained an idolater and a warrior. On one occasion, having been sent by Pomare to destroy an enemy, he went, surprised his victim, ripped him up alive, and actually left the wretched man on the spot after his bowels had been torn out, the assassin not having mercy enough to put him out of torture by another stroke. After their ferocious conflicts were over, the conquerors were wont to pile the slain in heaps, with their heads towards the mountains and their feet towards the sea. Next morning they would visit the carcasses to wreak the impotence of an unappeasable vengeance upon them, by mangling and polluting them in the most shocking ways that brute cruelty or demoniac frenzy could devise. One would turn up the face of a slaughtered enemy, and, grinning with fiend-like malice at it, would exclaim, 'Aha! you killed my father at such a place; now I will punish you!' Another would say to a putrefying corpse, 'You robbed me of my wife; and now I will have my revenge.' Then they would mutilate the limbs and trample them in the dust, eat off the head, pound it to pulp, dry it in the sun, and, when converted to powder, scatter it on the wind; sometimes even, we have been assured, they would prepare the body itself in such manner that it became parched up like leather, and then they would wear it over their own shoulders, in the manner of one of their tibutas, thrusting their head through a hole made for the purpose, the arms and legs dangling down, before and behind, till the loathsome envelope dropped, piecemeal, from their backs. Their outrages upon the women and children, both living and dead, of their vanquished foes, when they sacked their dwellings, cannot be described."

They circumnavigated this island, and saw many places of great curiosity; for example, on the north-east coast, they say,—

"We landed about two miles from our last quarters to visit a ravine which has been opened, by some unrecorded convulsion, to a great depth through a solid rock of chert and breccia. This singular fissure is a quarter of a mile in length, from twelve to fifteen feet wide, near the entrance, but narrowing to eight or nine towards the upper end. A strange tradition existed concerning this place: in a remote age a lizard was born of a human mother, and immediately translated into a god when it saw the light. Here was its retreat and its temple; and here divine honours have been paid to the four-footed reptiles of that species ever since."

"In the Baptist Missionary Accounts, No. XV., we find the following passage:—'He who has slept in the moonlight is heavy when he awakes, and as if deprived of his senses, and, as it were, oppressed by the weight of the dampness which is spread over his whole body.' This is stated by the writer in proof of the fact which he asserts, that 'the moonbeams have a pernicious influence in the east,' if not generally in tropical climates."

"Our friend Auna, this evening, gave us some further particulars of the absurd notions held by the Areois concerning a future state. The land of graves around us naturally led to conversation on subjects which lie beyond the grave. Some of these dissolute, reprobates believed that when a father or a son died, and went to heaven—the heaven formerly described by Auna, as a great plain, amidst a circle of the gods—the survivor, at his decease, was met by the former just on this side of the celestial barrier, who there seized the new comer, and having baked him whole in an earth-oven, as hogs are baked below, put his body, thus dressed, into a basket made of cocoa-nut leaves, and then presented him as a dainty offering to the god whom he had worshipped when alive. By this cannibal divinity he was now eaten up; after which, through some inexplicable process, the dead and devoured man emanated from the body of the god, and became immortal. If a father buried his son, or a son his father, in an unconsecrated place, it was said that the deceased would appear to the survivor the next day, and say, 'You have buried me in common earth, and so long as I lie there I cannot go to heaven'—of course always meaning the sensual heaven of the Areois.—'You must bury me with ceremonies, and in holy ground.' The corpse was then taken up; the arms bound to the shoulders, and the knees up to the body: it was then interred in a hole dug to fit its dimensions, in a sitting posture, but so shallow that the earth barely covered the head. This was the most honourable form of sepulture, and principally confined to high personages. But it was more usual to keep the corpses of their friends above ground, on frames, or in the recesses of marae, allowing them to putrefy and contaminate the air—all round the depositories of such nuisances. When a person was dying, his relatives standing about him would say, 'Take care of your head.' We have not been able to learn the particular meaning of this figure of speech."

These Areois, "when they alighted, like a swarm of locusts, in a rich district, were not, like locusts, contented with what they could devour themselves, but swept away from the miserable inhabitants whatever they could obtain, for the support of those of their order who were wallowing at their ease on dunghills of sloth, while these were labouring abroad in their vocation. That vocation was principally the exhibition of licentious dances, and occasionally dramatic scenes, rudely constructed, or the recital of romantic and diverting tales concerning their ancestors and the gods. Many of these were very long, and regularly composed, so as to be repeated verbatim, or with such illustrations only as the wit or fancy of the narrator might have the skill to introduce. Their captain, on public occasions, was placed cross-legged on a stool seven feet high, with a fan in his hand, in the midst of the circle of laughing or admiring auditors, whom he delighted with his drollery, or transported with his grimaces, being, in fact, the merry-andrew of the corps, who, like a wise fool, well knew how to turn his folly to the best account."

"One of the monstrous practices of these islanders, before they embraced the gospel, was to bury their friends alive, when, from their infirmities, they became burthenome to the young and the vigorous. They would dig a hole in the sand on the sea-beach, then, under pretence of taking their aged or sick relative to bathe, they would bear him on a litter to the spot, and tumble him into the grave which had

been prepared, instantly heaping stones and earth upon him, and trampling the whole down with their feet, till whether they left him dead or alive was of little moment, as it was impossible for him to rise again. In other cases the unnatural kindred would rush into the invalid's house at once, from opposite ends, and make their spears meet in his body. Then they would coolly share the spoil of his little property, and depart without any other reflection except that they had rid themselves of a nuisance, and, perhaps, gained a paltry article of dress or furniture as the price of blood."

"Marriages among the higher orders were often contracted in the following manner. A person who had a beautiful daughter brought her, while yet a child, to a chief, saying, with the utmost frankness, 'Here is a wife for you!' If the great man liked the girl's appearance, he took her off her father's hands, and placed her with some trusty dependant, to be trained and fattened, like a calf for the slaughter, till she had attained a suitable age. When her master chose to take her for his wife, the betrothed and their friends met at the marae. The girl appeared there with a cord about her neck, supported by one of her nearest kin, and accompanied by a man holding some leaves of sweet-smelling fern in each of his hands, which he pressed on either side of his head, above the ears. When the procession reached the altar these leaves were cast upon the ground. The priest, having muttered his prayers, took up one of the sprigs of fern, and, while each of the dead ancestors of the bride (so far back as they were remembered) was named, he doubled down or tore off one of the side leaflets. Then, while the names of her living relatives were mentioned in due order, one of the remaining leaflets was successively pointed out as the number of each. When that which represented the nearest in blood of those who were at hand occurred, that kinsman stepped forth, loosed the rope from the bride's neck, and delivered her to her husband. The friends on both sides then presented the couple with hogs, bundles of cloth, wooden dishes, canoes, &c. &c., according to their rank and ability. In less time than the honey-moon requires to fill and empty her horn, the chief probably grew weary of his spouse, and said to her, *Aiia* (it is enough), *haere e jo* (go away). The woman was then abandoned, and what often became of her may be easily guessed. In this manner the great people took and put away as many wives as they pleased, or could get."

Here, for the present at least, we must slacken sail, again vouching most cordially for the pleasure we have derived in perusing these volumes.

The Orlando Furioso. Translated into English Verse, from the Italian of Ludovico Ariosto; with Notes. By William Stewart Rose. Vol. VIII. London, 1831. Murray.

MR. ROSE has now completed a labour which has certainly, to him, been one of love. He has so long identified himself with his author, that we think he must sometimes have been puzzled to decide whether he was Ariosto or himself. We know not whether to congratulate or to pity him. He may perhaps say—

"My pleasant task is done.
My long-sustaining friend of many years!
And thou art gone, and so is my delight."

We can well imagine him divided between rejoicing and regret. But if we condole with the author whose "pleasant task" is done, we congratulate the literature to which his talents and his industry have made so important an

addition. The *Orlando Furioso* will now take its place among the standard works of our language. We have not space to enter into the analytic and lengthened criticism which a work like this deserves: we can do scant justice to the fine taste which has modified, and the accuracy which has rendered the original, at once wisely and well—the indefatigable research of the notes, and the vein of poetical feeling which runs through the whole. But we can give our warm praise, and recommend public attention to this work of taste, time, and industry. We extract the exceedingly rational soliloquy of Rinaldo, who refuses to taste the enchanted cup by which he can ascertain his wife's fidelity.

"When finding what we seek
Displeases, this 'tis folly to explore.
My wife's a woman; every woman's weak.
Then let me hold the faith I held before.
Faith itself has brought, and yet contentment brings.
From proof itself what better profit springs?

From this small good, much evil I foresee:
For tempting God moves sometimes his diadems.
I know not if it wise or foolish be,
But to know more than needs, I am not vain.
Now put away the enchanted cup from me;
I neither will, nor would, the goblet drain;
Which is with Heaven's command as much at strife,
As Adam's deed who robbed the tree of life.

For as our sire who tasted of that tree,
And God's own word, by eating, disobeyed,
Fell into sorrow from felicity,
And was by misery evermore o'erlaid;
The husband so, that all would know and see,
Whatever by his wife is done and said,
Passes from happiness to grief and pain,
Nor ever can uplift his head again.

The following stanzas are in a graver strain:

"In poor abode, 'mid pearly walls and bare,
Amid discomforts and calamities,
Often in friendship hearts united are,
Better than under roof of lordly guise,
Or in some royal court, beset with anare,
'Mid envious wealth, and ease, and luxuries:
Where charity is spent on every side,
Now friendship, unless counterfeit, is spied.

Hence it comes, that peace and pact between
Princes and peers and such as divided war.
To-day king, pope, and emperor, leagued are seen,
And on the morrow deadly foemen are.
Because such is not as their outward men
The heart, the spirit, that those sovereigns bear.
Hence, wholly careless as to right or wrong,
But to their profit look the faithless throng."

For the very absurdity we quote Harrington's version of a wife proposing mutual forgiveness to her husband.

"I pardon thee, and thou shalt me forgive:
And quite each other all old debts and driblets,
And set the hare's head against the goose giblets."

We quote the latter part of an admirable note on the surrender of Calais and the six burghers.

"I see nothing in the story which should reasonably startle belief. We are too apt to believe in the regular and consistent influence of the beautiful ideal of chivalry upon the spirit of those who professed it, and, instead of recurring to more authentic sources of information, take this purely from the old romances or (what is much more questionable) from their echoes—from the

'Primalonso, Pantagruel, knights of the sun,
Abortives of the fabulous dark cloister.'

In the age of chivalry, which is in question, the debased condition of the middling and lower orders of society procured them little or very uncertain sympathy from their superiors. I suspect that Edward looked upon the heroism of the citizens of Calais very much as a generous Turk may be supposed to have looked upon any similar act of virtue displayed by a band of Candlors or Romeliot during the late Greek insurrection; and if the feelings of the chivalric Edward III. were such as I conceive, were they not very similar to those which, in a much more civilized age, actuated the liberal and generous William III. when he expressed

himself contemptuously upon the death of a civilian volunteer who had fallen fighting for his country? Edward, who honoured valour in knights, punished it in burghers as a quality presumptuous and misplaced: and is not this, in truth, the spirit wherein William III., who would have honoured such a death in a military man, contemplated the death of the civilian? for why should he have sought to take all dignity from his catastrophe, but because he thought that to aspire to 'fight nations' battles and be crowned with honour' was impertinent in one that was not bred a soldier? He considered military courage in a citizen as a fine lady would consider personal delicacy in a scavenger; and this is the key to the supposed inconsistency of Edward, and Ariosto may be said to have painted Leo from the life. From thus questioning the consistency of the chivalric virtues, of the practical effects of which, I think, Ariosto had a very accurate notion, I am far from meaning to draw a general inference unfavourable to the code of chivalry; for if its professors did not always set up to its ideal of perfection, the reproach which is made to them may be extended to the professors of every code that is, was, or ever will be. Chivalry was assuredly the day-star of the dark ages on which it dawned; and its last glimmers yet gild the vulgarities of the happier but homelier eras which have succeeded them."

We now close this voluminous work with the most cordial praise.

Social Life in England and France, from the French Revolution in 1789, to that of July 1830. By the Editor of Madame du Defand's Letters. 8vo. pp. 214. London, 1831. Longman and Co.

SOME three years ago we gave warm praise to the predecessor of this volume, which was "A Comparative View of the Social Life of England and France, from the Restoration of Charles II. to the French Revolution." The publication now before us brings down that view to the present time. We think the author quite as clever as we did, but doubt whether we so entirely coincide with her views. In our opinion the regards the existing state of things in France too much *couleur de rose*, and seems to forget that there never yet was a period of human history without its bright and its dark side. For want of this consideration, her picture is painted all lights and no shadows. Again, we utterly disagree with her estimate of Joanna Baillie and Lord Byron: we doubt whether posterity will confirm her verdict of the first, and there is much of commonplace cant in her estimate of the latter. But these are slight differences; and we pass gladly on to do full justice to the elegance and acuteness of observation, the fine moral taste, and the original and accurate views of society, contained in this volume. Quotation will be our best justice.

"Foreign travel, however incapable of supplying the wants of a neglected education, must surely be considered as particularly necessary to the development of mind in the inhabitants of an island: it is the more so, perhaps, to those of Great Britain, from a certain reserve and uncommunicativeness of character, partly proceeding from peculiarities of organisation beyond our ken, and partly from a high appreciation of the political advantages to which they are born. So strongly are these impressed on every mind called into activity by cultivation, that it has been justly remarked, few Englishmen can bear an uninterrupted exist-

ence of many years in their own country, without acquiring a certain rust of prejudices essentially detrimental to general superiority of character. Little good could be effected by sending our young men, when they left their schools and colleges, to a country occupied, or a metropolis defended, by a British army; where they lived as they did at home, but in worse and more idle society, encouraging each other in false ideas which they had no means to correct, and in bad habits which they had no opportunity to improve. Many of the most distinguished young men of that day bore the marks of an irreparable deficiency in their education. Those of lively parts, of highly cultivated minds, of much ambition, and a strong desire of distinction, had a certain lounging careless ease about their manners, which proved that they satisfied their own ideas of what those manners should be, when in fact they had no manners at all;—a professed indulgence in every gratification,—a study of little personal comforts which more varied habits of life would have made them find unnecessary, and a more general acquaintance with the world ungraceful,—a total absence of that appearance of interest in the pleasures and conveniences of others, which can alone interest others in theirs,—a neglect of all general courtesy to women, of all those little friendly acts of protection, so becoming in the one sex, and so captivating to the other—attentions which the most manly and superior characters will always be found the first to bestow. Had our young men seen more of the world, however trifling or however perverse it might have appeared to them, they would have been ashamed of what might be called the *homeliness* of their manners; their ideas of an accomplished gentleman would have been more just, and their attempts at the character more successful. The sneers which they were apt to bestow liberally on the little peculiarities and mistakes of others, would then not have been due to themselves from the more enlarged minds and better manners which their offended. Nor were these manners confined to the young men of high rank or heirs to great estates, whom we may suppose to have been confirmed in their ignorance and neglect of others by the attentions of the women who wished to marry them, or by the flattery of the men who hoped to live on them. Even those whose success in life depended on pleasing, and whose birth and situation, in any other country, would have taught them the necessity of it—those whose talents and whose wit were to be their only passport to the society they sought, professed the same super-eminent love of indulgence, and the same necessity of personal comforts and gratifications. Their conversation and social powers partook of all the evils attending the contracted sphere of their ideas and observation. A ludicrous image of some familiar object, or the ridicule of some little national peculiarity, was all they attempted. Luckily their talents and their taste, such as they were, suited for the most part those of their audience; which, as Champfort has justly observed, forms the success of half the books and of half the characters in the world. Their own ignorance happily secured them from being aware of the light in which they were considered by those whose character and manners had not suffered under the same disadvantages as their own."

"The imposition of the income tax was odious to the nation, although to the unassisted eye of reason it appears the fairest mode of taxation that can be adopted, when the sacrifice of

the tenth part of the income of a nation becomes unfortunately necessary to save the rest; it laid open the affairs of every one, in a manner peculiarly obnoxious to English habits. The whole system of our commercial prosperity being grounded on credit, much aversion exists to exposing the individual foundation on which it rests. This has given to all Englishmen habits of reserve on the subject of their financial means—habits often leading to very false estimations of character; the rich always being thought much richer than they are, and consequently often stigmatised with want of liberality; and the possessors of smaller fortunes, by the same miscalculation, arraigned for extravagance, of which they are, in fact, not guilty. The operation of the income tax discovered many curious sources of unexpected wealth, and laid open many still more curious traits of national character in the acquirement and in the use of it. Persons trafficking in stalls, or small shops, actuated by that strict sense of honesty which had probably been the foundation of their success, gave in incomes of 4000*l.* and 5000*l.* a-year; and paid, with scrupulous exactness of calculation to government, yearly sums four times greater than any they had ever expended on themselves. The same inquisitorial process injured many brilliant commercial reputations, and stopped many in a dangerously rapid pursuit of fortune. In general, the whole body of retail dealers, who, contrary to the ideas and habits of other countries, had been accustomed to see every additional tax, and the weight of all public burdens, fall on their customers, and not on themselves, endured, with less patience than any other order of people, the privation of indulgencies to which they had accustomed themselves. They, therefore, ~~so increased the price~~ of every article of their commerce, as at once to secure to themselves the same indulgencies and the same profits; thus eluding all contribution to the public necessities, at the expense of the consumers. The immense influx of paper money, from the year 1707, having raised the nominal price of every thing, and the spirit of our government being adverse to all interference with internal policy, allowed this manœuvre of the retail dealers to pass unnoticed. It is to these times that must be referred the great demoralisation, on the score of fair dealing with their employers, which has taken place in this whole order of people. The large fortunes acquired in the public funds, the improvident expenditure necessarily entailed by war, and the carelessness of those who profited by it, allowed of a sort of reciprocity in the imposition of exorbitant charges, which has been since established into a regular system, instead of having ceased with the disastrous times which gave it birth. The equality of political rights seemed to bestow an equality of rights to every indulgence of expense; a degree of fortune, something like opulence in any other country, being absolutely necessary to a social existence in England. This rivalry in luxury was by no means favourable to the interests of society. As nobody chose to give a worse dinner than their neighbour, many a social meal was prevented among those endowed with every power to enliven them; and many a dull dinner, with all its expensive accompaniments, devoured at the table of a still duller host, by those who would have fled from the infliction of the same society if offered with a mutton chop."

"The same necessary retrenchments in the scale of expense became evident in the diminished number of costly entertainments, of

public breakfasts, of balls accompanied by suppers, which none but the rich could give, and none but the great had hitherto thought of giving. Riches, however, accumulating in the commercial and manufacturing orders of the state, the great were soon imitated and rivalled by those whose wealth was more independent of the situation of the country, and which, in many instances, was augmented by it; the whole commerce of Europe, by the distraction of the times, having been forced into our hands. These persons now came forward in society. To the young and dissipated they offered entertainments they could no longer afford themselves, for no other remuneration than the honour of receiving them in their houses, and being in return admitted into their society. They succeeded in obtaining the first part of the reward with a facility not honourable to those who were so little willing to grant them the second. Hence arose fêtes and entertainments, where the masters of the house were strangers to three fourths of the company, who were all invited by some fashionable friend, willing thus to give a ball to her own acquaintance at the expense of her complaisant *protégés*. Strange mistakes sometimes took place at these meetings, from the ignorance of the guests of the person of their host, and demands for refreshments made in a tone of authority to him who paid for them, mistaken and addressed as the individual hired to administer them."

Almack's.—"A few years afterwards, a public meeting for dancing was established, which, although originating in necessary economy, by the good taste and by the popularity of its institutions and directresses, soon rose to distinction and celebrity. An admission to it became a sort of necessary license to practise in the best company, while its expense was not the tenth part of any former fêtes prepared for the same society, and the price of admission too low to exclude the most attenuated finances. All those who thought that by their own former entertainments they had purchased the freedom of the company to which they were ambitious to belong, now found themselves cruelly thrown out; for in a country where no bar exists between any order of society, exclusions, like blockades, will inevitably take place, whenever the power of any portion of individuals is sufficient to enforce the one, or to establish the other. Thus, parties in our society, like parties in our political state, will always exist, and will serve, in both instances, to keep the ruling powers in order, and to animate the exertions and cultivate the talents of those who have hopes of one day succeeding to their distinction."

"It has been said, and truly, that architecture witnesses to the political and social state of a country more than any other contemporary evidence. The buildings of all the principal towns in Italy might be cited as furnishing proofs of this assertion. The enormous structures of ancient Rome, which still puzzle all modern conceptions of magnificence either to occupy or to people, prove a population of slaves, working at the will of despotic power for their daily subsistence. The hardly less vast remains of the papal grandeur of Rome, equally prove unwieldy and unwholesome wealth collected among a few, and devoting to sordid poverty the many. The severe prison-like palaces of Florence, with their high and small windows, and their square tower, at once for defence and for the power of breathing a freer air than in the dull chambers below, betray the want of security, and the turbulent manners

of a republic, whose chiefs could never agree among themselves, nor ever succeed in subduing the spirit of an industrious people, blessed with a favoured soil and climate. The more modern architecture of France will equally tell its own story. The immense and magnificent houses which existed in every quarter of Paris, date from times when partial taxes, partial immunities, and the uncontrolled will and favour of weak sovereigns, had raised up a nobility too powerful for the crown, and no less oppressive to the people. When the strong arm of arbitrary power at last succeeded in reducing these nobles to political insignificance, their ambition was confined to court favour, and their means of distinction to a luxury and magnificence which, being securely guarded by exclusive privileges, neither industry nor merit could ever possibly attain, or even hope to rival. Hence we see a whole quarter of the metropolis, in which the habitations of the *fièvre élat* occupy as small a share, and are kept as much out of sight, as their rights, their convenience, and their comforts, were in the government of their country—whole streets of high walls surrounding large enclosures, which defended their inhabitants from the necessity of ever coming in contact with their inferiors, and too surely gave token of the line of demarcation existing in society between a nobility assuming rights sustained only by possession, and a people deprived of rights which no possession can forfeit. Already, before the end of the reign of Louis the Fifteenth, many of these enormous mansions, however well suited for great fêtes and entertainments, had been found very inconvenient for the domestic purposes of their owners; selfish indulgence found its account in smaller habitations, which could only hold those who were to minister to its gratifications; hence sprang up a number of pavilions, ornamented with porticos and pediments, and columns without; but within, untenable for the occupation of a family—sufficiently demonstrative of the careless prodigality and selfish luxury of the day."

"Society is the biography of history; and it is a singular fact, that the work before us is the first English attempt to delineate the manners, habits, and opinions, of private and actual life. At present this performance is delightful—a few years hence, it will be invaluable.

STATE PAPERS. HENRY VIII.

[Fourth notice.]

THE account of the rebellion in Lincolnshire and Yorkshire (1536), hitherto very imperfectly known, is the next curious point which has attracted our special attention. "The papers relative to this insurrection (adds the editor), which have been preserved, particularly among Cromwell's correspondence in the Chapter House, and the miscellaneous papers in the same place, are very numerous; inasmuch that it is by no means easy to make a satisfactory selection from them. The following pages contain those documents only which give the best general view of the causes and objects of the insurrection, and of the aspect and mode in which it was viewed and treated by the king and his ministers; without entering into the details of the measures taken on the one side or on the other."

"The king's proclamation is a singular document.

"*King Henry VIII. to the Rebels in Lincolnshire. Answer to the Petitions of the Troublers and Rebels in Lincolnshire.*—First, we begyn and make answer to the 4th and 6th

articles, because upon them dependeth moche of the rest. Concerning choosing of counsaillours, I never have redde, harde, nor knownen that prynces, counsaillours, and prelates, shoulde be apoynted by rude and ignorant common people; nor that they were persons mete, or of habilitie, to disserne and chosse mete and sufficient counsaillours for a prince. How presumptuous then are ye, the rude commons of one shire, and that one of the most brute and beestelie of the hole realme, and of least experience, to fynde faulte with your prynce, for thelecting of his counsaillours and prelates; and to take upon you, contrary to Goddes law, and mannes law, to rule your prynce, whom ye are bounde by all lawes to obey and serve, with both your lyves, landes, and goodes, and for no worldly cause to withstande: the contrary wherof you, like traytors and rebelles, have attempted, and not like trew subjectes, as ye name yourselves! As to the suppression of religious houses and monasteries, we wolle that ye, and all our subjectes, should well knowe, that this is graunted us by all the nobles, spirituall and temporall, of this our realme, and by all the commons of the same, by act of parliament; and not set fourth by any counsaillour or counsaillours, upon their mere will and fantasie, as ye full falselye wold perswade our realme to beleve. And where ye alledge, that the servyce of God is moche thereby dymynished, the trewth therof is contrary: for there be non houses suppressed where God was well served, but where most vice, mischief, and abhomy nation of lyving was used; and that doth well appere by their own confessions, subscribed with their owne handes, in the tyme of our visitations. And yet were suffered a great many of them, more then we by thacte nedded, to stande; wherin, if they amend not their lyving, we feare we have more to answer for, then for the suppression of all this rest. And as for their hospitalite; for the relief of poure people, we wonder ye be not asshamed to asserme, that they have ben a grete relief to our people, when a great many, or the most parte, hadde not past 4 or 5 religious persons in them, and dyvers but one, which spent the substance of the goodes of their house, in nuryshing of vyce, and abhomy nable lyving. Nowe, what unkyndenes and unnaturalite may we impute to you and all our subjectes, that be of that mynde, that had lever suche an unthrifte sorte of vicious persons should enjoye such possessions, profytes, and emolumentes as growe of the saide houses, to the mayntenance of their unthrifte lif; then we, your naturall prynce, sovereigne lorde, and kyng, which doth and hadde spent more in your defences, of his own, the 6 tymes they be wourth! As touching thacte of us, we mervaile what madnes is in your brayn, or upon what grounde ye wold take auctorite upon you, to cause us to breke those laws and statutes, which, by all the nobles, knyghtes, and gentylmen of this realme, whom the same chiefly toucheth, hath ben graunted and assented to; seeing in no maner of thing it toucheth you, the basse commons of our realme! Also the groundes of those uses were false, and never admytted by any law, but usurped upon the prynce, contrary to all equitye and justice, as it hadde ben openly both disputed and declared, by all the well lerned men of England in Westminster Hall; wherby we may well perceyve howe madde and unreasonable your demandes be, both in that and the rest, and how unmete it is for us, and dishonourable, to graunte or assente unto, and how mete and decent for you, in suche rebellious sorte, to demande the same of your

prynce. As touching the 15th, whiche ye demande of us to be released, thinke ye that we be so saynt herted, that, perforce, ye of one shire (were ye a gret many moo) could compell us with your insurrections, and suche rebellious demeanour, to remytte the same? or thinke ye that any man will or may take you to be trew subjectes, that first maketh a show of a loving graunte, and then, perforce, wold compell your sovereigne lord and king to release the same; the tyme of payment wherof is not yet com? ye, and seeing the same will not countervaille the 10th peny of the charges, whiche we do, and daylie must susteyn, for your troycon and saufegarde? Make ye sure, by your occasions of this your ingratitude, unnaturalnes, and unkyndenes to us, now admy nistered, ye gyve us cause, which hadde alwayes ben asmoche dedycate to your welthes, as ever was kyng, not so moche to set our studie for the setting forward of the same, seeing how unkyndely and untrewly ye deale nowe with us, without any cause or occasion. And doubt ye not, though ye have no grace nor naturalment in you, to consider your duties of allegiaunce to your kyng and sovereigne; the rest of our realme, we doubt not, hadde: and we and they shall so loke on this cause, that we trust shalbe to your confusion, if, according to our former letters, ye submitte not your selves. As touching the first fruytes, we late you wete, it is a thing graunted us by acte of parliament also, for the supportation of parte of the grete and excessyve charges, which we supporte and bere, for the mayntenance of your welthes, and others our subjectes. And we have knowen, also, that ye, our comons, have moche complayned, in tymes passed, that the most of the goodes, landes, and possessions of the realme were in the spirituall mennes handes; and yet now, beinge as in hande that ye be as loving subjectes to us as may be, ye can not fynde in your hertes, that your prynce and sovereigne lorde should have any parte thereof. And yet it is nothing prejudiciall unto you, our comons; but do rebell and unlawfully ryse ayenst your prynce, contrary to your duetie of allegiaunce and Goddes commaundement. Wherfore, sirs, remember your folyes and traytorous demeanours, and shame not your natif countrey of Englonde, nor offende no more, so grevouslye, your undoubted kyng and naturall prynce, which alwaies hadde shewed him self most loving unto you; and remember your duetie of allegiaunce, and that ye are bounde to obey us, your kyng, both by Goddes commaundement and law of nature. Wherfore we charge you, estesones, upon the forsaide bondes and paynes, that ye withdraw your selves to your owne houses, every man; and no more to assemble, contrary to our lawes, and your allegiaunces; and to cause the provokers of you to this myschief, to be delyvered to our lieutenantes handes or oures, and you your selves to submytte you to such condigne punishment as we and our nobles shall thinke you wourthie. For doubt ye not elles, that we and our nobles can nor wolle suffer this injurie at your hande, unrevened, if ye gyve not place to us of soveraigntie, and shewe your selves as bounden and obedyent subjectes, and no more to entremedde your selves, from henceforth, with the weightie affaires of the realme; the dyrection wherof only apparteyneth to us, your king, and such noble men and counsaillours as he list to elect and chuse to have the ordering of the same. And thus we pray unto Almightye God to gyve you grace to do your duties, and to use your selves towards us like trew and faithfull subjectes, so as we may

have cause to order you thereafter; and rather obbedyentlie to consent amongst you to delyver into thandes of our lieutenaut 100 persons, to be ordered according to their demerites, at our will and pleasure, then by your obstynacy and wilfulness to put your selves, lyves, wyves, children, landes, goodes, and cattalles, beaydes the indignacyon of God, in the utter adventure of total destruction, and utter ruyn by force and violence of the sword."

We add Robert Aske's address:—

"Lorden, knyghtes, maisters, kynnesmen, and frendes. We perceyve that you be infurmyd that this assemble or pylgrymage, that we, by the favour and mercy of Almightye God, do intend to procede in hys cause: the kyng, our soveraigne lorde, hadde had many impossycions of us: we dowte not but ye do ryzte well knowe that, to oure power, we have ben all wyhes redy in paymentes and servyces to hys hyghnes as eny of hys subgettes; and, therefore, to asserterne you of the cause of this oure assemble and pylgrymage is this. For as muche that shuche symple and cryll dysposyd persones, beyng of the kynges counsell, hadde nott only ensensyd hys grace with many and sundry newe invencyons, whyche be contrary to the faythe of God, and honour to the kynges mayeste, and the comyn welthe of this realme, and thereby entendythe to destroye the churche of Englonde, and the mynysters of the same, as ye do well knowe, aswell as we; but also the seyd counsell hadde spoyld and robbid, and farther entendynge utterly to spoyle and robbe, the hole body of this realme; and that as well you as us, yffe God of hys infynyte mercye had not causyd shuche, as hath taken, or hereafter shall take, this pylgrymage upon theym, to procede in the same, and whether all this aforeseyde be trew or not, we put it to youre coneynes; and yff you thynke it be trewe, and do fyght agaynst us that entendythe the comyn welthe of this realme, and no thynge elles, we truste, be the grace of God, ye shall have smale spede; for this pylgrymage we have taken, hyt is for the preservacyon of Crystes churche, of this realme of England, the kyng our soveraigne lord, the nobylite and comyns of the same; and to the entent to make petycion to the kynges highnes for the reformation of that whyche is amysse, within this hys realme, and for the punnyshment of the herytykes and subvertes of the lawes; and we, nother for money, malys, dyspleasure to noo persons, but shuche as be not worthy to remayne nyghe abowte the kyng our soveraigne lorde's persone. And furthur, you knowe, yff you shall obteyne, as we truste in God you shall nott, ye put bothe us, and you, and youre heires, and oures, in bondage for ever; and furthur, ye are sure of entensyon of Crystes curse, and we clere and out of the same. And yff we overcum you, then you shalbe in oure wylles. Wherfore, for a conclusyon, yff you wyl not cum with us, for reformation of the premyssis, we certify you, by this oure wrytynge, that we wyl, that we wyl fyght and dye agaynst bothe you, and all those that shalbe abowte towards to stope us in the seyd pylgrymage; and God shalbe juge which shall have hys grace and mercy theryn, and then you shalbe jugyd, hereafter, to be shedderes of Crystyn blode, and destroyers of your evyne crystyn. Frome Robert Aske, chefe capytane off the conventall assemble or pylgrymage, for the same barony and comynalty of the same. Per me, Robertum Asken, in the name of all the baronage and comynalty of the same.

"The Articles."

"Furst, for the suppression of relygyouse howes.

"The 2 for the acte of uses.

"The 3 for the furste frutes.

"The 4 for the payment of money of the temporale.

"The 5 ys for the base counsell abowte the kyng.

"6 ys for the new byshopes."

The herald's report is also very characteristic:—

"The maner, facion, and ordorynge of me, Lancaster harralde at armys, to our soverayng lord the kyng, sent from Scroby, the 21 day of October, by the ryght honorable lord therle of Shrewsbury, lord steward of the kynges most honorable howsold, and leveteynand general from the Trent northward, and the ryght honourable Herles of Rutlande, and Hundyngton, of the kynges most honorable counsell, to Pomfrett, with a proclamacion to be redde amonkest the traytorus and rebellyus persons assembled at Pomfret contrary to the kynges lawys. And when I dyd aproche nere the towne of Pomfrett, I overtoke serten companys of the sayd rebellyus, beyng comon peple of the husbandre, wiche saluted me jentely, and gave great honor to the kynges cott of armys, whych I ware. And I demandyd of them, why the wher in hermes, and assembled of suche sort; and they answard me, that yt was for the comon welthe; and sayd, yf they dyd nott so, the commonte and the cherche should be dystroyde. And I demandyd of them, how. And they sayd, thatt no man shold bery, nor crysten, nor wedd, nor have theyr beate unmarked, bott that the kyng wold have a serten some of money for every suche thyng, and the beaste unmarkyd to his howne husse, whiche had never bene sene. And I answardyd them, and told them, how good and gracious lord the kyng had bene to them; and how longe he hadde kept them in great welthe, tranquelyte, and pease; and also that his grace, nor none of his counsell, never intenyd, nor thowght, no suche thynges and artecles, as they found them grevyd with. And with suche perswasions as I found and sayd to them, rydyng into the towne, I had gatte grant of 3 or 400 of the comonte to goo gladly home to theyr howses, and to axe the kynges mercy; and sayd; they wher whery of that lyffe they wher in. And resortyd, first, to the markett crosse, wher I shold have made the proclamacion. And Robert Haske, capetayn of the hoste, beyng in the castell, herd tell that I was comen, and sentt for me to come to hym; and so I dyd; and as I entoryd in to the first ward, theyr I found many in hermes, of verry crewell fellows, and a porter, with a whyt staffe in his hand, and at the 2 other ward gattes, ever of them, a porter, with his staffe, accompanyd with hernys men; and so I was brought into the hall, whiche I found full of peple. And I was comandyd to tary to suche tyme as the sayd traytorus captenes pleassor was known; and in that space, I stowd up at the hygh table in the hall, and theyr showed to the peple the cawse of my comyng, and the affecte of the proclamacion; and in doynge the same, the sayd Haske sentt for me in to his chamber; and theyr kepynge his porte and countenance, as though he hade bene a greatt prync, with great regor, and lyke a tyrant; who was accompanyd with tharchebishop of Yourke, the Lord Darcy, Sir Robert Counstable, Mr. Magnus, Ser Crystofer Danby, and dyvers other. And, as my dewte was, I saluted the Archebyschop of Yourke and my Lord Darcy, showynge

to them the cawse I came thether for. And then the sayd Robert Aske, with a crewell and a inestemable proude countenance, stretched hym self, and toke the herynge of my tale, whiche I oponyd to hym at large, in as moche honor to our soverayng lord the kyng as my reason wold serve me; wiche the sayd capetayne Aske gave no reverence to, and superstitiously demandyd the seght of my proclamacion. And then I toke yt owte of my purse, and delyvered yt to hym; and then he redd yt oponly, with outt reverence to anny person; and sayd, yt shold nott ned to calle no counsell for the answar of the same, for he wold, of his howne whyt, geve me thanswar, wiche was this—he, standynge in the highest place of the chamber, takeynge the hygh astatte apone hym, sayd: 'Herald, as a messynger you ar wellcome to me and all my company intenyng as I doo. And as for this proclamacion, sentt from the lordes, from whens you com, shall nott be redde at the market crosse, nor in no place amongst my peple, wiche be all onder my gydyng; nor for feare of losse of landes, lyffe, and goodes, not for the power wiche ys agenste us, dothe not enter in to our herttes with feare, bott ar all of on accorde, with the poyntes of our artecles, clerly intenyng to se a reformation, or ells to dye yn thoyr cawses.' And then I demandyd of hym, what his artecles was. And he sayd, on was, that he and his company wold goo to London of pylgramage to the kynges hyghnes, and theyr to have all vyle blode of his counsell pott from hym, and all noble blode sett up agayne; and also the faythe of Cryste, and hys lawes, to be kepte, and full restytucion of Crystes cherche, of all wronges done unto yt, and also the comonte to be ewayd as they shold be; and bad me truste to this, for it shold be done, or he wolde dye for yt. And then I requeryd hym, that he wold geve me this in wrytyng, for my capacite wold nott serve to bere yt away; and he sayd, 'With a good wyll;' and callyd for hys othe, wiche he gave to his peple, and sayd thartecles was comprehended within the sayd othe, and delyvered yt in wrytyng to me, and cawayd me to rede yt my self; and he sayd, to that he wold setto his hand, and dye in the quarell, and his peple with hym. And then I prayd hym to putt his hand to the sayd byll; and so he dyd, with a proude voyce sayd: 'This ys myn acte, who so ever say to the contrary.' And also he sayd, he ment no herme to the kynges persone, bott so reformation. And I fell downe of my kne be fore hym, showynge hym how I was a messynger, and charged by the kynges counsell to rede the proclamacion wiche I brought for my dyscharge; and he clerly answard me, that of my lyffe I shold nott; for he wold have nothyng putt in his peples heydes that shold sownd contrary to his intente; and sayd at all tymes I shold have his save condythe to come and goo, in message, wheryng the kynges cote of armes, or ells nott; and also sayd, yff my Lord of Shrewsbury, or anny other of the lordes of the kynges army, wold come and speke with hym, they shold have of hym theyr save condytes, to come saffe and goo saffe; and also sayd—'Herald, recommend me to the lordes fro whens you come, and say to them, yt wher mett that they wher with me, for yt ys for all theyr welthes that I doo.' And then he comanded the Lord Darcy to gyve me 2 crownes of 5s. to ryward, whether I wold or no; and then toke me by the arme, and brought me furthe of the castell, and theyre made a proclamacion that I shold goo save and come save, wheryng the kynges cote, in payne of death; and so toke his leve

of me, and retornyd into the castell, in hygh honor of the peple, as a traytour may. And I mysayd my horse, and I callyd to hym a geyne, for to have my horse, and then he made a proclamacion that who so held my horse, and brought hym nott a geyne, ymedeately, bad kyll hym, with outt mercy. And then bothe my horse was delyvered to me, and then he comandyd that 20 or 40 men shold bryng me owte of the towne, wher I shold as the least of his peple, nor that I shold nott speke with them. For sewrly I thynke, yf I myght a rede the proclamacion, and good wordes unto the peple, that all the plowgh comonte wold agone home to theyr howses ymedeately, for they say they be whery of that lyffe they leyd, and yf they say to the contrary to the capetaynes wyll, he shall dye ymedeately. And this all to be trew, I, the sayd Lancaster, hathe wryton this with my hande, and trew reypert, as myn othe ys. LANCASTER HERALD."

[To be continued.]

Essays and Orations, read and delivered at the Royal College of Physicians; to which is added, an Account of the opening of the Tomb of King Charles I. By Sir Henry Hallford, Bart. M.D. G.C.H. 8vo. pp. 192. London, 1831. Murray.

THIS volume contains the observations of a physician who, for a longer period than perhaps any other practitioner, has maintained in this great metropolis the proud eminence upon which early success had placed him. Of the multiplied opportunities afforded him by such extensive practice, he has availed himself to draw, respecting some obscure but important diseases, conclusions, the justness and accuracy of which make us regret that the book in which they are recorded is not of larger dimensions. The language of the Essays, which were most of them read to the crowded and brilliant audiences that have frequented for the last three or four years the evening meetings held at the College of Physicians, is, as far as possible, free from technical expressions, and easily intelligible to the unprofessional reader. To every liberal mind there is a sort of charm in writings of this kind, which either contain a description of the wonderful structure of our corporeal frames, or relate the leading symptoms and methods of treating the chief diseases "which flesh is heir to." Thus, every scholar and well-read gentleman will be found to possess in his library some treatise upon physiology, and some compendium of the practice of physic; to these he refers occasionally for the explanation of medical topics that may engage his attention—not that he expects to become thereby so much of an anatomist as to be able to perform an operation, or enter so deeply into the mystery of physic as to undertake the treatment of a disease; but it is pleasant to go along with the doctor in his discourse. Indeed, there is something in the possession of this vague and indefinite knowledge, which perhaps is even more flattering to the pride of the human intellect than that which is derived from a farther advancement in the pursuit of science, which, while it enlarges our views, makes us more intimately acquainted with the difficulties that still remain to be overcome. Be this as it may, Sir Henry Hallford has touched with the hand of a master some of the most obscure and difficult points of his own difficult profession, and illustrated by the torch of literature some of the intricate paths of medicine. Subjects of so much importance as a man's own health, when treated in a popular manner, cannot but prove

acceptable to all: by this means we get a glimpse into the arcana of that branch of science in which we are all most interested. It is matter of daily observation, that a man is better pleased with himself, if, in detailing his sensations to his medical attendant, he is enabled to express himself with tolerable accuracy as to the precise organ which he conceives to be disordered; and a patient feels relieved from a great weight of anxiety and distress as soon as his physician has told him the exact name of the disease under which he labours. The malady being defined and named, assumes, somehow or other, a less formidable aspect, and appears to be more tractable, and likely to yield to a proper course of remedies. Every one who has thought upon the subject will acknowledge the truth of these remarks, and will admit at once, that a work like that which we are now considering, is calculated to instruct not only professional men, but to gratify the curiosity and improve the mind of all who in this age of inquiry seek information from every source and of every description.

In speaking of these Essays, the author observes, in his preface, that "papers so addressed to an audience have something of a rhetorical character about them, and approach the nature of the Latin Orations which follow. The first of these was given many years ago in commemoration of the benefactors and eminent physicians of the college; the second on occasion of opening the new building, in 1826. The last paper is a reprint of an account of what appeared on opening the coffin of King Charles I.; and the drawing which accompanies it is a faithful representation of the countenance of the king at that time, (1813)."

But as full reports of these essays have been given, after their delivery at the College of Physicians, in our columns, we have nothing now to do but recommend them in their collected form.

1. *A View of the General Tenour of the New Testament regarding the Nature and Dignity of Jesus Christ; including a Collection of the various Passages in the Gospels, Acts of the Apostles, and the Epistles, which relate to that Subject.* By Joanna Baillie. 8vo. pp. 146. London, 1831. Longman and Co.

2. *The Trial of the Unitarians, for a Libel on the Christian Religion.* 12mo. pp. 313. London, 1830. Longman and Co.

We have placed these works side by side, that, while we ourselves refrain, as is ever our wont, from polemical discussion, we may not be open to the charge of withholding materials for carrying on controversy upon equal terms. Those acquainted with the previous works of Joanna Baillie will learn with surprise that in the present production she has ranged herself on the side of Unitarianism!

This remarkable profession of doctrine will be the more striking to the public as coming from the pen not only of a female, but of one so highly celebrated in polite literature. The inquiry, such as it is, seems to be impartial as far as the lights of the author's human understanding enabled her to judge; and her opinions are temperately expressed. About 100 pages are quotations from the New Testament (exclusive of Revelations) of all the passages which Mrs. Baillie could find bearing upon the High Church or Trinitarian, the Arian, and the Socinian creeds; and about forty contain her reasoning on the subject. The result of which is, that Joanna Baillie declares herself to be a convinced and entire Unitarian.

There is not much, it must be allowed, in

the forty pages thus written, which bears the stamp of strong argument; the writer, indeed, valuing herself on the want of learning to perplex her mind, and rather relying on the application of common sense to the best understanding of these texts of Scripture. The "View," therefore, can hardly be deemed a discussion, or such discussion by a lady as can hardly fail of corroborating the prejudice in favour of Mr. H. Bayly's verses:

"Some belles are elves,
That invoking the Muse,
Or talking of vast intellectual views;
The crow-quill's tip
In the ink they dip,
And prate with the lore of a learned lip."

The second work, the title of which we have prefixed to this notice, may be consulted as an able antidote on the other side, in the cause of Christianity, as maintained by the Church of England.

The Elements of Analytical Geometry. 12mo. pp. 312.

The Elements of the Differential Calculus, &c. Pp. 252.

An Elementary Essay on the Computation of Logarithms. By J. R. Young. Pp. 69. London, Souter.

We have to notice these excellent productions as clear guides to the higher branches of science. They do infinite credit to Mr. Young, and no works of the same class can be more fit to be put in the hands of students.

Agrippa Posthumus, a Tragedy: with other Poems, by the late Matthew Weavers, Esq., Master of Friern Watch School, &c. 12mo. pp. 142. London. Effingham Wilson.

This little volume is a tribute of fraternal affection, being edited by W. Weavers, a brother of the poet, who died at the early age of twenty-nine. From these specimens we gather that he was deeply imbued with classic attainments, and was a man of cultivated mind and fine feelings. Being "extensively known and beloved," as the editor states, it is probable that his remains, thus preserved, will have a wider circulation than is now o' days the lot of works of the same class.

Historical Gleanings on the Memorable Field of Naseby. By Henry Lockinge, M.A., late Curate of Naseby. 12mo. pp. 130. London. Longman and Co.

A PREFACE of some anxiety for so small a volume, ushers this publication into the reader's notice—for the author, *inter alia*, deprecates its being affected by "the general depression of the times." We really hope, that "the prevalent distress," and the more urgent claims of body for sustenance, over mind for information, will not prevent its sale, for it is really a very pleasing performance. The battle of Naseby sealed the fate of Charles and the kingdom, and the field is undoubtedly a place of much historical interest. We read, therefore, with gratification, all the little details connected with it, its antiquities, its natural aspects, and even its localities. But the chief point in Mr. Lockinge's performance is to prove that Cromwell was neither interred at Westminster nor thrown into the Thames; on the contrary, that his body was secretly carried to Naseby, and buried there. The speculation is curious, and curiously supported.

• We have elsewhere noticed a work by Sir H. Hallford, the last paper in which is a republication of that eminent physician's account of the appearance of the corpse of King Charles, when recently examined at Windsor. Having previously analysed this report in the *L. G.*, we have not thought it necessary again to refer to it, and we

Waverley Novels, Vol. XXV. Edinburgh, R. Cadell; London, Whittaker.

THE second volume of the *Pirate* requires no observation, except that the frontispiece and vignette, the one by Stanfield, and the other by Cooper, (engraved by J. Mitchell and Freebairn); the former a scene with seven figures, the latter Minna on horseback at the dangerous precipice, are both entirely worthy to ornament this popular publication.

Grinfield's Sketches of the Danish Mission on the Coast of Coromandel. pp. 152. Rivingtons.

A SLIGHT thing; but, as far as it goes, a record honourable to the exertions of the Society for Promoting Christian Knowledge. The labours of Zienbalg, Schultz, Swartz, and a few other less celebrated missionaries, are briefly detailed, though they cover a space of more than a hundred years.

Plan for supplying London, and other large Cities, with pure filtered Water. By L. Wellman Wright, Engineer. pp. 8.

WHAT a name is *Wellman* for such a plan!—we would adopt it at once. But the public may require farther proof of its nature and utility. We therefore beg to draw attention to this very important subject. The design is to form filters under the bed of the Thames, through which a quantity of pure water, equal to the consumption of the metropolis, will be furnished to the companies now in being. As we cannot give the drawing to illustrate this, we shall only add, that the project has undergone much consideration, and met with much approbation: it is, we understand, about to be immediately submitted to Parliament.

The Vision of Hell, Purgatory, and Paradise, of Dante Alighieri. Translated by the Rev. H. F. Carey. Third edition. With Life of Dante, Notes, and Index. 3 vols. London, 1831. Taylor.

WE have much pleasure in warmly recommending this very neat edition of a work which richly merits a place in every library. Mr. Carey's translation of this noble poem has long been held a model of its kind. To the fine taste and feeling of the poet he added the zeal and research of the antiquary; and the animation with which the text is rendered is only to be equalled by the industry with which the notes have been collected. These are opposite qualities, but both distinguish the translator of Italy's Milton. We can give Dante no higher praise. Our columns, devoted to the passing crowds of daily literature, have little space for the detailed and thoughtful criticism which a vast work like this inspires; but we must select one or two of the noble similes. How fine are the following lines!

"And truth
Was manifested, as a star in heaven—
A falcon issuing from the hood,
That rears his head, and claps him with his wings,
His beauty and his eagerness betraying."

We conclude with a true and energetic passage:

"So that men thus at variance with the truth
Dream, though their eyes be open; reckless some
Of error—others well aware they err,
To whom more guilt and shame are justly due.

only notice it here for the purpose of observing, that while Mr. Lockinge represents the king's hair to have become "venerably grey" in his captivity, Sir H. H. states that it was after more than a century and a half's sepulture, of a beautiful brown. The engraving illustrates as found in the tomb, of which an engraving illustrates Sir H. Hallford's volume, has also been published separately, as a print, by Mr. Murray. It is a most affecting memorial, and its resemblance to the Vandyke portraits quite wonderful.

Each the known track of sage philosophy
Deserts, and has a byway of his own:
So much the restless eagerness to shine
And love of singularity prevail."

Truly, even at this present, Dante may be read to much advantage.

Arthur of Brittany. By the Author of "The Templars." 3 vols. London, 1831. Whitaker, Treacher, and Co.

AN historical novel, of which the ill-fated Duke of Brittany is the hero. However, the *dénouement* is quite unexpected, and a mystery is profoundly concealed during the two first volumes. This work rather belongs to the old school of romance writing than the new; but as a great body of readers look most to the entertainment of the story, we beg leave to inform them, the narrative of *Arthur of Brittany* is very ingeniously managed; though any quotation we could give from it would be so imperfect as to injure rather than illustrate it.

The Sailor's Bride: a Tale of Home. By the Author of "The Months of the Year." pp. 114. London, 1831. C. Tilt.
AN unpretending and pretty little volume.

Lectures, Explanatory and Practical, on the Epistle to the Romans. 2 vols. 8vo. pp. 746. Edinburgh, Blackwood; London, Cadell. 1831.

IT was remarked upon the voluminous expositions of a biblical critic, that the only matter which he had succeeded in satisfactorily exposing, was his own entire ignorance of the subject he had presumed to discuss. This, however, is a charge of which Dr. Ritchie need entertain no apprehension. His comments on the important Epistle which he has chosen for the subject of his Lectures are a source from which the student may derive much sound information; while, from its unpedantic style, his work wears no forbidding aspect, to deter the general reader from seeking a ready explanation of the many "things difficult and hard to be understood" with which the Epistle to the Romans abounds. Though of the "kirk," Dr. Ritchie has not warped his subject to favour particular opinions, but has put forth his learning without offence to any, for the benefit of all.

Minstrel Melodies, No. I.; Songs of Social Hours, &c. By H. B. 12mo. pp. 32. Deptford, Delahoy.

H. B. does not stand for Haynes Bayly, but for the author of "Field Flowers," "the Garland," &c.; and, as we do not see why so pleasing a lyrist should seek an incognito, we will dissolve the secret, and, like the Speaker in the House of Commons when provoked, we will name him—Henry Brandreth! Here are twenty-eight songs, sold at ballad price, for fourpence:—why, we know many bards who would have made the pence price as many shillings at least, had they favoured the world with such productions. Yet we do not mean to say that some of these effusions are above par—they are merely ingenious *pièces de circonstance*. But we do like the naïveté of the following:—

"Away with the hypocrite-frown of the prude,
The greater the sinner, the greater the saint;
When the colours of art upon nature's intrude,
We but the false traits of humanity paint.
We may banish the mirror that dares to express
The fallacies we scorn of ourselves to disclose;
But the cheek's traitor-blush is still free to confess
We all love a pretty girl 'under the rose.'
The soldier, who battles his rights to maintain,
Or find on the red field of glory a grave—

The sailor, whose vessel rides proud o'er the main,
The champion of freedom, the lord of the wave—
When back to the land of their birth they return,
On beauty's fond bosom sink down to repose:—
The shorter love's taper, the brighter 'twill burn—
And all love a pretty girl 'under the rose.'

Some love on the canvass each tale to rehearse;
Some bid the cold marble leap forth into life;
One hatches, entranced, to the magic of verse,
One speeds where the wild harp with music is rife;
But all own of beauty the spell and the power—
All turn where the gates of her temple unclosed;
For, though but the nymph of some eglantine bower,
We all love a pretty girl 'under the rose.'

The next is more poetical.

"She hath quitted her chamber, her foot's in the hall
Where lately she sparkled the star of the ball;
Yet lingers she not, for her own leafy bower
Hath charms spell'd by passion at eve's placid hour.

The first rose of spring-tide is wreathed 'mid her hair—
'Tis gemmed by a dewdrop, the last that is there;
A sigh and a smile, and she hurries away—
The bride of to-morrow forgets not to-day.

Ah! no—though to-morrow her destiny seal
Of sorrow or joy, recollections will steal,
At times, o'er her bosom, of friendships by-gone
Or parting, like autumn's red leaves, one by one.

For sweet though the feelings that hallow her mind,
They are not the feelings by friendship enshrined,
Which, like the calm music of waves on the shore,
Still cling to the soul, though they soothe it no more."

Mr. Brandreth is too prolific to be equal; but many of his songs are very pretty.

Memorials of the Stuart Dynasty; including the Constitutional and Ecclesiastical History of England, from the Decease of Elizabeth to the Abdication of James II. By Robert Vaughan, author of "the Life and Opinions of Wycliffe." 2 vols. 8vo. London, 1831. Holdsworth and Ball.

THOUGH obviously addressed to exalt the character of the Puritans, from the time of Elizabeth to the present day, this publication is entitled to our praise, both for its research and spirit of impartiality. It contains a steady view of the subject consistently with the declared opinions of the author. The style is plain, but neither very forcible nor elegant; and occasional repetitions add prolixity to a narrative in itself certainly more solid than inviting.

Odds and Ends, in Verse and Prose. By W. H. Merle, Esq. Illustrated by George Cruikshank. Pp. 147. London, 1831. Longman and Co.

THE pieces in this little volume are so truly odds and ends, that we should hardly have thought them worth collecting for publication. But writers hold other opinions; so here are the trifles, with some clever bits by George Cruikshank to re-enforce them.

The History of Medicine, Surgery, and Anatomy, from the Creation of the World to the Commencement of the Nineteenth Century. By W. Hamilton, M.B. 2 vols. 12mo. London, 1831. Colburn and Bentley.

"FROM the creation of the world:" it is like German literature, and begins early enough, though not so early as Welsh genealogy. Well, what was the state of medicine, surgery, and anatomy, at the period with which our author commences? With regard to anatomy, the first great case was assuredly the removal of Adam's rib, and its re-formation. Nothing similar has occurred since; and therefore we must agree with the writer, that we are "desitute of the slightest authentic records of the state of medicine before the flood." Since that event,

* The nonsensical hypothesis of Schulze, the professor at Altdorf, (fortified by Le Clerc's greater folly,) is unworthy of attention, except to laugh at Father Adam's being of necessity the apothecary and accoucheur on the birth of Cain, Abel, and the rest.

however, when the world itself was afflicted with dropsy, and a very dangerous accumulation of water upon the chest, his history of the healing art, though far from a work of good taste, is yet a production of valuable inquiry, and possessing a mass of very curious information. Had Mr. Hamilton been less ambitious in his style, we would have awarded him much higher praise; but the defects in this kind cannot supersede the matter of its theme and its interest. It is in truth a book of great entertainment and instruction.

ORIGINAL CORRESPONDENCE.

To the Editor of the Literary Gazette.

SIR,—On reading in some of your recent Numbers the singular instances recorded of changes in the colour of the plumage of birds, it occurred to me that I could bring forward another case, which exemplifies a fact, perhaps little known, connected with the natural history of a certain class of the feathered tribe.

I have in my possession a large parrot which I brought with me from the interior of Brazil. It is of the macaw species, called by the inhabitants of the country where it is found *arara*, from its habitually emitting, in its native woods, a sound resembling that word, and described, I believe, by Linnæus, under the denomination of *Psittacus arara*. Its colours are of the most brilliant hue; the whole upper part of the body, which, with its tail, measures upwards of three feet, being deep blue, and the under part and the legs being covered with a light orange down. The only exception to the latter tint occurs under the neck, at the root of the lower beak, where there is a tuft of dark green feathers. Such was the exact description of the bird when I first had it, above five years ago; and such it remained for two years after that time, when being about to return to Europe, I was informed by an inhabitant of Brazil, who was somewhat of a naturalist, and who requested me to verify or disprove the fact by my own observation, "that the beautiful azure of the arara becomes green from age, and that change of climate hastens the alteration." I doubted the correctness of my informant's statement, and hoped it would prove erroneous, until I perceived, shortly after the arrival of the bird in England, some small green feathers mixing with the blue on its head. Every succeeding year has since added to the number and extent of these interlopers, and at this moment not only one half of the head is green, but spots and patches of that colour, like the advanced posts of future occupation, are to be seen on the neck and the adjacent parts of the back; so that some persons who may see this bird a hundred years hence, if it live, (and you are aware that parrots and macaws attain a great age), will not know, perhaps, that it ever was blue.

Having given you an external description of this bird, I will trespass a few minutes to describe its *intellectual* qualifications, which being, I believe, of unusual occurrence in animals of this kind, may not prove uninteresting to some of your readers.

The formation of the heads of birds is pronounced by naturalists to be typical of stupidity; and the parrot tribe has, if I err not, the smallest space allotted to contain the brain, compared with the size of the body, of any created being. Never was, however, conclusion more incorrectly drawn, or rather inferred more completely refuted, than in the case of this macaw. The proofs it daily gives of sagacity go beyond mere instinct, and some of them

would appear so incredible, that I must be content with noticing a few only. Alive to every thing that is passing in the house, this bird knows every one of its inmates, and evinces for each individually the degree of affection due to the care and attention it receives from each. For its mistress, in particular, it has the most unbounded attachment, and it will watch over her in sickness or slumber, and defend all approach to her with the fierceness and courage of a dog. I rank next in its affections, and between us and the rest of mankind there is in this respect an immeasurable distance. No dog can welcome and fondle a master more than this bird does on our return home; and the absence of some months has not in the least obliterated its recollection of me. This bird, like most parrots, has great power of mimicking sound; and a person placed in the next room when it is giving vent to its occasional babbling moods, might suppose that he hears an unknown language spoken with great fluency, and proper emphasis of delivery. In addition to this, strange as it may appear, the bird has a few sentences in the Portuguese language, to which it attaches their proper sense, and which it never uses but to convey that sense; such as *dai ca o pé*—to be taken; *está bom*—to intimate that the food it tastes is nice; accompanying the latter words with a significant toss of the head, which, by the way, also expresses surprise, or its delight at music, in which it will occasionally join, attempting to imitate the strain played or sung. It has a mode of pointing out and obtaining what it wants as clumsily as words could; and no human face can more forcibly portray the feelings of fear, anger, or joy, than this bird's does, as a red or scarlet tint diffuses over the white skin which covers its mandibles, and the eye assumes a corresponding expression.

I should carry this paper to too great a length were I to relate one-half of the singularities of this remarkable bird; and I shall therefore conclude with a few words as to the treatment of this species of birds, from which the Zoological Society may perchance derive some hints.

Parrots are of a very hot temperament, and therefore, when deprived of water as drink, or to bathe in, or when any heating food is given to them, they will, in their anxiety to be relieved from the excess of warmth which incommodates them, pluck out the feathers within their reach. To this, and not to his depraved appetite, I attribute Charley's eagerness to strip himself of his natural clothing, as described by your correspondent S. C. Hall. Indeed, I have seen instances of the feathers falling off of themselves, from the bird's having improper food administered; and the appearance and health of the animal completely restored by a return to proper aliment, such as farinaceous substances, Indian corn or wheat occasionally boiled, and by care being taken to give them no meat or greasy and fat food, and, above all, to keep within their reach gravel or earth, of which they use the harder parts to clean and sharpen their beaks after they have eaten, and swallow some of the minor particles to aid digestion. It is no less important that they should enjoy light and air for some part of the day at all times of the year, and that they should be allowed to bathe, or occasionally exposed to a shower of rain, at which they will show their delight by spreading their wings, and turning in all directions, to get wetted. The bird I have, though a native of a very hot climate, bears the cold weather of our English

winter remarkably well, often standing out in a frosty day exposed to wind, cold, and snow, and very frequently bathing both in winter and summer in cold water.*

Generally speaking, parrots live to a great age, and die suddenly, dropping dead as by paralytic stroke; but they are often subject to dysentery, which carries off many. When thus attacked, the cure is cold camomile tea, made strong, and of which they will then drink with great avidity, though they will not touch it when in health. They are also more or less affected by the loss of feathers at the periods of moulting, and it will then be advisable to give them once a day a *capsicum* or two, which they are very fond of. Nature seems to have destined the large and powerful beak of the macaw to be used as an instrument to detach from the hard branches of trees the fruits on which they feed, and to break open the strong and almost impenetrable husk which in many cases encloses the eatable substance. They therefore possess, by instinct in their beak, a restless desire to gnaw, which it is well to gratify, if they are to be kept in perfect health, by placing pieces of hard wood within their reach. G. V. D.

ARTS AND SCIENCES.

THE RIVER NIGER!

[For the first time during our career of fourteen years, we felt called upon by the nature of the intelligence to publish a *Second Edition* of our last Number, of which the annexed is a reprint. We had to regret that we received the letter so late as to prevent its issuing from the press before Saturday evening, by which means but few copies could be despatched into the country. Having had the good fortune to obtain and promulgate intelligence of so considerable interest, exclusively, we cannot but complain, a thing we rarely do, of the unhandsome, we might, perhaps, if we were not of angelic temper, say dishonest, appropriation of it by the editors of several country newspapers, without the slightest acknowledgment of the source to which they were indebted for it.—In London, and among the leading men of science, the news has made a great sensation;—we purposed in our next pointing out some of its geographical results: But to none was it more grateful than to the wife of Lander, who had heard nothing of her husband after his leaving Badagry. He has now been absent above seventeen months.]

LITERARY GAZETTE OFFICE,
May 21, Saturday Afternoon, 3 o'Clock.

WE have the gratification to state, that the great question respecting the course of the Niger, which has puzzled geography and literature for many centuries, has at last been determined by British courage and perseverance. We have just received the annexed letter from our esteemed and intelligent friend, Mr. Fisher, surgeon of the Atholl, well known to the world for his own interesting voyages and travels; and we lose no time in communicating the important information to the public, through the pages of the *Literary Gazette*.

His Majesty's Ship Atholl, at Sea,
Bight of Biafra, Feb. 2, 1831.

DEAR SIR,—I take the opportunity of writing you a few lines, by a vessel that we have just now met on her way to England. My object in writing in this hasty manner is to acquaint you that the grand geographical problem respecting the termination of the Niger is at length solved.

The Landers, after having reached Youri, embarked in a canoe on the Niger, or, as it is called there, the Quarra, and came down the stream until they reached the sea, in the Bight of Biafra. The branch by which they came to the coast is called the Nun, or Brasse River, being the first river to the eastward of Cape Formosa. On their way down the river, they

were attacked by the Hibboos, (a fierce nation that inhabit its banks), and made prisoners, or rather captives; but the King of Brasse happening to be in that country buying slaves, got them released, by giving the price of six slaves for each of them. In the scuffle that ensued at the time they were taken, one of them lost his journal.

Whilst at Youri they got the Prayer-book that belonged to Mr. Anderson, the brother-in-law and fellow-traveller of the celebrated Mungo Park. They were upwards of a month at Fernando Po, whence they embarked, about ten days ago, in an English merchant-vessel bound to Rio Janeiro, on their way to England. From their taking that circuitous route, I am in hopes that this will reach you before they arrive, by which you will probably have it in your power to give the first news of this important discovery.

I do not recollect of any thing else to acquaint you with that is worthy of notice; and even if I did, I have no time to mention it, as the boat by which I send this (to the vessel) is just this moment ordered away.

I must therefore bid you adieu for the present; and believe me, dear sir, yours very sincerely,
ALEXANDER FISHER.

ROYAL INSTITUTION.

MR. C. J. ROBERTSON on some considerable improvements in the art of painting in water colours,—the result of experiments, having for their object the discovery of a method which should combine the force and mellowness of painting in oil, with a permanency and durability in which oil painting is defective. Till within comparatively a few years, water colours were considered as incapable of producing any thing worthy of the name of art; but the industry and talent of some of our native artists have so advanced it, that the annual exhibitions of Painters in Water Colours, is become the most attractive, perhaps, of any; the brilliancy and purity of colour, in their beautiful imitations of nature have been felt and appreciated by all who have any pretension to taste. Still, this art has not been deemed capable of producing great or extended works, and has been thought, by its very nature, to be limited to works of a small size. Indeed, the name of paintings has been commonly denied them, being almost universally distinguished by that of drawings; notwithstanding that the greatest works of the most distinguished painters in Italy have been painted in water colours or fresco. Mr. Robertson produced, however, at the lecture of Friday evening, some pictures that excited surprise. Amongst the specimens produced were a beautiful small copy of the fine Titian of Bacchus and Ariadne, in the National Gallery; a most forcible large copy of a Holy Family, by Andrea del Sarto, in the collection of the Duke of Devonshire at Chiswick; and an original composition, from Apuleius's story of Cupid and Psyche. Mr. Robertson described his process and his reasons for it, which are as follow:—The paper is attached to a strong white linen, with a mixture of glue and paste, and lined at the back with tin-foil, to prevent any injury from moisture through the back of the picture. After carefully drawing in the outline with blacklead, all the shadows, and what are called the half tints, are painted in with a gray tint, which is well washed with water, till firmly fixed in the paper, and, till the water comes away quite clean; which is done to prevent its mingling with the subsequent tints, and disturbing their purity. Next, what are technically called the carnation tints,

* In very cold weather, or if the water is very cold, it may, however, be advisable to take the extreme chill off the bathing water by the admixture of a little warm.

or rosy tints of the flesh, are treated in the same manner; and, lastly, a yellow tint of ochre, all separate and unmixed. The colours being thus used singly are more pure than when mixed, as well as less subject to change. When he has worked his picture to a certain point, he varnishes it over with a solution of isinglass in spirit of wine, which gives force and depth to the colours. Upon this surface he paints again, and again varnishes it with the isinglass; by which it not only obtains a marvellous force and brilliancy, capable of producing any effects that may be desired, but is rendered safe from change or dirt. The use of oil, which injures the colours, not only by its becoming opaque and black by time, but also by its chemical action on many colours, is thus avoided; and the picture may be cleaned by spirit of wine with the greatest safety, which will dissolve every kind of dirt to which a picture may be liable, without injury to the most delicate tints on its surface; which being protected by a solution of isinglass in spirit of wine, which can only be made by continuing it at a boiling heat for a long time, is not in the slightest degree affected by cold alcohol. This coating of the isinglass also protects the colours from any injury by vapours or gases, from which pictures suffer so greatly; and its tenacity preserves it from all possibility of cracking. Thus it appears, from Mr. Robertson's reasonings, and was proved from specimens that had been painted many years, that he has attained the great desideratum of permanency;—we can bear testimony to the effect produced. The interest Mr. Robertson's lecture excited was proved by the great attention of one of the largest audiences we have seen in their theatre,—not even a whisper was heard. The novelty of his situation embarrassed the lecturer for the first two or three minutes; but he soon recovered his self-possession, and delivered it in a very clear, intelligible, and concise manner. He was much applauded, both in the course and at the conclusion of his lecture, and was thanked generally for the candour of his communications. The President of the Royal Academy, Sir M. A. Shee, Mr. Howard the secretary, and several of the academicians, expressed to the artist personally their warm admiration of his specimens; and he was surrounded all the remainder of the evening by a press of artists and connoisseurs, who wished to obtain information.

We are sorry to find that his improvements have precluded him from most of the exhibitions. Owing to their peculiar laws, his paintings do not come within any of the classes which they admit.

On the library-table were placed specimens of Davy's protectors, taken from the bottom of the *Magicienne*, which has been lying in harbour for some years past. Curious cellular bullets; fine punches, used for the punching of iron; and other objects connected with art and literature.

LINNEÆAN SOCIETY.

At the anniversary meeting, A. B. Lambert, Esq. in the chair, a satisfactory report from the auditors of accounts was read. Mr. Bichenow, according to annual custom, noticed the loss by death which the Society had sustained during the past year. His late Majesty, as patron of the Society, was first named. Among others, his Grace the late Duke of Atholl was distinguished in a particular manner, as the individual who introduced larch timber to this country. It was observed, that the two first trees of this species ever planted by his grace

are still growing at Dunkeld: they have been transferred from the greenhouse to the open air, and were described as magnificent specimens; although some of their offspring, growing in the neighbourhood of Blair, in Scotland, are much more so, having attained the height of one hundred and twenty feet. A communication from Mr. Curtis, F.L.S. was noticed: specimens of the *papa tridius* and the *oleaster rugosa*, collected near the celebrated fountain of Petrarch, at Vaulouse, accompanied the paper. Although these specimens had been kept hermetically closed for nine months, on the application of a little moisture they immediately exhibited signs of life: and further, the writer in a postscript says, that Messrs. Lediges have some of them inhabiting their native plants after they had been in an apparently dead state for seventeen months. The fact is more remarkable, since they are species destitute of *opercula*. Lord Stanley was re-elected president; and in the evening the fellows dined together.

SOCIETY OF ARTS.

THE annual distribution of prizes awarded by this praiseworthy institution took place in Exeter Hall, Strand, on Wednesday. The assembly was crowded; and as by far the greater portion of the company was composed of beautiful and elegantly-dressed women, the view from the platform was exceedingly pleasing. His Royal Highness the Duke of Sussex, in consequence of a sprained ankle, was unable to preside, as he had on similar occasions: Joseph Hume, Esq. M.P., however, very ably supplied his Royal Highness's place. After having addressed the audience at some length upon the merits of the Society, Mr. Hume delivered the prizes to the successful competitors or their proxies, accompanying them with appropriate remarks.

GEOLOGICAL SOCIETY.

R. J. MURCHISON, Esq. president, in the chair. The reading of the paper begun at the meeting of the 11th instant, entitled, "Notices on the secondary and tertiary formations of Germany, as compared with those of England," by the president, was concluded. On the table was exhibited a nearly perfect species of *Plesiosaurus*, the property of Lord Cole. Several fellows were elected.

ROYAL GEOGRAPHICAL SOCIETY.

G. B. GREENOUGH, Esq., in the chair.—Captain King's communication, respecting the geography of the southern extremity of America, was concluded, and some extracts from recent letters from Mexico read.

The object of Captain King's paper was, first, to exhibit the extent of our exact knowledge of the shores of South America previous to his late survey of them; secondly, to give a general view of his own labours and success; and lastly, to notice the chief parts in the physical geography of those regions. In 1790, Malaspina had examined the eastern coast, from the Rio Plata to the Strait of Magellan, and also the north-east side of Tierra del Fuego, with considerable minuteness and fidelity. The strait itself had been often surveyed, as surveys used to be made until within the last few years,—that is to say, its principal points had been determined by Sir John Narborough and succeeding navigators, until a reasonably exact knowledge was had of them; but the intervals were by no means minutely filled in: and, as it proved, the west coast, as far as the Gulf of Chiloe, had been examined by Sarmiento in

1679, with extraordinary exactness and fidelity; but no confidence was placed in his descriptions till thus verified; and the southern shores of Tierra del Fuego, and the innumerable other islands which fringe the land in this direction, were most imperfectly known. Captain King's object, therefore, was to verify what was known, and fill up intervals; and his arduous task can only be properly appreciated by an inspection of his chart, and by considering that he was thus employed for four years consecutively,—during the whole time contending with every difficulty which a climate of incessant storms and rain can interpose,—notwithstanding which he has minutely examined, perhaps the most intricate and complicated coast in the world, from the latitude of 47° south on both sides. His attention, however, as we have already intimated, was not exclusively given to the mere outline of coast. His contributions to its physical geography are also very great. Considering the Strait of Magellan as furnishing a transverse section of the continent, he notices three different formations in it. In the west it is primitive (granite and greenstone), rugged, mountainous—the hills are irregularly heaped together, the sounds intricate and tortuous, the shores deeply serrated, and in the channels are innumerable rocks and islands, extremely dangerous in navigation. About the centre the basis is clay-slate: the mountains are high, averaging from 3000 to 6000 feet: they lie in parallel ranges, between which are several considerable rivers, and, opposite to this portion of the coast, there are no islands. The eastern land is low, a prolongation of the pampas of Buenos Ayres, the soil a mixture of decomposed slate and clay; and here the islands again appear, their soil clayey, but mixed with masses of granite, hornblende rock, and clay-slate, protruding through the surface, which bears a poor grass, and is entirely destitute of trees: and the vegetation of these three formations is equally distinct—to the west ligneous but stunted, the shrubs seldom exceeding ten inches diameter—about the centre more vigorous, nourished, as Capt. King thinks, by the alluvial deposits brought down by the rivers; and to the east exclusively coarse harsh grass, not, however, without nourishing properties, as is testified by the herds of guanacos found feeding on it. The line of perpetual snow appears to be about 3500 or 4000 feet; and although the thermometer frequently descends below freezing point even close to the sea, the cold is not felt to be severe. Parrots and humming-birds are seen in great numbers, even while snow is falling; and *fuchsia*, *veronica*, and other tender shrubs, grow wild in the central region with great vigour. Captain King attributes these curious facts to the high temperature of the sea, which in the winter season he has observed 30° above that of the air, with a cloud of steam rising from its surface.

The letters from Mexico, we understood, were written by Lieutenant Glennie, R.N., an active and intelligent young officer, now in the service of the United Mexican Mining Company. The extracts read chiefly related to the pyramids of Teotihuacan; and the measurements given were nearly the same with Humboldt's, allowing for the difference between the English and Paris foot. Mr. Glennie considers the plan on which they were constructed not to have been completed; one large pyramid being wanting to make a regular figure. After the meeting, some conversation ensued among the members, in which the remarkable similarity between these pyramids

and those of Egypt was commented on, more especially as evidenced in their form, their having been originally covered with a white cement bearing inscriptions, and their having been constructed in groups. No entrance has, however, yet been found to any of the Mexican pyramids; nor is there any other appearance of their being burying places. On the contrary, the tradition is, that they once were surmounted by statues; although of this there is no evidence. They are indisputably anterior in date to the Mexican race found by Cortez; and were probably neglected ruins, as now, even in his day.

On Monday, W. R. Hamilton, Esq., V.P., in the chair, a letter from Mr. Jerdan to Lord Goderich, the president, was read, enclosing the original of one he had received from Mr. Fisher, surgeon of H. M. S. Atholl, giving the first account of the successful navigation of the Niger to the sea; and laying it before the Society; for which thanks were directed to be returned.

Afterwards, an abstract was communicated, by the secretary, of the contents of certain papers obtained from the India House; being extracts from the correspondence of the late Mr. Moorcroft, when on a mission to Central Asia, in the course of which he unfortunately died (at Anghok, in Belukh); and thus no account of his proceedings had yet been published. His first route was, in 1820, from Belaspore, on the Sutlej, to Leh, the capital of Ladakh, where he was detained two years, endeavouring to obtain permission to advance by way of Yarkand to Bokhara; but constantly thwarted by the jealousy of the Chinese authorities, fostered, as he believed, by the intrigues of the native (chiefly Cashmerian) merchants, who were afraid of losing their monopoly of trade in this direction. This portion of his time, however, he improved by diligent inquiries into the geography and political condition of Ladakh, Khoten, Chinese Tartary, and the other frontier provinces of that empire in Central Asia; and much of the information which he thus acquired—though its strict correctness is necessarily doubtful—is at once probable and curious. From Leh, in 1822, he proceeded to Cashmeer, by the usual road between the two provinces, which he represents as the great channel by which the latter obtains its supply of shawl wool from Thibet; and his purpose was now to penetrate to Bokhara by Cabul. But here, again, he met with such obstacles as to detain him till 1824; and it is still uncertain whether he ever reached Bokhara, or was still on his road to it when he died, in March 1825; his posthumous papers not having been yet recovered, and the latest direct despatch received from him only bearing the date of October 1823. The papers procured by the Society, then, consist of copious details, chiefly from actual observation, regarding Leh and Ladakh—bearing information respecting the neighbouring Chinese and Thibetian provinces—and several long essays on the shawl and other manufactures of Cashmeer. It was intimated that selections from them would progressively appear in the Society's Transactions, as opportunity offers; and its most cordial thanks were directed to be returned to William Astell, Esq., M.P., late chairman of the Hon. the Court of East India Directors, and W. Stanley Clarke, Esq., a director, for the liberality with which they had been communicated.—Adjourned.

CELESTIAL PHENOMENA FOR JUNE.*

21^d 17^h 36^m—the Sun attains his greatest northern declination (23° 27' 42" 1). At this time is the mid-day of the north and the mid-night of the south pole; and during several rotations of the Earth on its axis, the whole of the arctic regions enjoys the presence of the Sun, and the antarctic experiences the deepest gloom of the long and dreary night of winter. On the verge of the arctic circle, the Sun, at midnight, conceals for a short space of time one half of its disc, and then re-ascends to pour forth a flood of splendour over every point of the horizon; and on the confines of the antarctic circle, the southern half of its orb at noon just emerges above the horizon, and leaves those regions to be illuminated by the bright scintillations of the stars in Argo Navis, Lupus, Centaur, Cruz, Columba, and their splendid companions which circle the southern pole, occasionally diversified with the coruscations of the aurora australis.

Lunar Phases and Conjunctions.

The Moon will be in conjunction with

	D.	H.	M.
Jupiter in Capricornus	Occultation.		
Mercury in Taurus	8	13	45
Mars in Gemini	12	5	20
Venus in Cancer	12	16	30
Saturn in Leo	14	12	0
Uranus in Capricornus	23	4	0
Jupiter in Capricornus	28	18	54

Occultation of Jupiter and his Satellites.

14th—this will be the most interesting phenomenon occurring in the present year, excepting the occultation of Saturn in the following November. The order of the eclipses of the planet and satellites will be as follows: the bright limb of the Moon will come in contact first with the fourth satellite, then with the second; the immersion of the planet will then occur, at 13^h 8^m 40^s; the moon will afterwards proceed to the first satellite, and, finally, the third will be obscured. At emersion, the fourth will be first visible, then the second; the planet will next re-appear, at 14^h 13^m 51^s, afterwards the first, and, finally, the third satellite will emerge from behind the moon's dark limb. The following diagram will illustrate this occultation.

During the occultations, the first and second satellites will have approached a little nearer to their primary, and the third and fourth have receded a little farther off.

Some singular phenomena have sometimes been noticed at the occultation of the system of Jupiter. It was remarked, 7th April, 1792, that some of the satellites became indistinct at the limb of the moon, while the others did not suffer any change of colour. It was observed at the last occultation of this planet, visible to the British Isles, 7th April, 1824 (see *Ld. Gaz.* 1824, No. 375), that the satellites, on coming into contact with the Moon's limb, did

* In our Celestial Phenomena for May, line 2, for "Moon" read "noon."

not disappear instantly, but formed an indentation in the limb, as if embedded in it, but at the same time separated from it by a fine line of light: this indentation continued visible till about half their diameters were immersed, when it disappeared. On the approach of Jupiter, no difference in his light or shape was perceptible: after the contact had taken place, he appeared to exhibit no deficiency of disc, but, on the contrary, presented a complete figure, as if placed between the Moon and the Earth; this appearance continued for a few seconds; when nearly altogether immersed, his retiring limb was considerably elongated, as if forming a segment of a much larger sphere.

8^d—Mercury stationary. 20^d—greatest elongation (22° 37') as a morning star.

19^d—Venus in conjunction with 388 Mayer: difference of latitude 2'. This beautiful planet may now be traced from its rising to its setting.

Mars in conjunction with the following stars in Cancer: 15^d—with μ : difference of latitude 3'. 28^d—with 350, 360, 361, 362: differences of latitude 1', 6', 5', and 2', respectively.

J. T. B.

FINE ARTS.

EXHIBITION OF THE ROYAL ACADEMY.

[Fourth Notice.]

No. 256. *Portrait of Mrs. Hasler Capron and Child.* B. R. Faulkner.—No. 276. *Portrait of a Young Lady.* J. B. Lane.—Interesting and clever pictures.

No. 286. *A Terrier at a Rabbit's Hole.* T. Woodward.—Nothing can exceed the spirited excitement under which the animal is represented.

No. 305. *The young Minstrel; a Portrait.* J. Linnell.—There is frequently a firmness, approaching to hardness, in Mr. Linnell's style, not exactly adapted to the delicacy of portrait. In the present instance, however, it is impossible to conceive any thing more soft and beautiful than the pencilling, as well as the expression.

No. 306. *Portrait of Lieut.-Colonel O'Donnell.* J. Hollins.—One of the most elevated specimens of modern portraiture that we remember to have seen. It reminds us strongly of the Spanish school; and especially of Velasquez. The character is simple and dignified; the colouring grave and unobtrusive; the chiaroscuro admirable; and the costume and arrangement give it the air of an historical

portrait. The likeness too is admirable; and our readers may recollect that this fine countenance is that of the individual to whom we and they were indebted for the interesting letter last year, giving a description of the Turco-Russian war.

No. 342. *The little Masquerader*. Emma Jones.—Although somewhat liney in the drawing and patchy in the colour, this head has a stamp of truth upon it which is very fascinating.

No. 349. *Portrait of Mr. Gouldsmith*. Miss H. Gouldsmith.—We have frequently had occasion to praise this lady's landscapes. The transition to portrait is great; but as far as we are able to judge from the high situation in which the picture is placed, she promises as fairly in this class of art.

No. 354. *News from Abroad*. W. Thomas.—There is great simplicity in the design, and good expression in the characters, of this little drama. The colouring and effect are also well managed.

No. 355. *The Stolen Interview*. A. G. Vickera.—A good subject for a romantic tale. There is great fatness in Mr. Vickera's vehicle; but he would do well not to use it so freely in his dark masses, as it counteracts the retiring quality which they ought to possess.

No. 356. *Landscape; Twilight*. R. Westall, R.A.—Although Gray is not quoted in the catalogue, Mr. Westall has most beautifully depicted the effect so finely described in a single line of the "Elegy in a Country Church-yard."

"Now fades the glimmering landscape on the sight."

No. 364. *Skirmish of Cavaliers and Round-heads*. W. Baily and W. Barraud.—Battles of this description have been so often fought upon canvass, that the most brilliant affair of the kind—and that under our notice is far from wanting either spirit in the design or vigour in the execution—has ceased to excite much interest.

No. 369. *Portrait of the Right Hon. the Lord Mayor*. Mrs. Pearson.—Portraits sometimes give a glimpse of what has been passing in the minds of the originals during their sittings. The worthy chief magistrate must have been occupied with pleasant thoughts, if we may judge by the expression which the fair artist has introduced into his countenance.

No. 374. *The Water Log*. W. Willes.—A melancholy contemplation in itself; but rendered still more so, when the mind reverts to the probable adventures and hardships of the forlorn human beings, who, far from any friendly shore, have been compelled to abandon their gallant vessel to the fate which sooner or later must overwhelm her, and may overwhelm themselves. Mr. Willes has shewn much poetical feeling in this interesting work.

No. 378. *Mrs. Sawnter and her Niece—vide the Spectator*, No. 344. T. Clater.—It is evident that the artist has chosen his subject, not, like the essayist, to reprehend the practice of snuff-taking, but for the purpose of displaying his skill in representing, in the most finished manner, the rich and varied draperies that were in fashion in the early part of the last century. In this object, as well, indeed, as in his general composition and colouring, he has been eminently successful.

No. 390. *The Biter bit*. R. W. Buss.—There is much humour and appropriate expression in this performance; but the amorous old bean must have been as "sand-blind, high-gravel-blind," as Launcelot Gobbo's father, not to discover the complexion of his sable Dulcinea, until she threw aside her thin veil.

No. 405. *Market Gardeners at Battersea*. J. Stark.—Whether the subject be taken from the banks of the Thames, or from the banks of the Waveney, we are sure to find a faithful transcript of nature, under her most picturesque and pleasing forms, in the works of Mr. Stark.

No. 407. *A Sea-Port of the Mediterranean; Sun-rising*. P. H. Rogers.—All natural, and many artificial objects, are the same now as they were in the days of Claude; which, similar scenery being selected, may account for the resemblance this clever performance bears to some of the sea-ports of that great artist.

No. 411. *The Shipwrecked Mariner*. W. Etty, R.A.—It requires no common talents to give interest to a subject so often repeated; but Mr. Etty's are no common talents; and he has completely succeeded in that respect, as well as in exciting additional admiration of his versatility and skill. The effect is grand and powerful.

No. 412. *Solomon's Sacrifice at the Dedication of the Temple*. J. H. Nixon.—Similar in subject to some of Mr. Martin's sublime productions, but different from them in style. When time has somewhat mellowed and subdued its tones, this will be a very fine work. Its brilliant, yet mysterious light, and the splendour with which the whole composition is invested, announce an artist of no ordinary rank.

No. 417. *A Sunny Morning*. A. W. Calcott, R.A.—Who that gazes on this exquisitely beautiful picture, but must feel the same soothing and cheerful influence which the contemplation of such a scene in nature itself is calculated to create? This is the real triumph of art.

No. 431. *Portrait of a Gentleman*. W. Dyce.—If we may be allowed to pun on the name of this young artist, we should say that his throws have been most fortunate; and that he has turned up taste, colouring, and execution, sufficient to warrant the expectation that he will attain to high excellence in his profession. We have seldom seen a more promising work.

[To be continued.]

NEW PUBLICATIONS.

Fancy Ball Dress, No. V. L. Mansion and W. Spooner.

A POLISH lady—and all the world knows how picturesque and becoming the national dress of Poland is. The costumes, generally, are such "horrors" (we use a feminine phrase) that a collection of these prints, which unite the foreign and the graceful, will be invaluable on all occasions of a fancy ball. They are selected with excellent taste.

Feeding the Rabbits. Painted by W. Collins; engraved by J. Linnell.

ONE of Mr. Collins' natural rustic subjects,—two fine children feeding a hutch of rabbits,—and painted with all his usual fidelity and taste. The living things are truth itself—the landscape and accessories no less perfect. It is a delightful subject.

The Costumes of the French Pyrenæes. Drawn on stone by J. D. Harding, from original Sketches, by J. Johnson, Esq. Part III. Carpenter and Son.

As curious and picturesque as the preceding parts. It is painful to find, by the following extract from one of the descriptions (adverting to Bigorre and Bearn), that in these remote districts the same love of calumny prevails,

which is the curse of more densely populated, and, as they are pleased to consider themselves, more refined countries:—"Proverbs are said to be the index to national character, and the following, in the *patois* of the respective countries, may be offered as a test of local opinion:

Bearn
Faus et courtis.

Bigorre
Pir que can.

A man of Bearn is false and courteous. A man of Bigorre is worse than a dog."

Twelve Designs, chiefly intended for transferring upon White Wood, by means of Ackermann's Caustic Varnish. No. II. VERY suitable to the purpose,—we must honestly add, rather a childish one.

Ireland Illustrated. From original Drawings by G. Petrie, R.H.A. and W. H. Bartlett, Esqrs.; with Descriptions by G. N. Wright, M.A. No. XX. Fisher, Son, and Co.

THIS Number completes the volume of Illustrations of Ireland; and a very clever and interesting volume it is. One of the views in the last number is "Blarney Castle;" a visit to which we heard Mr. Phillips very pleasantly describe, in one of his recent lectures on music, at the Russell Institution. At this castle, it seems, it still preserved the celebrated stone, the kissing of which imparts to every man the power of uttering to the fair sex that "soft nonsense," which in Ireland is thence called "blarney." Mr. Phillips observed that he had kissed the stone!

The Right Honourable Harriet Elizabeth Georgiana, Countess Gower. Engraved by Dean, from a Painting by Sir Thomas Lawrence. No. LXXVIII. of the Series of the Female Nobility in La Belle Assemblée.

A CHARMING specimen of the taste of the late President.

The Champions of Constitutional Reform. Tilt. BUT so-so resemblances.

Visits of William the Fourth, when Duke of Clarence, as Lord High Admiral, to Portsmouth. By Henry Moses. No. III.

PICTURESQUE and spirited. "The Challenger, commanded by Captain Fitzclarence, sailing from Portsmouth, with despatches for Lisbon, Oct. 31, 1827," is strikingly beautiful.

Views in the Mauritius, or Isle of France. Drawn on stone by William Rider, of Leamington; from the Originals, by T. Bradshaw, Esq. late of his Majesty's Civil Service in the Mauritius. With an Account of the Island, and Description of each View. No. I. Carpenter and Son.

ALTHOUGH we are unable to speak highly of these views as works of art, yet they are sufficiently well executed to give a very competent notion of a country, evidently abounding in landscape-beauty, of which, we believe, no delineation has heretofore been made public.

PAINTING IN WATER-COLOURS.

WE mentioned some time ago that a new Society of Painters in Water-colours was in contemplation. We now understand that a number of able artists have actually united to form the Society; and that it is intended to open the first exhibition next spring. Her Majesty has graciously condescended to take the Society under her immediate patronage; and H. R. H. the Duke of Sussex, and other individuals of rank and character, have likewise promised it their protection and encouragement. When the comparatively small list of

members to which the present Society of Painters in Water-colours is rigidly restricted, and the great increase during the last twenty years of skilful professors of this pleasing department of the fine arts, are considered, there seems no reason to doubt of the prosperity of the new Society; which announces its determination to proceed upon principles of perfect fairness and liberality. We wish it all possible success.

SKETCHES OF SOCIETY.

A LITTLE GOOD ADVICE!

THERE is a singular Hottentot at Graham's Town, who goes about giving advice to his fellow-citizens, but too often, as the *Cape Advertiser* says, without being regarded:—"Go," exclaims Piet, "go to church. I don't care what church you go to—the great church, or the white church, or the yellow church. I give you perfect liberty, for I am free myself, and white by the ordinance, without the aid of pipe-clay. And mind what is said to you—don't steal; that is not fit for gentlemen. You lose by it. You stole the governor's wagon-chain, and he has got four oxen for it. Jew Smets and Mr. Ward are the hind oxen. The two sergeants are the leaders. Mind what I speak. One wife is enough. If you have two or three wives, one says, 'bring in the cups for breakfast;' another, 'no, bring the platters first;' another, 'where is the butter-dish, you lazy Hottentot?' I give good advice. Don't go to the canteens, my brothers; brandy is not good for burghers. All the pipe-clay in the world won't make you white if you get drunk. Rice-water is better. If you go to the magistrate's great house, where he receives company, he will give it to you. It will not make you drunk, nor break windows, nor fall down in the street. Mind your business. Work if you have any thing to do; if not, go to service. Don't sit idle. Don't walk about doing nothing. There is another thing. When you get farms in the country, stop there. If you run away, your sheep will do the same. Then you will say, 'Oh! that cursed Hottentot! he has swallowed three thousand sheep and bullocks, and the horns have not stuck in his throat. Open your mouth, villain. All down, by Jacob! I cannot see their tails.' That is not the way. Go home and teach your children A, B, C. I will take care of Graham's Town myself. Many people walk about in great haste, looking sharp as if they had lost something. But they never go any where, nor find any thing, except faults. Of these their pockets are full, because they have nothing else to fill them with. They say the ministers don't speak loud enough, and that is the reason that they can't repent. They say that they must look after the magistrates and great people all the day, otherwise they might find time to put their own affairs into order. The public servants must have the whole population gathered round their offices, to serve as a check, so that servants in private establishments may do as they please. No matter. It is all one to Piet Abran."

MUSIC.

EISTEDDVOD AND CAMBRIAN CONCERT.

THE Eisteddvod and Cambrian Concert took place at Freemasons' Hall on Wednesday, and, like all similar displays which touch the chord of national feeling, went off with the greatest spirit. The spacious hall was crowded with all the beauty and honour of the ancient principality. The music consisted chiefly of Welsh

melodies, and was a very appropriate and tasteful selection, reflecting much credit on Mr. Parry, sen. the director. The vocal performers, among whom were Mr. and Mrs. Knyvett, (and most delightfully they sang), Miss Cramer, Miss Lyon, Messrs. Horncastle, and Parry jun., poured forth the "songs of nature with delightful effect:" the latter gentleman obtained by acclamation the honours of an encore for the sweet and natural manner of his singing the pretty ballad of the Maid of Llangollen. Between the first and second parts of the concert, the medals proposed by the Society for compositions in the Welsh language were awarded, and the successful candidates decorated by lady hands. Penellion-singing followed; and if not altogether calculated to convey to polite ears the idea of that "magic song," which Gray says "made huge Plinlimmon bow his cloud-topp'd head," is yet full of interest from old associations, and, though rude, not deficient in simple melody. The design of the Society is well put forth by the secretary in an address prefixed to the particulars of the concert; and we most cordially wish success to their endeavours in preserving the venerable British language—as a valuable, a pure, and important relic, so generally neglected, yet so frequently worthy of the attention of the etymologist, the historian, and the antiquary.

DRAMA.

KING'S THEATRE.

PASTA, the queen of tragic song, on Tuesday evening once more appeared before us in *Tancredi*. She is thinner than when she was last here, but looks younger and handsomer than ever. Her appearance, notwithstanding her beautiful costume, is rather too feminine to represent the part with perfect *vraisemblance*; but her action and deportment are full of the chivalrous spirit of the young Christian knight of Voltaire's fine tragedy—for, in seeing Pasta, we are glad to refer her characters to a nobler origin than the 'makers of Italian libretti. Nothing could be more noble and touching than her first scene, where the banished Tancred, after his appeal to his ungrateful country, gives a loose to hope and joy at the idea of again seeing his *Amenaide*. Pasta's accents, at the words "*Mi rivedrai, — ti rivedrò!*" thrilled through every heart. In the progress of the piece, the varying emotions of jealousy, alternately smothered in gloom, bursting out in indignation, or yielding to doubt, were imitatively depicted; so excellently indeed, that it was with a feeling of real disappointment we witnessed the want of tenderness—indeed *nonchalance*—exhibited by the lovers at the moment of reconciliation. We were at a loss to account for this on the part of Pasta, for she is as great a mistress of the tender as of the sublime and terrible. Perhaps it was the want of a more interesting *Amenaide*; for Madame Lalande neither looks nor acts the part as it ought to be looked and acted. Her person wants youth, and her manner, though possessed of spirit and force, is deficient in simplicity. She sang admirably, however;—so admirably, indeed, that she compelled the audience to do her the justice which they sometimes withhold from her. Some defects in the quality and power of her voice often mar the effect of her talents; but it was not so on this occasion, and her efforts, accordingly, were eminently successful, particularly in the charming duet, "*Ah se' mali miei,*"—and an admirable quartetto, which was encored. Pasta's voice is covered with its usual veil; but this, which with others is a defect,

becomes in her a beauty, particularly in the expression of dark and gloomy feelings. Rubini, in *Argivio*, sung most brilliantly—too brilliantly, we are inclined to think. But his manner is full of grace and energy, and his execution so facile and finished, even when luxuriating in ornaments, that we can hardly quarrel with him for their exuberance. Santini's bass voice is admirable, and his singing in the concerted pieces highly effective. It is a pity his figure and gait are so awkward; but for these defects, he would be an excellent performer. The choruses (which in this opera are beautiful,) were very badly sung. We would advise M. Laporte to send his conductor of the choruses to Covent Garden to take a few lessons in the art of drilling.

The house was crowded, and had a splendid appearance. The prolonged applauses at the end of the piece induced Madame Pasta to present herself and make her bow of acknowledgment, which she did with the grace that accompanies all her actions.

THE larger theatres have done nothing new since our last, except the giving of a concert on Whitsun-eve at Covent Garden, which was very miscellaneous, and very ably sustained by native talent, at the head of which was Bramham, Sinclair, Phillips, T. Cooke, Misses Inverarity and Hughes, Lindley, Nicholson, &c.

The explosion which was anticipated at Drury Lane has taken place, and the connexion of Messrs. Polhill and Lee been dissolved—the latter retiring.

Kean is performing in Milton (late Grub) Street, where there is a small theatre, with eclat; and as Reeve, in the full swing of his cornic humour, is playing at the same place, it must be a treat to the Orientalists, acquainted with the topography of those remote parts. The minor houses are all bustling with new holiday pieces; and whether they deal in the terrible, the spectacular, or the droll, are all, we hear, doing well.

VARIETIES.

The Printers' Pension Society.—At the anniversary of this most deserving charity, on Wednesday next, Lord John Russell and Washington Irving, Esq. are expected to support the Lord Mayor in the chair; and we rejoice to see among the stewards on behalf of an Institution, which, though principally benevolent, can hardly be dissociated from the cause of literature and the press, such names as those of Lord Durham, Lord Sandon, Lord Howick, the Hon. E. G. Stanley, Mr. Spottiswoode, &c.

Paganini.—The newspapers announce that this celebrated performer has consented to exhibit the powers of his bow, at the usual Opera prices.

Ourang-Outangs.—Two very extraordinary animals of this species have just reached London: they are about to make their bows, we understand, at the Egyptian Hall.

Gelatine.—From the bones of the meat consumed in the Hospital of St. Louis, in Paris, there is obtained every day nine hundred rations of gelatinous solution, as rich in animal matter as the best soup of the kitchen.

March of Education.—In a trial lately reported in the newspapers, a witness swore positively that he had declined to take an individual into his service, because he had been assured by his former master, "in plain language," that he had committed a *bond fide* robbery upon him!

China.—The following is a literal translation of two official bulletins which were last year published at Pekin:—"First bulletin. Sien, minister, president of the college of war, and superior chief of the nine gates, (that is, of the city of Pekin,) reports, that in the night of the fifteenth day of the seventh moon (20th of August), the water of the lake Kkhoun-Nin-Fou was absorbed by the soil; and that the canal which proceeds from that lake, and surrounds the walls of the city, is entirely dry." To render this event more intelligible, it may be well to state, that twelve miles to the west of Pekin is a country palace, placed on the hill Tal-Chéou-Chân; to the south-west of which was dug the lake Kkhoun-Nin-Fou, above fifteen miles in circumference. "Second bulletin. The Academy of Astronomy reports that in the night of the fifteenth day of the seventh moon (20th of August) two stars were observed, and white vapours fell, near the sign of the zodiac Tsyéi-Tehoun. They were seen at the hour at which the night-guard was relieved for the fourth time (about midnight), and announce troubles in the west."

Primitive Steam-Engine.—In 1629, a compilation was published, entitled *La Machine du Sig. G. Branca: Roma*. It contains a description of all the machines known to the author. Among them is an scapille, a hollow metallic ball, having but one small opening, filled with water, and placed on a brasier, in such a manner, that the current of steam, issuing by a pipe, strikes the wings or spokes of a little horizontal wheel, and makes it revolve. It was remarked, in the year 1805, by Flurence Rivault, in his *Eskmens d'Artillerie*, that scapilles burst with a loud report when the steam was prevented from escaping. He adds, "the effect of the rarefaction of air will startle the boldest man." Some of the French scientific journals of the present day are endeavouring to show that the name of Salomon de Cane ought to be substituted for that of the Marquess of Worcester, as giving the first suggestion of the steam-engine.

Polish Tongue.—We are afraid we have misled our contemporaries with regard to the termination of the great Polish general's name, while setting them right in the pronunciation of the first syllable: it is spelt and pronounced *netzki*, not *netki*.

Portuguese and Latin Languages.—The following verses are both Latin and Portuguese:

Canto tuas palmas, fírmes como triumphos,
Ursula divinos martyri conde favores,
Subiectas sacra nympha feroc animosa tinnunt
Tu Phoenix vivendo ardes, ardeando triumphos
Ilustres generosa choros das Ursula, bellas
Das rosa bella roses, fortas das sancta columnas
Eternas vivas annos o regia plantas
Devotos cantando hymnos, vos invoco sanctas
Tem puras nymphae amo, adoro, casto, casto
Per vos felices annos, o candida turba
Per vos innumeros de Christo spero favores.

I do not know any other living language between which and the Latin so strong an affinity could be traced and exemplified. G. D.

Motto.—The old barons of Couci had a motto which perhaps carried the proud humility of the haughty and independent knight to its height:

"Je ne suis roi, ni prince aussi;
Je suis le Seigneur de Couci."

They ought to have written below,
"None but himself can be his parallel."

Anatomy of the Eye in the Lisard Tribe.—The eye of the gecko has been found by Müller to be provided with the same lachrymal capsule which Jules Cloquet has described in serpents. They are the only Saurian animals which present this peculiarity.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertiser, No. XXII. May 28.]

Major Ricketts is preparing for publication, a Narrative of the Ashantee War, including the particulars of the Capture and Massacre of Sir Charles M'Carthy, &c. &c.

LIST OF NEW BOOKS.

Beal's Observations on Distortions of the Spine, 8vo. 3s. sewed.—Ten Etchings illustrative of the Devil's Walk, by Thomas Landseer, imp. 4to. 12s. 6d. roan. Prints 15s.; colour 40s. Proofs 21s.; Whately's Lectures on Political Economy, 8vo. 7s. 6d.—Vaughan's Memorials of the Stuart Tyranny, 2 vols. 8vo. 11s. 4s. 6d.—Richie's Lectures on the Epistle to the Romans, 8vo. 12s.—Atherton: a Tale of the Last Century, by the Author of Rank and Talent, 3 vols. 8vo. 11s. 8s. 6d.—Postal and his Plan of Education, by Dr. Biter, 8vo. 14s. cloth.—Selections from Wordsworth, 12mo. 6s. 6d.—Maitland on the Romans, 8vo. 10s. 6d.—De Luc's Letters on Geology, 8vo. 12s. 6d.—Rice's Sermons preached at Cambridge in 1830-31, 8vo. 7s. 6d.—Valpy's Classical Library, No. 18. (Horace, Vol. II.), 4s. 6d. 6d.—Hughes's Divines, No. 13. (Jeremy Taylor, Vol. I.), 8vo. 7s. 6d.—Epitome of Literature, No. 3. (Locke on the Understanding), 12mo. 6s. 6d.—Price's Practice in the Exchange of Pleas, 8vo. 14s. 6d.—Standard Novels, Vol. IV. (Thaddeus of Warsaw), 12mo. 6s. 6d.—National Library, Vol. 10. (Thomson's History of Chemistry, Vol. II.), 12mo. 6s. 6d.

METEOROLOGICAL JOURNAL, 1831.

May.	Thermometer.	Barometer.
Thursday... 19	From 47. to 64.	29.61 to 29.66
Friday... 20	48. to 64.	29.75 to 29.78
Saturday... 21	46. to 63.	29.79 to 29.80
Sunday... 22	47. to 70.	29.90 to 29.93
Monday... 23	49. to 74.	29.90 to 29.93
Tuesday... 24	48. to 77.	29.80 to 29.78
Wednesday 25	50. to 74.	29.93 to 29.78

Wind variable, N.W. prevailing. Alternately clear and cloudy. Rain fell in the afternoon of the 19th; also in the evening of the 23d, accompanied by heavy thunder and a few flashes of lightning. Rain fallen, .25 of an inch.

CHARLES H. ADAMS.

Extracts from a Meteorological Register kept at High Wycombe, Bucks, by a Member of the London Meteorological Society. April 1831.

Thermometer—Highest.....	64.40°
Lowest.....	38°
Mean.....	46.3666
Barometer—Highest.....	30.90
Lowest.....	29.93
Mean.....	29.9222

Number of days of rain, 11.

Quantity of rain, in inches and decimals, 1.7768.

Winds.—2 East—3 West—7 North—4 North-east—4 South-east—3 South-west—4 North-west.

General Observations.—Although the range of the thermometer was not so great as last year, yet the mean was higher, and much above the average. The barometer has not attained so great a height, as respects the maximum, since 1824; but the mean was lower than any one for the same month in the last eight years, excepting 1829—the quantity of rain considerably less than in the last three years—the fine weather in the middle of the month began and ended with thunder-storms, which occurred on the 18th and 23d. More rain has fallen between the 1st of January and the end of April than in any one year in the same period for eight years. The evaporation 0.9473 of an inch.

TO CORRESPONDENTS.

We have had communications respecting our review of the Life of Lawrence from so many quarters—they are so conflicting and irreconcilable with each other—and some of them are so late in the week, as to make it impossible for us to institute requisite inquiry; we are, therefore, induced to defer any further notice of the subject till our next.

To P.—Captain Morris's songs have never, we believe, been collected: we have heard that their copy-right was intended as a legacy. We have no idea of "the Thorn" being written by Burns.

To the Editor, &c.

Sir,—In your notice of the publication of my tragic drama of the *Fleder*, you speak of a "desolating situation" to which, from a passage of the preface, the circumstances related therein are supposed to have reduced me. The expression a little startled me; and however I may have suffered from the circumstances in question, and much as I feel obliged to so earnest an advocate as I have found in the *Literary Gazette*, yet, as the passage you no doubt allude to would seem to imply on my part absurd weakness or exaggeration, you will excuse my troubling you to state that it is exposed to that construction from an unaccountable error, or rather alteration, of the press, after it had past my revision. The passage, I apprehend, is the following: "The equity of the case was another matter; that I was to seek in a court, whether the loss of three hundred pounds was not likely to drive a poor man, out of his senses." A note of errata annexed to the later copies directs that for "out of his senses" be read "in his senses." Yours, &c. JAMES KENNEDY.

Brevium.—Page 332, col. 1, note at bottom, for "hard," read "band."

ADVERTISEMENTS.

Connected with Literature and the Arts.

TO ARTISTS.—Fifth Annual Exhibition

of the Hants Picture Gallery, Southampton.
H. Buckham, Proprietor, informs Artists, that, in consequence of the British Gallery not closing till the 30th of May, Pictures will be received at the above Gallery till the 30th of June, instead of the 30th of May, as per Circular addressed to Artists.
All Works of Art sent by Messrs. Smith and Co.'s Waggon, from Gerard's Hall, Basing Lane, or the Spread Eagle, Fordingly, will go free of expense.
Any reference is required, apply to Messrs. Rowley and Fennell, 51, Rathbone Place, Oxford Street.

EXHIBITION of PORTRAITS to be

Engraved in LODGE'S PORTRAITS and MEMOIRS of the MOST ILLUSTRIOUS PERSONAGES of BRITISH HISTORY—Open Daily, at Messrs. Harding and Lepard's, No. 4, Pall Mall East, London.

Admission by Tickets only, which may be obtained, on application, free of expense.

The great celebrity this work has acquired throughout the country, and the very general desire of the subscribers to inspect the collection from which the engravings are executed, have led the proprietors to adopt the medium of a gratuitous public exhibition, to display in one collected view the whole series of illustrations proposed to be engraved in this work, elaborately executed and coloured, from the Galleries of his Majesty, the Nobility, and from the Public Collections, preparatory to commencing an entirely new edition, in Monthly Numbers, on the 1st of July, 1831; a Prospectus and Catalogue of which may be obtained (gratis) from every Bookseller in the Kingdom.

Persons residing in the Country, and intending to visit the Kingdom, may obtain Tickets of admission, free of all expense, from the principal Booksellers throughout the Kingdom.

"In the overwhelming masses of trash which are weekly, if not hourly, pouring in upon the republic of literature, it is pleasing to alight upon such productions as this, which cheer and guide the family watchman, and furnish a store of darkness and peril."—*Dublin's Literary Companion*, 2d edition, p. 616, in review of "Lodge's Portraits."

TO BOOKSELLERS and OTHERS.

To be disposed of, the Goodwill of a highly respectable Bookseller's Business, of a number of years' standing. The Person applying must be of undoubted respectability, and possessed of about Two Thousand Pounds.

Letters only, post-paid, addressed to Messrs. Stevens and Son, 55, Bell Yard, Temple Bar, will be attended to.

New Publications.

By R. Ashmole, Esq. Strand.

A PANORAMIC VIEW round the ROBERTS'S PARK: a faithful Representation of the elegant Buildings and interesting Objects of that delightful Spot. Length, 104 feet. Highly coloured, in a folio, price 50s.; in a circular Tourist's Case, 11s. 6d.

Six coloured Views on the Liverpool and Manchester Railway, with a Fleet of the Coaches, Machines, &c. from Drawings made on the Spot. By Mr. T. Barry. 12s.

Twelve Designs, chiefly intended for Transferring upon White Wood, by means of Ackermann's Caustic, or Transfer Yarnish, and for Staining in Drawing. Part I. containing Landscapes; Part II. Twelve Groups of Figures. Plain, 7s.; India paper, 10s.; coloured, 15s.

New Borders for Transferring various Designs, 2s. per Sheet.

N.B. Large Collections of Subjects for transferring constantly imported from France. White Wood Articles of every description.

The Dairy Maid. Engraved in Mezzotint by W. Say, Engraver to His Royal Highness the Duke of Gloucester, after a Picture by James Ward, R.A. in the possession of George Beaumont, Esq. Size, 12½ inches by 14½. Price of Prints, 7s. 6d.; of Framed, 15s.

The Tight Shoe, from the original Picture in the Collection of John Marshall, Esq. of Hales, Cornwall. Painted by Henry Richter; engraved in Mezzotint by H. Richter and T. F. Oudley. Size, 10½ inches by 14½. Prints, 12s.; Proofs, 21s.; Proof before letters, 11. 11s. 6d.

Filial Affection. Engraved in Mezzotint by G. Malle, after a Painting by Julien Villeneuve. Size, 8½ inches by 11. Price of Prints, 6s.; Proofs, 7s. 6d.

Thy Kingdom come, and Thy Will be done, a Pair. Engraved in Mezzotint by G. Malle, after Le Brun. Size, 6½ inches by 8½. Price 8s. each.

Miss M. Tree, as Viola. Painted and engraved by J. Mills. Size, 8½ inches by 6½. Price, plain, 6s.; beautifully coloured, 7s. 6d.

The Broken Vow, highly coloured. Size, 6½ inches by 8½. Price 8s.

Sales by Auction.

Valuable Books of Prints, Copperplates, Copyrights, &c.

MESSRS. SOUTHGATE, GRIMSTON, and WELLS, beg to announce, that they have received Instructions to sell by Public Auction, the entire Stock of Copies, &c. of the following well-known, extremely splendid, and valuable Works:—*Daniel's Views on the Coast of Great Britain*, 3 vols. 320 Copperplates—*Excursions in Great Britain and Ireland*, 18 vols. about 600 Copperplates—*Daniel's Sketches in Southern Africa*, 31 Copperplates, (3 not published)—*Dance's Collection of One Hundred and Sixty-two Portraits*, of which Ninety-two are unpublished, and many never engraved in any other work—*Daniel's Sketches of the Native Tribes, Animals, and Scenery of Southern Africa*, 20 Copperplates—*Sketches of a Voyager*, (unpublished) 33 Copperplates—*Ceylon Scenery*, 18 Copperplates—*Smirke's Hunchback*, 17 Copperplates—*Windward Castle*, 18 Copperplates—*Views of London*, 7 Copperplates—*Beck's and Bridges's*, 6 Copperplates—*Marine Subjects*, 8 Copperplates—*Miscellaneous Views*, &c. 16 Copperplates, &c. &c.

Catalogues are preparing, and will be forwarded to any Gentleman who may favour Messrs. Southgate and Co. with his Address.

LOCKS.—Scientific Gentlemen and others are respectfully solicited to inspect the Machinery erected by S. Mordan and Co. for the manufacture of the Patent Locks with seven guards. Such an inspection will at once explain the means by which this admirable and most secure Lock has been reduced in price and improved in quality. It will also give confidence to the assertion that all the keys made by S. M. and Co. will differ in pattern, and that duplicates will thus be wholly avoided, and fraud and curiosity both prevented. The manufactory is at 75, Castle Street, Finsbury Square, London.

To prevent imposition, the purchaser is directed to the stamp mark, bearing the signature S. Mordan and Co. Makers, London.

MUSIC.

FOR GLORIOUS FREEDOM! Sung with enthusiastic applause by Mr. Braham, at the Public and Private Concerts. Inscribed, by permission, to the Marchioness of Tavistock. The Words by T. H. Schilling, Esq. The Music by Charles Walters. Price 3s. 6d. Merit and Value, 20, New Bond Street; and to be had of the principal Music-sellers in Town and Country. "A spirited national song, and set to very appropriate music."—*Pieco.*

BOOKS PUBLISHED THIS DAY.

THE LIVES OF SCOTTISH WORTHIES. Just published, with Thirteen Engravings from the celebrated Designs of Flaxman, &c. Family Dramatists, No. IV.; being Popular English Specimens of Scotchmen. John Murray, Albemarle Street.

FITZ-RAYMOND; or, the Rambler on the Rhine: a Merico-Political Sketch of Past and Present Times. A Poem, in Three Cantos. By CALEDONNICUS.

Longman, Rees, and Co. London; Black, Edinburgh. "Fitz-Raymond has brought in review the different nations of Europe, and breathed forth such aspirations in these pertinent times as do equal credit to his head and to his heart. He has taken a very elevated position amidst the contentions which agitate and influence his country, making patriotic virtues, disinterested zeal, and benevolent intentions, the only legitimate objects of his eulogy, wherever found."—*Morning Post.*

AN ADDRESS delivered to the Literary and Philosophical Society at Kingston-upon-Hall, at the Opening of the Seventh Session, on Friday, Nov. 5, 1831. By CHARLES FROST, F.R.S. President of the Hall Literary and Philosophical Society, Honorary Member of the Antiquarian Society of Newcastle-upon-Tyne, Honorary Member of the Yorkshire Philosophical Society, &c. &c. Aures, perpetua temper dignissima vita.—*Laur.* Hall: Printed and published by I. Wilson, 48, Lowgate; sold also by Messrs. Simpkin and Marshall, Stationers' Hall Court, London.

Of whom may be had, by the same Author, **Notices relative to the Early History of the Town and Port of Hull,** compiled from original Records and unpublished MSS., and illustrated with Engravings, Sketches, and Vignettes. 4to. 5s. boards. See the Gentleman's Magazine for November, 1827, and the Retrospective Review, Monthly Magazine, and Monthly Review, for December, in the same year.

INTRODUCTORY LECTURES on POLITICAL ECONOMY; being Part of a Course delivered in Hunter Term, 1831. By RICHARD WHATELY, D.D. Principal of St. Alban's Hall. Professor of Political Economy in the University of Oxford. Printed for B. Fellows, Ludgate Street. Of whom also may be had, by the same Author, **Elements of Logic.** 4th edition, 8vo. 12s. **Essays on some of the Peculiarities of the Christian Religion.** 3d edition, 8vo. price 10s. **Essays on some of the Difficulties in the Writings of St. Paul.** 2d edition, 8vo. price 10s. **Errors of Romanism, traced to their Origin in Human Nature.** 8vo. price 10s. **Scripture Revelations concerning a Future State.** 2d edition, 12mo. price 6d. **Historic Doubts relative to Napoleon Bonaparte.** 4th edition, 8vo. price 2s.

A MANUAL of the RUDIMENTS of THEOLOGY, containing an Abridgement of Bishop Taylor's *Elements*; an Analysis of Paley's *Evidences*; a Summary of Bishop Pearson on the Creed; and a Brief Exposition of the Thirty-nine Articles, chiefly from Bishop Burnet; together with other miscellaneous matters connected with Jewish Rites and Customs, &c. &c. Of which College, Cambridge; Doctor of Theology, Perpetual Curate of Sarnborough, and Head Master of Horncastle Grammar School. Printed for C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

AN ESSAY, showing the intimate Connection between our Notions of Moral Good and Evil, and our Conceptions of the Freedom of the Divine and Human Will. By ROBERT BLAKLEY. Adam Black, Edinburgh; and Longman, Rees, Orme, Brown, and Green, London. Price 10s. 6d. Vols. V. VI. and VII. completing Molineux's **THE FAMILY LIBRARY of FRENCH CLASSICS.** The fine paper is reprinting, and will be ready shortly. Printed for Treuttel, Würtz, and Co. 29, Soho Square.

THE CHRISTIAN EXPOSITOR; or, a Practical Guide to the Reading of the New Testament. Intended for the Use of general Readers. By the Rev. GEORGE HOLDEN, M.A. "Though many Expositions of the Bible of great and deserved celebrity exist in our language, a Commentary sufficiently short to be read by those who have not leisure to consult learned works, yet sufficiently comprehensive to serve as a guide to the study of the Sacred Scriptures, appears to be still wanting. To supply this deficiency is the design of the present work, in which it has been the aim and study of the author to embrace, in a condensed form, such information as will enable the general reader to ascertain the real meaning of the inspired writers."—*Præf.* Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

In 8vo. with Plates, price 10s. boards, dedicated, by permission, to His Majesty, **LECTURES on the ELEMENTS of MISROLYPHICS and EGYPTIAN ANTIQUITIES.** By the MARQUESS SPINETO. Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall; and sold by Deighton, and Stevenson, Cambridge; and Parker, Oxford.

Mr. Roe's New Volume of Sermons. In 8vo. price 7s. 6d. **EIGHT SERMONS,** preached before the University of Cambridge, at Great St. Mary's, in 1831. To which is added, a Report of a Sermon, preached before the University on Commencement Sunday, 1832. By HUGH JAMES ROBE, D.D. Christian Advocate, and Dean of Beoking. Cambridge: Printed for J. J. Deighton; and C., J., G., and F. Rivington, London. Of whom may be had, by the same Author, 1. **Christianity always Progressive;** being the Christian Advocate's Publication for the Year 1830. In 8vo. 8s. 6d. 2. **Brief Remarks on the Dispositions towards Christianity,** generated by prevailing Opinions and Fanciful; being the Christian Advocate's Publication for the Year 1830. 8vo. 3s. 6d. 3. **The State of Protestantism in Germany** described; being the Substance of Forty Discourses preached before the University of Cambridge, in 1825. The 3d edition, enlarged, with an Appendix. 8vo. 14s. 4. **A Letter to the Lord Bishop of London,** in reply to Mr. Pusey's Work on the Causes of Rationalism in Germany, comprising some Observations on Confessions of Faith and their Advantages. 8vo. 7s. 6d.

8vo. price 4s. 6d. **THE RELIGION of SOCRATES,** dedicated to Sceptics and Sceptic-makers. Printed for B. Fellows, Ludgate Street. Of whom may be had, by the same Author, **Essays on the Lives of Cowper, Newton, and Hobbes.** "The judicious and elegant Essays on the religion of three celebrated individuals, as appropriately distinguished under the description of the depository of Cowper, the enthusiasm of Newton, and the religion of Hobbes."—*Edinburgh Review*, Jan. 1831.

In 8vo. price 12s. 10s. boards. **SCRIPTURAL NARRATIVES of those PASSAGES in OUR BLESSED LORD'S LIFE and MINISTRY, which are SUBJECTS of ANNUAL COMMEMORATION in the CHURCH;** preceded by Preliminary Notices of the Days on which they are commemorated, and followed by Reflections and Collects: adapted to the Greater Holydays of the United Church of England and Ireland; and designed, together with Biographical Notices of the Apostles, Evangelists, and other Saints, to form a Course of Reading on all the Holydays of the Church. By RICHARD MANT, D.D. M.R.I.A. Bishop of Down and Connor. Oxford: Printed for J. Parker, J. G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, London.

Of whom may be had, by the same Author, **Biographical Notices of the Apostles, Evangelists, and other Saints;** with Reflections and Collects: adapted to the Minor Festivals of the United Church of England and Ireland. 8vo. 2s.

In 8vo. price 4s. boards. **HOURS of DEVOTION,** for the Promotion of True Christianity and Family Worship. Translated from the original German. By the Rev. E. A. BURROW, D.D. F.R.S. and F.L.S. Printed for C., J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Of whom may be had, by the same Author, **A Summary of Christian Faith and Practice,** confirmed by References to the Text of Holy Scripture, compared with the Liturgy, Articles, and Homilies, of the Church of England; and illustrated by Extracts from the chief of those Works which received the Sanction of Public Authority, from the time of the Reformation to the final Revision of the Established Formularies. In 8 large vols. 12mo. 17s. 1s.

With Notes and Illustrations; the whole intended to furnish a correct and complete View of the Theological System of Popyery.
 By J. M. CRAMP.
 London: Holdsworth and Hall, 18, St. Paul's Churchyard; Waugh and Innes, Edinburgh; and W. Curry, Jun. and Co. Dublin.

In 8vo. price 6s. boards.
AN OUTLINE OF SEMATOLOGY; or, Essay towards establishing a new Theory of Grammar, Logic, and Rhetoric.
 "In this work the Author explains, for the first time, the nature of the relation which exists between thought and language—a subject which has been left in a very imperfect state by Stewart, Tooke, and other writers on metaphysics and philology. He proposes to explain the operations of the mind by Sematology, or the Science of Signs, and thus to explode the doctrine of Ideology by Locke. By this theory also the author detects the vicious peculiarity of the syllabus called Aristotelian.
 London: Printed for John Richardson, Royal Exchange; and sold by all other Booksellers in Town and Country.

The most complete and extensive Interest Tables at Five per cent extant.
 The 8th edition, carefully revised, in 1 thick vol. 8vo. price One Guinea; or, may be ordered separate, Part I. from One to One Hundred Days, and One Month up to Twelve, 7s. 6d.

 "If you desire your son, though no great scholar, to read and reflect, it is your duty to place into his hands the best translations of the best classical authors."—*Dr. Parr.*
 Printed and published by A. J. Valpy, M.A. Red Lion Court; and sold by all Booksellers.

1st of June, 3s. 6d.
EPITOME of ENGLISH LITERATURE; or, a Concentration of the matter of standard English Authors, on a Plan entirely new; with Portraits, Memo-graphical Sketches, &c.
 Vol. III. containing Locke on the Human Understanding.
 Vol. IV. will commence Clarendon's History of the Rebellion, to be condensed into about one-third, and forming three or four volumes, printed like Scott's Novels. With many Engravings.
 "The only existing edition of Clarendon is in 3 vols. 8vo. price 3l. 12s."

The object of this undertaking is to publish, in monthly vol. in a concentrated form, a Series of Standard English Authors. In history no facts, and in philosophy no reasoning, will be omitted or distorted, so as to render a reference to the original author needless; and thus the youth, especially of such ages as become perfectly acquainted with authors republished from their bulk alone, at a comparatively little cost of time as well as price. "Were all books reduced to their quintessence, many a bulky author would make his appearance in a pamphlet; there would be scarce such a thing as a folio, and the works of an age would be contained on few shelves."
 "The pruning hand of an editor is to go over the historical and philosophical volumes, and the rising generation are to have all the old lumbering quartos and octaves compressed into duodecimo, and to become masters of philosophy, with a comparative trifling of time, labour, and money. So be it! we only regret that we were born a generation too soon. The present specimen certainly speaks well for the work, and, with its portrait and very excellent biographical sketch, will be welcome to many a freshman, either in or out of the University."—*Albion, No. 18.*
 The series will be confined to the popular productions of writers in prose, and the following will be first selected:—Barnet, Clarendon, Gibbon, Hume, Robertson, Bacon, Addison, Goldsmith, Johnson, Milton, Swift, &c.
 The first two vols. contain Valpy's Moral Philosophy, Evidence of Christianity, and part of Locke, with a Portrait of each Author.
 Edited and printed under the superintendence of A. J. Valpy, M.A. Red Lion Court; and sold by all Booksellers in Town and Country, of whose Prospectuses may be had.

Haght's Digest, No. XIII.
 1st June, 7s. 6d.
SELECT WORKS of JEREMY TAYLOR.
 Vol. I. with a Life of the Author, Summary to each Discourse, Notes, &c. Continued monthly.
 Numbers I. to V. contain the only complete edition of Sherlock's Works.
 "Sherlock was one of those champions who could challenge like Goliath, and conquer like David. No better service could be rendered to the Christian world, than the republication of his admirable writings."—*Gentleman's Magazine.*
 Numbers VI. to XII. the complete Works of Dr. Barrow.
 "It was the advice of Lord Chatam to his illustrious son, to study the works of Barrow deeply and frequently; and it was the remark of the celebrated Bishop Warburton, that in reading Barrow he was obliged to think."
 Printed and published by A. J. Valpy, M.A. Red Lion Court, Fleet Street; and sold by all Booksellers.
 Any Author may be had separately.

Cavalier Games.
LA BELLE ASSEMBLEE for June will
 be embellished with a Portrait of the Right Hon. General Gower, from the celebrated Painting by Sir Thomas Lawrence, splendidly engraved on Steel, by Dean. Also, a View of the Cemetery at Liverpool, shewing Mr. Huskinson's Graves, &c.; and Two Plates of Fashions, exhibiting the latest London and Parisian Costume coloured, and accompanied by appropriate Devotions, with the usual quantity of interesting Literature. Price 3s. 6d.
 Published by Whittaker and Co. London.

In a few days, in 3 vols. post 8vo.
ARTHUR OF BRITANNY.
 By the same Author.
The Templars. In 3 vols. post 8vo. 37s.
 "The story is not only invested with interest, but with deep pathos, presenting a brilliant proof of executive power."—*Monthly Magazine.*
 "A work which, though essentially unlike in many particulars, and claiming for itself a distinct pretension to originality both in its conception and execution, resembles no more than any book we ever read of that admirable novel 'The Spy.'"
 Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

LONDON: Published every Saturday, by W. A. SCRIPPS, at the LITERARY GAZETTE OFFICE, 7, Wellington Street, Waterloo Bridge, Strand, and 13, South Molton Street, Oxford Street; sold also by J. Chappell, 98, Royal Exchange; E. Marlborough, Ave Maria Lane, Ludgate Hill; A. Black, Edinburgh; Smith and Kay, D. Robertson, and Atkinson & Co. Glasgow; and J. Cusack, Dublin.—Agents for America, O. Journal of Belles Lettres, Arts, Sciences, &c.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire its immediate transmission, by post, we recommend the LITERARY GAZETTE printed on stamped paper, price One Shilling.

No. 750.

SATURDAY, JUNE 4, 1831.

PRICE 8d.

REVIEW OF NEW BOOKS.

The Precepts of Jesus the Guide to Peace and Happiness, &c.; to which are added, the First, Second, and Final Appeal to the Christian Public, in Reply to the Observations of Dr. Marshman, of Serampore. By Rammohun Roy. Printed at Calcutta. Reprinted in London, and forming Vol. VIII. of Unitarian Tracts.

This volume is quite out of print.

Its remarkable author is now in London, engaged on high political, moral, and useful objects, which are likely to have much influence on the future condition of our vast Indian empire. He is himself, consequently, a person of great public interest, and in communication with many of the leading characters of the age.

The visit of a Brahmin, of a superior caste, to England, is itself a rare, almost a unique occurrence; and when we find that he is also a profound scholar—that he is a convert to Protestantism—that he has written and published an account of his proselytism, stated and maintained his opinions, and is directing his views with great activity and force to their diffusion over the Hindu and Mahometan world;—it must, we think, be acknowledged, that, without breaking through our rule of taking no part in religious controversy, we are rendering an acceptable service to readers, to the country at large, to literature, and to true religion, in bringing forward an historical notice of this distinguished individual and his works.

In order to do so more strikingly, we have caused his portrait, and a fac-simile of his handwriting, to be copied for this paper. Having had the pleasure of being introduced to, and conversing with him, we can also vouch for his general acquaintance with the best class of English learning, and the facility with which he expresses himself in our language. His countenance is dark; the eye, as in most Asiatics, very fine; his notions of many subjects, to a European understanding in particular, singularly new and interesting.

Rammohun Roy, like Joanna Baillie, is a Unitarian, but differing on one essential point from the doctrines of that sect.† He "was born about the year 1780, at Bordouan, in the province of Bengal. The first elements of his education he received under his paternal roof, where he also acquired a knowledge of the Persian language. He was afterwards sent to

Patna to learn Arabic; and here, through the medium of Arabic translations of Aristotle and Euclid, he studied logic and the mathematics. When he had completed these studies he went to Calcutta, to learn Sanscrit, the sacred language of the Hindoo Scriptures; the knowledge of which was indispensable [not entirely—Ed. L. G.] to his caste and profession as a Brahmin. About the year 1804 or 1805 he became possessed, by the death of his father and of an elder and younger brother, of the whole of the family property, which is understood to have been very considerable. He now quitted Bordouan, and fixed his residence at Moursheadabad, where his ancestors had chiefly lived. Shortly after his settlement at this place he commenced his literary career, by the publication of a work in the Persian language, with a preface in Arabic, which he intitled, 'Against the Idolatry of all Religions.' The freedom with which he animadverted on their respective systems gave great umbrage both to the Mahomedans and the Hindoos, and created him so many enemies, that he found it necessary to remove to Calcutta, where he again took up his residence in the year 1814. Two years previously to this period, he had begun to study the English language; but he did not then apply to it with much ardour or success. Being some years subsequently appointed Dewan, or chief native officer in the collection of the revenues, and the duties of his office affording him frequent opportunities of mixing with English society, and of reading English documents, he applied to it with increased attention, and very soon qualified himself to speak and write it with considerable facility, correctness, and elegance. He afterwards studied the Latin, Greek, and Hebrew languages; of his proficiency in the two last of these he has given very decisive evidence in the tracts which are here published. From his first work, 'Against the Idolatry of all Nations,' it is evident that he had been led at an early period of life to regard with disapprobation the monstrous and debasing system of idolatry which was embraced by his countrymen. A careful study of the sacred writings of the Hindoos had also convinced him that the prevailing notions respecting the multiplicity of deities, and the superstitious devotion to the licentious and inhuman customs connected with them, were grounded upon an utter ignorance or gross perversion of their religion. These original records appeared to him to inculcate a system of pure theism, which maintained the existence of one sole God, infinite in his perfections, and eternal in his duration; and that it required from its professors a mental rather than a corporeal worship, accompanied by strict and exemplary virtue. Having embraced these views of the Hindoo theology and morals, he became anxious to reform the creed and practice of his countrymen, and determined to devote his talents and his fortune to this important and honourable undertaking."

Thus says the preface; and it goes on to mention his publications touching the *Veda*, which

comprise the body of Hindoo theology; but the consideration of which does not come within the scope of this article. Deeply impressed with the conviction, that his countrymen were capable of better things than idolatry, accompanied by self-destruction and the immolation of their nearest relations, he produced, as he tells us, genuine translations of such parts of the Scriptures as inculcate not only the enlightened worship of one God, but the purest principles of morality, together with notices addressed against the arguments of Brahmins in defence of their system. These are extracted from the books of the New Testament, ascribed to the four Evangelists, and make the first publication above enumerated; the succeeding appeals being answers to the strictures which they first provoked from the pen of Dr. Marshman.

It appears that the doctrine of the Trinity is deemed by Rammohun Roy to be a species of polytheism, not "quite as objectionable" as the Unitarian writer of the preface, page xiii., states, "as the polytheism of the Hindoos"—but still, though much purified, not only objectionable, but calculated to prevent the adoption of what he considered to be a better Christian faith by the natives of Hindostan.

In his introduction to "the Precepts," Rammohun Roy gives the following reasons for confining himself chiefly to the moral precepts of the Evangelists.

"Voluminous works, written by learned men of particular sects, for the purpose of establishing the truth, consistency, rationality; and priority of their own peculiar doctrines, contain such a variety of arguments, that I cannot hope to be able to adduce here any new reasonings of sufficient novelty and force to attract the notice of my readers. Besides, in matters of religion particularly, men in general, through prejudice and partiality to the opinions which they once form, pay little or no attention to opposite sentiments (however reasonable they may be), and often turn a deaf ear to what is most consistent with the laws of nature, and conformable to the dictates of human reason and divine revelation. At the same time, to those who are not biassed by prejudice, and who are, by the grace of God, open to conviction, a simple enumeration and statement of the respective tenets of different sects may be a sufficient guide to direct their inquiries in ascertaining which of them is the most consistent with the sacred traditions, and most acceptable to common sense. For these reasons I decline entering into any discussion on those points, and confine my attention at present to the task of laying before my fellow-creatures the words of Christ, with a translation from the English into Sungskrit and the language of Bengal. I feel persuaded that by separating from the other matters contained in the New Testament the moral precepts found in that book, these will be more likely to produce the desirable effect of improving the hearts and minds of men of different persuasions and degrees of understanding. For historical and some other

* We profess to not being strictly acquainted with the varieties of sectarian differences, nor their nice limits;—the annotated note, no doubt, sets us right; and we know, from the MS., it is of very high authority. We, of course, insert it with pleasure.—Ed. L. G.

† A constant reader of the *Literary Gazette* requests the Editor to correct a mistake in page 343 of the last Number. Joanna Baillie is not a Unitarian. She expressly disclaims their doctrines (in p. 129 of her Tracts), as at variance with so many plain passages of Scripture, that it cannot be considered as standing on any solid foundation. "She is an Arian of Dr. Clarke's school."

‡ The Unitarians in England hold "the proper humanity of Christ" as one of their fundamental tenets; Rammohun Roy, on the contrary, maintains his "pre-eminence and super-angelic rank and dignity."

passages are liable to the doubts and disputes of free-thinkers and anti-Christians, especially miraculous relations, which are much less wonderful than the fabricated tales handed down to the natives of Asia, and consequently would be apt at best to carry little weight with them. On the contrary, moral doctrines, tending evidently to the maintenance of the peace and harmony of mankind at large, are beyond the reach of metaphysical perversion, and intelligible alike to the learned and to the unlearned. This simple code of religion and morality is so admirably calculated to elevate men's ideas to high and liberal notions of one God, who has equally subjected all living creatures, without distinction of cast, rank, or wealth, to change, disappointment, pain, and death, and has equally admitted all to be partakers of the bountiful mercies which he has lavished over nature, and is also so well fitted to regulate the conduct of the human race in the discharge of their various duties to God, to themselves, and to society, that I cannot but hope the best effects from its promulgation in the present form."

Nearly a hundred pages are devoted to the extracts so introduced; and this pamphlet, as we have observed, attracted the attention, and challenged the animadversions, of Dr. Marshman, in a periodical called the *Friend of India*. To these Rammohun replied; and we ought here to observe, that, not having Dr. M.'s remarks before us, but only such passages as are quoted by his adversary for the purpose of refutation, our notice must of necessity be *ex parte*; though it is but fair at the same time to acknowledge, that we never in any controversy met with more evident signs of a spirit imbued with a love of truth for the sake of truth, or altogether more liberal and candid, than in the learned orientalists in question. The Christian Dr. M. manfully upholds the Trinitarian faith, and contends that Rammohun Roy's system of morals would be most inefficient in teaching men either their duties to their fellow-creatures, or to their Creator: the Hindoo convert, on the other hand, is all for good works, and denies that faith in what is incomprehensible is necessary. "What," he argues, "are those sayings, the obedience to which is so absolutely commanded as indispensable and all-sufficient to those who desire to inherit eternal life? They are no other than the blessed and benign moral doctrines taught in the sermon on the mount (contained in the 5th, 6th, and 7th chapters of Matthew), which include, therefore, every duty of man, and all that is necessary to salvation; and they expressly exclude mere profession or belief, from those circumstances which God graciously admits as giving a title to eternal happiness. Neither in this, nor in any other part of the New Testament, can we find a commandment similarly enjoining a knowledge of any of the mysteries or historical relations contained in those books. It is, besides, plainly stated, that but a very small portion of the works of Jesus have been handed down to us by the Evangelists. John says, at the conclusion of his gospel, ch. xxi. ver. 25, 'There are also many other things which Jesus did, the which if they should be written every one, I suppose the world itself could not contain the books that should be written.' On the other hand, we cannot doubt that the whole spirit of his doctrines has been faithfully and fully recorded. The reason of this appears obvious:—miracles must have had a powerful effect on the minds of those who witnessed them, and who, without some such evidence, were disposed to ques-

tion the authority of the teacher of those doctrines. John, ch. xv. ver. 23: 'The works that I do in my Father's name, they bear witness of me.' Ver. 37 and 38: 'If I do not the works of my Father, believe me not. But if I do, though ye believe not me, believe the works.' Had his doctrines of themselves made their due impression, the aid of miracles would not have been requisite, nor had recourse to. In this country, the bare report of such miracles could have given no support to the weight of the doctrines; for, as the compiler has stated in his introduction, miracles infinitely more wonderful are related of their gods and saints, on authorities that the Hindoos must deem superior to those of the apostles. We are taught by revelation, as well as education, to ascribe to the Deity the perfection of those attributes which are esteemed excellent amongst mankind. And according to those ideas it must surely appear more consistent with the justice of the Sovereign Ruler, that he should admit to mercy those of his subjects who, acknowledging his authority, have endeavoured to obey his laws, or shewn contrition when they have fallen short of their duty and love, than that he should select for favour those whose claims rest on having acquired particular ideas of his nature, and of the origin of his Son, and of what afflictions that Son may have suffered in behalf of his people. If the reviewer and editor will continue to resist both authority and common sense, I must be content to take leave of them with the following words (Luke, ch. xviii.): 'And he said unto him, If they hear not Moses and the prophets, neither will they be persuaded though one rose from the dead.'"

It is a lamentable thing to think how far the conduct in life of ~~both~~ Trinitarians and Unitarians is from squaring with their professions; how strong a case they put into the mouths of the enemies of all religion, by the contrast between their actions and doctrines! Look around and see the miserable hardness of heart practised by the disciples of a gospel of love; look at the rascality and selfishness of those who make a display of their piety, and pretend to do as they would be done by. What fills our prisons with guilt and wretchedness? what dooms the mass of the lower orders to poverty, suffering, and starvation? in thousands of instances the relentless persecution of Christian creditors, the inhuman indulgences of pampered wealth, which yet scrupulously observes the Sabbath, and subscribes to the creed of charity! It is monstrous; but so common, that mankind have ceased to wonder at it. Is it surprising, then, that a Brahmin should be prone to reject those claimants to a superior faith, whose lives are only the more inconsistent the higher those claims are advanced?

"Besides (he adds, and it is a picture of missionary proceedings which well merits consideration), the compiler (*i.e.* Rammohun Roy), residing in the same spot where European missionary gentlemen and others for a period of upwards of twenty years have been, with a view to promote Christianity, distributing in vain amongst the natives numberless copies of the complete Bible, written in different languages, could not be altogether ignorant of the causes of their disappointment. He, however, never doubted their zeal for the promulgation of Christianity, nor the accuracy of their statement with regard to immense sums of money being annually expended in preparing vast numbers of copies of the Scriptures: but he has seen with regret, that they have com-

pletely counteracted their own benevolent efforts, by introducing all the dogmas and mysteries taught in Christian churches to people by no means prepared to receive them; and that they have been so incautious and inconsiderate in their attempts to enlighten the natives of India, as to address their instructions to them in the same way as if they were reasoning with persons brought up in a Christian country, with those dogmatical notions imbibed from their infancy. The consequence has been, that the natives in general, instead of benefiting by the perusal of the Bible, copies of which they always receive gratuitously, exchange them very often for blank paper, and generally use several of the dogmatical terms in their native language as a mark of slight in an irreverent manner; the mention of which is repugnant to my feelings. Sabat, an eminently learned, but grossly unprincipled Arab, whom our divines supposed that they had converted to Christianity, and whom they of course instructed in all the dogmas and doctrines, wrote a few years ago a treatise in Arabic against those very dogmas, and printed himself and published several hundred copies of this work. And another Moosulman, of the name of Ena'et Ahmud, a man of respectable family, who is still alive, speedily returned to Mohumudaniam from Christianity, pleading that he had not been able to reconcile to his understanding certain dogmas which were imparted to him. It has been owing to their beginning with the introduction of mysterious dogmas, and of relations that at first sight appear incredible, that, notwithstanding every exertion on the part of our divines, I am not aware that we can find a single respectable Moosulman or Hindoo, who were not in want of the common comforts of life, once glorified with the truth of Christianity, constantly adhering to it. Of the few hundred natives who have been nominally converted to Christianity, and who have been generally of the most ignorant class, there is ground to suspect that the greater number have been allured to change their faith by other attractions than by a conviction of the truth and reasonableness of those dogmas; as we find nearly all of them are employed or sed by their spiritual teachers, and in case of neglect are apt to manifest a rebellious spirit;—a circumstance which is well known to the compiler from several local facts, as well as from the following occurrence:—About three years ago, the compiler, on his visit to an English gentleman, who is still residing in the vicinity of Calcutta, saw a great number of Christian converts with a petition, which they intended to present to the highest ecclesiastical authority, stating, that their teachers, through false promises of advancement, had induced them to give up their ancient religion. The compiler felt indignant at their presumption, and suggested to the gentleman, as a friend, the propriety of not countenancing a set of men, who, from their own declaration, seemed so unprincipled. The missionaries themselves are as well aware as the compiler, that those very dogmas are the points which the people always select as the most proper for attack, both in their oral and written controversies with Christian teachers; all of which, if required, the compiler is prepared to prove by the most unquestionable testimony. Under these circumstances, the compiler published such sayings of Christ as he thought intelligible to all, conveying conviction with them, and best calculated to lead mankind to universal love and harmony; not dwelling upon those matters, an observance of which is not absolutely or-

dained, and the interpretations of which, instead of introducing peace and happiness, have generally given rise to disputes and controversies."

We must again explicitly guard ourselves against being supposed to espouse any side in the argument we are illustrating: *first*, we could not do so fairly, as we have only one of the reasoners before us; *secondly*, there are, no doubt, far more competent men to reply to him among the learned and pious of our church, than any answer to which his opinions have yet been exposed; and, *thirdly*, we are ourselves utterly incompetent to the task. Nor, we trust, shall we be called a partisan, because we have lent our widely diffused Journal to disseminate the knowledge of this controversy; the subject is of the deepest importance; and, as the author is revising his works for publication in London, they must immediately demand the anxious vindication of our church from some of its brightest ornaments.

That the omnipresent God, who is the only proper object of religious veneration, is one and undivided in person, is too ably maintained by Rammohun Roy to admit of any possibility but that his tenets will create a very great sensation in the Christian world; it is on this ground that we humbly pioneer the way, and lay before it his leading principles. We shall now, therefore, conclude with a few extracts, merely indicating what they are. The following throws (at least, to us) a new light upon the religion of Mahomet:—

Dr. M. had asked—"Did Mohummud, arrogant as he was, ever make such a declaration as Jesus did—namely, that 'I am with you always, even to the end of the world?' I will not (replies his opponent) renew the subject, as it has been already discussed in examining the first position. I only intreat the attention of the editor to the following assertions of Mohummud, known to almost all Moosulmans who have the least knowledge of

doctrines of Monotheism taught by Mohummud, and entertained by his followers, have not been corrupted by polytheistical notions of Pagans, nor have heathen modes of worship or festivals been introduced among Moosulmans of Arabia and Turkey as a part of their religion. Besides, metaphorical expressions having been very common among oriental nations, Mohummudans could not fail to understand them in their proper sense, although these expressions may throw great difficulty in the way of an European commentator even of profound learning."

The reasoning upon miracles is interesting, as expounding several Hindoo articles of belief.

"As this discussion (says the writer) applies to the evidence of miracles generally, it may be worth considering. Arguments adduced by the editor amount to this: 'If all social, political, mercantile, and judicial transactions be allowed to rest upon testimony; why should not the validity of Christian miracles be concluded from the testimony of the apostles and of others, and be relied upon by all the nations of the world?' The editor must be well aware that the enemies to revelation draw a line of distinction on the subject of proofs by testimony, between the current events of nature familiar to the senses of mankind, and within the scope of human exertions; and extraordinary facts beyond the limits of common experience, and ascribed to a direct interposition of Divine power suspending the usual course of nature. If all assertions were to be indiscriminately admitted as facts, merely because they are testified by numbers, how can we dispute the truth of those miracles which are said to have been performed by persons esteemed holy amongst natives of this country? The compiler has never placed the miracles related in the New Testament on a footing with the extravagant tales of his countrymen, but distinctly expressed his persuasion that they (Christian miracles) would be apt at best to carry little weight with those whose imaginations had been accustomed to dwell on narrations much more wonderful, and supported by testimony which they have been taught to regard with a reverence that they cannot be expected all at once to bestow on the apostles. The very same line of argument, indeed, pursued by the editor would equally avail the Hindoos. Have they not accounts and records handed down to them relating to the wonderful miracles stated to have been performed by their saints, such as Ugustyu, Vushistu, and Gotum; and their gods incarnate, such as Ram, Kriahnu, and Nursingh; in presence of their contemporary friends and enemies, the wise and the ignorant, the select and the multitude? Could not the Hindoos quote in support of their narrated miracles, authorities from the histories of their most inveterate enemies the Jeins, who join the Hindoos entirely in acknowledging the truth and credibility of their miraculous accounts? The only difference which subsists between these two parties on this subject is, that the Hindoos consider the power of performing miracles given to their gods and saints by the supreme Deity, and the Jeins declare that they performed all those astonishing works by *Asoree Shukti*, or by demoniac power. Moosulmahs, on the other hand, can produce records written and testified by contemporaries of Mohummud, both friends and enemies, who are represented as eye-witnesses of the miracles ascribed to him; such as his dividing the moon into two parts, and walking in sunshine without casting a shadow. They can assert, too, that several of those wit-

nesses suffered the greatest calamities, and some even death, in defence of that religion; some before the attempts of Mohummud at conquest, others after his commencing such attempts, and others after his death. On mature consideration of all those circumstances, the compiler hopes he may be allowed to remain still of opinion, that the miraculous relations found in the divine writings would be apt at best to carry little weight with them, when imparted to the Hindoos at large in the present state of their minds: but as no other religion can produce any thing that may stand in competition with the precepts of Jesus, much less that can be pretended to be superior to them, the compiler deemed it incumbent upon him to introduce these among his countrymen as a guide to peace and happiness."

On the mystical and sacred doctrine of the Trinity itself, we must, of our exposition would be most incomplete, quote what the author adduces.

"I have now noticed all the arguments founded on Scripture that I have heard of as advanced in support of the doctrine of the Trinity, except such as appeared to me so futile as to be unworthy of remark; and in the course of my examination have plainly stated the grounds on which I conceive them to be inadmissible. Perhaps my opinions may subject me to the severe censure of those who dissent from me, and some will be ready to discover particular motives for my presuming to differ from the great majority of Christian teachers of the present day in my view of Christianity, with the doctrines of which I have become but recently acquainted. Personal interest can hardly be alleged as likely to have actuated me, and therefore the love of distinction or notoriety may perhaps be resorted to, to account for conduct which they wish it to be believed honest conviction could never direct. In reply to such an accusation, I can only protest in the most solemn manner, that even in the belief that I have been successful in combating the doctrine of Trinitarians, I cannot assume to myself the smallest merit; for what credit can be gained in proving that one is not three, and that the same being cannot be at once man and God; or in opposing those who maintain that all who do not admit doctrines so incomprehensible must be therefore subjected by the All-merciful to eternal punishment? It is too true to be denied, that we are led by the force of the senses to believe many things that we cannot fully understand. But where the evidence of sense does not compel us, how can we believe what is not only beyond our comprehension, but contrary to it and to the common course of nature, and directly against revelation; which declares positively the unity of God, as well as his incomprehensibility; but no where ascribes to him any number of persons, or any portion of magnitude? Job, xxxvi. 26, 'Behold God is great, and we know him not.' Ch. xxxvii. 23, 'Touching the Almighty, we cannot find him out.' Psalm cxlv. 3, 'His greatness is unsearchable.' Neither are my attempts owing to a strong hope of removing early impressions from the breasts of those whose education instilled certain ideas into their minds from the moment they became capable of receiving them; for notwithstanding great and long-continued exertions on my part to do away Hindoo polytheism, though palpably gross and absurd, my success has been very partial. This experience, therefore, it may be suggested, ought to have been sufficient to discourage me from any other attempt of the kind; but it is my reverence for Christianity, and for the Au-

their own religion: *ان الله عز وجل بعثني* "Truly the great and glorious God raised me as *mercy and guidance to worlds.*" *كنت اول النبيين* "I was the first of all prophets in creation, and the last in appearance." *كنت نبيا وادم في ادماء* "I was a prophet when Adam was in earth and water." *انا سيد المرسلين ولا* "I am the Lord of those that were sent by God. This is no boast to me." *انما ظلي علي روس امتي* "My shadow is on the head only of my followers." *فقد را الله* "He who has seen me has seen God." *من اطاعني فقد اطاع الله ومن* "He who has obeyed me, has obeyed God; and he who has sinned against me, has sinned against God." It is, however, fortunate for Moosulmans, that, from want of intimate familiarity and intimate connexion between the primitive Mohummudans and their contemporary heathens, the

thor of this religion, that has induced me to endeavour to vindicate it from the charge of polytheism as far as my limited capacity and knowledge extend. It is indeed mortifying to my feelings to find a religion that from its sublime doctrines and pure morality should be respected above all other systems, reduced almost to a level with Hindoo theology, merely by human creeds and prejudices; and from this cause brought to a comparison with the paganism of ancient Greece; which, while it included a plurality of gods, yet maintained that *Θεὸς ἑστὶς ἓς*, or 'God is one,' and that their numerous divine persons were all comprehended in that one Deity."

In conclusion, he says:—

"Lastly, I tender my humble thanks for the editor's kind suggestion in inviting me to adopt the doctrine of the Holy Trinity; but I am sorry to find that I am unable to benefit by this advice. After I have long relinquished every idea of a plurality of gods, or of the persons of the Godhead, taught under different systems of modern Hindooism, I cannot conscientiously and consistently embrace one of a similar nature, though greatly refined by the religious reformations of modern times; since whatever arguments can be adduced against a plurality of gods, strike with equal force against the doctrine of a plurality of persons of the Godhead; and, on the other hand, whatever excuse may be pleaded in favour of a plurality of persons of the Deity, can be offered with equal propriety in defence of polytheism. I now conclude my Essay by offering up thanks to the Supreme Disposer of the events of this universe, for having unexpectedly delivered this country from the long-continued tyranny of its former rulers, and placed it under the government of the English;—a nation who not only are blessed with the enjoyment of civil and political liberty, but also interest themselves in promoting liberty and social happiness, as well as free inquiry into literary and religious subjects, among those nations to which their influence extends."

As we have offered no opinions, so neither do we add any comment. Considering this matter to be of vital importance to Christianity and to millions of our fellow-creatures, we have fulfilled our duty by bringing it barely, and on its own (general, not being able to enter upon its particular) grounds, before the public.

Satires, and the Beggar's Coin; a Poem. By J. R. Best, Esq. author of "Transalpine Memoirs," "Cuma," "Transrhene Memoirs," &c. 12mo. pp. 174. London, 1831. Hurst, Chance, and Co.

Cuma. By the same. 8vo. pp. 261. London. Longman and Co.

THE *Beggar's Coin* is the very coinage of a busy brain—this book, a rambling medley of talent and want of method and judgment. Mr. Best is a man of impulses—an irregular genius. He writes English verses and French verses; poetry after the manner of Scott, heroic and pathetic, and humorous and satirical, and would-be humorous and satirical compositions. He is at all in the ring, and, having seen and observed a great deal, he is often amusing; though, as a whole, his efforts want the stamp of superior excellence which alone can bear such productions now-a-days beyond the dull and sinking ordeal of public apathy.

Cuma is flanked by two maps, like a volume of travels. At the beginning, the Bay of Naples, as if the bard was at any rate determined to secure the bays; and at the end, a chart of Tartarea Regna, with Avernus, Lethe, &c. as

if he did not care a jot whether he were dead or not. Of the poems between we say nothing, for the book has been published two years, but reserve the small space we can spare to the later volume. Of the first poem we shall give only one stanza: it occurs in the description of a death-chamber in Switzerland, where a female traveller has lost her companion.

"The blast sighs round her, and the pale moon creeps
Athwart the glass; its beams all mildly fall
On the rude couch where all she cherished sleeps.
Shall she exclude those beams from her sad hall?
'No! let them play o'er him,' she says and weeps;
'For they appear to rest upon his pall
As their sweet silence pitied me.' She wept;
And, on his cold breast sinking, calmly slept."

This is enough to shew the style, and is a good specimen of the feeling of the poem, from which we also select a close translation of an ancient Venetian barcarol, which Moore has partially rendered among his National Melodies.

"Venetian Moonlight."

O, speed thee, Ninetta,
The night is so fair,
In our boat let us hasten
To quaff the cool air;
For oh! it is soothing
Along the bright sea
All silvered with moonbeams
To float silently.
How blissful the soft hour!
The moonbeams how bright!
Oh! smiling Laguna,
I'm mad with delight!
Come, come, my sweet Nina,
I'll glide let us glide,
And meet the cool breezes
That sigh o'er the tide!"

From "Modern Poetry, a Satire," we venture to quote a diatribe against "sentiment."

"By heavens! it almost makes one faint to see
This billious power enthroned a deity!
Turn where you will, peruse what page you please,
Converse, walk, dance, nay, eat your bread and cheese—
Whate'er you do, that hateful, sickly word,
That drawl of 'sentiment' is ever heard,
And ever by the jaundiced crowd adored.
Each lyric bard sheds sentimental tears;
Each youth a sentimental aspect wears;
Each poet sings of love and discontent,
And fancied griefs and sickly sentiment.
'Tis the one cant that drowns all other cant;
And every beautiful miss can now decant
Upon its precious qualities, and tell
All—all.... But no, she feels it all too well!"

Mr. Best is equally indignant against female authors: he seems to think petticoats and poetry incompatible, and we will not contest so delicate a point. We rather take, for its novelty, a verse or two of a steam-boat melody—a parody on the Bay of Biscay O!

"See, see my noble steamer
Cut up the turpise sea,
Though Althorpe would esteem her
Too lovely to run free.
But all mankind will own
The steam-boat reigns alone—
Ocean maid
Queen Adelaide—
Untaxed, untrammell'd, undismay'd!
Oh! who would rank above her,
That lazy-sailing ship?
The winds refuse to move her
While o'er the wave we trip.
On duteous billows borne,
The useless gale we scorn:
The sailor's craft
Rolls far afloat,
Nor pitying breeze will onward waft.
* * * * *
And when mischances greet us,
As e'en mischances may,
The fishes never eat us
Like common sailors' clay.
If boilers burst, to heaven
The son of steam is driven.
To the sky
Up we fly
With caldron, fire, and smoke on high!"

Another song of the same kind, to a Venetian air.

"Oh! come with me when day-light sets,
Sweet! then come with me,
When smoothly go our steam-packets
O'er the twilight sea."

When steam extends its radiant spokes
Amid the glancing spray,
And high above the chimney smokes,
And steals the stars away.

Oh then! the hour for those that love,
Sweet! like thee and me,
When all's so calm below, above,
In heaven, and o'er the sea.
When fires beneath are piled with coals,
And clouds o'erhang the main,
And all with noes, eyes, and souls,
Should love the fragrance then."

Our author, indeed, is an adept at parodies; witness verse one on "I'd be a butterfly."

"I'd be a dormouse, wrapped up in cotton,
Whose every thread close around me should nest,
Sleeping for ever, the larid forgotten,
Dreaming of summer, and sunshine, and heat.
I'd never languish for cheese sound or rotten,
I'd never sigh to make use of my feet.
But I'd be a dormouse wrapped up in cotton,
Dreaming of summer, and sunshine, and heat."

But we have now done our best for Mr. Best, and conclude with only one other example of his talent.

"Thekla's Song."

"The oak-wood quivers, the clouds drive o'er,
The maiden wanders beside the green shore;
The billows dash on it with mighty sound,
And, singing aloud to the gloom around,
Her eyes mid their tears wildly roved.

Her heart is all shattered, the world is drear,
And life presents nought to hope or fear.
'Thou Holy One! call thy child from below,
I have known all the bliss the earth can bestow—
I have lived, and oh! I have loved.'

Tears speed on their current all fruitless and vain,
No mourning can waken the dead up again!
But ask what may solace and strengthen thy breast,
When the sweet love is gone that made thee so blest,
It will not be denied thee above.

Let tears speed on their current all fruitless and vain,
Though no mourning can waken the dead up again!
The sweetest of joys to the sorrowing breast,
When the dear love is gone that made it so blest,
Are the griefs and the plaints of love."

Journal of a Residence in Germany; written during a Professional Attendance on their Royal Highnesses the Duke and Duchess of Clarence (their Most Gracious Majesties), during their Visits to the Courts of that Country, in 1822, 1825, and 1826. By William Beattie, M.D. 2 vols. 8vo. London, 1831. Longman and Co.

EVERY now and then a book seems to be published expressly to shew how much folly can be put into print. Grandiloquent in style, deficient in material, coarse in flattery, and utterly contemptible in their catchpenny spirit, Dr. Beattie's two volumes are about as wretched compilations as we remember to have met with in the course of our literary experience. But before we proceed to illustrate our assertions by specimens of the rapid inanities of the pages now before us, we must enter our protest against the execrable taste (even if it had been done with all possible grace and talent) of thus parading illustrious and royal names; and also ask, if the work, which relates occurrences as far back as 1826, were worth the publishing, why was it not given to the public before, instead of waiting for the present spring-tide of royal popularity? We have too high a respect for the illustrious personages whose names adorn the title-page before us, not to protest against their having any thing in common with pages whose pompous nothings can only be matched by their imbecile conceit. Now for the work itself; it opens like an epic poem. "The tide runs fresh—the wind is favourable. Two distinguished admirals command. The yacht is manned by able and experienced seamen—veterans who have unfurled their sails in every quarter of the globe, and to every wind of heaven." All this for a voyage to Flushing! They land, and then—*"Here every day brings its pleasure or pain."* Query, the difference between the two? The

banks of the Rhine are thus apostrophised :—
 "But all these are no more! The feudal lords are no more! The proud banners that crowned these castled heights are no more! The eleven thousand virgins of Cologne are no more! That illustrious army of heroines, after struggling long and courageously against the insinuations of sin and Satan—the strong current of earthly affections—have rested at last on their oars, and, like the barge on my left, passed smoothly down the stream of time into the haven of eternity." They arrived at Altenstein; and the following information is, to be sure, very important :—

"The urbanity of the court—the rational conversation of the officers—the interesting faces and unaffected manners of the ladies—the language, the voices, the uniforms—the civil and military decorations—several points of etiquette—the music—the mixed military and classic air which pervades the whole—all are new, and not more new than pleasing. * * * During the eight days' journey to this country, his royal highness has not dined more than twice. He breakfasted in the morning at seven, upon tea and a simple slice of dry toast—Spartan fare, in abstinence at least, if not in substance. A slight luncheon, consisting of cold fowl, Westphalia ham, veal, or gibier—the latter a favourite viand—was prepared, and put into a small basket in the chariot. One or more of these, with bread, formed the staple banquet of the day, and were resorted to at pleasure. At night, on arriving at the inn, his royal highness took tea—and only green tea."

The style of the following is quite Homeric.

"The postilion continued his career, every moment accelerated by the increasing momentum. It was abundantly evident that Schwager could not obey. He did every thing in his power, but in vain, to check the velocity with which he was proceeding. He had by no means calculated the weight of the carriage. His leaders, as usual, had neither bit nor rein; so that he had no command over them; but, instead of driving, was dragged after them. The danger was at its height. The precipice upon which we were rushing suddenly appeared. The feeling it excited was like that of the boatman who feels himself hurried irresistibly towards the cataract of Rheinfelden. Though momentary, it left an impression of all that is sublime in fear. The leaders touched the parapet: the wheelers, by a momentary and desperate manœuvre, were thrown on their haunches, almost under the body of the carriage. They offered all the resistance which living muscle and wretched harness could oppose in such an emergency. The effort succeeded. The leaders bolted instinctively from the precipice. The carriage reeled for a moment—the wheelers sprang to their legs—the danger was over—but an instance of more imminent danger is of rare occurrence. To his lasting credit, the postilion never once lost his balance, nor his presence of mind, nor—his pipe. He excused himself very readily, by assuring us that there was no danger, not even at the turning."

We proceed to a few more of these very important details.

"Louisburg.—Friday night.—Left Künzelsau this morning at seven o'clock. Between Besigheim and Louisburg, at three leagues distance, the carriage was met by a special messenger from the queen, mounted on a fine charger; livery, bright orange with black facings. He drew himself up in front of the carriage; expressed his royal mistress's wel-

come; then, wheeling round, led the way to the palace, where we arrived at six o'clock.

"Saturday morning.—I am to be presented to the queen this forenoon. To be in the drawing-room at half past twelve. Her majesty dines at one. The court etiquette is to appear in boots; in other respects I am to observe the same ceremony as on a presentation at St. James's. The Comte de Goërlitz, Baron de Germingen, and General de Bunesau, the principal officers of the queen's household, have been in my apartments, and pointed out the amenities of the place."

Sentiment.

"During supper the windows were open, and several bats, invited by the light, entered freely and continued their evolutions during the repast; but as soon as her majesty rose from table, the winged intruders were warned to depart. All obeyed but one: he, as if assured that the royal mistress of the mansion wished every thing under her influence to live and enjoy life, obstinately resisted the voice of authority, and at last, I regret to say, paid the forfeit with his life. '*Pauvre malheureux!*' sighed a beautiful young lady; 'how readily would the royal hand have interposed even in thy behalf, had she suspected the smallest design against thy little summer existence! I heard the crush, as he placed his iron heel upon thy late happy and defenceless breast. I witnessed, and cannot forgive the act! Thy little roost under my window will be empty to-morrow! I shall have one fewer in the evening to welcome me in my forest walk! This brief life was thy immortality—the blow, therefore, doubly cruel!'

'Ah, surely nothing dies but something mourns!'

Conviction at court.

"The ball commenced. The band poured forth its liveliest airs, and set many light hearts and heels in motion. I was not long an attentive and quiet observer, till I found that the waltz had risen several degrees in my estimation. Like some others, *illegible* as myself, I had contracted certain prejudices against this favourite dance, from the spurious imitations of it at home. I now felt that I had done injustice to the original;—opinions and prejudices hastily contracted are often as hastily laid aside;—in example whereof I now confess, that the waltz is the most intellectual of all dances, and most becoming a refined and sentimental people! I assert this with confidence, because my testimony is supported by that of the Baron von Gemmelhausen, with whom, on a subject of such universal interest, I feel truly proud to coincide. The accomplished waltzer has a light, airy motion,—an elasticity of toe,—an ease and elegance combined,—something difficult to express, but what every waltzer feels at the point of his fingers. These must ever accord to the waltz all its peculiar grace and sentiment, and all its title to pre-eminence. Much to the disgrace of those, whose exalted province it is to direct the steps of the rising generation, most of our dances are excessively formal,—made up of studied manœuvres. They inspire nothing,—lead to nothing; there is no feeling—no imagination in them. In short, they appear to have been originally invented and arranged by some grave mathematician in some of his gravest moments;—but the waltz! . . . The ball was kept up with great spirit and determination. Every cheek was glowing—every eye sparkling with delight, and every heart—under the left hand of her partner. Every sylph-like figure,—each worthy of a special ode,—was kept in a perpetual airy whirl, touching the earth so lightly, that

it was labour to the ear to catch the echo of her glimmering feet. In the mean time, choice refreshments continued in cheerful circulation. The air was impregnated from time to time with luxurious odours, such as accompanied Cleopatra in her voyage down the Cydnus. Conversation became more and more animated, and, if I may so express it, more personal. The garlands that hung pendent from the walls, ruffled their leaves as if stirred by the zephyrs of paradise. Every succeeding air seemed sweeter than the last. The lamps and lustres, the more they burned the brighter they burned, and seldom has their light been shed on a more delightful and delighted assembly. Illustrious rank and title presided. Beauty and worth composed the groups, and all mingled in the mazes of the dance."

We doubt whether it be possible to make human suffering more ludicrous than in the following story. Does our would-be facetious doctor remember Pope's line?

"Gentle dulness ever loves a joke."

"The fair petitioner was once happy; happy as a warm heart and ripening hopes could make her; and would have continued so: but love, in evil hour, and in the guise and gait of a French *tambour*, beat a charge upon her heart. She, poor soul, though greatly taken by surprise, made a long and desperate resistance, fully resolved that her little fortress, though all unmaned, should never succumb—at least to a French *tambour*. All this she said to herself, and repeated it again and again. But while she did so, the formidable *tambour* continued also to repeat his charge, rat-tat-too, all at her heart. How it happened she does not remember; but one morning, by some unaccountable oversight, she was thrown off her guard,—and what do you think the *tambour* did? He took advantage of that accident, and reiterated the siege with such precipitation, that at every roll of his drum-sticks her heart quaked, and the fears of womanhood overwhelmed her. It soon became evident that the fortress could not hold out much longer,—that was certain; yet did she neither lose her self-possession nor her ingenuity, as any other would have done. A very clever thought suggested itself—a sudden determination to make her escape! As for surrender,—did any body think for a moment that she would surrender? No; she would sooner throw herself from the window,—a desperate thought under desperate circumstances. But there was no alternative. With the bound of an antelope she leapt, and fell—into the arms of the *tambour*! Now, this was nothing less than a manœuvre of the arch-enemy of womankind. What could be done?—Nothing! Could she help it?—Certainly not! Things had come to the worst. She now felt herself a helpless damsel in the keeping of a dragon—a French *dragon*, too, who, it is well known, is never forward in releasing his prisoner; less so, if English; and least of all, if an English damsel. Well, it could not be very long before there would certainly be a peace and a general exchange of prisoners, and then she would be quite sure of regaining her freedom. This was a very ingenious, comforting thought; so she determined to abide the results of an expected peace. She did so; but when that peace arrived, her peace, poor soul, was gone, *tambour* and all! Her whole surviving stock of this world's prosperity was the miniature of a *tambour*, *en grand appareil*, and another of hardly larger dimensions hanging in her arms—her little all, but all to her! As dear, she declared to me, as if the *one* had died with a marshal's baton in his hand, and the

other had been appointed a little lord of the chamber to the little king of Rome! Every body was struck with her appearance, and deeply affected by her story. None had the heart to reproach her. She looked so piteously in her child's face, and then at the speaker, that one could not in conscience expect her to be sorry for what she had done. Enough of sorrows may be yet in store for her. It was not our province to censure, but to impart, where we could, a little sunshine, a little comfort, and a little encouragement. These were severally communicated. The illustrious travellers made her a liberal donation; the example was followed by others; and, in bestowing this welcome bounty, accompanied with a seasonable maxim, she dropped me a low curtsy, and, modestly shutting her eyes to prevent, no doubt, the escape of tears in the presence of strangers, promised me in pathetic terms *never to do so any more!* then, fondling her little *tambour*, whispered, 'Viens, mon petit, maintenant je saurai t'acheter un beau tambour! Ah, pauvre malheureux! que ton papa savait battre le tambour! Que je me rappelle de ses baguettes!' In less than half an hour they were in front of the Wiedenhof—the young *tambour* and his mamma—the former with an instrument of sound as large as life, and shaped like a half cask of Hocheimer, which ever and anon the little urchin tattooed with a taste and effect which made a powerful impression upon every ear. For my own part I was more affected by the circumstance than the music. I look upon *precocity* of talent in general as a melancholy omen—a thing to excite more apprehension than hope. In the vocabulary of human life, brightness too often implies brevity,—and here was a case in point."

This is at once too good and too bad. We have not space to quote the whole of the non-sense of a scene of Aix-la-Chapelle: we shall only give the introduction.

Aix-la-Chapelle, Saturday.—The case was distressing, the scene such as the eye shrinks from with horror. I may safely assert, that there was not one dry cheek among the bystanders.

"The silent agony of the moment was not relieved by a single expression; the very function of respiration seemed for the time suspended: the expression of a Niobe was nothing to this! As in the natural world the electric flash is often followed by the thunder and the shower, so it happened on the present occasion,—the first electric shock of grief and astonishment was succeeded by tears. These, however, did not flow in silence, but were interrupted by bitter invectives against some person or persons unknown. Despair is often productive of a courage which would astonish those who are well with themselves and the world, and know not what it is to have lost their all. It was far otherwise with the lady who there stood with clasped hands and streaming eyes, like one of those weeping Magdalenes whom it is more dangerous to encounter in sorrow than in smiles. Raphael knew this; but had he ever met with a scene like the present, it had been worth five thousand louis. She had courage such as despair only could inspire."

We beg leave to inform our readers, that all these fine phrases usher in an accident which has happened at the custom-house, where some ink has been spilt over a lady's dresses. Truly the ensuing intelligence is well worth printing!

"7th.—To-day I had the honour of dining at *half-past one* with the duchess dowager, at her villa in the garden. A small domestic circle. Dinner in good *English* taste, roast beef, fried

potatoes, an excellent rice-pudding, &c."

"Friday, 8th.—I had the honour to dine with the duke and duchess at the palace, by special invitation. Dinner at *half-past two*."

"Thursday, 14th.—An interesting forenoon's amusement to-day. The prince invited his royal highness to visit the culinary department, and the wine cellars under the ground floor of the château.

"In a room near the kitchen, we were surprised to find a handsome *déjeuner à la fourchette*. It consisted of a variety of made dishes, comfits, pâtés, côtelettes, with several kinds of wines served during the repast; including a specimen of very old Madeira.

"30th.—I am honoured with an invitation to dine with their serene highnesses at their villa. There is to be another ball at court one of these evenings: some of the splendid dresses intended to be worn on the occasion have been obligingly shewn me, and I have exclaimed again and again, *Magnificent!*

"One of these days I am to visit the ruins of the Hennéberg, for which purpose his serene highness yesterday at dinner offered me the use of his *droshka*. 18th.—A splendid ball was last night given at court.

"22d.—To-night, a splendid ball was given by the duchess dowager at her villa. His serene highness and his sister, the Duchess of Clarence, led off the dance. The prince appeared, as usual, to great advantage in his hussar uniform.

"*Nonnenverder*, 4th.—The dessert was on the table,—not abundant, but choice and fresh gathered. The wine with which it was served bore the date of the comet vintage, and at once established its character and especial claims to the patronage of strangers. The landlord's daughters entered the apartment with bouquets of flowers, which they had just culled, and now presented to the ladies of the party. They were the latest of the sprig; surviving, by some weeks, that fragrant family in whose sweet fellowship they had sprung up,—breathed their vernal sweets,—and which they were now speedily following to the earth. The minstrel *Frauenlob* was of our party, and observed that their fate was an enviable one! No one seemed to comprehend his meaning, yet no one asked him to explain. I observed, however, that, on receiving the flowers, the ladies had deposited them, in their dying moments, in a situation which was by no means unlikely to excite a feeling of jealousy in the minstrel's very susceptible mind; and to this I am inclined to refer the solution of his singular apostrophe. The hour was peculiarly favourable to sentiments of a pathetic cast. Thus delicately excited, they became infectious."

This leads to the recital of the old legend of Roland, particularly ill-told. A morning at Wirtemberg.

"Between six and seven o'clock at latest, breakfast is served to each member of the household in his respective chamber, after the French fashion. It consists of coffee, warm milk, and fresh rolls, and is left on the toilet-table for the solitary repast of the inmate or guest. The social breakfast of England is unknown in this country, unless where occasionally introduced. The queen and her ladies all follow the national custom of breakfasting thus early and alone. From this hour till dinner is allotted as the season for business or study. The ladies enjoy the comfort of dishabille, knitting, and needle-work; the gentlemen that of their dressing-gown, a novel, and a sofa. Unless on extraordinary occasions, it is rare that either quit their apartment much before

the hour of dinner. This, however, does not preclude friendly and familiar visits. The ladies are not afraid of being surprised in the disguise of a morning dress, or with their temples clustered with papillots. They do not comprehend how a visit under such circumstances should frighten them from their strict propriety, or make them blush to appear,—as the finest forms of ancient Greece appeared,—undistorted by modern corsets—the dictates of a barbarous fashion,—which, originally intended as a corrective for spinal obliquity, became a fruitful cause of it;—that is, till the recent and immortal Calisthenes were introduced!

"The party was now at tea; her majesty seated in an arm-chair upon a nicely-sanded floor; his royal highness at her right hand; a table in the centre with the tea equipage; a boiling kettle in the middle; and three of the ladies of honour seated round it: the gentlemen and myself standing near the window.

"Sunday, May 21st, 1826.—Their royal highnesses embarked on board the *Sovereign* yacht. Monday.—Landed at Calais; received by the mayor, and Mr. Marshall, the British consul; and shortly after set off and slept at St. Omer's, & *l'Ancienne Poste*. Tuesday.—Left St. Omer's, and slept at Lille. Wednesday.—Left Lille at seven o'clock; the day wet throughout; *Paries indicat uvida suspendisse vestimenta*. Slept at Brussels. Thursday.—Slept at the *Pavillon Anglais*, Liège. Friday.—Passed through Aix-la-Chapelle, and slept at the *Rheinberg*, Cologne."

A great deal of wretched poetry is scattered through these trifling pages: we give a sample.

"Saturday.—To-day an anecdote was told me in the following terms:—It relates to the capture of a forest beauty of great celebrity by a modern troubadour, thereby offering an additional and pleasing testimony to the power of music. The words are adapted to a lively Saxon air.

Unnumbered lays had sung her praise,
Her sparkling eye and rosy tint!
Each varied grace of form and face,
But never told the roguery in't!

All wooed the dame; for never came
A brighter form from beauty's mint!
Graf, ritter, squire, were all on fire,
But sighed at last, there's roguery in't!

'Now mark me well,' said Blumensell,
'Full well I know to fire a flint!'
Ah, luckless spark, he misd his mark!
Then sternly swore, there's roguery in't!

A forest bard, unhelm'd, unstarr'd,
Of music softly tried the dint:

'I scorn,' said she, 'thy minstrelsy,
For well I know there's roguery in't!'

The chord he smote, a thrilling note
Disolv'd her snow, she took the hint:
A murmur slips her rosy lips—

'That song,' she sighed, 'has roguery in't!'

The song was sung, the harp was hung
With garland wreaths of richest tint;
The priest is there, to bless the pair,
And whispers me, 'there's marriage in't.'"

We have now given ample proof to support the assertion with which we commenced, and we gladly leave this very ridiculous performance.

National Library, Vol. X. Thomson's History of Chemistry, Vol. II. London, 1831. Colburn and Bentley.

THE conclusion of Dr. T. Thomson's excellent and justly popular work. The last chapter, though short (about sixteen pages), is particularly valuable as a map of the present state of chemistry. Leaving out of view light, heat, and electricity, respecting the nature of which only conjectures can be formed, Dr. T. classes the fifty-three simple bodies with which we are

now acquainted into five supporters, seventeen acidifiable and thirty-one alkalisable bases. He then notices some of their most important combinations, and continues:

"The opinion at present universally adopted by chemists is, that the ultimate particles of bodies consist of atoms incapable of further division; and these atoms are of a size almost infinitely small. It can be demonstrated that the size of an atom of lead does not amount to so much as ~~an atom of lead~~ of a cubic inch."

He points out the process by which their weight and bulk are approximated; and says:

"We have no data to enable us to determine the shape of these atoms. The most generally received opinion is, that they are spheres or spheroids; though there are difficulties in the way of admitting such an opinion, in the present state of our knowledge, nearly insurmountable. The probability is, that all the supporters have the property of uniting with all the bases, in at least three proportions. But by far the greater number of these compounds still remain unknown. . . ."

"Every base is capable of uniting with almost every acid, in all probability in at least three different proportions; so that the number of salts which they are capable of forming cannot be fewer than 21,000. Now scarcely 1000 of these are at present known, or have been investigated with tolerable precision. What a prodigious field of investigation remains to be traversed must be obvious to the most careless reader. In such a number of salts, how many remain unknown that might be applied to useful purposes, either in medicine, or as mordants, or dyes, &c. How much, in all probability, will be added to the resources of mankind by such investigations, need not be observed. The animal and vegetable kingdoms present a still more tempting field of investigation. Animal and vegetable substances may be arranged under three classes, acids, alkalies, and neutrals. The class of acids presents many substances of great utility, either in the arts, or for seasoning food. The alkalies contain almost all the powerful medicines that are drawn from the vegetable kingdom. The neutral bodies are important as articles of food, and are applied, too, to many other purposes of first-rate utility. All these bodies are composed (chiefly, at least) of hydrogen, carbon, oxygen, and azote; substances easily procured abundantly at a cheap rate. Should chemists, in consequence of the knowledge acquired by future investigations, ever arrive at the knowledge of the mode of forming these principles from their elements at a cheap rate, the prodigious change which such a discovery would make upon the state of society must be at once evident. Mankind would be, in some measure, independent of climate and situation; every thing could be produced at pleasure in every part of the earth; and the inhabitants of the warmer regions would no longer be the exclusive possessors of comforts and conveniences to which those in less favoured regions of the earth are strangers. Let the science advance for another century with the same rapidity that it has done during the last fifty years, and it will produce effects upon society of which the present race can form no adequate idea. Even already some of these effects are beginning to develop themselves: our streets are now illuminated with gas drawn from the bowels of the earth; and the failure of the Greenland fishery, during an unfortunate season like the last, no longer fills us with dismay. What a change has been produced in the country by the introduction of steam-boats! and what a still greater improvement is at pre-

sent in progress, when steam-carriages and railroads are gradually taking the place of horses and common roads. Distances will soon be reduced to one-half of what they are at present; while the diminished force and increased rate of conveyance will contribute essentially to lower the rest of our manufactures, and enable us to enter into a successful competition with other nations."

The concluding pages treat of chemistry as applicable to physiology, and are both curious and interesting. Every reader will be gratified and informed by their perusal; and to persons of all descriptions we cordially recommend this work.

Jones's English Systems of Book-keeping.

London, 1831. Large 4to.

IT is rather an unpleasant thing for a critic to be obliged by truth to set out with a confession, that he knows little or nothing of the subject upon which he is called to favour the world with his opinion. But so it is between us and "Jones's Systems of Book-keeping." The book-keeping with which we are most conversant, is that practised upon us by our friends, at the expense of our library, wholesale and retail. Whether this is accomplished by single or double entry, we cannot always ascertain; but we are sure that we never see any balance sheets, and therefore we must leave the accounts to stand between the parties and their consciences till they are audited at the great audit day.

Of his own plan, Mr. Jones says, that it is calculated to prevent the frauds which could so readily be accomplished under all preceding methods of ledger-*demain*; and he submits many formulas to demonstrate this assertion. He also proclaims its simplicity, not only in the various lines of commerce, but also on that great source of evil to the public in needless expense for inefficient government accounts, so as to bring the subject in a familiar manner home to every understanding, although hitherto of great intricacy, and throwing open a wide door for losses and frauds, by false entries and expensive litigation; to say nothing of the numerous insolvencies which take place through the uncertain information which books of accounts produce, and the vast expenditure beyond the profits really gained in trade.

Such are Mr. Jones's claims; and they are, no doubt, of much commercial interest; we therefore sought advice upon them, and the report made to us we repeat:—

"It is not clear that this system does afford the facility and certainty of detecting errors, which is stated by the author; in fact it is not itself without error.* Nevertheless, it contains some important suggestions, which may be applied to the improvement of every practical mode of keeping complex and extensive accounts."

To this, we presume fair, opinion we have only to add, that we have also on our table a much smaller performance on the same matter, namely, *Morrison's General System of Mercantile Book-keeping*,† which appears to us to be singularly simple and practically effective.

While on such topics we may also as well discharge our minds of *The Executor's Account Book*, by John H. Brady,‡ late of the

* An Examination of Mr. Jones's System, by a Practical Book-keeper, and published by Simpkin and Marshall, and E. Wilson, affirms that it is altogether erroneous; and to demonstrate this, gives a ledger, in which every entry is wrong posted, and yet, according to his plan, the whole appears to be perfectly correct!!!

† London, 1830, small 4to. pp. 84. Longman and Co. ‡ Small 4to. pp. 74. Sweet.

Legacy Duty Office, and the author of several very useful publications; who has here placed a ready-made scheme before every person undertaking the duty of an executor, likely to save much trouble, and induce much desirable clearness and order.

In conclusion, *Walker's Interest and Discount Tables*,* where those who lend, and those who borrow, are promptly instructed what are the legal charges there-for.

Constable's Miscellany, LXVIII. Wilson's American Ornithology, Vol. I.

A PORTRAIT of Mr. Wilson, and a vignette of the bald eagle, adorn this first vol. of a republication which excited much interest in its original form, (see *L. G. Reviews*), and has since largely contributed to fill many of those pages which are altogether, or partially, compiled from the labours of others. The history of the habits, and the anecdotes of birds which it contains, are extremely engaging. Some of the reflections are, perhaps, a little strained. For example, the bald eagle is denounced as a ruffianly tyrant, because he watches the fish-hawks, (ospreys,) pounces upon them, and robs them of their prey. "Thus" (says the author, for we must have a moral strain upon every thing!) "thus we see throughout the whole empire of animal life, power is almost always in a state of hostility to justice; and of the Deity only can it truly be said, that justice is commensurate with power." Now this is mighty fine; but it seems to us that the bald eagle is quite as much justified in taking the fish from the osprey, not injuring the latter, as the osprey is in catching the fish and eating it!! The cant of sensibility is annoying. At a late lecture at the London Literary Institution, (the *Morning Herald* tells us on Tuesday,) Dr. J. Mitchell pointed abhorrence at the man who placed pots in his house for sparrows to build in, and observed, "It was disgusting to hear the fellow express his delight at the prospect of making pies of their young." For ourselves, we so love to watch the doings of birds and beasts, that we would ten times rather preserve than destroy even the most useless; but, in plain common sense, if young sparrow-pies are good, we can detect no more reason to denounce this pot-catcher than the owner of a dovecot. A pigeon attracts the human affections quite as much as a sparrow, and yet pigeon-pie is a very common dish. So are roasted larks, wheatears, &c. &c. &c. and no sentiment about them.

Familiar German Exercises, adapted to the "Compendious German Grammar." By A. Bernays. 12mo. pp. 240. London, Treuttel and Co.

THIS is an exceedingly neat and well-digested volume. The exercises are well adapted to the rules, and are at the same time practical, and, for the most part, amusing. The author has done wisely in not confining himself to sentences of his own making, and in taking his pieces generally from writers like Schiller, Wieland, Kotzebue, &c. By this means he has opened the widest possible range of phrases for the practice of the student, and afforded himself the opportunity of introducing numerous notes and remarks, which give an additional value to the book. A great deal of the learner's time is saved by the German being given for the English words and idioms; so that he need not hunt for them in the dictionary, at the hazard of choosing, in nine cases out of ten, wrong

* Second edition, Simpkin and Marshall.

ones. There is also an appendix, containing, besides other useful matter, some ingenious rules on the gender and declension of German substantives, which remove almost all the difficulties attending this subject. In short, we may safely affirm, that this volume, together with the grammar to which it belongs, offers the most complete and most practical compendium of German etymology and syntax we are acquainted with. Paper and print, too, are superior to the general run of school-books.

A Compendium of Ancient and Modern Geography; for the Use of Eton School. By Aaron Arrowsmith, Hydrographer to the King, &c. 8vo. pp. 906. Eton and London, 1831. E. Williams, and others.

A VERY complete and excellent compendium—all indeed which the word implies, and replete with the information which students and readers may desire to seek. It seems (where we have consulted it for the sake of forming our judgment) to have consulted the best authorities; and, on doubtful points, it has the merit of being neither opinative nor dogmatic, simply supplying the best intelligence in a clear and concise manner. There are good maps, and the volume is handsomely got up.

Select Works of the British Poets from Chaucer to Jonson, with Biographical Sketches. By Robert Southey, Esq. LL.D. pp. 1016.

Select Works of the British Poets, with Biographical and Critical Prefaces. By Dr. Aikin. pp. 807. London: Longman and Co.

THE whole body of English poetry is compressed in these beautiful and singularly cheap volumes. The edition edited by Dr. Southey comprises that early literature which, fresh, original, and vigorous, is the "world before the flood" of those mediocre and French-formed writers, who too long occupied the place assigned the "British Poets" on our shelves. To the lovers of poetry we cordially recommend these works—they are a whole library in two volumes; and, moreover, to those readers whose love lives a little in the eye, we must observe, that the clear print and neat appearance of this edition deserve high praise. The brief preceding notices are written with Dr. Southey's accustomed good taste and elegance.

A Grammar of the Anglo-Saxon Tongue; with a Praxis. By Erasmus Rask, Professor of Literary History, and Librarian to the University of Copenhagen, &c. &c. A new edition, enlarged and improved by the Author. Translated from the Danish, by B. Thorpe, Honorary Member of the Icelandic Literary Society of Copenhagen. 8vo. Copenhagen, 1830.

THERE is a superficial and a philosophical view of every subject. A little mind is attracted by the superficial, but the energies of a powerful mind are employed upon realities. From the superficial manner in which grammar has sometimes been treated, it has not always received that attention which it deserves. It is a metaphysical and very important subject, embracing an extensive field for observation. Grammar comprehends the whole structure of language. At early periods, it engaged the close attention of Julius Cæsar, Charlemagne, and other men of the first talent and renown. In modern times, the greatest historians, philosophers, and poets, have not thought it beneath their notice.

We pass over the due attention which has been given to other tongues, and speak now

only of those which are of Gothic origin. In Holland, we have a Bilderdijk and Siegenbeek, the glory of their age; in Germany, a Grimm; in France, a Raynoud; in England, a Crombie and Turner; in Denmark, a Rask:—these, with a long train of able coadjutors, have taken an enlarged and truly philosophical view of grammar. Some of them divide languages into classes, considering the body of each class to be the same, and differing only in the mode of placing and uniting the members. Thus, the Dutch, German, Danish, Norwegian, English, &c. are the same, but differ in those connecting words and auxiliaries which most frequently occur, such as the articles, pronouns, auxiliary verbs, and connecting words. If the difference in these words be ascertained, and the permutation of certain consonants be noticed, such as the change of the Dutch, German, and Danish *d* into the English *th*, we shall find a most striking similarity in the Gothic languages.

Attention to these principles has enabled Professor Rask to produce a work of the greatest importance to Anglo-Saxon students,—a grammar formed on the true idiom of the Saxon tongue, with a constant and judicious reference to the languages of cognate origin.

The preface contains a "Critical History of the Anglo-Saxon Language, and the other Gothic Tongues." The etymological part is very comprehensive; and the remarks on orthography, on the formation of words, and on Anglo-Saxon versification, deserve great praise. The work closes with extracts from the most approved Saxon writers, and a very useful and complete verbal index.

Mr. Thorpe has performed his part well, and has rendered a great service to Saxon literature, by clothing this grammar in a becoming English dress. A translation of Mr. Rask's Icelandic Grammar, by the same able hand, would be an invaluable acquisition.

Selections from the Poems of William Wordsworth; chiefly for the use of Schools and young Persons. Pp. 365. London, 1831. Moxon.

THE editor of this little volume is among Mr. Wordsworth's unbounded admirers: we doubt whether this be the best qualification for one about to make a selection from his writings, and this doubt is made a certainty by the work before us. The privilege of choice has been exercised with very little taste: really, the idiot boy Peter Bell, and Harry Gill, are unworthy specimens of the genius of one who is among our language's noblest masters. Mr. Hine urges that these are favourites with the poet himself—perhaps so, on the principle which attaches the mother to her least-favoured offspring. In some of his productions we shall always consider that Mr. Wordsworth has sacrificed poetry to a poetical theory; that he has sometimes "narrowed his mind," and given up for a whim "what was meant for mankind."

We regret this the more, as these peculiarities have afforded such easy points of attack to many who, though able to catch all the small ridicules which floated on the surface, were utterly incapable of sounding the mighty and glorious depths of a first-rate mind. We do not wonder, however, at the idolatry of even his blindest eulogists: what author is it who says, that no attachment is so strong as that which has had something to get over? and we all know, that we are more closely drawn to that which we have to defend. These are some of the secondary causes which may account for the enthusiasm Wordsworth inspires; but the great first cause is in his own noble genius, the fine

humanising spirit, the high and holy philosophy which characterise his writings. Deeply, to use his own language, is his soul imbued

"With life and nature; purifying thus
The elements of feeling and of thought,
And sanctifying by such discipline
Both pain and fear: until we recognise
A grandeur in the beatings of the heart."

Wordsworth was the first who made poetry a "wayfarer 'mid the paths of daily life," and this will be one of his most enduring merits. His choice of common subjects we commend: it is only when they verge on the ludicrous that we think he has debased poetry, by thus associating it with the absurd. To illustrate our meaning by examples, we never could discover the merits of Henry Gill, the idiot boy, &c. &c.; but we admire as much as we reverence the feeling and the mind put forth in the old Cumberland Beggar, Michael, &c. In the first of these he beautifully exclaims that

"Man is dear to man; the poorest poor
Long for some moments in a weary life
When they can know and feel that they have been
Themselves, the fathers, and the doers out
Of some small blessings; have been kind to such
As needed kindness, for this single cause.
That we have all of us one human heart."

Need we point out why this passage is so exquisite? because it touches on that general chord of sympathy which runs from the highest to the lowest of the human race. To return to the volume before us: though we still think a better judgment might have been exercised, there is yet quite enough to make it a very valuable and delightful present to the youthful reader.

Standard Novels, No. IV. Thaddeus of Warsaw. By Miss Jane Porter. Revised, corrected, and illustrated with a new Introduction, Notes, &c. Colburn and Bentley.

A PLEASANT introduction ushers in the first of Miss Porter's many and popular works. *Thaddeus of Warsaw* has gone through ten editions: what can a critic say after that? Miss Porter mentions, that when this and her succeeding work, *The Scottish Chiefs*, were translated and published in Germany, she was made Lady of the Chapter of St. Joachim, and received the gold cross of the order from Wirttemberg. A vignette and frontispiece in character (the former the best) are prefixed to this volume.

Orlando Innamorato di Bojardo; Orlando Furioso di Ariosto: with an Essay on the Romantic Narrative Poetry of the Italians; Memoirs and Notes. By Antonio Panizzi. Vol. V. London, 1831. Pickering.

THE *Orlando Innamorato* is completed in this volume; and we equally congratulate editor and publisher on the elegant and satisfactory work they have produced. It is a most beautiful and correct edition; and Mr. Panizzi deserves the highest praise for his unwearying industry and research. We cannot do better than quote his own final words.

"I shall conclude by requesting those who may find some difference between my text and that of any single edition of the *Innamorato*, to pause before they condemn my endeavours; because, what may seem an error, or an incorrect reading, may have been advisedly preferred, and be the most correct. I do not mean to assert that these volumes are immaculate. Those who know the difficulties of republishing a work of this kind in a foreign country, and from such editions, will readily make allowances; and those who do not know what these difficulties are, can never imagine them. It may be, that by collating other editions with

this, an improved one may be hereafter produced; but it must be admitted that this is the first time that the *Orlando Innamorato* by Bojardo has been published in a legible form, and with many thousand errors of the press less than in any previous edition of this splendid and too shamefully neglected father of the *Orlando Furioso*."

Library of Entertaining Knowledge. The Architecture of Birds. London; Knight.

THIS is quite a delightful volume—a volume for the young, the middle-aged, and the old, of both sexes. Natural history is naturally one of the most pleasing studies, if we seek instruction; one of the most curious, if we only aim at entertainment. In the volume before us a multitude of the peculiarities of birds, of their habits, of their modes of constructing their nests, &c. &c. are described; and the whole is enlivened by interesting anecdotes. The following, related of the woodpecker, is an example of what may be called *catching a Tartar*.

"Notwithstanding the care which this bird, in common with the rest of its genus, takes to place its young beyond the reach of enemies, within the hollows of trees, yet there is one deadly foe, against whose depredations neither the height of the tree, nor the depth of the cavity, is the least security. This is the black snake (*Coluber constrictor*), who frequently glides up the trunk of the tree, and, like a skulking savage, enters the woodpecker's peaceful apartment, devours the eggs or helpless young, in spite of the cries and flutterings of the parents; and, if the place be large enough, coils himself up in the spot they occupied, where he will sometimes remain for several days. The eager schoolboy, after hazarding his neck to reach the woodpecker's hole, at the triumphant moment when he thinks the nestlings his own, and strips his arm, launching it down into the cavity, and grasping what he conceives to be the callow young, starts with horror at the sight of a hideous snake, and almost drops from his giddy pinnacle, retreating down the tree with terror and precipitation. Several adventures of this kind have come to my knowledge; and one of them that was attended with serious consequences, where both boy and snake fell to the ground, and a broken thigh, and long confinement, cured the adventurer completely of his ambition for robbing woodpeckers' nests."

Many ornithological works have been laid under contribution for this small volume; and we have only to add, that it is adorned by a number of woodcuts.

Posteriorum Latinorum, Hostii, Lævii, &c. Vita et Carminum Reliquia; edita à M. Weichert. Leipzig, 1830.

COLLECTIONS of fragments, and isolated dissertations on authors of whom time has left us little more than the names, and the memory of whom is almost entirely effaced, are great services rendered to ancient literature. Such is Hostius. The origin of the Hostian family is to be traced to Hostius Hostilius, grandfather of the third king of Rome. The celebrated Cynthia, sung by Propertius, belonged to the same family. According to M. Weichert, she was the niece, not the daughter, of the poet. A contemporary of Lucilius, the satirist, this poet lived in the seventh century of the Roman era. He was sometimes called Hostilius. The subjects of his verses were historical: for instance, he sung the Istrian war. Of Lævius, so little is known, that a modern writer has

even doubted if he ever existed. M. Weichert, however, proves that he lived prior to the reign of Augustus, and publishes several fragments of his. C. Licinius Calvus was the friend of Catullus, and the son of C. Licinius Mæcer, and was born in May 672. His father was an orator and a historian; and he himself left a speech against Vatinius, of which this volume contains some fragments. Caius Helvius Cinna was also the friend of Catullus; but it was not he whom the people killed by mistake, after the assassination of Cæsar. M. Weichert, passing to C. Valgius Rufus, thinks that this friend of Horace has been erroneously ranked among epic poets, on the strength of a panegyric on Messala, falsely attributed to Tibullus. Domitius Marsus, who lived in the time of Augustus, was perhaps of Marsian origin, and his family probably obtained the rights of citizenship at the time of the civil war. Ovid is the first who mentions him; Martial frequently quotes him: he composed epic poems and elegies. After these conjectural but ingenious biographies, comes a very curious dissertation on the detractors of Horace; and then another *de turpido Alpino*, the object of which is to shew that it was the poet Turcius Bibulus who is thus designated by Horace. He was then seventy years old, and seems to have written a poem upon Memnon, and another upon the Rhine; both in a very inflated style. M. Weichert afterwards speaks of Titius Septimius, quoted by Horace as a lyric and a tragic poet. It is evident, from the judgment pronounced upon him by Horace, that from that period began to grow the faults by which the style of Seneca was disfigured. The subject of the last dissertation is Jarbita, the rival of Timagenes. This Timagenes was a rhetorician of Alexandria. Jarbita is a fictitious name, substituted for Cordus or Cogrus.—The book is full of exceedingly ingenious remarks; many ancient passages are explained in it; and the whole will be of great assistance to philologists, who are already so much indebted to M. Weichert.—*Revue Encyclopédique.*

The Bridal Night, the First Poet, and other Poems. By Dugald Moore. 8vo. pp. 246. Glasgow, 1831. Blackie, Fullarton, and Co.

THE Abbé de Voisenon was one day listening to a friend who took a friend's privilege of reading a MS. to him. The author had evidently perused the best writers in the language, and profited by them. As the tragedy proceeded, the abbé kept bowing: almost every passage called forth a fresh bow. "What the devil," at last exclaimed the impatient poet, "do you mean by your bows?" "Nay," exclaimed the malicious listener, "one must be polite: you would not have me pass old acquaintances without bowing?" We make our bows to Lord Byron, Shelley, &c.; and leave to Mr. Dugald Moore the application of the story.

ARTS AND SCIENCES.

ROYAL INSTITUTION.

MR. BRITTON delivered an excellent lecture on ancient domestic architecture; but as we have already given reports of similar discourses at the London Institution, a general eulogy may here stand us in the stead of a detailed notice.

COLLEGE OF PHYSICIANS.

SIR HENRY HALFORD, Bart. the president, in the chair. This meeting was not less numerously attended than the preceding ones. Dr. Francis Hawkins, the registrar, read a

paper, in which Dr. Roupell, physician to the floating hospital moored off Greenwich, described, in a very clear and forcible manner, the symptoms of a peculiar fever which raged in that institution in the spring of this year. The disorder was characterised by a very severe affection of the head and nervous system, and was accompanied in many instances by the appearance of a rash. So excessive was the affection of the head, that even where consciousness was not destroyed, memory was often entirely lost. Many of the patients doubted their identity; and one who fancied he had died, when questioned as to his reason, asked, "if he lived, why he did not feel?" Although many fell victims to the severity of the disorder, yet considering the intensity of its symptoms, the mortality was hardly so great as might have been expected. Dissection always disclosed the effects of inflammation of the brain, still the disorder, so far from being cured, was often aggravated by bleeding; and more benefit was derived from a cautious use of stimulants and anodynes.

A paper was afterwards read by the president himself, which excited very considerable interest, for it detailed the results of his great experience in the treatment of gout. For the cure of this painful disorder, he declared his dependence to be placed upon colchicum. From a proper use of the vinous infusion of the root of this plant, he stated that he had never seen any but the best effects to arise; and when the mode of administering this medicine, and thereby cutting short the attack of gout, is followed up by the use also of the acetous extract of the same root, he does not think that the intervals between the attacks are shorter than they used to be formerly, when the complaint was left to patience and flannel. But granting, for argument's sake, that they are shorter, yet the weight of three or four attacks of the disorder, of three or four days' continuance each, is scarcely to be compared with the pressure of a six weeks' painful confinement in the spring, and one of equal duration at the latter end of the year. The president mentioned that he had been at pains to procure from Constantinople some of the hermodactyls which are sold there, and are thought to be the same root as was recommended for the cure of gout so long ago as the sixth century, by Alexander of Tralles. Some specimens of the hermodactyl, and others of the colchicum bulb, were placed on the table, and they appeared to be exactly similar. The president explained also the means which he was in the habit of recommending for the prevention of gout. But he attached still greater importance to the patient's management of himself with respect to temperance and early hours; and with the same view he cited the authority of Hippocrates, Celsus, and Pliny, in commendation of that virtue which has been called by the latter writer "*sanctitas*."

NATIONAL REPOSITORY.

SINCE our first notice of the opening of this highly interesting institution, several works of great ingenuity have been added to the collection; though the exhibition is far from complete, owing to the candidates for public favour neglecting to forward such inventions as they have announced for this year's exhibition. There are various agricultural implements, as chaff-cutters, mills, pressing-rollers, &c., of considerable merit. We also observe some very beautiful specimens of muslin and silk fabrics, proving that our manufacturers are now capable of successfully competing with

those of Indian or of French manufacture. In the Nottingham or lace manufacture, too, there are some exquisitely beautiful examples of art, eminently worthy of the notice of the fair visitors to this national gallery. Among the foreign curiosities is a sort of silk, said to be manufactured from the hair of the Cashmere goat, but in reality from the shearings of French poodle dogs.

Among the various works of utility, we must not omit to mention a full-sized billiard-table, constructed of cast iron—a complete triumph of art in the department of iron manufacture. The most extraordinary feature in this table, as a work of art, is the great extent of surface, nine feet by six—fifty-four square feet of iron worked perfectly horizontal, for without perfection in this respect, it could not answer the purpose intended. However fine the large mirrors may be ground, it is well known that they are seldom, if ever, perfect planes when of a large size; this double slab of cast iron is, however, said to be perfect in this respect. The table has been planed by means of machinery erected for the purpose, and a series of parallel grooves being worked throughout the whole extent of the plates in the first instance, like the process of copperplate engraving, these grooves are afterwards worked in cross directions till the entire surface is perfectly plane.

THE COURSE OF THE NIGER.

THE discovery of the termination of the course of the Niger, upon which we promised last week to offer some geographical remarks, will be of the greatest importance to geography, to our political power, and to civilisation.

With regard to geography, perhaps the contradiction which was afforded by the various sources whence we derived our knowledge of the character of the interior of Africa, and of the course of, next to the Nile, the most renowned, and, as was considered from the same accounts, the greatest river of that country, have in late times given unlimited zest in the pursuit of further information, and has not in the least detracted from the pleasure with which we find that we are indebted to our countrymen for the solution of this all-absorbing problem. It appears, that among the ancients many facts connected with the geography of the interior of Africa were well known, which have still been an object of discussion among the moderns; and of these, we may enumerate the occurrence of a large lake or marsh (for it is either, at different seasons of the year), whose real existence, beyond the speculations of geographers, was very unsatisfactorily established, until the journey of Denham and Clapperton; and the fact of the occurrence of a great river in the west, emptying itself into the ocean, though many were of opinion that it lost itself in an inland marsh, or in the desert, while others supported the opinion of its identity with the Nile of the Egyptians. The researches of Ptolemy and the Arabian geographers on the Nile of the Negroes, and in later times the travels of Leo Africanus, who was a Moor of Granada, demonstrated the absurdity of this opinion; and how extraordinary that, in the boasted perfection of human intellect, it should have been broached several centuries afterwards, and that the barometric levellings of Bruce should have been necessary to enforce conviction! It is not at all improbable that Hanno, the Carthaginian, as advanced by Macqueen, reached the Bight of Benin, or of Biafra; and certainly the geographical information obtained on these countries by Herodotus and Edrisi was more accurate

than the speculations of many modern geographers.

Observation had demonstrated to the moderns that no large river emptied itself into the ocean on the north-west coast, though it required a more accurate acquaintance with the Senegal and the Gambia before it was fully ascertained that they were not the outlets of this great stream. The progress of navigation along the south-eastern shores of Africa also shewed that no large river emptied itself into the sea along that coast; while the settlements of the Portuguese on the coast to the south of Cape Lopez, led them, at an early period, to adopt the opinion afterwards supported by Mungo Park and Mr. Barrow, that one or more of the rivers in their vicinity were the outlets of the great river of the interior of Africa. Two celebrated geographers, D'Anville and Major Rennell, however, espoused the theory of the waters emptying themselves into the Wangara, or great marsh; which argument underwent various modifications in the hands of different geographers; and though the probability of its emptying itself into the Gulf of Guinea had been pointed out on the continent, and vigorously supported in this country, an expedition was fitted out to explore the Congo or Zaire, which, though unfortunate to the individuals concerned, was yet satisfactory in a geographical point of view, and demonstrated that the rivers south of Cape Lopez were not the outlets of the waters of the Niger, and gave origin to a speculation which partook of all the characters of a romance of the desert, beneath the sands of which its author buried the gigantic stream, loaded with the waters of the Wangara or Lake Tchad, to make it flow into the Mediterranean at the Syrtis of the ancients.

In the history of geography there are no examples of greater perseverance and courageous determination than in the efforts made to triumph over the difficulties presented in the solution of this important question. Since 1815, there has scarcely a year passed in which a new attempt has not been made; and of these, if we recede a little farther back, twenty-five were made by our countrymen, fourteen by Frenchmen, two by Americans, and one by a German; of which but a small number, since the days of Houghton, have not fallen victims to their heroic devotion.

Mungo Park first observed the direction of the stream which had become as much an object of discussion as its termination; and, strange to say, after the present discovery, it will, in some parts of its course, still remain so. The unfortunate traveller just alluded to, previous to his descent of the river, obtained some information from Moors and from negroes, on its course by Timbuctoo. The Jinne of Park is synonymous with Jenné, Ginné, Djenné, of other writers, as Jenné has again been confounded with Kano or Kanno. It may be a figurative term—for the Jinne of Park was on an island, as was the Jenné of the Moorish reports, while the Jenné of some travellers is at a short distance from the river. This cannot be the case with regard to Timbuctoo, which is visited by caravans twice a year from Morocco; nor is the name met with any where, except the two first syllables in the town of Timbo, which cannot be mistaken for Timbuctoo.

Major Laing had discovered the source of the Niger to be in the mountains of Loma, in 9° 15' west latitude, and had ascertained its course for a short distance from its source. We were also aware of the existence of one or two streams joining the great river, or branching

from it near Timbuctoo. De Lisle had marked a river Gambarra, on his maps drawn up for Louis XV., and not without good authority. This is the river coming from Housa; and the Joliba of modern travellers is a river, we could prove, from the concurring testimony of a variety of sources, coming from the north-west, and joining its waters with, that is to say flowing into, the Niger, in the immediate neighbourhood of Timbuctoo; still at that point the Kowarra, or Quorra of the Moors, or Quolla of the negroes, who always change the *r* for *l*; a name which, according to Laing, it has at its sources—according to Clapperton, it preserves beyond Timbuctoo, and is probably still the name of the same stream at its embouchure in the Bight of Biafra. The Quarrama is another tributary stream which passes by Saccatoo, and falls into the Quorra above Youri, and above the point where Mungo Park was wrecked; and the line of country between this river and the Shashum, comprising the hills of Doochee, of Naroo, and of Dull, is the line of water-shed to the rivers joining the Quorra on the one hand, and those emptying themselves into the Wangara on the other. The course given by Sultan Bello, and the information obtained by Major Denham, both pointed out a river coursing to the east, which is probably the branch followed by the Landers; for its termination in Lake Tchad had not even an air of probability; though it is not, on the other hand, at all improbable that other branches empty themselves into the Bight of Benin, by the rivers Formosa or Volta, according to information given to Captain Clapperton and Major Laing.

We had intended to embody some remarks upon the pretended journey of Caillié; but we find we have already occupied too much space in details necessary to make the geographical nature of the question well understood; and we shall content ourselves with remarking, that the discovery of the termination of the Quorra, or Niger, tends to throw a degree of improbability upon the narrative of that individual, which it will require much ingenuity to explain away. It is certain that the latitude given to Timbuctoo by the editor of those travels, and upon which sufficient ridicule has already been thrown in the Edinburgh Geographical Journal, may be considered as an error entirely of the editor's, who, by taking it upon himself, will relieve the burden of the mistake from the traveller, and thus lighten the weighty doubts which might in consequence bear upon the remainder of the details; for the situation of that city, as given by Jomard, is quite inconsistent with the situation it must be in, from the ascertained source, direction, and termination of the river. There can be no doubt but that a portion of the labours presented to the public as the travels of Caillié are founded upon valid documents, wherever obtained, and probably most of the errors are those of the editor. But though authorities can be found in support of the division of the Quorra into two branches; one of which, the Joliba, flows to the north-west, and the other in an almost opposite direction,—a fact which has no analogy in geography, and, what is better, no existence in nature; yet no authority can be found for placing Timbuctoo on a river flowing north from the Niger.

The details which will be given to us by the results of this successful expedition will, then, not only be of assistance in allaying the existing condition of things with the knowledge of the ancients, but it will enable us to reduce to a few facts the many contradictory statements

which have originated in the variety of the sources of information, and the individual and national rivalry which the interest of the question gave birth to among the geographers of the present day. It will also be of importance, as it was connected with a great question, as to the possibility of a large river traversing an extensive continent, or losing itself in a marsh or lake, or being buried in the extensive sands of the desert. By laying open the interior of Africa to us, it will increase our political strength and commercial advantages on those coasts;—it will enable us to put into practice an amelioration long contemplated by Mr. Barrow, in the choice of our settlements on those coasts;—it will place the greatest and most important vent of the barbarous and inhuman traffic of negroes in our possession; and it will enable us to diffuse the benefits of superior intelligence among an ignorant and suffering people.

PORTABLE INK CAKE.

WE consider it due to the inventors of this new and useful composition to notice it among the discoveries in art of the present day, as we have no doubt, from the specimen of it, which we have seen and tried, that it will be found of very great service in every situation where fluid writing ink cannot be conveniently carried or preserved. It is similar in appearance to Indian ink, but has no opaque or earthy substance in its composition; and when diluted or rubbed down with water, possesses all the qualities of the best fluid writing inks. The condensation of these qualities seems to be the principle upon which it is made, and as its solid form prevents the powers of the substances used from being affected by the influence of climate, we should think that it supplies a great desideratum, not merely to travellers, but to all residents in warm countries, where fluid ink is so speedily rendered unserviceable by the climate. Its great recommendations are, its extremely neat and portable form, and the ease with which it is at once converted into ink, in small quantities, for instant use, by the addition of a few drops of water. We believe that the inventor of it (Mr. Morrison, secretary to the Literary and Antiquarian Society of Perth) was originally led to give his attention to the improvement of writing inks, from the opportunities he possessed of examining and comparing ancient manuscripts, and that this ink cake is the result of a series of experiments, in number almost unexampled in the history of the arts.

ROOFING:—ST. GEORGE'S HOSPITAL.

OUR attention has been attracted to a new kind of roof, (secured by patent to a Mr. Carter*), which has been employed in covering the portico of St. George's Hospital, lately erected. It consists of cast-iron plates, so constructed as to resemble the ancient Greek tile, and has a very fine architectural effect. The plates lap over each other; but we can convey no idea of the structure without the aid of the engraver; and can only state, that the contrivance appears to be very ingenious as well as useful. Some of the plates have perforations for glass, combined with contrivances to prevent the intrusion of wet, and to extend the proportion of sky-light. The specimen is well seen from Hyde Park, near the statue of Achilles; and we recommend it to notice as a novelty and improvement in art.

* A builder of Exeter, we believe.

OCCULTATION OF JUPITER AND HIS SATELLITES.

JUNE 1 (Thursday morning)*.—This beautiful phenomenon occurred under as favourable circumstances as could be expected from the low altitude of the Moon and planet at the time of occultation. The following were the observations:—At 13^h 7^m 13^s (clock time) the rate of motion of Jupiter, as it closely approached the Moon's bright limb, appeared to be retarded, and for two or three seconds arrested; its disc then gradually disappeared, preserving a dark fringe or penumbra, which separated the planet from the illuminated edge of the Moon, as though the contact was not complete. This appearance continued till nearly the final immersion of the planet at 13^h 8^m 30^s. Owing to the vapours of the horizon, the edge of the Moon was tremulous, and the disc of Jupiter not well defined: the same cause prevented any observation of the immersion of the satel-

lites. All the emersions were satisfactorily observed. The fourth satellite emerged from behind the Moon's dark limb at 14^h 0^m 23^s; the second at 14^h 11^m 49^s; the western limb of Jupiter then re-appeared at 14^h 13^m 27^s, and the whole disc was uneclipsed at 14^h 15^m 11^s; the first satellite afterwards became visible at 14^h 17^m 56^s; and, finally, the third at 14^h 23^m 21^s: the belts of Jupiter were visible, and no anomalous appearance was observed at the emersions. The appearance of nature, after the occultation, was singularly tranquil and impressive: the brilliant planet Jupiter on the obscure margin of the pale waning moon, the sky entirely free from clouds, and the fixed stars fading away in the morning twilight; the atmosphere was remarkably serene, and, though so very early, the lark was already on the wing "towards heaven's gates," hailing with its lively melody the dawning day.

Deftford.

* See *Lit. Gaz.* Celestial Phenomena for this month.

RAMMOHUN ROY.

As the insertion of the engraving of this celebrated individual at the end of the article in which it is referred to, would have interfered with our Review, we have preferred placing it here.

Ramon Mohun Roy

LITERARY AND LEARNED.

ROYAL SOCIETY.

SIR ASTLEY COOPER, Bart., V.P., in the chair. A paper was read, entitled, "On the fossil bones found in caverns in the Mendip Hills in Somersetshire," by the Rev. David Williams. The communication was illustrated

by a variety of very curious specimens of the bones, consisting of human remains of the Celtic aborigines, portions of the jaws of the hyæna, molar teeth of the elephant and rhinoceros. Contrasted with these were some exceedingly delicate specimens of molar teeth, incisors, jaws, &c. of the *rodentia* and *cheiroptera*. Mr. Williams inferred, from a variety of circumstances,

that the tiger, elephant, hyæna, and bear (*urus spelæus*)—remains of which were exhibited—had all lived and died in this country at some remote period. Dr. Browster and Professor Jamieson presented their respective Journals. Several other scientific works were presented to the Society; and two fellows were elected.

SOCIETY OF ANTIQUARIES.

MR. AMYOTT in the chair. Mr. Cope exhibited a drawing of a font, and other remains of antiquity, at Mellor, in Derbyshire. Mr. Kempe communicated some letters, part of a selection from the Loseley MSS. intended for publication, relative to Dr. Donne's clandestine marriage with Ann, daughter of Sir Geo. More, of Loseley, in 1600-1. It appears the lady's father was highly incensed at the marriage; and Donne being secretary to Sir Thomas Egerton, lord keeper, who had married Sir Geo. More's sister, Sir George complained bitterly against him; and the lord keeper not only dismissed poor Donne from his situation, but also committed him to the Fleet: and Christopher Brooke, who appears to have been a barrister on the northern circuit, and gave the lady away, was committed to the Marshalsea,—as one of the letters was from Brooke to Sir Thomas Egerton, praying his release, and urging that he was a great loser by being prevented from attending the assizes at York. The other letters were from Donne to his father-in-law and the lord keeper, supplicating their mercy, and extremely well indited. One of Donne's letters, while in confinement, to his wife, was signed John Donne, Anne Donne, *undone*; and Mr. Kempe observed, that Donne's name was certainly pronounced *Dun*; for in his own letter he spells the participle past of the verb *do*, *donne*; and the sentence confirming his marriage spells the name uniformly *Dunn*. It appears from Mr. Kempe's commentary on the letters, that Donne was afterwards received into favour, and entered the church; that the king invited him to court, and made him dean of St. Paul's; that he lost his wife, to whom he was devotedly attached; and that a few days before his death, he consented to be stripped and dressed in his grave clothes, and stood on an urn carved in wood, to have his likeness taken for his monument, which was, after his death, executed accordingly; and among a few mutilated remains of the former cathedral of St. Paul's, his monument is still preserved in the crypt under the present structure.

FINE ARTS.

EXHIBITION OF THE ROYAL ACADEMY.

[Fifth Notice.]

THE apartment distinguished by the name of "the Antique Academy" presents its usual *olla podrida* of art. Although there is nothing very piquant in the general character of the entertainment, we imagine there are few visitors who will not find something to their taste. The drawings, enamels, and miniatures, notwithstanding the overwhelming spread of canvases above and around, are by far the most attractive part of the show.

No. 458. *His late Majesty George the Fourth; enamel, after the original in the possession of Lord Stewart de Rothsay, by the late Sir Thomas Lawrence, P.R.A.* H. Boue, R.A.—"O king, live for ever!" would be a wish of probable accomplishment applied to this effigy of royalty, rendered invulnerable to the shafts of time by the vitrifying process of enamel-painting. It is one of the most splendid specimens of ena-

mel portrait we remember to have seen from the hand of the artist, practised and skilful as it is. Mr. Bone has two other fine works: No. 464, *His Majesty William the Fourth, after the original by A. Morton, Esq.*; and No. 455, *F. Chantrey, Esq. R.A., after the original by John Jackson, Esq. R.A.*

No. 448. *Elgin Marble, from a drawing by H. Corbould, engraved for the Trustees of the British Museum.* W. Bromley, A.E.—A beautifully executed portion of a work, the parts of which, however, appear to "come like angel visits, few and far between."

No. 454, *Enamel Portrait of her Grace the Duchess of Northumberland, painted from the original picture by the late Sir Thomas Lawrence, P.R.A.*; and No. 463, *Enamel of Venus disarming Cupid, painted from the original picture by W. Hilton, Esq. R.A., both by W. Essex.* are very successful imitations of the admirable originals.

No. 471, *Portrait of a Lady*; No. 475, *Portraits of the Right Hon. the Ladies Georgiana and Louisa Russell*; and No. 478, *Portrait of the Right Hon. Lady Wriothesley Russell.* A. E. Chalon, R.A.—This bevy of beauties exhibits the taste and skill of the artist in an eminent degree: not so No. 604, *Portrait of a Lady*; in which the ultra of fashion in the head-gear appears to us to be highly absurd. Is Mr. Chalon unacquainted with the privileges of his profession, which entitle him to conceal or correct such deformities?

"What in a picture greatly would offend,
The painter throws discreetly into shade."

Why does he not follow the example of Sir Joshua Reynolds, who was accustomed to attack his sitter's head with a pencil-stick, and to destroy in one instant the hideous edifice which the hair-dresser had been for hours constructing?

No. 484, *Harold's Body discovered after the Battle of Hastings, by Edith Swaneshalls and two Monks*; No. 493, *Mary Magdalen seeing the two Angels in the Sepulchre*; and No. 593, *A Greek Soldier, from the highest accessible [accessible] Rock, pointing out to a Woman the long-sought yet distant Sea, during the Retreat of the Ten Thousand.* G. Jones, R.A.—Drawings which prove how well suited Mr. Jones's talents are to the illustration of history. The last-mentioned, in particular, is strikingly original, and full of interest.

No. 578. *The Idolatrous destroyed while sacrificing—a Composition from the 25th chapter of the Book of Numbers.* G. Smith—Artists more frequently shew their skill in execution than their judgment in the selection of a subject. We can scarcely imagine a worse choice in that respect than the present, which is calculated for the contemplation of the mind, not of the eye. The performance is, however, far from being deficient in merit as regards both colouring and effect.

No. 465, *Strasbourg*; No. 476, *Venice*; and No. 596, *A Fisherman of Honfleur.* C. Stanfield.—There is no great range in either of the views; that of "Venice," indeed, is next to nothing; being simply a study of a very confined, although a highly picturesque part of the city. The "Fisherman," like Mr. Stanfield's other drawings, is characterised by truth and simplicity, rather than by any gaudy shew of colour.

No. 472. *Composition of Flowers, from Studies after Nature.* G. Sintzenich.—Taste in arrangement, purity of tone, and exquisite delicacy of finish, are the distinguishing qualities of this charming little gem.

No. 474, *Greta-Hall, Kenwick Lake, the*

Residence of R. Southey, Esq.; No. 479, *Rydal Mount, the Residence of William Wordsworth, Esq.* W. Westall, A.—These drawings, with reference both to nature and to art, are beautiful in themselves; but their interest is greatly increased by their connexion with two such highly gifted and celebrated men.

No. 523. *Portrait of Mrs. Hardwick. D. M'Clise.*—A brilliant performance. We hope, however, that whenever the painter purchases an estate with the well-earned produce of his talents and industry, he will not be satisfied with so defective a title. Instead of the simple portrait of an individual, this is a composition of several eminently graceful figures. How is it, by-the-by, that Mr. M'Clise has been so unhandsonably treated this year? Of five exceedingly clever productions, all, especially No. 480, *Portrait of Viscount Castlereagh*, executed in that free and masterly style which, without the appearance of labour, gives every requisite of character and effect—not one has been placed in even a tolerable situation. The academicians cannot plead ignorance of this young artist's name and merits, for he has recently carried off two of their medals.

No. 503. *An Italian Scene.* T. M. Baynes.—Whether this is a local view or a composition we know not; but it is one of the most fascinating drawings in the Exhibition.

No. 537. *Portraits of Sir Richard Sutton, Bart. and his Hounds, with Portraits of Gentlemen of the Lincoln Hunt, &c.* J. Furneley.—The rules of composition can scarcely be expected or applied in subjects of this kind. It is enough if the figures spread themselves on the canvases as they may be supposed to do in the field; and this, we think, has been effected with great skill by Mr. Furneley. The whole presents a lively and animated scene.

No. 576. *Portrait of Mrs. Bray, authoress of Fitz of Fitz-Ford, the Talba, &c.* W. Patten.—There is in this portrait a sentiment which evidently belongs to the character of the individual—at once pleasing and unaffected; independent of which, it is praiseworthy as a work of art, being well composed, and carefully painted.

No. 574. *The Dropping Well at Knaresborough, Yorkshire.* G. Nicholson.—It is not often that a natural phenomenon is a subject of pictorial interest. Mr. Nicholson's drawing presents us with both.

No. 579, *Morning—Kentish Boatmen saving the Cargo of a Wreck*; No. 590, *View of the Second Cataract of the Nile, taken from the Western Bank.* H. Parke.—These drawings have a lightness and clearness in their execution which would recommend them, without reference to the interest of their subjects.

No. 591, *Portrait of D. Eves Coke, Esq.*; No. 605, *Portrait of his Grace the Duke of Rutland.* O. Oakley.—Whole-length portraits, executed in a style highly creditable to Mr. Oakley's talents.

No. 608. *The Villager.* T. George.—A beautiful subject finely expressed.

No. 610. *Portraits of a Lady and Child.* C. R. Bone.—Elegant and simple; as is also No. 502, *Portrait of Miss Parry*, by the same rapidly rising artist.

No. 544. *The Cactus Speciosissima, &c.* V. Bartholomew.—Mr. Bartholomew has on former occasions greatly distinguished himself in this department of art, not only by his accurate botanical delineations, but by his skilful introduction of incidental accessories, giving a value to his compositions beyond that of the mere character of the flowers themselves. His present work is no way inferior to any of its

predecessors. Among other able productions of a similar description will be found, No. 589, *Hollyhocks*—the *Adelaide*, the *Victoria*, and other *Varieties*, Mrs. Pope; No. 530, *Study of Geraniums from Nature*, Mrs. Withers; No. 553, *Flowers from Nature*, Magdalena van Fowinkel; No. 566, *A Garland of Flowers*, Madame de Comolera; No. 575, *Flowers from Nature*, C. L. Tyler, &c. &c. &c.

Among the miniatures, clustered as they are, without any margin to confine the vision, works will, nevertheless, be found, exhibiting as many of the essential qualities of art as performances of larger size and loftier pretensions. A few of the most prominent of these are—No. 658, F. Cruickshank; No. 667, A. Robertson; No. 672, S. J. Rochard; No. 674, W. J. Newton; No. 673, Mrs. J. Robertson; No. 679, W. C. Ross; No. 681, G. Patten; No. 689, C. R. Bone; No. 715, Mrs. Green; No. 722, W. J. Newton; No. 731, W. J. Newton; No. 740, Mrs. Robertson; No. 753, A. Parsey; No. 809, Miss Jones; No. 824, W. C. Ross; No. 825, A. E. Chalou, R.A.; No. 833, Mrs. J. Robertson; No. 841, F. Cruickshank; No. 842, A. E. Chalou, R.A.; No. 853, Mrs. Green; No. 872, A. Robertson; No. 878, W. C. Ross; No. 887, M. Haughton; No. 831, A. Robertson; No. 895, S. J. Rochard; Nos. 912 and 931, Miss Fanny Corboux, &c. &c. &c.

NEW PUBLICATIONS.

National Portrait Gallery. With Memoirs by W. Jerdan, Esq. Part XXVI. Fisher, Son, and Co.

THIS Part is enriched with portraits of the King, Lord Exmouth, and Dr. Gray, bishop of Bristol. It has appeared too late for us to give any detailed notice; but we must quote an original and very characteristic anecdote of his Majesty, illustrative of his frankness and good humour.

"The Andromeda reached the harbour of Port Royal after dusk, and H. R. H., with her first lieutenant (the late admiral of the fleet and master of the robes, Sir Charles Pole, Bart.), proceeded in his barge to the shore. They immediately, in their uniforms, entered the public rooms; and the new comer, the captain of one of his majesty's ships, was good-humouredly greeted by the military, and played several games of billiards with the officers. After some inquiries, he requested his antagonist, the colonel-commandant, to have the goodness to parade his regiment at daylight, as he wished to inspect it! The astonishment of the request coming from a captain of the navy, was only equalled by the surprise when, on explanation, it was discovered from whom it originated!"

DRAMA.

DRURY LANE.

THE revival of *Blue Beard* has followed that of *Timour the Tartar*. There is a spice of George Colman the younger in *Blue Beard*, which reconciles us to its occasional appearance at our theatres royal. But it is really time that the insufferable bombast and commonplace melo-dramatic incidents of *Timour* should be banished to the Surrey side of the water, to keep company with those of the *Blood-red Knight*, and the rest of the species. We are not of those who object to spectacle at the great theatres, but we object to see it lavished on such unworthy vehicles, while the best plays of our best writers are frequently performed with dresses and scenery that would disgrace a barn. The only novelty at this house has been a one-act piece, a translation from *Nepoléon à l'Ecole*

de Brienne, and called *The Little Corporal*. It was produced on Monday, for Mr. Wallack's benefit; and had not the occasion itself been sufficient to propitiate the audience, the excellent acting of little Miss Poole, who bids fair to rival our long-loved Clara Fidler, must have obtained their most favourable suffrages. Young Fenton, whose acting in *The Jenkines* had previously deserved our commendation, managed to distinguish himself amongst his brother juveniles, and the piece was announced for repetition by the tiny *Napoléon* amidst general applause.

COVENT GARDEN.

THE theatre was brilliantly attended on Tuesday night; but certainly the name of the gifted author was one "to conjure with." Young as Mrs. Norton is, she has already a high and varied reputation. Her touching and melancholy poetry contrasts well with her lively and keen wit; while her one or two prose stories give promise of very superior excellence indeed. A drama of her's might well attract both the discerning few and the curious many. The *Gipsy Father* was received, and given out for repetition with friendly applause. Still, we must say we do not think this piece likely to keep possession of the stage: the horrors are gratuitous and accumulated, while the whys and wherefores are very deficient. Is the hint taken from any German story? for the whole is of that German school of exaggeration, to which young writers are so much addicted. A brief analysis of the plot will shew these defects. Reduced to the extreme of poverty, with his wife and family starving at his side, *Walter Barwell* joins a band of gipsies, from one of whom he obtains half a loaf, which he immediately returns to divide among his children. While they are devouring the welcome food, an old man, the father of his wife, eats a piece of it. *Walter* starts up in a rage, reproaches the grandfather with robbing the poor infants of their meal, and prepares forthwith to thrust him out of the house. This the wife opposes; and finding she is overcome in the struggle to protect her father, snatches up a knife, and stabs her husband, who falls apparently dead on the stage. We must pause one moment on this out-Heroding Kotzebue himself. First, the extreme improbability of *Walter's* turning the old man out of his house; secondly, the equal improbability of the violent conduct. To continue the story:—the son, in a most melo-dramatic spirit of self-sacrifice, takes the crime upon himself, and is hurried before judge *Franklin*, between whose daughter and himself an attachment subsists. This leads to two very-well-worked-up scenes; the one where *Ross Franklin* offers to fly with her lover,—and where she endeavours to prevail on her father to permit his escape; she using arguments drawn from the feelings, while he answers them with reasons. The dénouement may be easily guessed. The father has not been really killed, and the curtain drops on embraces, joy, and reconciliation. We do not very clearly see why the play should be called *The Gipsy Father*, as the gipsies have nothing to do with it, beyond giving the unfortunate half loaf of bread. The sympathy of the Londoners for poaching is very amusing; and all the fine feelings of the cocknies were enlisted against the game laws, by *Walter Barwell's* declaration, that all his misery originated in having killed a hare. Poaching, smuggling, and forging, are crimes which immediately appeal to the feelings. Objectionable and faulty as the *Gipsy Father* is, there are parts both good

in themselves, and good for their future promise. Mrs. Norton has genius, varied and original, and too good to be Germanised. The piece was exceedingly well supported. Warde both played and looked his character admirably. Miss Ellen Tree made a very sweet *Ross Franklin*; and Keeley was most laughable in the village apothecary, who preferred Epsom salts to Epsom races. We wish we could afford higher praise; but we cannot; and have only abstained from harsher censure because we would not add one to the *Sorrows of Rosalie*.

VARIETIES.

Printers' Pension Society.—The anniversary dinner on Wednesday was more numerous attended, and the subscription larger, than on any preceding occasion: a proof that this truly excellent charity, though yet in its infancy, is growing into the importance it so well deserves to attain. The Lord Mayor presided, and announced the gratifying fact, that the Duke of Sussex had consented to become the patron of the institution. That it already relieves, by small pensions, the distress of more than fifty aged and almost worn-out individuals, whose lives have been passed in active industry upon the press, is, indeed, a sufficient recommendation of it, not only to the many, but to nobles and princes.

The Literary Fund.—We are afraid we may have misled some of our friends, and the friends of this institution, by stating, that the Greenwich, i. e. White-Bait Meeting, was to take place on the 21st. Wednesday, the 22d, is, we observe from our notice to attend, the day appointed, and we are glad to add, that a numerous assemblage is anticipated.

Royal Society of Literature.—The newspapers have begun discussing the presumed withdrawal of the royal bounty from this Society: as they are but indifferently informed on the subject, they had better, perhaps, have left it to its own issue.

Paganini.—The *début* of this famed violinist was to take place, and we dare say did take place, long after our *Gazette* went to press: of course we can make no report of it this week. All we can say is, that the theatre yesterday bid fair to be crammed; and that at the private rehearsal on Thursday evening, every person connected with the establishment was carefully excluded, and the key carried to Signor Paganini. From one of our greatest musicians in the orchestra on this occasion, we learn that the performances were indeed surprising!!

The Malthusian System suspended.—Among the many curious returns to the population papers on Monday, there was one in Sloane Street probably unique. The return gave twenty-four females, ladies, servants, &c. in one house. A rather whimsical dialogue ensued between the maid and the astonished collector. "What!" cried the latter, looking over the paper, "twenty-four women all in one house, and no man among ye?" "Yes, sir," replied Sally, "it is too true; but mistress has set it down as if upon oath, and I am ready (a sigh!) to take my oath too, if you doubt it."

Decidedly the worst Pun ever made.—A bitter hater of puns, who had been persecuted during a whole afternoon by a pestiferous fellow who never ceased making them, at last declared, in wrath, that puns were worse than the plagues of Egypt. "For example," said his tormentor, "speaking of the plagues of Egypt, what do you think, the other day, when I rode to the Fair? O! they took Toll o' me!"

Panorama of Bombay.—We have just had a glance at the new Panorama of Bombay, in Leicester Square, and have been much delighted with it. The subject is finely adapted for panoramic effects. The sea and shore blend excellently together. The noble pillar of the vegetable world, the palm-tree, is a striking object; and native and European groups give animation to the scene. The distant hills are wonderfully picturesque in form; and the islands which stud the water, the shipping, &c. &c. combine beautifully into a harmonious whole. To East Indians this view must be most attractive; but, indeed, it has powerful claims upon the admiration of every lover of art. We had almost forgotten to say, that the house whence Sterne's celebrated Mrs. Draper eloped, is one of the most prominent parts of the picture.

Monkeys at the Egyptian Hall.—Two monkeys, stated to be, the one from Borneo, and the other from the western coast of Africa, and nevertheless, according to the bills of the day, both *ourang outangs*, are now exhibiting in London. We went to see them without instruments to determine their facial angles—but are nevertheless strongly disposed to consider the male individual, of about two feet six inches in height, with long black hair, as the chimpanzee (*troglodytes niger* of St. Hilaire). Of the other we are not so sure; the small size of the ears seems to forbid her association with the pongos, or true ourang outangs.* Her large head, diminutive height, red hair, and thoughtful aspect, remind us of the red ourang, or *simia satyrus* of Linnaeus, which is considered by some authors as the young of the pongo; but the animal at the Egyptian Hall is not so young, and has well-defined eyebrows. The animals are well worthy of the attention of naturalists, and are in a good condition. They are supposed to be about three years old—equivalent to about eight years in man.

* The male is very remarkable, from having large ears, and the lobes distinctly marked; which we never saw in any animal except the human.

LITERARY NOVELTIES.

[Literary Gazette Weekly Advertisement, No. XXIII. June 4.]

LIST OF NEW BOOKS.

Southey's British Poets, from Chaucer to Jonson, 8vo. 11. 10s. cloth.—Aikin's British Poets, from Jonson to Beattie, 8vo. 12s. cloth.—Merle's Odds and Ends, with Illustrations by G. Cruikshank, 8vo. 8s. cloth.—McCulloch's System of Geology, 2 vols. 8vo. 11. 12s. bds.—Syme on Diseased Joints, 8vo. 7s. 6d. bds.—Lardner's Cabinet Cyclopædia, Vol. 19 (Brewster's Treatise on Optics), fcp. 6s. bds.—A Father's Recollections of Three Pious Young Ladies, 12mo. 5s. bds.—Lockinge's Historical Gleanings of the Field of Naseby, 12mo. 7s. bds.—Roscoe's Novelist's Library, No. 11. (De Foe's Robinson Crusoe, Vol. 2), fcp. 5s. boards.—Aldine Poets, Vol. 13 (Pope, Vol. 1), 12mo. 5s. bds.—Bojardo's Orlando Innamorato, by Panizzi, Vol. 5, crown 8vo. 12s. bds.—The Steamboat Companion, 12mo. 1s. sewed.—Philip Augustus, by the Author of Darnley, &c. 3 vols. post 8vo. 11. 11s. 6d. bds.—Arthur of Brittany, by the Author of the Templars, 3 vols. post 8vo. 11. 11s. 6d. bds.—The Dangers and Duties of a Christian, by the Rev. Erskine Neale, 8vo. 6s. bds.—Kidd's Picturesque River Companion to Margate, 12mo. 1s. 6d. sewed.

TO CORRESPONDENTS.

We have been satisfied by the evidence of our own eyes, that no alterations made in the Life of Lawrence by his friends were adopted: and with this we wish to dismiss a subject which has occupied more attention than it ought to have done.

We thank M. P. of Deal: the Ebbol lines were fully explained in a subsequent Gazette.

To "Topada,"—We do not think the narrative alluded to can find a proper medium; at any rate we cannot speak of an unseen MS.

We do not comprehend what Incoed means.

Pin Money, by the Author, of *Manners of the Day*, seems characteristic; but too late for this week.

ADVERTISEMENTS,

Connected with Literature and the Arts.

SOCIETY OF BRITISH ARTISTS'

Gallery, Suffolk Street, Pall Mall East.
The Eighth Exhibition for the Sale of Works of Living British Artists, is now Open, from Ten till Seven.
Admission, 1s.—Catalogue, 1s.
J. WILSON, Secretary.

THE TWENTY-SEVENTH ANNUAL

EXHIBITION of the SOCIETY of PAINTERS in WATER COLOURS, is now open, at the Gallery, Pall Mall East, every day, from Nine till Dark.
Admission, 1s.—Catalogue, 6d.
CHARLES WILD, Secretary.

TO ARTISTS.—Fifth Annual Exhibition

of the Santa Picture Gallery, Southampton.
H. Buchan, Proprietor, informs Artists, that, in consequence of the British Gallery not closing till the 28th of May, Pictures will be received at the above Gallery till the 30th of June, instead of the 20th of May, as per Circular addressed to Artists.
All Works of Art sent by Messrs. Smith and Co.'s Waggon, from Gerard's Hall, Basing Lane, or the Spread Eagle, Piccadilly, will go free of expense.
If any reference is required, apply to Messrs. Rowny and Forster, 51, Rathbone Place, Oxford Street.

EXHIBITION OF PORTRAITS to be

Engraved in LODGE'S PORTRAITS and MEMOIRS of the MOST ILLUSTRIOUS PERSONAGES of BRITISH HISTORY.—Open Daily, at Messrs. Harding and Lepard's, No. 4, Pall Mall East, London.

Admission by Tickets only, which may be obtained on application, free of expense.

The great celebrity this work has acquired throughout the country, and the very general desire of the subscribers to inspect the collection from which the engravings are executed, have led the proprietors to adopt the medium of a gratuitous public exhibition, to display in one collected view the whole series of illustrations proposed to be engraved in this work, elaborately executed and coloured, from the Galleries of His Majesty, the Nobility, and from the Public Collections, and to commence an entirely new edition, in Monthly Numbers, on the 1st of July, 1831; a Prospectus and Catalogue of which may be obtained (gratis) from every Bookseller in the Kingdom.

Persons residing in the Country, and intending to visit the Metropolis, may obtain Tickets of Admission, free of any expense, from the principal Booksellers throughout the Kingdom.
"In the overwhelming masses of trash which are weekly, if not hourly, pouring in upon the republic of literature, it is pleasing to alight upon such productions as this, which cheer and guide us, like friendly watchfires, across a country of darkness and peril."—*Dublin's Literary Companion*, 2d edition, p. 616, in review of "Lodge's Portraits."

BOOKSELLING, STATIONERY, &c.—

To be disposed of, the Halfshare of a Stationery and Bookselling Trade, comprising Stock, Fixtures, &c.; the incoming from 1800 to £1,000. It is situated in one of the largest Manufacturing Towns, and is a very lucrative and improving concern. The most respectable References will be given and required.

Applications in London may be made to Messrs. Baldwin and Cradock, Paternoster Row; Mr. Tapp, Chancery; or Mr. Tilt, Fleet Street; or by letter (post-paid), directed A. B., care of Messrs. Baldwin and Cradock.

Just published,

BUSTS IN BRONZE, at 11. 1s. each, of HIS MAJESTY WILLIAM the FOURTH, and the LORD CHANCELLOR BROUGHAM.

These Busts are of dimensions and of character to form an appropriate ornament of great interest, for every chimney-piece in the Kingdom. The acknowledged excellence of the likeness, and the intrinsic beauty of the Busts as works of art, the absolutely indestructible nature of the material, and the powerful embodying effect of an actual model, leaves the most elaborate print far behind, as a memorial of important and valued personages.

Sold by the Author and Publisher, Samuel Parker, Bronzist, 18, Argyl Place, Regent Street, and 26, Cornhill; Jennings and Co. Chancery; and by all Booksellers.

FERNELEY'S PORTRAIT OF

SPANIEL, Winner of the Derby Stakes, at Epsom, 1831. Under the special patronage of the Right Hon. Lord Lowther.

R. Ackermann, Jan. begs leave to inform the Nobility, Gentry, and the Sporting World, that he has obtained His Lordship's permission to publish a Portrait of the above celebrated Horse, which will form the Fifth Plate of a Series of Portraits, by J. Ferneley, of Melton Mowbray. Price 15s. each, beautifully coloured. Those published are—Rowton, Friam, Velociped, and Cadland.

Subscribers' Names received at R. Ackermann's, Jan. Eclipse Sporting Gallery, 191, Regent Street, where may be seen, a large Collection of Prints, Drawings, &c. &c.

Reply of the Commons of England to the King's Speech on the Dissolution of Parliament. And on the following week (11th June), the Spectator will publish the Anatomy of Taxation.

MR. BROSTER purposes commencing a

"Course of Instruction" in his System for "improving the Organs of Speech" under slight, or the most "distracting Impediments" in Colloquial or Public Speaking, at 3, Lower Belgrave Street, Belgrave Square. After the Season he receives Pupils at his Residence, Brook Lodge, near Chester.
* Discovered by him, vide *Blackwood's Magazine*, Jan. 1830.

FIFTY COMIC ENGRAVINGS (for

Sevensence), distinguished for broad humour, fun, and point, which cost the Proprietors Two Hundred and Fifty Guineas! will appear in Bell's Life in London and Sporting Chronicle, of Sunday, June 17th, 1831, price only Sevensence. The "Comicalities" above alluded to, and which will appear in Bell's Life in London, on Sunday, the 17th of June, have been selected from the celebrated Series which has appeared in that Journal for the last five Years, and embrace all those which have not already been presented to its readers in its former "Comic Recompensation." It will also contain those which have been published together with some novelties in the same popular style. The original cost of the designing and engraving of these fifty humorous puns was five guineas each, making the gross total of two hundred and fifty guineas; the whole of which engravings may now be obtained for the trifling cost of sevensence. They will occupy seven folio columns, and for the scrap-book or portfolio will furnish a source of laughter and amusement.

Titles of the Engravings.

BOOKS PUBLISHED THIS DAY.

In post 8vo. 8s. boards.

ODDS and ENDS, in Verse and Prose.

By WILLIAM HENRY MERLE, Esq.
Author of "Constanza," &c.
Illustrated by George Cruikshank, from Designs by the Author.
London: Printed for Longman, Rees, Orme, Brown, and Green.

THE FIVE NIGHTS OF ST. ALBANS.

A new edition of this "extraordinary work" will be ready for publication on Thursday next.

William Kidd, 239, Regent Street; and Sherwood and Co.

"Human virtues—the constancy of man, and the devotion of woman, are arrayed against the power of hell. The struggle is long, the trials are terrific, and the triumph is sudden, complete, and glorious."—*Blackwood's Magazine*.

Companion to the Waverley Novels.

In monthly Volumes, beautifully illustrated with Engravings, price 6s. bound.

STANDARD NOVELS and ROMANCES.

The monthly publication of popular fictions, under the above general title, has now proceeded to its fourth Number, and has met with greater success than could have been anticipated by the most sanguine expectation of the Proprietors. The public at large has seized with alacrity on the opportunity thus presented of procuring editions of favourite Novels and Romances by living writers, at a fifth of the cost originally charged for each work, with the additional and important advantage of the author's own revision. Illustrations and new introductory matter, obtained by the Proprietors at considerable cost, and giving a unique character to the present impression of celebrated works, which is therefore not only the cheapest, but indubitably the best extant. But as many of the Subscribers to the Standard Novels have expressed a wish that the undertaking should not be restricted to the publication of fictions written in any one stated limit of time, and have referred the Proprietors to their own prospects, issued more than a twelvemonth ago, wherein novels of nearly every age were promised, Messrs. Colburn and Bentley have purchased the copyright of the best English fictions originally printed by Mr. Ballantyne, under the immediate superintendence of Sir Walter Scott, and rendered specially interesting and valuable by the copious biographical and critical memoirs which that illustrious writer has prefixed to the works of each novelist. To readers, therefore, of the Standard Novels, complete as a circle of the best stories (without restriction to any period), extant in the English language, and still more worthy of companionship with the Waverley Novels, the Proprietors are fortunately enabled to avail themselves of the above-mentioned publication, edited by Sir Walter Scott.

* No. IV. (published June 1), contains the whole of Miss Jane Porter's celebrated romance, *Thaddeus of Warsaw*, complete, with a new Introduction and Notes by the Author.—No. I. comprises the whole of the *Pilot*, by Cooper.—No. II. Godwin's celebrated Story of *Caleb Williams*, complete, with a Memoir of the Author, by his Daughter, Mrs. Shelley.—No. III. The whole of the *Spy*, by Cooper, with a new Introduction and Notes, written expressly for this publication, by the Author.

Messrs. Colburn and Richard Bentley, New Burlington Street.

Information and DIRECTIONS for TRAVELLERS on the CONTINENT.

By MARIANA STARKE.

Seventh edition, with considerable Additions, thoroughly revised, post 8vo. 12s.

2. Brocckdon's Guide to Paris, with highly finished Engravings; being Part I. of the Route from London to Naples.

3. Venice—Sketches of Venetian History, with Engravings.

4. Travels in the Morea. By William Martin Leake, F.R.S. Author of the "Topography of Athens," and a "Tour in Asia Minor." 2 vols. 8vo. with a most accurate Map and Plates, 2l. 5s.

5. The Diary of an Invalid in pursuit of Health; being the Journal of a Tour in Portugal, Italy, Switzerland, and France. By the late Henry Matthews, A.M. 2d edition, 2 vols. post 8vo. 15s.

6. Antiquities, Arts, and Literature of Italy. By Joseph Forsyth, Esq. 2d edition, 3 vols. post 8vo. 15s.

7. Rome in the Nineteenth Century. 4th edition, 3 vols. 8vo. 1l. 11s. 6d.

8. Switzerland; or, a Journal of a Tour and Residence in that Country. Followed by a general View of its History, brought down to the present time. By S. Simond. 2d edition, 3 vols. 8vo. 36s.

9. An Autumn near the Rhine; or, Sketches of Courts, Society, and Scenery in Germany near the Rhine: 2d edition, 8vo. 14s.

John Murray, Albemarle Street.

STANDARD NOVELS, No. IV.

published June 1st, contains the whole of Miss Jane Porter's well-known story of "Thaddeus of Warsaw." This Romance has been, for years, a great favourite in Poland, and has acquired increased popularity there in consequence of the existing patriotic struggle maintained by that country against the Russian yoke. In this edition, Miss Porter has related several original and affecting anecdotes connected with the romance, which will confer on it a singular attraction.

No. I. comprises the whole of the *Pilot*, by Cooper.

No. II. contains Godwin's celebrated Story of *Caleb Williams*, complete.

No. III. contains the whole of the *Spy*, by Cooper, corrected and revised by the Author, with a New Introduction and Notes, written expressly for this publication.

Messrs. Colburn and Richard Bentley, New Burlington Street.

THE LIVES OF SCOTTISH WORTHIES.

Just published, with Thirteen Engravings from the celebrated Designs of Flaxman, &c.

Family Dramatists, No. IV.; being Popular English Specimens of Æschylus.

John Murray, Albemarle Street.

Hall's New General Atlas.

Ditto, half-bound in Russia.....	9 0
In the full size of the Maps, half-bound in Russia.....	10 0
Ditto, Proofs on India paper, half-bound in Russia.....	14 8 0

A NEW GENERAL ATLAS OF FIFTY-THREE MAPS, with the Divisions and Boundaries carefully coloured. Constructed entirely from new Drawings, and engraved by SIDNEY HALL. Complete in Seventeen Parts, any of which may be had separately, 10s. 6d. each.

Great expense has been bestowed, and unremitting exertions employed, to render this Atlas perfect, by collating and adjusting the labours of preceding geographers, by correcting the errors of position, together with their orthographical inaccuracies, by ascertaining and delineating the changes in political geography, especially those relating to European States and their boundaries, and by tracing, with the utmost possible accuracy, the progress of discovery in remoter regions.

Part	Contents.
1. France, Hindoostan, Russia	2. Scotland, Colombia, East India Islands
3. Prussia, Sweden, West Indies	13. Africa (general Map) Egypt, Chili, La Plata, Bolivia, or Upper Peru
4. Greece, Austria, South Italy	14. Turkey in Asia—Birmah, with Parts of Anam and Siam—British North America
5. Turkey (in Europe), Netherlands Europe	15. Eastern Hemisphere, Portugal, Northern Africa
6. North Italy, Switzerland, Mexico and Guatemala	16. Western Hemisphere, Asia, North America
7. Peru, Colony of New South Wales, Spain and Portugal	17. The World on Mercator's Projection, British Isles, South America, Western Africa
8. England, China, Van Diemen's Land	18. Ireland, Palestine, Nubia and Abyssinia, Canada, New Brunswick, and Nova Scotia
9. United States—Bavaria, Wirtemberg, and Baden—Chart of the Pacific Ocean	
10. Brazil, Prussia, Germany (Central)	
11. Northern Germany, Denmark, Southern Africa	

"We have taken some pains to examine this new Atlas, and we can safely state our conviction of its general superiority to all other atlases."—*The Spectator*, (conducted by J. S. Buckingham, Esq.)

"The best and most recent authorities are in all cases consulted, and the maps are engraved in a masterly manner."—*New Monthly Magazine*.

For other favourable opinions of this Atlas, see the *Literary Gazette*, *Gent's Magazine*, *John Bull*, *Atlas*, *Courier*, *Globe*, &c.

Also, in royal 8vo. 21s. boards.

An Alphabetical Index of all the Names contained in the above Atlas, with References to the Number of the Maps, and the Latitude and Longitude in which the Places are to be found. Supplied to the Subscribers to the Atlas at the cost Price.

Longman, Rees, Orme, Brown, and Green.

Part XV. price Six Shillings, of the ENCYCLOPEDIA BRITANNICA, is published this day.

This Part concludes the Article Architecture, and contains Aristotle's Philosophy, with a Comment on the Aristotelian among the Plans will be found a highly finished Engraving of York Cathedral, and a Map of Asia, which may be considered a Specimen of the New Atlas to accompany the Work.

Adam Black, Edinburgh; Simpkin and Marshall; Whittaker, Treacher, and Co.; Hamilton, Adams, and Co.; and Jennings and Chaplin, London; and John Gunning, Dublin.

MISCHIEF, Section First. A Poem, on Matrimony, Mopement, Reform, Fashion, Clubs, Coquettes, Song, Dance, Race-gaming, Deer Stalking, Duck Shooting, Sin, Shame, and Remorse.
 "Honi soit qui mal y pense."
 "The first section of a Spenserian poem, with the ominous title of *Mischief*, has much amused us. The style is sprightly and graphic.—*Edinburgh Service Journal*.
 "A clever sketch in verse, resembling, but not in imitation of *Beppo*."—*Atlas*.

See Literary Gazette, &c. &c.
 Shortly will appear,
The Second Section of Mischief, to which will be prefixed, a Prose Essay on Critics.
 Edward Moxon, 64, New Bond Street.

Recently published,
DESTINY.
 By the Author of "Marriage," and the "Inheritance." In 2 vols. 11s. 6d.

"We now leave the Chief's Daughter to that fair favour she so well deserves to receive from the public."—*Literary Gazette*.
 "The character of *Destiny* will be best understood by the admirers of *Fride* and *Prejudice*, and *Northanger Abbey*, when we say that the authoress is entitled to the high distinction of being called, without qualification or drawback, the *Miss Austin* of Scotland."—*Spectator*.
 "This novel alone will entitle the author to a high rank among the novelists of the day."—*Scotsman*.

2. **Captain Basil Hall's Naval Life and early Voyages.** 2 small vols. Vignette Titles, 11s.
 "Captain Basil Hall, under the title of 'Fragments of Voyages and Travels,' has published a kind of autobiographical miscellany, the perusal of which has afforded us several days of great enjoyment. It might have been called recollections of the more striking passages of a life at sea. It consists of a sort of retrospective view of his career, of his experience, of his adventures,—with a pretty constant moral commentary upon the best motives and guides of action. The author intends his book for the perusal of youth; but we doubt much whether youth will take the lively interest in it that we are very sure age will. Of this agreeable work, we may add, that it ought to be considered as a companion to all books of voyages and travels. We trust confidently to Captain Hall for a continuation; for he tells us that he wants only the approbation of the public, which we take the liberty of promising him."—*Spectator*.

3. **Captain Hall's Travels in North America**, 3d edition, 2 vols. 11s. 6d. And *Exchings*, 10s. 6d.
 Printed for Robert Cadell, Edinburgh; and Whitaker and Co. London.

In 8vo. price 3s. 6d. (continued every two months, alternately with the *Magazine of Natural History*). No. 20 of

PRICE 8d.

REVIEW OF NEW BOOKS.

The Voice of Humanity, published Quarterly. Nos. I., II., III., and IV. 8vo. pp. 166. London, J. Nisbet.

Missionary Voyages and Travels; compiled by J. Montgomery. (Third Notice.)

"A private meeting of the friends and supporters" of the publication above first named is, we observe from its No. IV., convened for next Wednesday, at Exeter Hall; why designated *private*, and held at a public place, we do not know. But the subject itself is of so much genuine interest, that we have felt strongly disposed to afford it all the elucidation in our power, without starting at trifling difficulties, or too minutely questioning minor details. In the earlier volumes of the *Literary Gazette* we were among the foremost to enforce the rights (if we may use the word) of those objects which the *Voice of Humanity* calls upon us to protect, and whose sufferings every good feeling commands us to alleviate. At a time, therefore, when more general discussion may be expected, it becomes us to devote such influence as we may possess to the furtherance of a cause of which to diffuse the knowledge is surely the best, the only recommendation which it needs to a civilised, not to say a Christian people.

But, professing ourselves to be sincere and earnest advocates in this cause, we must, *a priori*, state that we do not altogether approve of the line taken by the publication before us. We respect its motives, we would to the utmost advance its purposes; but we cannot approve of all the means and arguments which it employs. In our opinion, true humanity has no greater adversary in the world than affected sentiment,—the practice of the golden rule no more counteracting agency than that which is produced by a suspicion or dislike of cant. Injudicious friends are always more dangerous than avowed or secret enemies; and we could wish that many things in the periodical alluded to had been omitted. Still the design is worthy of the highest praise, and it shall be ours to promote it, according to our own sense, and in our own way, to the utmost in our power.

To begin with the beginning, the Prospectus and the sequent work, in order to extend rational humanity towards the animal creation, sedulously enforce the establishment of Abattoirs and Cattle-Markets in, or rather near, the metropolis, instead of the dangerous and demoralising places now in use, and especially that common offence, Smithfield. On this point we think there can be but one opinion; and the wonder is, that the self-interest of a few individuals, or of a corporation, should have prevailed so long in obstructing a manifest national improvement.

"Next in importance (says the Prospectus) is the unrecorded and unexampled misery of the horse, in the knacker's yard, when his former usefulness has expired; devouring the manes and tails of his fellow-sufferers, from

hunger, until the knacker, from a demand for the flesh, gives an order for the termination of all pain and suffering: but their dying from absolute starvation is regarded, in these places, with the utmost indifference, as the trouble of slaughtering them is then saved. A bill to amend the Knackers' Act will be found in the fourth number."
